FOREWORD

The Federal Power Act was originally enacted as the Federal Water Power Act, approved June 10, 1920 (41 Stat. 1063, 16 U.S.C. 791–823). The Federal Power Commission was reorganized January 1, 1931, as an independent Commission under the act approved June 23, 1930 (46 Stat. 797). By Title II of the Public Utility Act of 1935, approved August 26, 1935 (49 Stat. 838), the original Federal Water Power Act was made part I of the "Federal Power Act" and parts II and III were added. The Federal Power Act was amended May 28, 1948 (62 Stat. 275), August 7, 1953 (67 Stat. 461), August 15, 1953 (67 Stat. 587), June 4, 1956 (70 Stat. 226), and August 28, 1958 (72 Stat. 941 at 947). The Commission also administers the Natural Gas Act, approved June 21, 1938 (52 Stat. 821, 15 U.S.C. 717–717w), as amended February 7, 1942 (56 Stat. 83, 15 U.S.C. 717f), July 25, 1947 (61 Stat. 459, 15 U.S.C. 717f), March 27, 1954 (68 Stat. 36, 15 U.S.C. 717(c)), and August 28, 1958 (72 Stat. 941 at 947, 15 U.S.C. 717r), and has certain duties under the Tennessee Valley Authority Act, approved May 18, 1933 (48 Stat. 1075), and amendments thereto; the Bonneville Act, approved August 20, 1937 (50 Stat. 731); the Fort Peck Act, approved May 18, 1938 (52 Stat. 403); and under various Flood Control and River and Harbor Acts (notably the Flood Control Act of 1944, approved December 22, 1944 (58 Stat. 887)), and other statutes, as well as Executive Orders.

This volume, the thirty-second of a series, contains all the formal opinions and accompanying orders of the Federal Power Commission rendered, July 1, 1964 to December 31, 1964, inclusive. In addition to the formal opinions, there have been included intermediate decisions which have become final and selected orders of the Commission issued during such period.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP63-230 (PHASE II);* WISCONSIN PUBLIC SERVICE CORPORATION, DOCKET NO. CP63-244

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS AND, AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 1, 1964)

On February 18, 1963, as supplemented and amended on March 21 and April 29, 1963, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) filed in Docket No. CP63-230 (Phase II) an application pursuant to Section 7(c) of the Natural Gas Act authorizing the construction and operation of certain facilities and the sale and delivery, by means of said facilities, of natural gas to Wisconsin Public Service Corporation (Public Service) for resale and distribution by the latter in the communities of Denmark, Kewaunee, Algoma, Sturgeon Bay and Wrightstown, Wisconsin, all as more fully set forth in the application, as supplemented and amended.

Specifically, Michigan Wisconsin proposes the following in Phase II:

> The construction and operation of approximately 19.3 miles of 6-inch pipe extending from a point on its Green Bay, Wisconsin, pipeline easterly to Denmark, Wisconsin, in order to sell and deliver natural gas to Public Service for resale and distribution in the communities of Denmark, Kewaunee, Algoma and Sturgeon Bay and to provide Public Service with a delivery point on said proposed line for service to Wrightstown.

The application indicates the total third year peak day and annual requirements of these communities are 7,109 Mcf and 1,221,250 Mcf, respectively.

The estimated cost of the proposed Phase II facilities is shown to be $545,000, which cost will be financed out of treasury funds.

On February 28, 1963, as supplemented on April 22 and May 24, 1963, and May 1, 1964, Public Service filed in Docket No. CP63-244 an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Michigan Wisconsin to construct a lateral line and to sell natural gas to Public Service for resale and distribution in the Village of Mishicot, Wisconsin, all as more fully set forth in the application, as supplemented.

The application indicates the estimated third year maximum day and annual natural gas requirements of Mishicot are 799 Mcf and 184,190 Mcf, respectively.

Public Service will construct and operate distribution facilities at an estimated cost of $175,705.

On April 3, 1963, Michigan Wisconsin filed an answer to the subject application stating that it has no objection to an order requiring it to construct 4.8 miles of

*By Commission order issued November 12, 1963, 30 FPC 1239, the Phase I portion of the proceeding in Docket No. CP63-230 was disposed of. This order pertains exclusively to the proposals in Phase II of Docket No. CP63-230 and to the proposals in Docket No. CP63-244.

service lateral and to provide natural gas for service to Mishicot. Said lateral is estimated to cost $101,200.

On July 5, 1963, the Coal Interests[1] filed a petition to intervene in Docket Nos. CP63-230 and CP63-244; however, on January 24, 1964, said petition was withdrawn.

Due notice of the filing of the application in Docket No. CP63-244 and opportunity for hearing thereon has been given by publication in the Federal Register on May 26, 1964 (29 F.R. 6901). No protest, further petition to intervene or request for hearing has been filed in said docket.

After due notice (published in the Federal Register on May 26, 1964 (29 F.R. 6901), no further petition to intervene, notice of intervention or protest to the granting of the application, as supplemented and amended, in Docket No. CP63-230 (Phase II) has been filed.

At a hearing held on June 26, 1964, the Commission on its own motion received and made a part of the record in Docket No. CP63-230 (Phase II) all evidence, including the application, supplement, amendment and exhibits, submitted in support of the authorization sought therein, and upon consideration of the record in said Docket No. CP63-230 (Phase II) and in Docket No. CP63-244,

The Commission finds:

(1) Applicant, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 14, 1950, in Docket No. G-1302 (9 FPC 167).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented and amended, in Docket No. CP63-230 (Phase II), are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Michigan Wisconsin is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Michigan Wisconsin as proposed in Docket No. CP63-230 (Phase II) are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Michigan Wisconsin's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Applicant, Wisconsin Public Service Corporation, is a corporation organized and existing under the laws of the State of Wisconsin and is duly author-

[1] Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc., and Upper Lake Docks Coal Bureau, Inc.

ized to engage in the business of selling and distributing natural gas within said State.

(7) It is necessary and desirable in the public interest that Michigan Wisconsin Pipe Line Company be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Public Service and to sell and deliver up to 799 Mcf of natural gas per day to Public Service, as set forth in the application, as supplemented, in Docket No. CP63–244 and as hereinafter ordered and conditioned.

(8) The authorization in Docket No. CP63–244 should be conditioned upon Public Service being prepared to receive gas from Michigan Wisconsin, as proposed, within one year from the date on which this order issues and upon Public Service obtaining and submitting a firm commitment from Western Condensing Company to purchase the annual third-year volumes shown for this industrial customer in the application, as supplemented, in said Docket No. CP63–244.

(9) The requirement that Michigan Wisconsin serve Public Service, as proposed in Docket No. CP63–244, will not place any undue burden upon Michigan Wisconsin nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Wisconsin Pipe Line Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented and amended, in Docket No. CP63–230 (Phase II), upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Michigan Wisconsin's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 6 months from the date on which this order issues.

(D) Michigan Wisconsin Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant, Wisconsin Public Service Corporation, and to sell and deliver up to 799 Mcf of natural gas per day to Public Service, all as hereinbefore described and as set forth in the application, as supplemented, in Docket No. CP63–244.

(E) Michigan Wisconsin shall report to the Commission in writing the date of commencement of service to Public Service.

(F) The order in Docket No. CP63–244 is hereby conditioned upon Public Service being prepared to receive natural gas from Michigan Wisconsin, as proposed, within one year from the date on which this order issues and upon Public Service obtaining and submitting a firm commitment from Western Condensing Company to purchase the annual third-year volumes shown for this industrial customer in the application, as supplemented, in Docket No. CP63–244.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NOS. G–9201 AND G–14587

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 1, 1964)

On April 16, 1964, Southern Natural Gas Company (Petitioner) filed in Docket Nos. G–9201 and G–14587 a petition to amend the Commission's orders issued November 2, 1955, 14 FPC 1063, (Docket No. G–9201), August 7, 1959, 22 FPC 211, (Docket No. G–14587), as amended by order issued January 25, 1962, 27 FPC 176, (affecting both of said orders) by increasing by 2,250 Mcf per day the volume of natural gas to be sold by Petitioner on an interruptible basis to Southern Nitrogen Company. No change in volume is proposed in the firm allotment as is not provided in the Commission's order of January 25, 1962, above-mentioned which authorized the delivery of up to 10,100 Mcf per day on a firm basis.

No additional facilities will be required to deliver the increased volume of gas to the Southern Nitrogen Company for processing into nitrogenous chemical products and fuel in its Savannah, Georgia plant.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 3, 1964. (29 F.R. 7257) No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's orders issued on the dates and in the respective dockets herein before designated be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's orders of November 2, 1955 and August 7, 1959, as amended by the order of January 25, 1962, in Docket Nos. G–9201 and G–14587, respectively, be and the same are hereby amended by authorizing Southern Natural Gas Company to increase by 2,250 Mcf per day the volume of which Southern Natural Gas Company may deliver on an interruptible basis to Southern Nitrogen Company.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

U.S. DEPARTMENT OF THE INTERIOR, SOUTHEASTERN POWER ADMINISTRATION, ALLATOONA, BUFORD, CLARK HILL, HARTWELL, AND WALTER F. GEORGE PROJECTS, DOCKET NO. E–7100

ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued July 7, 1964)

The Secretary of the Interior (Interior), acting on behalf of Southeastern Power Administration (SEPA) on March 25, 1964, filed with the Federal Power

Commission for confirmation and approval, pursuant to the provisions of the Flood Control Act of 1944 (58 Stat. 887) Wholesale Power Rate Schedules GA–1, GA–2, ALA–1, SC–1, CAR–1 and CAR–2. The proposed rate schedules are applicable to the sale of power generated in the federally owned projects of Allatoona, Buford, Clark Hill, Hartwell, and Walter F. George. Approval of the rate schedules is requested for a five-year period, beginning July 1, 1964, and ending June 30, 1969.

The rate schedules named above are designed to supersede current rate schedules heretofore approved by the Commission for various periods, all terminating June 30, 1964.

The five projects were constructed by the U.S. Army Corps of Engineers and are presently in operation. The location and present generating capacity of these projects are as follows:

Project	State	River	Capacity (kw.)
Allatoona	Georgia	Etowah	74,000
Buford	do	Chattahoochee	86,000
Clark Hill	South Carolina, Georgia	Savannah	280,000
Walter F. George	Georgia, Alabama	Chattahoochee	130,000
Hartwell	South Carolina, Georgia	Savannah	264,000

SEPA has no transmission system of its own. In order to carry out the provisions of Section 5 of the Flood Control Act of 1944, which require that preference be given to public bodies and cooperatives and that power and energy be disposed of in such a manner as to encourage the most widespread use thereof, SEPA has contracted with both the Georgia Power Company and Duke Power Company for the wheeling of power to preference customers in the service areas of those companies. Some power is also sold to these companies. As a matter of policy, SEPA markets all of the power from Allatoona and Buford in the State of Georgia, since those projects are located wholly within that State. Power from Walter F. George, located on the Alabama-Georgia line, is marketed equally in each State. Similarly, power from Hartwell and Clark Hill, located on the Georgia-South Carolina line, is marketed equally in those States.

The half of Walter F. George power and energy not sold in Georgia is sold in Alabama to the Alabama Electric Cooperative, Inc., in accordance with provisions of a contract between the Government and the Cooperative, which takes the power at the project site.

Contracts entered into in 1959 between the Government and South Carolina Public Service Authority and the Government and Greenwood County Electric Power Commission provide for the sale to these two South Carolina preference customers of the half of Clark Hill power not sold in Georgia. Power is taken at the Clark Hill bus.

Wheeling charges are presently being paid by the Government to Georgia Power Company and Duke Power Company for power and energy delivered by the Companies to preference customers of the Government in Georgia and in North and South Carolina. Contracts with the Companies show rates for wheeling services to vary with distance from point of delivery, being 1.00 mill per kilowatt-hour delivered within the first 100 miles, 1.75 mills per kilowatt-hour between 100 and 150 miles, and 2.50 mills per kilowatt-hour for distances greater

than 150 miles. The annual charges to be paid to Georgia Power Company for wheeling energy from the five operating projects to preference customers in Georgia have been estimated to be $1,044,000, or an average of 1.21 mills per kilowatt-hour. Similar payments to Duke Power Company for wheeling energy from the Hartwell project have been estimated to average $279,000 annually, or 1.5 mills per kilowatt-hour.

Rate schedule GA–1—available to public bodies and cooperatives in Georgia to whom power may be wheeled by the Georgia Power Company and applicable to power and accompanying energy generated at Allatoona, Buford, Clark Hill, Walter F. George, and Hartwell projects—supersedes rate schedule GA–I–1. Rate schedule GA–2, which supersedes rate schedule GA–I–2, is available to the Georgia Power Company and applicable to capacity and energy generated at the same five plants. Rate schedule ALA–1 supersedes schedule ALA–I–1. It is available to the Alabama Electric Cooperative, Incorporated, and applicable to power and accompanying energy delivered at the Walter F. George project. Rate schedule SC–1 replaces schedules CH–1 and CH–2. It is available to South Carolina Public Service Authority and Greenwood County Electric Power Commission and applies to power and accompanying energy generated at the Clark Hill project. Rate schedule CAR–1 supersedes schedule H–I–1. It is available to public bodies and cooperatives in North Carolina and South Carolina to whom power may be wheeled by the Duke Power Company. This schedule applies to power and accompanying energy generated at the Hartwell project. Rate schedule CAR–2, which supersedes schedule H–I–2, is likewise applicable to capacity and energy generated at Hartwell and is available to the Duke Power Company.

In all schedules the proposed monthly demand charge for capacity is $0.90 per kilowatt. Proposed rate schedule SC–1, in addition, includes a demand charge of $0.21 per kilowatt per week, cumulative for the billing month, for capacity made available and accepted on a weekly basis by the South Carolina Public Service Authority and Greenwood County Electric Power Commission in addition to the capacity the Government makes available for scheduling energy.

The proposed rate for on-peak energy is 3.25 mills per kilowatt-hour to all preference customers but the three named hereafter, and 2.65 mills per kilowatt-hour to Georgia Power Company, Duke Power Company, and to the following preference customers: Alabama Electric Cooperative, Inc., South Carolina Public Service Authority, and Greenwood County Electric Power Commission. The 3.25 mill rate applies to preferred customers who have no generating facilities or transmission facilities that would enable them to purchase power at site of generation, and who must, therefore, have the available power firmed up and wheeled to them over transmission facilities of others. The 2.65 mill rate, on the other hand, applies to customers who have generation and transmission facilities of their own and who can take the variable peaking power output at site of the Government's projects and firm up the power themselves. In addition to rates for capacity and on-peak energy, rate schedules GA–2, ALA–1, SC–1 and CAR–2 provide for the sale of off-peak and/or dump energy at a rate of 2.00 mills per kilowatt-hour. Thus, such energy is available only to customers which purchase energy at site of generation.

Proposed rates for capacity are 1.5 cents less per kilowatt-month than in the rate schedules they supersede with the exception of expiring rate schedules CH–

1 and CH–2. In rate schedule CH–1 the capacity charge is $0.75 per kilowatt per month and $0.175 per kilowatt per week; in schedule CH–2 the capacity charge is $0.175 per kilowatt per week.

Except for rate schedules CH–1 and CH–2, the proposed rates for on-peak energy are 0.31 mill less than the rates now in force, the proposed rates being 3.25 and 2.65 mills per kilowatt-hour and comparable present rates being 3.56 and 2.96 mills per kilowatt-hour. Current rate schedules CH–1 and CH–2 contain several energy rates ranging from 4.00 mills to 2.00 mills per kilowatt-hour. The proposed rate of 2.00 mills per kilowatt-hour for off-peak and dump energy is the same as the present rates for such energy.

A comparison of costs to SEPA's customers under existing and proposed rates for power produced at the five presently operating projects, made by Interior, indicates a total annual savings to all customers of about 4.6 percent, roughly $680,000.

Adoption of the rates proposed would provide generally uniform rates for all of SEPA's customers, with a rate differential of 0.60 mill per kilowatt-hour between energy sold at market and at site of generation.

In support of the rates proposed SEPA has submitted a repayment study based on costs and revenues associated with the generation and sale of electric power and energy expected to be produced at the five projects presently in operation mentioned above and in addition has included for projects either under construction or authorized for construction by the Corps of Engineers. These projects are Carters, located in Georgia on the Coosawatee River; Millers Ferry and Jones Bluff, both in Alabama, and both on the Alabama River and West Point on the Georgia-Alabama state boundary on the Chattahoochee River. The first two of these projects are expected to be in operation in 1969 and the last two in 1971.

SEPA's repayment study begins with fiscal year 1950, the first year of power operations at the Allatoona project, and extends through fiscal year 2020, the 50th year following the in-service date of the last of the nine projects. This study indicates that, with revenues produced by application of the proposed rates, the initial capital costs of all nine projects will be repaid before the end of fiscal year 2018, with some surplus accruing in each of the last three years of the study. Repayment is shown to be made so that the initial capital costs of each project will be repaid 50 years after the project begins full commercial generation of electric energy. In this study, SEPA has assumed that net revenues from the sale of power and energy developed at each project after the initial capital costs of the project have been repaid would continue to be available to help repay the capital costs of projects whose 50-year repayment period ends at some later date.

Under this payout method, the total annual cost upon completion of the nine-project system in fiscal year 1971 is estimated to be $21,875,000. The sum covers operation, maintenance, replacement, wheeling, and marketing expenses, interest on the remaining investment each year, and an amount which would repay the system capital costs within 48 years from that date. Investments and annual charges for the multiple-purpose projects as used in the study are those allocated to power. An allowance was made by SEPA for anticipated investment cost increases for the four new projects in the system over the amounts estimated currently by the Corps of Engineers. Interest rates are those applicable at the time construction funds are first made available for each project, that is 2½

percent for the five operating projects, 2⅝ percent for Carters and Millers Ferry, and 3 percent for Jones Bluff and West Point.

Estimates of anticipated revenues are based upon sale of the power at rates in the proposed rate schedules and repetition of historical stream flows, and appear reasonable. The estimated revenues to be received from the sale of power and energy at the proposed rates during the five-year period 1964–1969 would be sufficient to pay all annual costs including scheduled amortization of the initial Federal investment under a schedule which would repay the total investment in the nine-project system in the forty-eighth year after the last project is placed in commercial operation. The repayment of the initial investment cost during the five-year period would total $20,896,156.

Notice of the request for approval of the proposed rates and charges was sent to State officials and other interested parties and published in the Federal Register on April 14, 1964 (29 F.R. 5103) stating that any person desiring to make comments or suggestions for the Commission's consideration should submit same on or before April 24, 1964. No comments or suggestions were received.

The Commission finds:

The proposed rates and charges of SEPA for the sale of electric power and energy from the Allatoona, Buford, Clark Hill, Hartwell, and Walter F. George Projects as set forth in Wholesale Power Rate Schedules GA–1, GA–2, ALA–1, SC–1, CAR–1, and CAR–2, all as described above, for a period beginning with the date of the issuance of this order, and ending June 30, 1969, will not be inconsistent with the provisions of the Flood Control Act of 1944.

The Commission orders:

The proposed rates and charges of SEPA, for the sale of electric power and energy from the Allatoona, Buford, Clark Hill, Hartwell, and Walter F. George Projects, as set forth in Wholesale Power Rate Schedules GA–1, GA–2, ALA–1, SC–1, CAR–1, and CAR–2 all described above, hereby are confirmed and approved for a period beginning with the date of issuance of this order and ending June 30, 1969.

OPINION NO. 426–A

CONTINENTAL OIL COMPANY, DOCKET NO. CI63–979

OPINION AND ORDER DENYING APPLICATIONS FOR REHEARING AND STAY

(Issued July 2, 1964)

Syllabus

1. Distinguishing *Mobile*, Commission *rejects* United's claim of "prospective customer" status and thus one to which unilaterally increased rates may be offered but not imposed. Pp. 9, 10.
2. Order directing pipeline to comply with its obligations under expired contract until it receives abandonment authority, is not subject to attack on grounds of vagueness. P. 10.

3. Opinion No. 426 did not seek to enforce contract obligations; it sought to enforce statutory obligations—it is irrelevant that producer rather than pipeline exercised specified option to cancel contract, or in fact, that contract had been cancelled. P. 10.
4. There is no inconsistency in ordering pipeline to operate pursuant to underlying contract, while at same time allowing rate to be charged not contemplated by contract. P. 10.
5. A producer has the right to file change in certificate terms at expiration of underlying contract. P. 10.
6. It is a *non sequitur* to contend that Commission must exercise nonexistent authority over local distribution companies in order to administer effectively its delegated authority. P. 11.
7. If distribution companies are to be required to secure approval before abandoning service from pipeline, such approval must be sought from state agency. P. 11.
8. Procedurally, unilaterally-filed rate increases are no less lawful than mutually-agreeable filings made during course of contract. P. 11.
9. Contract termination alone does not obviate need to comply with Section 7(b)—for producers that need remains as long as certificate is outstanding; for purchasers, so long as jurisdictional facilities are in existence. P. 11.
10. Commission *denies* United's request for stay as failing to meet standards of *Virgina Petroleum Jobbers*. P. 12.
11. Commission *denies* applications for rehearing and for stay. Commissioner Woodward *dissenting*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

O'Connor, *Commissioner:*

In Opinion No. 426, issued May 5, 1964, 31 FPC 1079, we held that United Gas Pipe Line's (United) act of January 31, 1963, resulting in the complete non-use of jurisdictional facilities and indefinite cessation of purchases from reserves from which gas previously flowed in interstate commerce, constituted an abandonment of facilities and service within Section 7(b) of the Natural Gas Act. An application for stay, limited to the date of this order, was filed by United on May 5, and granted by the Commission on May 7. On June 3, 1964, United filed an application for rehearing and, in the alternative, a stay pending final judicial determination of the opinion and accompanying order. On June 4, an application for rehearing was filed by Texas Eastern Transmission Corporation (Texas Eastern) which had intervened in the proceedings before the Presiding Examiner. On June 8, Continental Oil Company (Continental), from which United had ceased to purchase, filed an answer in opposition to the application for a stay pending final judicial determination.

United urges error in not holding it to be a "prospective customer" of Continental and thus one to which unilaterally-increased rates may be offered but not imposed. In asserted support, United cites the following Supreme Court statement from *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*:

> The obvious implication is that, except as specifically limited by the Act, the rate-making powers of natural gas companies were to be no different from those they would possess in the absence of the Act: to establish *ex parte*, and to change at will, the rates offered to prospective customers; or

to fix by contract, and change only by mutual agreement, the rate agreed upon with a particular customer.[1]

The Court, speaking in the context of the pipeline-distributor relationship, was referencing "prospective customers" as those with whom contracts had not been entered. The Court was not referring to previous purchasers, with whom contracts had been made; by whom certificated or certificable facilities had been constructed and placed into operation; to whom producers were obligated to continue to sell; and, upon whom, producers, ofttimes by possessing residual reserves too marginal to interest other purchasers, had become solely dependent. The statement clearly will not support the proposition that pipeline purchasers, operating jurisdictional facilities and rendering services thereby, are free to reject at their discretion, lawful rate increases.

United also urges error in that the opinion did not prescribe the precise terms under which United was to continue to purchase Continental's gas; that the Commission was seeking to enforce contracts, an activity contended to be outside its statutory authority; and that, at any rate, the contract had been cancelled by Continental.

United's first point is without merit. Prior to its abandonment, United never felt compelled to ask the myriad of questions it now raises, as to how it should comply with its obligations under the certificate inasmuch as the contract itself provided the answers. United obviously was capable, in the ten years during which the contract was in effect, to conduct its purchasing in a manner consistent with the contract. We feel certain it could do so now, and that the order, which merely directed it to comply with its obligations under the expired contract (except to the extent we have approved filed rate changes) until it receives abandonment authority, is not subject to attack on the grounds of vagueness. Moreover, to specify conditions, as United suggests, would be inconsistent with our aim of merely continuing the purchase pattern existing at the time of Continental's filing. We will specify conditions, if at all, only in the event United fails to show that the public convenience and necessity permits the abandonment already effected. As yet, United has not chosen to avail itself of its statutory right to make such a showing.

United's second and third points are likewise without merit. Opinion No. 426 did not seek to enforce contract obligations; it sought to enforce statutory obligations. Consequently, it is irrelevant that Continental rather than United exercised the specified option to cancel the contract, or in fact, that the contract had been cancelled. Further, we find no inconsistency in our ordering United to operate pursuant to the underlying contract, while at the same time allowing a rate to be charged not contemplated by that contract. As the *Sunray* case reveals a producer has the right to file a change in the terms of its certificate at the expiration of the underlying contract, and such a change may become effective either on thirty days notice if the Commission does not suspend, or subject to refund after a potential five month suspension period. For purposes of Section 7(b), however, those terms that are not specifically altered in this manner are to remain in effect until one party justifies an abandonment.

Texas Eastern takes exception to our statement that ". . . if the power to compel the continuation of sales is not to be reduced to mere illusion, the power to compel the continuation of purchases must be its correlative."[2] It argues ". . . if logic requires that the Commission must have the power to compel pipe-

[1] 350 U.S. 332, 343 (1956).
[2] 31 FPC 1079, at 1085.

lines to continue purchases from independent producers at supply end of the line, then it necessarily follows that the Commission must have the same power to compel municipalities and distributing companies to continue purchases from the pipelines at the market end of their lines."[3] We feel that the contention of Texas Eastern is fallacious. Here we are dealing with two natural-gas companies, both of which are subject to our jurisdiction under the Natural Gas Act. This Act provides that all companies subject thereto must obtain our permission and approval prior to abandoning facilities or service. On the other hand the Commission has no jurisdiction over local distribution companies. It is a *non sequitur* to contend that we must exercise non-existent authority over local distribution companies in order to administer effectively authority which has been delegated to the Commission. If distribution companies are to be required to secure approval before abandoning a service they are taking from a particular pipeline, this approval, of necessity, must be sought from a state agency. The fact that we do not exercise this power over local distribution companies or the possibility that some states may not choose to do so does not detract from the validity of our statement that the power to compel the continuation of producer sales, where the public interest so dictates, would be largely illusory if we could not compel the continuation of pipeline purchases.

United and Texas Eastern assail our conclusion that ". . . absent satisfaction of (Section 7(b)), which cannot be met by mere showing of contractual termination, the *status quo* is to continue."[4] They contend that we have violated our own rationale by allowing Continental to file for a rate higher than that allowed by contract, thus premising the *status* as that period prior to December 28, 1962, the date Continental filed its increase.

Their error lies in the point-in-time they chose. There is no doubt but that producers are free to file rate increases upon contract termination.[5] Procedurally, these unilaterally-filed rate increases are no less lawful than mutually-agreeable filings, filed during the course of the contract. The only distinction is that, in the former instance, the purchaser in addition to his right to oppose the rate increase filing is afforded the opportunity, under Section 7(b), to prove that the public convenience and necessity does not require it to purchase at the filed rate. Contract termination, alone, does not obviate the need to comply with this Section. For producers, that need remains so long as there is an outstanding certificate. For purchasers, it remains so long as jurisdictional facilities are in existence.

On May 11, 1964, Continental filed a motion to correct footnote 14 wherein we state that it was the only producer of record in the Johnson Bayou Field. An examination of the record, as well as our own public files, indicates that the statement was erroneous. Not only are other producers operating in the Johnson Bayou Field, but several are also producing from the same reservoirs as Continental. Presumably, Continental is currently suffering drainage, and footnote 14 will be appropriately amended.

On June 8, 1964, Continental filed an answer in opposition to United's request for a stay. It contends that granting such a request would irreparably injure Continental by causing drainage and possible lease forfeiture. We are satisfied that such injury is likely to accrue; that the dollar-impact on United of an order compelling continued takes until it justifies its abandonment would be *de mini-*

[3] Application by Texas Eastern Transmission Corporation for Rehearing of Opinion No. 426, pp. 5–6.
[4] *Id.*, at 1084.
[5] *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 364 U.S. 137 (1960).

mis; and that, at any rate, if Opinion 426 is finally reversed in the courts, United will possess legal remedies to recover excess payments. United's request, failing to meet the standards of *Virginia Petroleum Jobbers* v. *F.P.C.*,[6] must be denied.

The Commission finds:

No new facts or principles of law have been presented in the applications for rehearing which were not fully considered by the Commission prior to the rendition of the aforesaid opinion and order, or, having now been so considered, warrant further hearing, modification or revocation of said opinion and order, except as specified below.

The Commission orders:

(A) The applications for rehearing filed herein by United Gas Pipe Line Company and Texas Eastern Transmission Corporation are hereby denied.

(B) The stay requested by United Gas Pipe Line Company is hereby denied.

(C) Footnote 14 on page 1083 of the opinion shall be modified to read as follows:

[14] Testimony adduced in this proceeding, corroborated by Commission files, indicates that other producers are operating in the Johnson Bayou Field (Record, volume 1, pp. 171–72, 174), and, in fact, producing from the same reservoirs as Continental. *Id.* at 90. Even in the absence of drainage, producers abandoned under circumstances as now before us could present a strong justification under Section 7(b) for allowing severance from their previous purchaser, thus freeing their gas from its interstate dedication.

Commissioner Woodward *dissenting* stated that the applications for rehearing and stay should be granted.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

HIGHLAND OIL COMPANY, DOCKET NOS. G–19866 AND RI60–283

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued July 2, 1964)

On May 15, 1964, Highland Oil Company (Highland) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Highland. The offer relates to a sale made under Highland's FPC Gas Rate Schedule No. 2 in Duval County, Texas (Texas R.R. Com. District #4). The proposed increased rates of 15.0952¢ and 17.24347¢ per Mcf were suspended by order of the Commission for the statutory period, and were made effective by Highland on April 1, and October 6, 1960, respectively.

Under the terms of the offer, Highland proposes to eliminate the favored-nation, price redetermination and their periodic escalation provisions from its rate schedule and to establish a 15¢ per Mcf rate for the subject sale. Highland's annual revenues will be decreased about $5,200 from the presently effective rates. No protests or objections have been filed to the offer.

Highland, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in

---

[6] 259 F. 2d 921 (D.C. Cir. 1958).

excess of the settlement rate.[1] The estimated total dollars to be refunded approximates $18,800, exclusive of interest.

The proposed settlement is consistent with the provisions of the *Second Amendment to the Commission's Statement of General Policy No. 61–1*, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Highland's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Highland's rate and rate schedule.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Highland on May 15, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Highland on May 15, 1964, is hereby approved in accordance with the provisions of this order.

(B) Highland shall file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 2, eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Highland shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate, making account for proper charges, with simple interest at 7 percent, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal, and interest, and the bases for determination, together with a copy of a release from TGT with respect to such refunds.

(D) Upon notification by the Secretary of the Commission that Highland has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement, subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated insofar as they relate to Highland's FPC Gas Rate Schedule No. 2, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64–2 without further order of the Commission.

(E) The acceptance by the Commission of Highland's offer of settlement, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Highland, including area rate or other similar proceedings.

[1] Highland's FPC Gas Rate Schedule No. 2 is subject to a dehydration charge by TGT, for which allowance must be made in computing the refund.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

HUMBLE OIL & REFINING COMPANY, ET AL., DOCKET NO. RI60-186, ET AL.

ORDER REDESIGNATING PROCEEDING IN PART

(Issued July 14, 1964)

By the Commission's order issued May 29, 1963, in Docket No. G-9765, Humble Oil & Refining Company (Humble) was permitted to amend its certificate of public convenience and necessity covering sales of natural gas to Natural Gas Pipeline Company of America from the O. O. Sutton No. 2 well, among others, located in the Camrick Southeast Pool, Texas County, Oklahoma, to include the interests of 21 additional co-owners under its FPC Gas Rate Schedule No. 191.

The proceedings in Docket Nos. RI60-186 and RI61-392 relate to proposed rate increases suspended by the Commission's orders issued on March 16, 1960 and March 16, 1961, respectively. Included among the suspended rate schedules in said dockets[1] is Humble's FPC Gas Rate Schedule No. 191. The suspended supplements have been made effective subject to refund pursuant to Section 4(e) of the Natural Gas Act. Humble warrants in a letter agreement dated December 14, 1960, that it has the right to sell each non-operator's share of gas from the unit involved and that it will indemnify Natural Gas Pipeline Company of America as to any adverse claims asserted with respect to such gas, among other things. Humble also states that its filings will cover each non-operator's share of gas produced from the unit.

By letter dated May 23, 1961, Humble was advised that its FPC Gas Rate Schedule No. 191 had been redesignated as Humble Oil & Refining Company (Operator), *et al.*

The Commission finds:

Good cause exists for redesignating the proceedings in Docket Nos. RI60-186 and RI61-392 as Humble Oil & Refining Company and Humble Oil & Refining Company (Operator), *et al.*, insofar as they pertain to Humble Oil & Refining Company's (Operator), *et al.*, FPC Gas Rate Schedule No. 191.

The Commission orders:

The proceedings in Docket Nos. RI60-186 and RI61-392 are hereby redesignated as Humble Oil & Refining Company and Humble Oil & Refining Company (Operator), *et al.*, insofar as they pertain to Humble's FPC Gas Rate Schedule No. 191.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

WILLIAM HERBERT HUNT TRUST ESTATE; LAMAR HUNT TRUST ESTATE; HUNT OIL COMPANY; PLACID OIL COMPANY (OPERATOR), ET AL.

ORDER DENYING APPLICATIONS FOR REHEARING

(Issued July 2, 1964)

The above-named parties (hereinafter referred to collectively as "petitioners" on June 1, 1964, filed applications for rehearing of similar letter orders issued

[1] Humble's FPC Gas Rate Schedules Nos. 202, 213, 215, 220, 227, 229, 242 and 253 were also suspended in said dockets.

May 6, 1964,* by the Commission rejecting their respective tenders of notices of change purporting to change the presently effective rates to 18.0¢.[1] We there held that the tendered notices did not constitute changes in rate within the meaning of section 4(d) of the Natural Gas Act because they did not propose to change the 18.0¢ rates then in effect.

Petitioners claim that the tendered notices propose to change the present rates upon judicial review "in the event" the Commission's determination in Opinion No. 412[2] concerning the proper initial price for the subject sales is upheld. In that case we held the proper initial price to be 15¢ for sales in Texas District Nos. 2 and 4, but stayed the effect of our order pending judicial review at the request of the parties involved here. Because of the stay, petitioners are now collecting 18¢ for these sales subject to refund as provided in our stay order.

As the Court said in *Amerada Petroleum Corp.* v. *F.P.C.*, 293 F. 2d 572 at 575 (10 Cir., 1961):

> * * * Section 4(d) of the Act concerns itself with the making of changes in rates. It forbids the making of changes without notice thereof being given to the Commission for at least thirty days before such changed rates are to go into effect. And it provides that the notice shall state the change or changes to be made in the schedule or schedules "then in force" and the time at which the changed rates shall go into effect. Considered as a whole, the section bears a clear token of Congressional implication that *the power of a natural gas company to make a changes or changes in rates is limited to the rate or rates in force and effect at the time of the change or changes.* [Emphasis supplied.]

Since petitioners are presently charging and collecting 18¢, it is clear that the proposed changes to 18¢ would not in fact change the rates being charged and collected. Since the tendered notices do not constitute changes in rates within the meaning of Section 4(d) of the Natural Gas Act, we must deny petitioners applications for rehearing.

The Commission orders:

For the reason set forth above, the applications for rehearing filed by petitioners on June 1, 1964, are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP64-187

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 2, 1964)

On February 24, 1964, as supplemented on March 23, 1964, New York State Natural Gas Corporation (Applicant) filed in Docket No. CP64-187 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public

---

*Printed at 31 FPC 1123-1124.

[1] The notices, relating to sales in Texas District Nos. 2 and 4, were tendered as proposed supplements to William Herbert Hunt Trust Estate's FPC Gas Rate Schedule No. 11, Lamar Hunt Trust Estate's FPC Gas Rate Schedule No. 9, Hunt Oil Company's FPC Gas Rate Schedule No. 55, and Placid Oil Company (Operator), *et al.* FPC Gas Rate Schedule No. 22.

[2] Opinion No. 412 involving *Hassie Hunt Trust (Operator), et al.* Docket No. G-19115 *et al.* was issued December 9, 1963, 30 FPC 1438.

convenience and necessity authorizing the construction and operation of natural gas pipelines, compressor facilities, and delivery points to meet the increased requirements of existing customers beginning with the 1964–65 winter, all as more fully set forth in the application as supplemented.

To increase the capacity downstream from the Borger Compressor Station, Tompkins County, New York, Applicant proposes to construct and operate one 1100 hp compressor unit at the Borger Compressor Station and 14 miles of 30-inch pipeline loop extending Line No. 550 northeast from the Borger Compressor Station. The proposed facilities will increase the capacity north from the Borger Compressor Station to the Syracuse area by 38,700 Mcf per day, and northeast from the Borger Compressor Station to the Schenectady-Albany area by 39,500 Mcf per day. The additional capacity is required to meet increased requirements of this service area commencing with the 1964–65 winter.

To make deliveries at new points to an existing customer, Niagara Mohawk Power Corporation, Applicant proposes to construct and operate 7.4 miles of 12-inch lateral pipeline extending north from Applicant's 20-inch mainline to the vicinity of Cazenovia, Madison County, New York, a measuring and regulating station at the terminus of said lateral, and a tap and metering facilities on Applicant's 16-inch mainline near Rotterdam, Schenectady County, New York. These two new delivery points will make gas available to Niagara Mohawk Power Corporation for distribution in growth areas which cannot be served adequately from existing delivery points.

To provide increased capacity between the Leidy Storage Field and the Sabinsville Compressor Station, Applicant proposes to construct and operate 14.05 miles of 26-inch pipeline extending from Sabinsville Station, Tioga County, Pennsylvania, south to a connection with Line No. 280. These facilities are needed for the storage injection season beginning April 1965 and will increase the capacity between the Leidy Storage Field and the Sabinsville Compressor Station by 59,000 Mcf per day. The present pipeline capacity north of Leidy in Line No. 280 is approximately 176,000 Mcf per day, and based upon estimates for the next three years, approximately 95% of this capacity will be required to meet normal customer requirements (including storage service) and to replace the storage inventories following normal winters. In the event of a colder than normal winter season, as experienced during the 1962–63 winter, it would not be possible to replace the depleted storage volumes within the following input season due to existing Line No. 280 limitations.

The proposed facilities are estimated to cost approximately $3,840,432, to be financed from funds on hand and funds to be obtained from Applicant's parent corporation, Consolidated Natural Gas Corporation.

After due notice no petition to intervene, notice of intervention, or protest to the granting of the application has been received.

At a hearing held on June 26, 1964, the Commission on its own motion received and made part of the record in this proceeding all evidence, including the application and supplement and exhibits thereto submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, New York State Natural Gas Corporation, a New York corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 27, 1942, in Docket No. G–312 (3 FPC 844).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale subject to the jurisdic-

tion of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same hereby issued authorizing Applicant, New York State Natural Gas Corporation, to construct and operate the proposed facilities as hereinbefore described, and as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within six months from the date on which this order issues.

THE ATLANTIC REFINING COMPANY, DOCKET NO. CI62-1562

ORDER ON REHEARING MODIFYING INITIAL DECISION AND REJECTING PROPOSED RATE SCHEDULE AND APPLICATION FOR CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 6, 1964)*

Syllabus

1. Since applicable contract rate at any specified time is either expressly stated or can be readily ascertained, Article XIII, Section 1 of contract complies with substantive requirements of Section 154.93 of Regulations under the Natural Gas Act and such provision does not make Producer's application and proposed rate schedule subject to rejection. Pp. 18, 19.
2. Terms of pricing provisions of Article XIII, Section 3 of contract creates an indefinite escalation not permissible under Section 154.93 of the Regulations and therefore inoperative and of no effect at law. P. 19.
3. Upon rehearing, Commission *affirms* prior letter-order rejecting proposed rate schedule and application for certificate of public convenience and necessity.

Sherman S. Poland for the Atlantic Refining Company
William E. Hynan for the Staff of the Federal Power Commission

*Initial Decision appears on P. 19.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

By letter order dated July 19, 1962, *infra*, p. 19, the Commission, acting pursuant to Section 154.93 (as amended by Commission Orders No. 232, 232–A and 242) and Section 154.100 of the Regulations Under the Natural Gas Act, rejected the proposed rate schedule and related certificate application submitted by The Atlantic Refining Company in the captioned docket on the ground that the gas purchase contract contained pricing provisions other than those permitted by Section 154.93.

Upon application for rehearing, the Commission concluded that the language of the pricing provisions in the subject contract was equivocal. Rehearing thereupon was granted to determine the meaning of the provisions and whether such provisions are in fact proscribed by Section 154.93. A hearing was held on October 19, 1962, the only participants being applicant and counsel for staff. The proceeding is now before the Commission for decision on exceptions by Atlantic to the initial decision issued by the presiding examiner on May 6, 1964.

Applicant, both throughout the hearing and in its briefs, took issue with Section 154.93, contending that the provision exceeds the Commission's delegated authority under the Natural Gas Act. However, as the examiner points out, these arguments have now decisively been answered by the recent decision of the Supreme Court in *F.P.C.* v. *Texaco Inc., et al.*, decided April 20, 1964,[1] which upholds the validity of Section 154.93.

In excepting to the examiner's decision applicant no longer contends that Section 154.93 of the Regulations is improper; it takes exception only to that portion of the examiner's decision which holds that certain provisions in the fixed escalation clause in Article XIII, Section 1 of the contract violate the terms of Section 154.93. No exception is taken to the further finding that Section 3 of Article XIII contains a provision not permissable under Section 154.93 and which in itself is sufficient to require rejection of the contract and certificate application.

The pertinent pricing provisions of the contract are set out in full in the examiner's decision, as are the permissable provisions specified in subsections (a), (b) and (c) of Section 154.93 for a change in price. The examiner found that while paragraphs *a* and *b* of Article XIII, Section 1, comply with subsection 154.93(b), *i.e.* "Provisions that change a price to a specific amount at a definite date;" paragraphs *c* and *d* do not. We disagree. Paragraph *b* provides that "For the five (5) year period commencing on January 1, 1964, thirteen cents (13¢) per thousand (1,000) cubic feet." The following sections then go on to provide a price of 14 cents per Mcf "for the next five (5) year period" (paragraph *c*) and an increase of 1-cent per Mcf for the next 5 year period and for each succeeding 5 year period over the price "in effect at the beginning of the previous five (5) year period" (paragraph *d*).

Paragraph *c* is indistinguishable in substance from paragraphs *a* and *b* and which concededly are acceptable pricing provisions. The only difference is that the beginning date is not precisely stated. That this date is intended to be January 1, 1969, cannot seriously be disputed. Further, the fact that paragraph *d* does not state the total price to be effective in the indicated time periods, but merely states that the price shall be 1-cent per Mcf higher than the price pertaining in the previous 5 year period, does not make the pricing provision indefinite in character. Since the applicable contract rate at any specified time is either expressly stated or can readily be ascertained, it is our opinion that Article XIII, Section 1 of applicant's contract complies with the substantive requirements of

[1] No. 386, Oct. Term 1963, 377 U.S. 33, 84 S. Ct. 1105 (1964).

Section 154.93 of the Regulations and that such provisions do not make Atlantic's application and proposed rate schedule subject to rejection.

Article XIII, Section 3, affords Atlantic an alternative of requesting a redetermination of the price to be paid for the periods set out in paragraphs *b*, *c* and *d* of Section 1. Subsection 154.93(c), however, expressly limits such price redeterminations to periods "during which there is no provision for a change in price to a specific amount * * *." This option to Atlantic, together with the proviso that the redetermined price "shall not be higher than the price allowed pursuant to paragraph (3) of Section 154.93, Part 154, Regulations Under the Natural Gas Act, and shall not be lower than the price provided in section 1 of this article with respect to such period" creates an indefinite escalation pricing provision not within the scope of the permissible pricing provisions in Section 154.93. Accordingly, the previous rejection of the filings will be affirmed.

The Commission finds:

(1) The terms of the pricing provisions contained in Article XIII, Section 3 of the May 14, 1962 contract between Atlantic and El Paso are not permissable under Section 154.93 of the Commission's Regulations Under the Natural Gas Act and are therefore inoperative and of no effect at law.

(2) Section 154.93 of the Regulations Under the Natural Gas Act provides, in part, that any contract executed on or after April 2, 1962, containing price changing provisions other than the permissable provisions therein set forth shall be rejected.

The Commission orders:

(A) The following letter-order to the Atlantic Refining Company in Docket No. CI62-1562 rejecting the filings referred to therein is affirmed.

(B) This rejection is without prejudice to the resubmission of the proposed rate schedule and application for a certificate of public convenience and necessity in accordance with the applicable provisions of the Natural Gas Act and of the Commission's Regulations thereunder.

[LETTER-ORDER REJECTING RATE FILING]

THE ATLANTIC REFINING COMPANY,
P.O. BOX 2819, DALLAS 21, TEXAS.

JULY 19, 1962.

Attention: Mr. Stuart J. Scott

Gentlemen: This is with reference to your letter of June 28, 1962, submitting (1) a gas purchase agreement dated May 14, 1962, for filing as a proposed rate schedule and (2) a related application in Docket No. CI62-1562 for a certificate of public convenience and necessity.

The gas purchase agreement contains pricing provisions other than those permitted by Section 154.93 of the Commission's Regulations. Therefore, in accordance with Commission Order No. 242 (copy enclosed), and Section 154.100 of the Commission's Regulations, the proposed rate schedule and related certificate application are hereby rejected. All available copies are returned herewith.

This rejection is without prejudice to the resubmittal of the subject filings upon deletion of the unacceptable provisions.

Very truly yours,

J. H. GUTRIDE, *Secretary.*

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON PETITION FOR REHEARING
(Issued May 6, 1964)

FRAZEE, *Presiding Examiner:* The Atlantic Refining Company (Atlantic) produces natural gas from certain leases in the Basin Dakota and Blanco Mesa

Verde fields in Rio Arriba County, New Mexico. On May 14, 1962, Atlantic contracted [1] to sell this gas to the El Paso Natural Gas Company (El Paso). On June 29, 1962, Atlantic filed an application [2] with the Federal Power Commission for a certificate of public convenience and necessity [3] authorizing the transportation and sale of this gas in interstate commerce for resale. On this same date, Atlantic filed the El Paso contract with the Commission as its rate schedule.

The Commission sent a letter-order [4] to Atlantic on July 19, 1962, *supra*, rejecting its application for a certificate of public convenience and necessity and the rate schedule, stating "The gas purchase agreement contains pricing provisions other than those permitted by Section 154.93 of the Commission's Regulations. Therefore, in accordance with Commission Order No. 242 (copy enclosed), and Section 154.100 of the Commission's Regulations, the proposed rate schedule and related certificate application are hereby rejected. All available copies are returned herewith." The letter-order continued by saying "This rejection is without prejudice to the resubmittal of the subject filings upon deletion of the unacceptable provisions."

Following the receipt of the letter-order of the Commission rejecting its application for a certificate of public convenience and necessity, and its rate schedule, Atlantic filed a petition for rehearing on August 15, 1962, alleging that Section 154.93 of the Commission's Regulations was invalid for the reason it exceeded the powers granted to the Commission by the Natural Gas Act, as amended, since it attempts to deny Atlantic the right to establish its own rates by contract in the first instance subject only to being modified upon a finding of their unlawfulness under Section 4 or Section 5 of the Natural Gas Act.

Acting upon Atlantic's petition for rehearing, on September 13, 1962, the Commission issued its "Order Providing for Rehearing and Fixing Date for Hearing," in which it said "Full and careful consideration was given similar contentions raised in Docket No. R-203 (27 FPC 339), which concerned the amendment of Section 154.93, wherein we determined that Sections 4, 5, and 7 did give the Commission the power to refuse to approve contractual provisions found adverse to the public interest and we clearly set forth the rationale in Order No. 242 issued therein on February 8, 1962." The Commission went on to say, ". . . the language of the pricing provisions in Atlantic's contract is equivocal." Therefore a rehearing was "granted and a public hearing, limited to the issues set out above" was ordered to be convened on October 11, 1962, and gave notice thereof by a publication in the Federal Register.[5] The hearing was duly convened on the date fixed and recessed to October 14, 1962, when the hearing was reconvened and concluded.

At the hearing Atlantic offered the testimony of one witness, its Manager of Gas Sales, who was responsible for the negotiation of the gas sales contract with El Paso,[6] and who testified showing the manner in which the pricing provisions were negotiated and the considerations which led to the execution of the formal written sales agreement with El Paso.[7] Upon an objection and motion by Staff counsel this testimony was stricken from the record.[8] However, upon motion of Atlantic's counsel the stricken testimony was admitted as Atlantic's offer of proof.[9] Atlantic's application for a certificate and its companion rate schedule

[6] Tr. p. 10.
[7] Tr. pp. 10–26.
[8] Tr. pp. 19, 26.
[9] Tr. p. 26.

were received in evidence as Exhibits 1 and 2. The letter-order of the Commission, dated July 19, 1962, was received as Item A, by reference, and the Commission's Order No. 242 was also received in evidence as Item B, by reference.

No evidence was offered by the Staff of the Commission. There were no other parties to the proceeding.

After hearing the oral arguments of counsel, a briefing schedule was set and briefs were filed by Atlantic and by the Staff of the Commission.

One of the two principal issues in the case concerns the validity of Section 154.93, as amended by Commission Order Nos. 232, 232-A, and 242. Atlantic contends this section of the Commission's Regulations exceeds the authority delegated to the Commission by the Natural Gas Act, as amended.

Following the decision in *Phillips Petroleum Company* v. *Wisconsin, et al.*, (June 7, 1964), 347 U.S. 672, the Commission issued a series of rule-making orders[10] promulgating regulations governing the filing of rate schedules and applications for certificates of public convenience and necessity. The regulations presently provide that only certain pricing provisions in the contracts of independent producers filed with the Commission as rate schedules are permissible,[11] any other provisions for a change of price being inoperative and of no effect at law.[12] By its Order No. 242, 27 FPC 339, 340, the Commission further amended Section 154.93 of its Regulations to provide "that any contract executed on or after April 2, 1962, containing price-changing provisions other than the permissible provisions . . . shall be rejected" so far as the producer rates are concerned [13] that so far as pipeline applications for certificates are concerned, any producer contract executed after the above date which contains non-permissible pricing provisions "will be given no consideration in determining adequacy" of its gas supply,[14] and that a producer's application for a certificate of public convenience and necessity "shall be rejected" if any contract submitted in support thereof contains any of the non-permissible provisions.[15]

The foregoing regulations governing the filing of rate schedules by independent producers were promulgated by the Commission pursuant to the provisions of Section 4 of the Administrative Procedure Act, 5 U.S.C. Sec. 1003. Notice of the proposed rule-making by the Commission in Docket No. R-203, 27 FPC 339, was published in the Federal Register, 27 Fed. Reg. 1356, as required by Section 4 of the Administrative Procedure Act, and by mailing copies of the notice to interested persons, including natural gas companies, and to State and Federal agencies, to afford them the opportunity to submit their views in writing to the Commission.

All interested parties were afforded ". . . an opportunity to participate in the rule-making" of the Commission "through submission of written data, views, or arguments with or without opportunity to present the same orally in any manner . . ." Section 4(b) Administrative Procedure Act. Numerous comments were submitted, a number of parties contending the promulgation of these regulations would be unlawful and beyond the powers granted to the Commission by the Natural Gas Act. The Commission concluded, however, that Sections 4, 5, and 7 of the Natural Gas Act contemplate it will refuse to approve contractual provisions found to be adverse to the public interest. Therefore,

[13] *Ibid.*

[14] See Section 157.14 (a) (10) (v), "provided further, however," *et seq.*

[15] See Section 157.25.

acting under the authorization contained in Section 16 of the Act, the Commission issued its Order No. 242, 27 FPC 339, amending Section 154.93 of its regulations.

Section 7(c) of the Natural Gas Act states "No natural-gas company . . . shall engage in the transportation or sale of natural gas, subject to the jurisdiction of the Commission . . . unless there is in force with respect to such natural-gas company a certificate of public convenience and necessity issued by the Commission authorizing such acts or operations" and, except for the provisos contained in this Section, "In all other cases the Commission shall set the matter for hearing and shall give such reasonable notice of the hearing thereon to all interested persons as in its judgment may be necessary under rules and regulations to be prescribed by the Commission . . ." Atlantic further contends its application and rate schedule were summarily rejected without the hearing alleged to be necessary by the Act.

The Supreme Court considered this same issue in *Federal Power Commission* v. *Texaco Inc. et al.*, decided April 20, 1964, in Case No. 386—October Term, 1963, and said "the statutory requirement for a hearing under Section 7 does not preclude the Commission from particularizing statutory standards through the rule-making process and barring at the threshold those who neither measure up to them nor show reasons why in the public interest the rule should be waived." The Court went on to say "the rule making authority" of the Commission "is ample to provide the conditions for applications under Sections 4 or 7" and that "Section 16 of the Natural Gas Act gives the Commission power to prescribe such regulations as it may find necessary or appropriate to carry out the provisions of this Act." The Court continued "applications for certificates are made under Section 7 of the Act, the Commission under Section 7(e) is required to control the terms and conditions under which natural gas companies . . . may initiate sales at wholesale of natural gas in commerce."

Further considering the validity of the Commission's regulations, the Court said "the present regulations do not pass . . . on the merits of a certificate of public convenience and necessity; they merely prescribe qualifications for applicants." Then the Court said "Natural gas companies that seek to enter the field with prearranged escalator clauses and the like have a built-in device for ready manipulation of rates upward. Protection of the consumer interests against that device may be best achieved if it is done at the very threshold of the enterprise. At least the Commission may so conclude and the legislative history makes clear that its authority reaches that far."

It therefore follows, and is so concluded, that Section 154.93 of the Commission's Regulations was validly issued and is within the authority delegated to the Commission by the Natural Gas Act.

It also follows, and is so concluded, that the only hearing to which Atlantic has so far been entitled was given to it when the regulations in question were promulgated pursuant to Section 4 of the Administrative Procedure Act. Whether Atlantic can qualify for a certificate of public convenience and necessity for the sale to El Paso has never been reached for the reason that its application was not in proper form because of the non-permissible pricing provisions contained in the contract submitted for filing as its rate schedule.

The remaining principal issue is whether the May 14, 1962, contract between Atlantic and El Paso contains pricing provisions which are not permissible under the provisions of Section 154.93 of the Commission's Regulations.

Article XIII, Section 1, of the May 14, 1962, contract between Atlantic and El Paso contains the pricing provisions.[16] In Section 3 of Article XIII, the parties provide for a price redetermination at Atlantic's option.[17] This price redetermination option, the Staff says, contains non-permissible provisions which, in part, caused the rejection of the sales agreement by the Commission in its letter to Atlantic on July 19, 1962.

Section 154.93, Rate Schedule Defined, of the Commission's Regulations clearly defines "the permissible provisions for a change in price" to be:

(a) Provisions that change a price in order to reimburse the seller for all or any part of the changes in production, severance, or gathering taxes levied upon the seller;

(b) Provisions that change a price to a specific amount at a definite date; and

(c) Provisions that, once in five-year contract periods during which there is no provisions for a change in price to a specific amount (paragraph (b) of this section), change a price at a definite date by a price-redetermination based upon and not higher than a producer rate or producer rates which are subject to the jurisdiction of the Commission, are not in issue in suspension or certificate proceedings, and, are in the area of the price in question: *Provided further*, That any contract executed on or after April 2, 1962, containing price-changing provisions other than the permissible provisions set forth in the proviso next above shall be rejected.

The May 14, 1962, contract was executed for a term of twenty (20) years "and thereafter from month to month until sixty (60) days notice in writing of termination is given by either party to the other." See Article XIX, Term, p. 23, Exh. 2. Delivery of the gas to El Paso to commence on or before ninety (90) days from the date Atlantic notifies El Paso it has received and accepted a certificate of public convenience and necessity from the Federal Power Commission. See Article II, p. 4, and Article V, p. 7, Exh. 2.

Paragraphs *a* and *b* of Section 1, Article XIII, of the May 14, 1962, contract between Atlantic and El Paso comply with paragraph (b) of Section 154.93 of the Commission's regulations for they contain specific "provisions that change a

---

[16] See Exh. 2, Article XIII, p. 15, Price: "Section 1. Buyer shall pay Seller for all gas delivered hereunder in accordance with the following schedule:"

a. From the period commencing with the initial delivery of gas hereunder until January 1, 1964, twelve cents (12¢) per thousand (1,000) cubic feet.

b. For the five (5) year period commencing on January 1, 1964, thirteen cents (13¢) per thousand (1,000) cubic feet.

c. For the next five (5) year period, fourteen cents (14¢) per thousand (1,000) cubic feet.

d. For the next five (5) year period and for each succeeding five (5) year period thereafter the price to be paid by Buyer to Seller for all gas delivered hereunder shall be increased one cent (1¢) per one thousand (1,000) cubic feet more than the price in effect at the beginning of the previous five (5) year period.

[17] See Exh. 2, Article XIII, p. 15, Price: "Section 3. Seller shall have the right, at its option, to request a redetermination of the price provided in Section 1 of this article to be paid for any one or more, or all (but not for a partial period), of the periods set out in *b*, *c*, and *d* of said Section 1. Any such request made with respect to any of such periods shall be made in writing during the six (6) months immediately preceding the commencement of such period. If Seller shall make any such request, representatives of Buyer and Seller shall promptly meet and attempt to determine the then reasonable market price of the gas deliverable hereunder. In making such determination, consideration shall be given to all pertinent factors. The price so determined by Buyer and Seller, or determined by arbitration as provided in Section 4 of this article, shall be the price applicable during the entire period with respect to which the same was determined; provided that such price shall not be higher than the price allowed pursuant to paragraph (3) of Section 154.93, Part 154, Regulations Under the Natural Gas Act, and shall not be lower than the price provided in Section 1 of this article with respect to such period."

price to a specific amount at a definite date." Paragraphs *c* and *d* of Section 1, Article XIII of the contract provide that "for the next five (5) year period and for each succeeding five (5) year period thereafter the price to be paid by Buyer to Seller for all gas delivered hereunder shall be increased one cent (1¢) per one thousand (1,000) cubic feet more than the price in effect at the beginning of the previous five (5) year period." Thus, paragraphs *c* and *d* do not contain permissible provisions for the reason that they do not provide for "a change in price to a specific amount" nor a change in price "at a definite date by a price-redetermination based upon but not higher than a producer rate or producer rates which are subject to the jurisdiction of the Commission, are not in issue in suspension or certificate proceedings, and, are in the area of the price in question." See Section 154.93 of the Commission's regulations, paragraph (c).

Section 3, Article XIII, of the May 14, 1962, contract contains even more indefinite pricing provisions than those heretofore considered. Section 3 recites that "Seller shall have the right, at its option, to request a redetermination of the price provided in Section 1 of this article to be paid for any one or more, or all (but not for a partial period), of the periods set out in b, c, and d of said Section 1." Section 1, b, provides "for the five (5) year period commencing on January 1, 1964," the price shall be "thirteen cents (13¢) per thousand (1,000) cubic feet." This complied with the permissible provision provided in paragraph (b) of Section 154.93 of the regulations since it provided a change in price to a specific amount at a definite date. However, the parties then provided in Section 3 that Atlantic, at its option, might during the six (6) months immediately preceding the commencement of such period request a redetermination of the specific price of 13¢ per Mcf for the five year period commencing January 1, 1964. This option to Atlantic created an indefinite escalation pricing provision which violates the permissible pricing provisions in Section 154.93, paragraphs (b) and (c).

That it was the intent of the parties to create indefinite escalation pricing provisions is illustrated by the final sentences in Section 3, wherein it was agreed "The price so determined" either by the Buyer and the Seller, or as provided by arbitration "shall not be higher than the price allowed pursuant to paragraph (3) of Section 154.93, Part 154, Regulations Under the Natural Gas Act, and shall not be lower than the price provided in Section 1 of this article with respect to such period." Thus, in effect, the parties attempted to create both a floor and a ceiling price for the gas to be delivered on and after January 1, 1964. Such indefinite escalation pricing provisions are clearly outside the permissible provisions contained in Section 154.93 of the Regulations.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced, and the briefs filed, the Presiding Examiner finds and concludes that:

(1) Section 154.93 of the Commission's Regulations Under the Natural Gas Act having evolved as a result of a series of rule-making proceedings, as hereinabove fully considered, was promulgated under the authority delegated to the Commission by the Natural Gas Act, as amended.

(2) The terms of the pricing provisions contained in Article XIII, Section 1, paragraphs c and d, and Section 3, of the May 14, 1962, sales agreement between Atlantic, the Seller, and El Paso, the Buyer, contain pricing provisions which are not permissible under Section 154.93 of the Commission's Regulations Under the Natural Gas Act and are therefore inoperative and of no effect at law.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) The letter-order of the Commission to the Atlantic Refining Company on July 19, 1962, summarily rejecting the filings referred to therein, thereby giving effect to Section 154.93 of the Regulations Under the Natural Gas Act, as amended, by the Commission's Order No. 242, is affirmed.

(B) This rejection is without prejudice to the resubmission of the rate schedule and application for a certificate in accordance with applicable provisions of the Commission's Regulations Under the Natural Gas Act.

HARRY W. FRAZEE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

BROWN COMPANY, PROJECT NO. 2326

ORDER ISSUING LICENSE (MAJOR)

(Issued July 6, 1964)

Application was filed on November 16, 1962, by Brown Company (Applicant) of Berlin, New Hampshire, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2326, known as the Cross Project, located on the Androscoggin River, in the City of Berlin, Coos County, New Hampshire.

According to the application, construction of the original dam and powerhouse was commenced in 1902 and completed in 1903 by Berlin Mills Company, which was the former name of Applicant. The powerhouse contained five sets of 1,200 horsepower wheels directly connected to wood pulp grinders. In 1912 all grinding operations were abandoned and three units were removed and replaced by three 950 horsepower turbines, each directly connected to a 600 kilowatt generator. In 1920 the fourth unit was replaced by a 950 horsepower turbine and 700 kilowatt generator, and in 1925 the fifth unit was replaced by a 900 horsepower turbine directly connected to a 720 kilowatt generator. There have been no major project revisions since 1925. The Cross Project has a total installed capacity of 4,700 horsepower connected to generators having a total rated capacity of 3,220 kilowatts. The energy generated by the project is fed into Applicant's steam-electric and hydroelectric system supplying power to Applicant's mills located in Berlin and Gorham, New Hampshire.

By its order issued July 24, 1958,[1] the Commission found that the Androscoggin River throughout its entire length is a "navigable water" as defined in Section 3(8) of the Federal Power Act and a "navigable water of the United States" within the meaning of Section 23(b) of the Act. The basis for this finding was that the Androscoggin is presently, and for more than a century has been used for the transportation of logs and other forest products by water.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the project structures affecting navigation were considered satisfactory; that any license issued for the project should include the terms and conditions in the interests of navigation usually included in licenses for such project; and that the plans of the project structures had been approved pursuant to Section 4(e) of the Act.

---

[1] *New Hampshire Water Resources Board*, Docket No. E-6807, 20 FPC 99-101.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interest of fish and wildlife resources.

For the reasons set forth in our Opinion No. 357 (27 FPC 830, 833), the license herein granted shall have a termination date of December 31, 1993. Since there was no project construction after 1935, we will make the effective date of the license July 1, 1958, the first day of the month in which we determined the Androscoggin River to be a navigable water, as set forth above.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Maine and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purpose of a license for the project.

(2) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received.

(3) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 4,300 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) The step-up transformers mentioned in paragraph (B) below, which were included in the application for license, are part of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's Rules and Regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Brown Company (Licensee), of Berlin, New Hampshire under Section 4(e) of the Federal Power Act (Act) for a period effective as of July 1, 1958 and terminating December 31, 1993, for the continued operation and maintenance of the Cross Project No. 2326, located on the Androscoggin River, a navigable water of the United States, in Coos County, New Hampshire, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2326 consists of:

(1) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: Sheet 1 of 2 (FPC No. 2326–1) Plan View of Project Area.

(ii) Project works consisting of:

A fixed crest concrete gravity type overflow section about 292 feet long (including a sluice gate about 18 feet wide and 5 feet high, adjacent to the powerhouse) with crest elevation of about 918.1 feet, m.s.l., topped with flashboards (about 3½ feet high); a wing dam, at the right bank, including a rock-filled timber crib section about 65 feet long (crest elevation of part about 923.6 feet, m.s.l., and part about 924.6 feet, m.s.l.,), and a concrete section about 80 feet long (crest elevation about 924.6 feet, m.s.l.) with a waste gate about 7 feet wide and 4 feet high; a powerhouse (integral with the dam) adjacent to the left bank, including a gated intake section with five flumes controlled by 10-manually-operated gates (each approximately 10 feet wide and 12 feet high), one 900 horsepower turbine and four 950 horsepower turbines direct connected to one 700 kilowatt, one 720 kilowatt, and three 600 kilowatt generating units; step-up transformers; and appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L	FPC No.	Title, Cross Dam Hydroelectric Development
Sheet 1 of 4	2326-3	Plan View of Station & Dam.
Sheet 2 of 4	2326-4	Elevations of Station & Gatehouse.
Sheet 3 of 4	2326-5	Section Views of Station.
Sheet 4 of 4	2326-6	Plan View of Operating Floors.

Exhibit M: Fifteen typewritten pages, "General Description of Mechanical, Electrical, and Transmission Equipment", filed in the Commission November 16, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States", (30 FPC 1658) which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall, from the effective date of this license, pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, one (1) cent per horsepower on the authorized installed capacity, plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration. The authorized installed capacity for such purpose is 4,300 horsepower.

Article 29. The Commission reserves the right to determine at a later date what additional transmission facilities, if any, shall be included in this license.

Article 30. Whenever the licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon the failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current regulations under the Act.

Article 31. The Licensee shall within one year from the date of issuance of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 32. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

H. N. BURNETT, DOCKET NO. RI64-674

ORDER PERMITTING WITHDRAWAL OF INCREASED RATE FILING, ACCEPTING INCREASED RATE FILING, REQUIRING FILING OF NOTICE OF CHANGE, AND TERMINATING PROCEEDING

(Issued July 6, 1964)

On June 8, 1964, H. N. Burnett (Burnett) filed a motion requesting that she be permitted to file for a proposed increased rate of 11.0¢ per Mcf, in lieu of the 11.099¢ per Mcf rate suspended in the above-designated proceeding. Burnett further requests that Docket No. RI64-674 be terminated.

On March 16, 1964, Burnett tendered for filing a notice of change in its FPC Gas Rate Schedule No. 8, for the jurisdictional sale of natural gas to Cities Service Gas Company, in the West Panhandle Field, Carson County, Texas (Railroad Commission District No. 10). The proposed increased rate of 11.099¢ per Mcf, designated as Supplement No. 13 to Burnett's FPC Gas Rate Schedule No. 8, was suspended by order issued April 2, 1964, in Docket No. RI64-674, until September 16, 1964, and thereafter until made effective in the manner prescribed by the Natural Gas Act.

Burnett offers to substitute a proposed increased rate of 11.0¢ per Mcf at 14.65 psia in lieu of the proposed 11.099¢ per Mcf rate at 14.65 psia and to waive her right to collect the .099¢ per Mcf tax reimbursement amount until such time as she may be entitled to file for a further rate increase under the subject contract. If Burnett had tendered for filing a 11.0¢ per Mcf rate at the outset, together with a waiver of the right to file for a higher rate, instead of the 11.099¢ per Mcf rate, it would not have been suspended because such rate does not exceed the applicable area price level for increased rates as set forth in the Commission's *Statement of General Policy No. 61-1* (18 CFR, Chapter 1, Part 2, Section 2.56).

In view of the fact that the proposed increased rate contained in the above-designated supplement has not become effective subject to refund, it is deemed appropriate to permit Burnett to withdraw the supplement. Further, it is deemed appropriate to accept the 11.0¢ rate proposed herein by Burnett and to terminate the instant suspension proceeding.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to permit Burnett to withdraw Supplement No. 13 to its FPC Gas Rate Schedule No. 8, to permit Burnett to place in effect without refund obligation an increased rate of 11.0¢ per Mcf at 14.65 psia, to require Burnett to file a notice of change as hereinafter ordered, and to terminate the above-designated proceeding.

The Commission orders:

(A) Burnett is hereby permitted to withdraw Supplement No. 13 to its FPC Gas Rate Schedule No. 8, and to substitute therefor an increased rate of 11.0¢ per Mcf at 14.65 psia.

(B) Burnett shall file within 30 days from the date of issuance of this order a notice of change providing for an 11.0¢ per Mcf rate. The notice of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon compliance by Burnett with the provisions of the order, the rate and charge of 11.0¢ per Mcf at 14.65 psia shall be effective as of the date of issuance of this order, and the proceeding in Docket No. RI64–674 shall be deemed terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

LLOYD V. CRUM, JR., DOCKET NO. CP64–167

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 6, 1964)

On January 27, 1964, as supplemented on April 29, 1964, Lloyd V. Crum, Jr. (Applicant), filed in Docket No. CP64–167 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Northern Natural Gas Company (Northern Natural) to establish physical connection of its facilities with the proposed facilities of Applicant and to sell and deliver natural gas to him for resale and distribution in the Village of Racine, Mower County, Minnesota, and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate a pipeline distribution system in the Village of Racine and environs and to resell gas purchased from Northern Natural for ultimate public consumption by the inhabitants thereof.

The estimated cost of Applicant's proposed facilities is $58,300, which is to be financed from Applicant's own funds.

The estimated daily and annual requirements of natural gas under the subject application on a firm and interruptible basis in Mcf at 14.73 psia, are as follows:

	First year	Second year	Third year
Firm Peak Day	90	100	100
Annual Firm	16,630	18,058	20,609
Annual Interruptible (No curtailment)	18,417	20,879	23,779
Total Annual	35,047	38,937	44,388

On April 9, 1964, Northern Natural answered the application stating in substance that it has no objection to the granting of the application and if directed by the Commission it will construct 700 feet of 3-inch pipeline extending from an existing line south of Stewartville, Minnesota, to the facilities to be constructed by Applicant, together with a measuring and regulating station.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 9, 1964 (29 F.R. 7438). No protest or petition to intervene in opposition to the granting of the application has been filed.

The Commission finds:

(1) Northern Natural Gas Company, having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) Applicant, Lloyd V. Crum, Jr., an individual residing in Racine, Minnesota, is duly authorized by ordinance to construct and operate a gas distribution

system in the Village of Racine and to engage in the business of distributing and selling natural gas within said village.

(3) It is necessary and desirable in the public interest that Northern Natural be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver to Applicant its daily and annual requirements as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Northern Natural within one year from the date of issuance of this order.

(5) The requirement that Northern Natural serve Applicant, as proposed, will not place any undue upon Northern Natural nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Northern Natural Gas Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant, Lloyd V. Crum, Jr., and to sell and deliver to Applicant his maximum daily and annual requirements of natural gas as hereinbefore described and as more fully described in the application herein.

(B) Applicant shall be prepared to receive natural gas from Northern Natural within one year from the date of issuance of this order.

(C) Northern Natural shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NARRAGANSETT ELECTRIC COMPANY AND THE NEW ENGLAND POWER COMPANY, DOCKET NO. E-7153

ORDER PERMITTING WITHDRAWAL OF SUSPENDED RATE SCHEDULE ACCEPTING SUBSTITUTED RATE SCHEDULE AND TERMINATING PROCEEDING

(Issued July 6, 1964)

On April 27, 1964, New England Power Service Company (Service Company) on behalf of The Narragansett Electric Company (Narragansett) filed a request for permission to withdraw Supplement No. 3 to Narragansett's Rate Schedule FPC No. 19 and to substitute in lieu thereof a proposed Supplement No. 4 effective as of January 1, 1964, all for purposes of terminating the above-captioned proceeding. Both Supplements provide for wheeling services by Narragansett to New England Power Company (NEPCO), an affiliate of Narragansett.

The proposed supersession of Supplement No. 3 by Supplement No. 4 has the effect of reducing Narragansett's earlier request for a $410,388 annual rate increase to NEPCO by $316,200, a resulting annual rate increase of $94,188. That prior increase proposed by Narragansett on February 3, 1964, would have raised the Company's wheeling charges for services to NEPCO from $301,608 for the twelve month period ending March 4, 1965, to $711,996. Narragansett's February 3, 1964 rates are reflected in that Company's Rate Schedule FPC No. 19, Supplement No. 3, the operation of which was suspended until August 5, 1964, by order of the Commission issued March 4, 1964, initiating this proceeding. To date, no hearings have been convened, Narragansett having elected to study the matter further for purposes of submitting this settlement proposal.

For reasons indicated hereafter, we believe this proceeding should be disposed of on the basis of the rates reflected in Narragansett's Rate Schedule FPC No. 19, Supplement No. 4. No protests or objections thereto have been received.

The following facts should be noted: Narragansett, an affiliated company of NEPCO, operates in the state of Rhode Island. In addition to generation, transmission, and distribution of electric energy for its utility customers, Narragansett serves a wheeling function for NEPCO by providing transmission capacity in the Warren area and across the northwest corner of Rhode Island. NEPCO owns no transmission facilities in that state. The charges for these services are reflected in Narragansett's Rate Schedule FPC No. 19.

In 1963 Narragansett constructed approximately 4.73 miles of new 115 kv, single circuit, transmission line and improved 11.91 miles of two existing 115 kv, single circuit, lines to provide a transmission outlet for NEPCO's new 500,000 kw Brayton Point steam electric generating station. Brayton Point supplies substantial quantities of power and energy to various parts of NEPCO's system. The rate increase embodied in Narragansett's Supplement No. 3 or 4 is designed to compensate that Company in recognition of changes in investments, conditions, and proportions of use of facilities employed in transmission by Narragansett for NEPCO.

Initially, Narragansett submitted cost data to support its higher rates (Supplement No. 3) based on utilization of its entire high voltage transmission system under assumed load flows at Narragansett's estimated system peak hour for 1963. The lower rates (Supplement No. 4) reflect Narragansett's reconsideration of its costs and facility utilization and are based on assignment of specific transmission facilities as used by NEPCO and an analysis of Narragansett's transmission system operations under heavy, medium and light flow conditions during 1963. The resulting costs associated with Narragansett's wheeling services to NEPCO are summarized in the following revised cost of service study circulated among persons interested in the issues here before the Commission, including Commission staff:

NARRAGANSETT COST OF SERVICE

Narragansett Facilities	Gross investment	Allocated to NEPCO	
		Percent	Investment
D-182-115 kv transmission line	$534,400	100	$534,400
U-147-115 kv transmission line	145,600	100	145,600
V-148-115 kv transmission line	291,500	100	291,500
K-11 & L-12-69 kv transmission lines	116,500	100	116,500
Q-143 & R-144 (North) 115 kv transmission lines	188,300	100	188,300
E-183-115 kv transmission line	138,500	100	138,500
115 kv Warren Substation	275,400	100	275,400
69 kv & 115 kv Woonsocket Substation	1,067,000	50	533,500
A&B 69 kv transmission lines & 69 kv Warren Substation	537,100	68.4	367,500
Investment Allocated to NEPCO			$2,691,200

Less: Adjustment for Narragansett's use of NEPCO's Seekonk Junction-Warren A&B lines:	
Gross Investment—$107,600	
Narragansett's Share of Invest.—30/95×$107,600	($34,000)
Net Allocated to NEPCO	$2,557,200
Annual Charges at 15.1%	$386,100
2.5% Rhode Island Gross Earnings Tax	9,700
Total Annual Payment	$395,800

Available data indicate that Narragansett's initial costing method is undesirable in that it unduly emphasizes inadvertant power flows and tends to result in broad and unpredictable fluctuations in NEPCO's annual payments to Narragansett. Narragansett's revised cost study submitted in support of Supplement No. 4 is premised on a more comprehensive analysis of the functions performed by the Company's transmission facilities under representative system operating conditions.

Following various conferences among interested parties to this proceeding and circulation of Narragansett's proposed Supplement No. 4, together with supporting cost data,[1] among the State Regulatory Commissions of the States of Massachusetts, New Hampshire, Rhode Island and Vermont, and wholesale for resale customers of NEPCO,[2] staff recommends that Supplement No. 4 to Narragansett's Rate Schedule FPC No. 19 be accepted for filing superseding Supplement No. 3 to FPC No. 19, effective upon the date of termination of this proceeding. As indicated above, no protests or objections to the withdrawal of Supplement No. 3 and its supersession by Supplement No. 4 have been received by this Commission.

Narragansett requests that Supplement No. 4 be permitted to take effect as of January 1, 1964. However, the Company fails to support that request with the required showing of good cause for the Commission to permit Narragansett's proposed rate schedule submittal, Supplement No. 4 to FPC No. 19, to take effect as of a date prior to the date of its filing.[3] Due to the suspension of Narragansett's higher rates and charges reflected in the Company's Supplement No. 3, no increased charges have been collected to date for wheeling services to NEPCO.

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act upon good cause shown to permit Narragansett to withdraw Supplement No. 3 to its Rate Schedule FPC No. 19, and to allow Supplement No. 4 to Narragansett's Rate Schedule FPC No. 19 to take effect as of the date of issuance of this order, and to terminate the entitled proceeding, in the manner hereinafter ordered.

The Commission orders:

(A) Narragansett is hereby permitted to withdraw Supplement No. 3 to its Rate Schedule FPC No. 19.

(B) Supplement No. 4 to Narragansett's Rate Schedule No. 19 is hereby accepted as a rate schedule effective pursuant to Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder, as of the date of issuance of this order.

(C) The above entitled proceeding, Docket No. E-7153 is hereby terminated.

[2] Fitchburg Gas and Electric Light Company, Granite State Electric Company, Town of Littleton, Massachusetts Electric Company, and Green Mountain Power Corporation.

[3] Section 35.11 of the Commission's Regulations under the Federal Power Act (18 CFR 35.11), provides: *Section 35.11 Waiver of notice requirement.* Upon application and for good cause shown, the Commission may, by order, provide that a rate schedule, or part thereof, shall be effective as of a date prior to the date of filing or prior to the date the rate schedule would become effective in accordance with these rules. Application for waiver of the prior notice requirement shall show (a) how and the extent to which the filing public utility and purchaser(s) under such rate schedule, or part thereof, would be affected if the notice requirement is not waived, and (b) the effects of the waiver, if granted, upon purchasers under other rate schedules. The filing public utility requesting such waiver of notice shall serve copies of its request therefor upon all purchasers.

OPINION NO. 434

SHELL OIL COMPANY, OPERATOR, ET AL.,[1] DOCKET NO. CI62-1037; HUMBLE OIL & REFINING COMPANY, DOCKET NO. CI63-383; THE SUPERIOR OIL COMPANY, DOCKET NO. CI63-409

MEMORANDUM OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 6, 1964)*

Syllabus

1. Although underlying purpose of Natural Gas Act is to underwrite just and reasonable rates to consumer, *CATCO* makes clear that Section 7 proceeding does not require finding that initial rate be "just and reasonable"—it is necessary only to find that proposed sale, at initial rate is "required by present or future public convenience and necessity." P. 36.
2. Under *CATCO* Commission is required to scrutinize proposed sales to determine whether initial rates are "out of line" and may, at its discretion, attach such conditions as is believed necessary. P. 36.
3. Commissions *finds* in-line price for instant sales is 17.7 cents per Mcf. P. 37.
4. Aneth rate of 17.7 cents per Mcf is neither a "suspect" price as such term has come to be used in past in-line determinations, nor "tainted" by method of its derivation. PP. 37, 38.
5. Far from being suspect, Aneth price has been judicially approved and may, therefore, properly be utilized as guide in setting line applicable to instant sales. P. 39.
6. Certification of sales at 17.7 cents will not set a new price plateau in the general Aneth area nor trigger "favored nation" clauses in contracts. P. 39.
7. While sales here are first jurisdictional sales by Arizona producers to come before the Commission and volumes are small, case has importance beyond present circumstances in its possible effect on development of new and emerging gas supply area. P. 40.
8. Whether same price will be permitted on other applications for sales from Arizona will depend on particular facts presented in such cases. P. 40.
9. Certificates here are rightfully made subject to results of the rule-making proceeding in Docket No. R-199. P. 40.
10. In proceeding arising under Section 7 of the Natural Gas Act, Commission *issues* certificates of public convenience and necessity to producers for sales of gas from Arizona fields.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

O'CONNOR, *Commissioner:*

This proceeding arises under Section 7 of the Natural Gas Act. The applicants are independent producers of natural gas. They seek certificates of public convenience and necessity for sales of natural gas to El Paso Natural Gas Company from certain acreage most of which lies in northeast Apache County, Arizona, and a small nonproductive portion in San Juan County, Utah. The acreage dedicated by Shell Oil Company, Operator, *et al.* (Shell) and Humble Oil & Refining Company (Humble) is in what is known as the East Boundary Butte area. The Superior Oil Company's (Superior) acreage, which is adjacent to East Boundary Butte, has no official field designation. An average daily volume of 4,000 Mcf is involved in the applications. The issuance of certificates of public convenience and necessity is not opposed in this case; the only contested issue is the price at which the certificates should be granted, *i.e.* whether applicants are entitled to certificates in accordance with the contracts filed with their applications or whether the certificates will be conditioned to require the substitution of something less than the contract price. The initial contract rate at which applicants seek certificates is 17.7 cents per Mcf.[2] Staff and the interveners[3] contend that the price should be conditioned to 13 cents for pipeline quality gas. The proceeding is now before the Commission for decision on applicants' exceptions to a decision by the Presiding Examiner, dated January 2, 1964, conditioning the initial price as recommended by staff and the interveners. Superior also excepts to the examiner's action conditioning the take-or-pay provisions in the contracts to be subject to the final order in the rule-making proceeding in Docket No. R–199.

Shell's contract is dated January 6, 1962. Those of Superior and Humble were executed, respectively, on September 5 and 6, 1962. Except for the difference in the dedicated acreage, the contracts are similar in all material respects. Each is for a 20-year period and provides a price of 17.7 cents per Mcf for sweet gas, with escalations at the rate of one cent per Mcf each five years following the date of initial delivery. In the event the gas is sour, and thus not of pipeline quality, the contracts provide that it will be treated by El Paso for the removal of the impurities, with El Paso charging the producers for the cost of treatment based on a specified formula up to a maximum deduction of 6.5 cents per Mcf. The 17.7-cent price is thus for the volumes remaining after processing. The gas, which is moving now under temporary certificates conditioned to a price of 15 cents per Mcf, is delivered by the producer to a central field point where it is picked up by El Paso for transportation via its existing Aneth-San Juan line for treatment at the pipeline's San Juan River plant. With treating charges of 3.2 to 4.65 cents presently being incurred, the producer-applicants would net approximately 13.05 to 14.5 cents per Mcf at their contract price.

The contracts further provide that the deliveries of gas by the producers are to be at a pressure sufficient to allow the gas to enter El Paso's pipeline, although they are not required to make such deliveries at pressures in excess of 950 psig.

---

[2] All prices herein are at 15.025 psia.

[3] State of California, California Public Utilities Commission, Southern California Gas Company and Southern Counties Gas Company of California.

As matters now stand no compression is necessary, the natural pressure of the gas from the wells being sufficient to meet the contract requirement. El Paso is required to reimburse the applicants for 75 percent of all additionally enacted taxes. If, in any year, El Paso is required to pay for gas which it does not take, the contracts provide that El Paso may take the gas so paid for over the next succeeding five years during the term of the contract. If El Paso has not taken all the gas for which it has paid by the time the contracts expire, it may take such gas during the three months following. The contracts provide no upward adjustment in price based on the Btu content of the gas. They do, however, require a minimum heating value of 950 Btu's per cubic foot, and provide that if the producers deliver lesser quality gas, their price will be reduced proportionately.

Although the underlying purpose of the Natural Gas Act is to underwrite just and reasonable rates to the consumer, the decision by the Supreme Court in *CATCO* [4] makes clear that a Section 7 proceeding does not require a finding that the initial rate itself be "just and reasonable." It is necessary only to find that the proposed sale, at the initial rate, is "required by the present or future public convenience and necessity." Under *CATCO* we are required to scrutinize proposed sales to determine whether the initial rates are "out of line" in which event ". . . the Commission in the exercise of its discretion might attach such conditions as it believes necessary." [5] In defining the "line" so referred to, the Court of Appeals for the Ninth Circuit stated:

> Considered in this light, the "line" referred to in *CATCO* may properly be referenced to relevant existing producer prices under which substantial amounts of natural gas move in interstate commerce . . .
>
> Existing producer prices are relevant for comparative purposes only if they pertain to gas production in the same or analogous area and if other principal features of the contract are fairly comparable . . . . Disparate provisions relative to facilities to be provided and other services to be rendered should be given effect as well in determining the propriety of the analogy to rates under other existing contracts.[6]

Other Courts of Appeal have approved and adopted [7] the in-line method of initial price regulation for the purpose of certificating sales under Section 7 and a number of in-line pricing determinations have been made in accordance with the procedures outlined by the courts.[8]

All parties to the proceeding agree that the appropriate initial price for these sales is to be determined by comparing the price with other certificated sales. The disagreement lies in deciding which certificated sales should be used in making the comparison, *i.e.* what is the analogous production area and price to which these sales should be rendered in-line. Applicants contend that the area to be looked to is that involved in Opinion No. 335 [9] which granted permanent certifi-

cates to 17 producers at an initial price of 17.7 cents per Mcf for casinghead gas produced in the general Aneth Field area and dry gas produced from the Boundary Butte Field, all located in the Four Corners area of the Paradox Basin in San Juan County, Utah. Staff and the interveners maintain that the 17.7-cent Aneth area prices are "tainted" and should not be used to determine an in-line price for these sales, *i.e.* that Opinion No. 335 does not establish a price line which, under current Commission policy, is automatically applicable to these sales; that the Aneth casinghead sales are not comparable to the dry gas sales here; and that the appropriate comparative area and the proper price to be applied in this proceeding is the 13-cent [10] per Mcf price allowed for recent sales to El Paso from the San Juan Basin in northwest New Mexico.

The contracts in issue in this case are dated in 1962, well after the September 1960 announcement of the Statement of General Policy No. 61–1. However, the area of production here involved was not included within any of the Policy Statement areas, nor has the Commission established any ceiling price level for initial service in the State of Arizona. The closest Policy Statement area of major production is the San Juan Basin in northwestern New Mexico where the guideline rate is 13 cents per Mcf. Since January 1, 1964, the majority of the San Juan contracts have escalated to a total price of 14 cents per Mcf. The Notice of Proposed Revision of Area Boundaries, Docket No. R–218, issued July 11, 1962, proposed an "Aneth Field Area" in southeast San Juan County, Utah, and would have included that portion of the East Boundary Butte area lying in that State. At this time further action on the revision has been suspended.[11] We observe that when the Shell application originally was noticed for hearing Southern California Gas Company and Southern Counties Gas Company indicated they would not intervene (and thus not oppose certification at the contract rate) as the proposed price ". . . is consistent with the 'in-line' price in the Aneth market area" as determined in Opinion No. 335.[12] They also recommended that the proposed Aneth pricing area, which would have terminated at the Utah-Arizona border, be extended southward to include all the East Boundary Butte area situated in Arizona.[13] These expressions were recanted, however, and active intervention sought, upon notice of our conditioning of the temporary certificate to Shell to an initial price of 15 cents per Mcf. As they stated, "The Commission's action indicates that our assumption that the gas to be sold is from an extension of the Aneth formation and that the contract price of 17.7 cents per Mcf was therefore 'in line' may be mistaken. . . ." [14]

Based on consideration of the evidence submitted, the briefs, the examiner's decision and the exceptions thereto, it is our opinion that the in-line price for these sales is 17.7 cents per Mcf and that certification thereof at this rate, which is the initial contract price, is in the public interest and will serve the public convenience and necessity. In the context of the assumption expressed by the aforementioned interveners, as well as the arguments and claims made by the other parties opposing unconditional certificates, we conclude that the production here involved is in fact from an extension of the Aneth formation; that the Aneth rate of 17.7 cents per Mcf is neither a "suspect" price as the term has come to be used in past in-line price determinations [15] nor "tainted" by the

[10] 12 cents plus 1-cent per Mcf minimum guarantee for liquids.

method of its derivation; and that the gas sold by the applicants is not substantially inferior in quality or in the terms and conditions of sale to that sold by the Aneth producers.

Opinion No. 335 was issued in February 1960. The case, as has been indicated, involved applications for sales of gas to El Paso by 17 producers from the Aneth Field area at an initial contract rate of 20 cents per Mcf. The gas sold by these producers was predominantly low pressure, sweet casinghead gas which was to be gathered by El Paso and then processed and compressed by it at its Aneth plant for the extraction of liquefiable hydrocarbons. El Paso was to retain a portion of the liquids to compensate it for the cost of operating the gathering, pressuring and extraction facilities. As in the case of the sales in this proceeding, the price paid to the producers was based on the residue volume compressed to 850 psig remaining after the extraction process and available for transmission at the plant tailgate.

One of the sales consolidated in the Aneth proceeding involved dry, high pressure, sour gas produced from the Boundary Butte Field.[16] As with the sales here, the price was subject to a reduction for removal of impurities, with payments being based on the volume remaining after treatment. Since the point of delivery was at the wellhead, it was necessary for El Paso to construct approximately nine miles of gathering line to connect with the main transmission line coming from the Aneth plant. Thus, the casinghead gas sales involved in that proceeding are somewhat more favorable than the dry gas sale involved in Opinion No. 335 since, in the latter case, El Paso gathers the gas without reimbursement from extracted liquids. In addition, the Boundary Butte sale is less favorable to El Paso than the sales in this proceeding since here the producers themselves gather the gas to a central point before delivery to the purchaser. Although the estimated first month's production for the Boundary Butte sale certificated in Opinion No. 335 was 465,000 Mcf,[17] equivalent to a yearly volume in excess of 5 million Mcf, the recent annual reports filed by El Paso with the Commission indicate that the actual sales from Boundary Butte Field are in the range of 1.3 to 1.5 million Mcf per year. Whichever figure is used, it is apparent that the Boundary Butte sales do involve the transportation of substantial volumes of gas in interstate commerce. The Aneth area sales are similarly substantial but to a far greater degree, with sales of more than 23 million and 25.5 million Mcf in 1960 and 1961.

In issuing certificates to the producers in Opinion No. 335, the initial contract price of 20 cents proposed in the applications was conditioned by the Commission to require a price no higher than 17.7 cents per Mcf. The Opinion was rendered prior to the full development of the present approach to initial price regulation. Nevertheless, the *CATCO* decision of the Supreme Court, which laid down the outlines for the existing in-line method, was discussed and, as is apparent from a reading of the Opinion, the initial price condition was applied in complete accordance with that decision. Moreover, crucial to the decision herein is the fact that the 17.7-cent initial price condition of the Aneth case was expressly approved by the Fifth Circuit Court of Appeals, thus upholding the Commission's determination, in the face of a direct contention by the State of California that the price should have been conditioned to require an even lesser rate per Mcf.[18] Whether the Aneth price would not be determined in a like manner, in the sense that the same considerations would be applied were that case first

[16] Western Natural Gas Co., Operator, *et al.*, Docket No. G–13964, F.P.C. Gas Rate Schedule No. 24. Although filed in the name of Western, the sale also involves gas from two additional producers, Three States Natural Gas Co. and San Jacinto Petroleum Co., selling under a single contract.

[17] Hearing exhibit No. 13.

[18] *Texaco Inc., et al.* v. *F.P.C.*, 290 F. 2d 149 (CA5, 1961).

coming before us today, is immaterial for the purpose of our decision herein. Far from being suspect, the Aneth price has been judicially approved on review and may, therefore, properly be utilized as a guide in setting the line applicable to these sales. The Aneth price, having been decided on the basis of the *CATCO* principles, is no longer subject to review either by this Commission or by dissatisfied participants to that proceeding. Moreover, arguments attempting to restrict that decision on the ground of the alleged "uniqueness" of the Aneth sales cannot avail where, as here, the evidence convincingly demonstrates a clear comparability at the point at which payment for the gas is computed.

Applicants, both in their briefs and in the other material submitted in support of their applications, point out the many similarities between the Aneth production and the production in this case as well as the distinguishing characteristics of the San Juan gas production. They note that the East Boundary Butte area and Aneth are both in the same geological basin, the so-called southeast Paradox or Blanding Basin, and that both East Boundary Butte and Aneth gas is produced from the same formations. San Juan gas, however, is completely different with respect to basin, conditions of exploration, depths of production, delivery point,[19] pressure,[20] and in the fact that the producers do not pay for the processing necessary in some instances to remove the excess carbon dioxide and hydrogen sulfide. Applicants also note the close proximity of their acreage to the Aneth producers—8 miles from Boundary Butte and 11 miles from Aneth—and the 52 to 75 miles which separates their leases from the San Juan gas fields. Other similarities are that the gas, after processing, is of approximately the same pipeline quality and Btu content as the residue gas available to El Paso at the tailgate of the Aneth plant. The record indicates that Humble's and Shell's gas have a heating value of 1039 and 1103 Btu per cubic foot, respectively, before processing. Superior's gas, after processing, is reported at 1100 Btu and Shell's at 1151 Btu. The residue gas available at Aneth has a value from 1154 to 1168 Btu per cubic foot. Although no notation is made as to the Btu content of the San Juan gas, the evidence shows that a drop of 54 Btu per cubic foot (from 1136 to 1082) was experienced in the Aneth, Boundary Butte and East Boundary Butte stream after introduction of the San Juan gas. Of the six wells currently producing in the area under consideration, two are high gas ratio oil wells and four are dry gas wells. Apparently, any liquefiable hydrocarbons are minimal and serve only to increase the Btu content of the gas stream. In any event, and unlike the San Juan producers, no provision is made for a minimum guarantee on liquids. Moreover, it is important to note that although the East Boundary Butte area is included within the southern boundary of the geographical area covered by the "favored nation" clauses of the Aneth contracts, certification of these sales at the 17.7 cent price will not set a new price plateau in the general Aneth area nor trigger the "favored nation" clauses in those contracts. It is also appropriate to observe that while the original Aneth contracts were executed in 1957 and 1958, at least 19 additional sales, primarily of the "add acreage" type, have since been made at the same initial rate, with certificates at this price being issued as recently as March 12, 1963.

Despite the allegations of the interveners and staff, the evidence does not show that applicants will be selling a product substantially inferior to that purchased from the Aneth case producers. To the contrary, all of the evidence points to the

[19] El Paso's purchase contracts in the San Juan Basin provide that El Paso will take delivery of the gas at the wellhead of the various producers. In order to receive the gas into its system El Paso has constructed an extensive gathering system extending throughout the basin which it operates at its sole expense.

[20] In certain cases El Paso may be required to accept deliveries at pressures as low as 50 and 100 psig.

conclusion that the gas after processing is comparable to that sold to El Paso at the tailgate of the Aneth plant. At Aneth, El Paso gathers and compresses the gas but is compensated by a share of the liquids; in this case the producers deliver high pressure gas within two miles of El Paso's line and, while El Paso must process the gas for the removal of impurities, it is compensated by the producers for the cost of treatment. The criteria of comparable geology, geography, conditions of exploration, production and marketing utilized in past decisions [21] in selecting the sales to be looked to in fixing a price line are met by the Aneth sales. The same conditions, however, generally do not apply with respect to the sales being made from the San Juan Basin. Accordingly, we conclude that no price condition is required for these sales and that certificates may be issued at the contract rate.

The sales herein involved are the first jurisdictional sales by independent producers from Arizona to come before the Commission on applications for permanent certificates.[22] Until recently exploratory activity in the State was sporadic due primarily to the lack of marketing facilities in the area. Following the construction of El Paso's Aneth line, however, increased exploratory activity has been reported. Thus, while the volumes here involved are small, the case has an importance beyond its present circumstances in its possible effect on the development of a new and emerging gas supply area. However, the effect of the case in establishing a precedent price line for future sales throughout the State is mitigated, if not wholly eliminated, by the fact that the southern boundary of the Paradox Basin, with its comparable conditions of production, is but a short distance from the area of these sales. Whether the same price will be permitted on other applications for certificates for sales from Arizona will depend on the particular facts presented in those cases.

The charge of error in conditioning the take-or-pay provision to the final order in the rule-making proceeding in Docket No. R-199 has been considered by us in a number of past proceedings. On each occasion the requests for its deletion have been denied.[23] In our opinion the certificates issued herein were rightfully made subject to the results of the rule-making proceeding. The exception will be denied.

The exceptions submitted by each of the producer-applicants includes a request for an opportunity to present oral argument before the Commission. We conclude that no useful purpose would be served by such argument and that the requests should be denied.

The Commission finds:

(1) The applicants herein are independent producers of natural gas and are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor,

are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Subject to the requirements of our order herein and the conditions attached to the certificates herein issued, the applicants are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales proposed by the applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity upon the conditions hereinafter set forth, and certificates should be issued to each of them as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued, upon the conditions hereinafter set forth, to each of the applicants in this proceeding for the sale of natural gas in interstate commerce for resale as proposed, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described above and in their applications.

(B) The certificates herein issued are granted without price condition; provided, however, that such grant shall not be construed as a determination of the justness or reasonableness of the initial or subsequent prices contained in the gas purchase contracts, nor as a waiver of the requirements of Section 4 of the Natural Gas Act or of Section 154 of the Commission's Rules and Regulations thereunder; and is without prejudice to any findings or order which have been or may hereafter be made by the Commission in any proceeding now pending or which may hereafter be instituted by or against the applicants. Further, the action in this proceeding shall not foreclose nor prejudice any future proceeding or objection relating to the operation of any price or related provision in the gas purchase contracts here involved.

(C) The certificates herein issued are granted upon the further express condition that the allowance of the take-or-pay for provisions in the applicants' contracts is subject to our ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R–199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, the applicants shall within 30 days file amended rate schedules in conformity therewith, acceptable to the Commission. The producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. Any changes or modifications to be made in accordance with this paragraph shall be prospective only.

(D) The certificates herein issued are not transferable and shall be effective only so long as each of the applicants continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(E) The motions for opportunity to present oral argument before the Commission are denied.

(F) Except as herein granted, the exceptions to the examiner's decision are hereby denied.

Commissioner Ross *dissenting.*

Commissioner Black *dissenting* joins in Commissioner Ross' statement.

Ross, Commissioner, *dissenting:*

The majority has noted that this case has an importance which transcends the small volumes involved in the instant sales. Indeed this is so. Whatever initial price is approved for this new area, that price, for all practical purposes, will become the floor for all future initial sales in this area, and probably for all other areas in Arizona. The pattern is universal—in every producing area of the country. When the Commission determines a ceiling price for an area, that becomes the base price at which contracts are executed. As the majority notes, "It is also appropriate to observe that while the original Aneth contracts were executed in 1957 and 1958, at least 19 additional sales, primarily of the 'add acreage' type, have since been made *at the same initial rate*, with certificates at this price being issued as recently as March 12, 1963." [Emphasis added, Op., p. 30.]

The specific issue here is to determine an in line price for a new area. As such, there are no contracts in the area to examine. The majority has decided that the prices in Aneth are determinative. In so deciding, the majority has followed sensible reasoning as far as it goes; but it neglects to consider the whole picture.

This generation has witnessed the skyrocketing of natural gas prices. From an average wellhead price of 4.9¢ per Mcf in 1945, the price doubled in the period to 1954 to 10.1¢ and rose 5¢ more in the period through 1961.[1]

To the Supreme Court, this situation signaled a clear and present danger to purchasers of natural gas, and the Court implored this Commission to put on the brakes—to hold the line on gas prices until just and reasonable rates are determined. While the Commission has made some contributions to the tapering off of the price rise, the battle is far from won. Certainly, the present decision cannot be considered as a major step in this effort. To the contrary, the 17.7¢ per Mcf price the majority finds required by the public interest represents the highest initial price level for gas over the entire southern and southwestern tier of producing states excepting only Louisiana and Mississippi.[2] Perhaps more important, the 17.7¢ price is over 2½¢ per Mcf higher than the nationwide average wellhead price of gas. The majority describes its result as holding the line. Maybe, but the line must be pointed upward.

This Commission's experience demonstrates that an in-line price determination sets the pattern for future sales in an area. Frequently parties forego the exercise of their contract provisions to file for rate increases rather than establish pricing levels which exceed the in-line price. In fact, at the present time, producers have elected to forego more than $37 million a year in contractually authorized rate increases, principally in situations in which the increased rate would exceed the ceiling.

Of course, a producer can file for and collect precisely what his contract permits in those situations in which the initial rate has been conditioned to a lower level. His only responsibility is to refund that portion ultimately found unjust and unreasonable, a contingency which is eminently equitable. On the other hand, unqualified acceptance of the initial contract rate—the course followed by the majority—forever bars the public from recouping such unjust and unreasonable amounts. The point is that the Commission should select the lower alternative price levels because both the producer and the public are protected: the public, by Section 4(e) refund conditions; the producer, by his intervening right to collect the higher rate. Under the majority's scheme, the public is pre-

[1] *1963 Gas Facts*, 1962 data, American Gas Association.

[2] A proceeding is currently being held to determine the proper initial price level for Mississippi gas.

cluded from recovering rates which could well be found unjust and unreasonable—hardly a promising situation. Despite the repeated schooling by the courts describing this situation, the majority sadly fails to even consider it.[3]

In view of the above circumstances, the majority's unqualified acceptance of Aneth prices bears scrutiny.[4] In this regard, the majority's refusal to take a good hard look at the Aneth price determination is flatly inconsistent with the Commission's decisions involving Texas Gulf Coast and Louisiana prices as well as its argument to the Fifth Circuit Court of Appeals:

> That the Commission should not perpetuate the inflationary effects of its past errors, even when they have not been disclosed by the courts, is not a new or unique concept to the law.
>
> * * * * * * *
>
> A wrong final decision is nonetheless binding on the parties thereto; but a wrong decision has no claim to immortality as a guide for later action.[5]

The fact of the matter is that the Aneth price would not be determined today as it was in Opinion 335. This doesn't mean that Aneth prices are tainted or suspect as those terms are used in the UGI cases.[6] It simply means that the Commission is not duty bound to commit the same errors of its predecessors. To be specific: The Commission used the San Juan price as a base in determining the level of Aneth prices. (Quaere, if San Juan is a proper reference point for Aneth, why should it not be a proper reference point for the area involved here as well?) To the San Juan price of 13¢, the Commission added on "some 5¢ per Mcf representing processing and related costs. . . ." (23 FPC 370, 376) This is the principal error. In every single in-line case decided since the autumn of 1961, the Commission has steadfastly refused to consider costs. How ironic it is that the majority should retreat now in the echo of the Supreme Court's denial of certiorari, letting stand the D.C. Circuit Court's approval of one of the decisions of the Commission declaring that costs are not relevant.[7] Even more specifically, the Commission has adopted a policy of not escalating an in-line price on the basis of delivery conditions. This decision too has been affirmed in Court.

> * * * We do not think that the Commission was required in this case to consider the exploration and drilling costs or the cost of delivery services in arriving at the "in-line" price in a certificate proceeding. The consideration of these matters may properly be left to a Section 4 proceeding.[8]

In my opinion, the proper in-line price for the initial sales is 14¢ per Mcf. Certainly, the infirmities involved in the Aneth price determination preclude

---

[3] See the following paragraph:

> In arriving at initial rates under Section 7, the Commission, of course, does not foreclose a company from obtaining an increase under Section 4. As indicated, Section 4 is a rate proceeding and Section 7 is not. But the public must be protected from the time the gas first enters interstate commerce. Since there is no mechanism for refund of overcharges under Section 7, if the Commission is to err in setting an initial rate, it should err on the low side because the company, under Section 4, can immediately increase the rate, subject to disallowance by the Commission after a full rate proceeding, the public being protected with reference to refunds in the interim. [*Atlantic Refining Company* v. *F.P.C.* 316 F. 2d 677, 679 (1963).]

[4] Whether the Aneth price would now be determined in a like manner, in the sense that the same considerations would be applied were that case first coming before us today, *is immaterial* for the purpose of our decision herein. [Emphasis added. Op., pp. 38, 39.]

accepting 17.7¢. Rather, the prices in San Juan are determinative, a conclusion reached by both the Examiner and the Commission Staff. San Juan prices are now at the 14¢ level. Consideration of the price in this area makes much more sense than blindly accepting the deficiently determined prices in Aneth. Selection of 14¢ also conforms to the Supreme Court's mandate to hold the line.

Commissioner Black joins in this statement.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

BROWN COMPANY, PROJECT NO. 2327

ORDER ISSUING LICENSE (MAJOR)

(Issued July 7, 1964)

Application was filed on November 16, 1962 by Brown Company (Applicant) of Berlin, New Hampshire, for a license under Section 4(e) of the Federal Power Act (Act) for its constructed Project No. 2327, known as the Cascade Project, located on the Androscoggin River in the Town of Gorham, Coos County, New Hampshire.

According to the application, the original dam and powerhouse, the construction of which was commenced in 1903 and completed in 1904, consisted of six sets of 2,200 horsepower wheels directly connected to wood pulp grinders. In 1916, all grinding operations were abandoned and two sets of the water wheels were removed and replaced by two 3,400 horsepower turbines, each directly connected to a 2,400 kilowatt generator. In 1918, a third set of water wheels was replaced by a 3,400 horsepower turbine and 2,400 kilowatt generator, and the gates on the remaining three adjacent flumes were closed and permanently sealed. There have been no major project revisions since 1918.

The Cascade Development has a total installed capacity of 10,200 horsepower connected to generators having a total rated capacity of 6,900 kilowatts. The energy generated by the project is fed into Applicant's steam-electric and hydroelectric system supplying power to Applicant's mills located in Berlin and Gorham, New Hampshire.

In its order issued July 24, 1958,[1] the Commission found that the Androscoggin River throughout its entire length is a "navigable water" as defined in Section 3(8) of the Federal Power Act and a "navigable water of the United States" within the meaning of Section 23(b) of the Act. The basis for this finding was that the Androscoggin is presently, and for more than a century has been used for the transportation of logs and other forest products by water.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the project structures affecting navigation were considered satisfactory, and that the plans of the project structures affecting navigation had been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license issued for the project conditions in the interests of fish and wildlife resources.

For the reasons set forth in Opinion No. 357 (27 FPC 830, 833), the license herein granted shall have a termination date of December 31, 1993. Since there was no project construction after 1935, we will make the effective date of the license July 1, 1958, the first day of the month in which we determined the Androscoggin River to be a navigable water, as set forth above.

---

[1] *New Hampshire Water Resources Board*, Docket No. E-6807, 20 FPC 99-101.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Maine and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the issuance of a license for the project.

(2) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The issuance of a license as hereinafter provided will not affect a Government dam or the development of water resources for public purposes which should be undertaken by the United States.

(4) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 9,200 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) The 2.3/22 kv step-up substation facilities mentioned in paragraph (B) below are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(7) The exhibits designated and described in paragraph (B) below, which were included as part of the application for license, conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Brown Company (Licensee) of Berlin, New Hampshire, under Section 4(e) of the Federal Power Act (Act), for a period effective as of July 1, 1958, and terminating December 31, 1993, for the continued operation and maintenance of the Cascade Development, Project No. 2327, located on the Androscoggin River, a navigable water of the United States, in Coos County, New Hampshire, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2327 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: Sheet 1 of 2 (FPC No. 2327-1) Plan View of Project Area.

(ii) Project works consisting of:

A fixed crest concrete gravity overflow dam, with wing walls and abutments, about 380 feet long (including a floodgate about 20 feet wide and 6 feet high) with crest elevation about 898 feet, m.s.l., topped with flashboards about 4⅓ feet high: a forebay intake gate section about 183 feet long, extending from

end of dam to the left bank, containing 13 forebay gates (each about 7 feet wide and 11 feet high); a forebay immediately downstream from the gated section, formed by a fixed crest concrete gravity section (parallel to the river and topped with flashboards about one foot high) and 341½ feet long (including a drain gate about 7 feet wide and 9⅛ feet deep and an iceway about 6 feet wide) and a powerhouse intake structure with six gates (3 unused, headworks removed) each about 11⅝ feet wide and 13⅜ feet high: a powerhouse, on the right bank (integral with the intake structure), including three 3,400 horsepower turbines directly, connected to three 2,400 kilowatt generating units; a substation; and appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L	F.P.C. No.	Title
		Cascade Hydroelectric Development

Sheet 7 of 7	2327-9	Plan View of Machines and Draft Tubes.

Exhibit M: Fourteen typewritten pages, "General Description of Mechanical, Electrical, and Transmission Equipment", Filed in the Commission November 16, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised November 1, 1963) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (30 FPC 1658), which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall pay to the United States the following annual charges:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, one (1) cent per horsepower on the authorized installed capacity, plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration. The authorized installed capacity for such purpose is 9,200 horsepower.

Article 29. The Commission reserves the right to determine at a later date what additional transmission facilities, if any, shall be included in this license.

Article 30. Whenever the Licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefore and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 31. The Licensee shall within one year from the date of issuance of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 32. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

ROCHESTER GAS AND ELECTRIC CORPORATION, DOCKET NO. E-7154

DECLARATORY ORDER

(Issued July 7, 1964)*

Rochester Gas and Electric Corporation (Petitioner) of Rochester, New York, filed a petition, including a statement of facts, pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure, for a declaratory order to remove any uncertainty as to Petitioner's need under the Federal Power Act for a license to continue to maintain and operate its four hydroelectric projects on the Genesee River. Three of these projects, called Stations 5, 2 and 26, whose installed capacities are 6,500 kw, 38,250 kw and 3,000 kw, respectively, are in Rochester, and the fourth, Station 160, with an installed capacity of 425 kw, is some thirty miles southwesterly at Mount Morris, New York.[1]

Petitioner contends that these projects are not located on navigable waters of the United States.[2] We find that this contention is not sustained by the facts set forth in the petition.

Rising in the Allegheny Plateau in Potter County, Pennsylvania, north of the Susquehanna basin, the Genesee River flows northward for about 158 river miles, crossing New York State and discharging into Lake Ontario. It has a drainage area of 2,753 square miles and an average discharge of 2,476 cfs. Its principal tributaries are Canaseraga and Honeoye Creeks from the east and Oatka and Black Creeks from the west. The river has two major stretches of rapids and falls, one at Portageville, river miles 88 to 84, where it descends 380 feet, and another at Rochester, river miles 8.2 to 6.0, where it descends 260 feet. From below the Rochester rapids and falls about three miles above Lake Ontario, the river has been improved by the Federal government to accommodate deep-draft commercial vessels used in the Great Lakes traffic.

There is abundant historical evidence that the Genesee River also has supported commerce above this improved stretch. Settlers of the Genesee Valley in the early decades of the nineteenth century rafted potash, pearlash, lumber, and wheat to Rochester. After 1825, they sent goods downstream for shipment on the then-completed Erie Canal, which crossed the river just above the Rochester rapids and falls at river mile 11.2. Between 1837 and 1857, the State of New York built the Genesee Valley Canal along the Genesee River and certain of its tributaries. The eastern branch of this canal reached Dansville, New York, and the western branch, having reached Olean, New York, followed the Allegheny River to the Pennsylvania border. The Genesee Valley Canal connected with the Erie Canal at Rochester. The canal operated until 1878.

The Genesee River with reasonable improvements could again support interstate traffic. As recently as 1950, Congress authorized preliminary examination and survey of a through waterway to the Allegheny River.[3] Although con-

*Order denying rehearing issued August 28, 1964, 32 FPC 668. Affirmed in part; vacated in part, *Rochester Gas & Electric Corp.* v. *F.P.C.*, 344 F. 2d 594; (CA2–1965); cert. denied, 382 U.S. 832.

[1] These projects are located at river miles 6.0, 7.5, 8.2, and 66.5, respectively.

[2] Subsection 23(b) of the Federal Power Act reads in pertinent part:

> (b) It shall be unlawful for any person . . ., for the purpose of developing electric power, to construct, operate or maintain any dam, water conduit, reservoir, powerhouse, or other works incidental thereto across, along, or in any of the navigable waters of the United States . . ., except under and in accordance with the terms of a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to this Act (16 U.S.C. 817).

[3] River and Harbor Act of 1950 (64 Stat. 169).

struction was not recommended, there might be further development in the future.[4]

Three of Petitioner's projects, stations 2, 5 and 26, are located in the Rochester rapids and falls. Under the definition of navigable waters in the Federal Power Act[5] and leading Supreme Court decisions on navigability,[6] Petitioner is not relieved of the licensing provisions of the Federal Power Act because these projects are located in a stretch of rapids and falls on a navigable stream.

The Commission finds:

(1) The Genesee River from above the Rochester Gas and Electric Company's project works to its mouth at Lake Ontario is a "navigable water of the United States" within the meaning of subsection 23(b) of the Act.

(2) Rochester Gas and Electric Corporation maintains and operates four hydroelectric projects, designated Stations 2, 5, 26 and 160, across, along, or in the Genesee River without a permit or a valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to the Federal Power Act.

The Commission orders:

Rochester Gas and Electric Corporation shall, within ninety (90) days of the issuance of this order, file application for a license pursuant to the provisions of the Federal Power Act and the Commission's Rules and Regulations thereunder, for the continued maintenance and operation of its project works in and along the Genesee River at Rochester and Mount Morris, New York.

Before Commissioner: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

HUMBLE OIL & REFINING COMPANY, DOCKET NOS. G–9287 AND G–9288, ET AL.[1]

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL SEVERING AND TERMINATING PROCEEDINGS, AND PRESCRIBING REFUNDS

(Issued July 8, 1964)*

There is before us for consideration a Motion for Approval of Settlement Proposal, Termination of Rate Proceedings, and for Shortened Procedure Certifica-

[4] The New England-New York Inter-Agency Committee in 1955 said in its report on The Resources of the New England-New York Region, Genesee River Basin, Part Two, Chapter XXXIII, Section VIII at page 3: "Present facilities for navigation are considered adequate. No further development of these facilities in the Genesee River Basin is contemplated *at this time.*" [Emphasis added.]

[5] Section 3(8) reads:

(8) "navigable waters" means those parts of streams or other bodies of water over which Congress has jurisdiction under its authority to regulate commerce with foreign nations and among the several States, and which either in their natural or improved condition *notwithstanding interruptions between the navigable parts of such streams or water by falls, shallows, or rapids compelling land carriage,* are used or suitable for use for the transportation of persons or property in interstate or foreign commerce, including therein all such interrupting falls, shallows or rapids, together with such other parts of streams as shall have been authorized by Congress for improvement by the United States or shall have been recommended to Congress for such improvement after investigation under its authority . . . [Emphasis added.]

[6] "Navigability, in the sense of the law, is not destroyed because the watercourse is interrupted by occasional natural obstructions or portages." (*Economy Light Co.* v. *United States*, 256 U.S. 113, 122 (1920).) See also: *The Montello*, 87 U.S. (20 Wall.) 430, 442–443 (1874); *United States* v. *Utah*, 283 U.S. 64 (1930); *United States* v. *Appalachian Electric Power Co.*, 311 U.S. 377 (1940).

[1] The additional dockets involved herein are set forth in Appendices A, B, and C attached hereto.

*Modified; rehearing denied by order issued August 7, 1964, 32 FPC 542.

tion filed on May 25, 1964, by Humble Oil & Refining Company (Humble) encompassing the rates for 165 of Humble's currently effective FPC Gas Rate Schedules. Comments have been filed by some of the parties to these proceedings, all of which have been given due consideration. In summary, the settlement proposal as filed by Humble provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area ceilings with three exceptions hereinafter discussed.

(2) Humble waives the right to file for contractually authorized increased rates until June 1, 1967, for all of the rate schedules involved in the settlement. However, Humble reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels established by any order or rule of the Commission, or to file for any contractually authorized increase in tax reimbursement;

(3) Humble will delete any favored nation and price redetermination clauses contained in Rate Schedule Nos. 21, 111, 122 and 125 and additionally will delete the periodic pricing provisions in Rate Schedule Nos. 1, 6, 11, 17, 108, 126, 171, 175, 183, 184, 201, 219 and 295;

(4) Refunds, with interest at the applicable rates, under rate schedules where collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with May 1, 1961, to the date of issuance of this order for all of Humble's rate schedules, excepting Rate Schedule No. 126 for which the commencement date would be September 15, 1962, and Rate Schedule No. 39 for which no refund would be made;

(5) Exclusion from the settlement proposal of all Permian Basin sales; thirty-four sales related to previous offers of settlement accepted by the Commission; one sale to another producer whose resale rate is under suspension; and five sales consolidated in certificate proceedings that are presently before the Commission.

In support of its proposal, Humble states that the settlement rates, refunds, the moratorium period, and other provisions thereof not specifically noted herein, are in the public interest in that they are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the parties to the settlement conferences utilized cost-of-service studies and revenues based on contract rates to determine Humble's revenue-cost relationship. These studies indicate that it is appropriate that we require that refunds should be computed for sales made on and after May 1, 1961. However, as noted above, Humble proposes to make refunds under its Rate Schedule No. 126 from on and after September 15, 1962, and to make no refunds under its Rate Schedule No. 39. These rates schedules are for sales of natural gas made by Humble to Southern Natural Gas Company (Southern) in the Sandy Hook and Angie Fields in Mississippi and South Louisiana (Rate Schedule No. 39) and in the Gwinville Field in Mississippi (Rate Schedule No. 126).

Humble states, in its proposal, that special circumstances surround these sales which justify the shorter refund period for Rate Schedule No. 126, and no refunds under Rate Schedule No. 39. It cites the fact that at Gwinville the original contract was executed in 1947 for a ten-year term, and at that time it had interest in only two wells. During the term of the contract Humble participated in drilling forty-two additional wells in the field, and developed

approximately 235 billion cubic feet of additional reserves in the shallow formations in the field. In 1957, Humble states, it entered into a new contract with Southern for a twenty-year term. Part of the consideration for the new contract it says was the possible development of deeper formations in the field. Some deep development has been partially successful, and production therefrom had added more than ten percent to current deliveries to Southern.

At Sandy Hook, Humble states that the shallow formations were virtually depleted in 1959, and it began development of the deeper formations at that time. The deeper development has resulted in increased deliverability of the field by more than 4,400 percent. At Angie, Humble says the field is depleted, deliveries have ceased, and the leases have been released.

Humble states that it has acquired considerable acreage in the contract areas in both the Gwinville and the Sandy Hook fields in order to maintain and increase its deliveries to Southern. It proposes settlement rates of 15.968¢ per Mcf for Sandy Hook, and a rate of 15.0256¢ for Gwinville. It makes no proposal for a settlement rate for Angie.

We have considered all of the circumstances set forth by Humble in support of its proposal that the refund period under its Rate Schedule Nos. 39 and 126 be for a shorter period of time than the refund period for all other rate schedules involved in the settlement, and we do not find justification for a departure from the established policy of requiring refunds for all rate schedules, where refunds are due, for the same period of time. In *Pure Oil Company, et al.*, Docket No. G–16790, *et al.*, 28 FPC 889, we provided for different refund periods for two of Pure's rate schedules from the general refund period in order to make the refunds under those schedules conform to the established refund policy in the many *Transco-Seaboard* settlements we had approved[2] since the circumstances surrounding Pure's two rate schedules were the same as those in such settlements. In *Sinclair Oil & Gas Company*, Docket No. G–9291, *et al.*, 30 FPC 1620 (Order issued December 30, 1963) we departed from our established policy, but only in the method of distribution of the refunds. We noted there that the method we approved returned to each purchaser refunds in the same proportion in which it contributed to the total excess earnings of the producer.

Additionally, the circumstances set forth by Humble do not conform to circumstances which in other general rate settlements have caused us to permit exceptions to the general principles governing such settlements. The development by Humble in the fields here involved was entirely within the "contract acreage", as was the acquisition of additional leases, whereas in instances where we have approved exceptions to the applicable area increased rate ceiling, there has been acreage added to the original contract acreage which resulted in increase in deliverability under the contract. Therefore, we hereby condition our approval of the settlement proposal to require Humble to make refunds under its Rate Schedule Nos. 39 and 126 in the same manner, and for the same period of time, as we require for its other rate schedules where collection was made subject to refund. Applicable interest shall be paid on all of the refunds through May 31, 1964. Thereafter, Humble may elect, at its option, to either use these funds in its business and pay 6% interest thereon or to deposit such funds in a special escrow account for the sole benefit of the ultimate owners of such refunds and credit all interest actually earned thereon to the escrow account. As herein conditioned, such refunds will be approximately $8,869,000, exclusive of interest.

---

[2] *E.g.: Texaco Inc., et al.*, Docket No. G–13169, *et al.*, 28 FPC 247, 249.

Humble's future revenues will be decreased approximately $3,485,000 annually as a result of the settlement.

The purchasers of gas under the various rate schedules to which this settlement proposal relates are all natural gas pipeline companies subject to our jurisdiction under the Natural Gas Act, and many of these purchasers in turn have customers who are natural gas pipelines. Some of these pipeline customers of Humble or of Humble's customers are required under express provisions of outstanding orders of this Commission to flow through to their customers all or part of any of the refunds they may receive from Humble as a result of this settlement; others may choose to do so in the absence of such express provisions. But in view of our duty to insure that the ultimate consumers of gas actually receive all of the benefits of our rate regulation to which they may be entitled, we shall take action here to assure that, within the limits of our jurisdictional reach, the refunds to be ordered actually flow to those parties legally and equitably entitled thereto.

We are not here determining that a pipeline purchaser from Humble or one down the line in the chain of resales between the producer and ultimate consumer are never entitled as a matter of law or equity to retain all or part of the refunds received from a supplier. We conclude only that merely because a pipeline is under no special express requirement to flow refunds through to its customers and did not previously pass on to its customers the producer's price increase (or higher gas costs arising from sales temporarily certificated at prices higher than that fixed in the settlement), does not determine that it is entitled to retain such refunds. Unlike the corresponding refund provisions of the Federal Power Act (Section 205(e), 16 U.S.C. 824(d)) and the Interstate Commerce Act (Section 15(7), 49 U.S.C. 15(7)), which provided that refunds must be paid "to the persons in whose behalf such amounts [increased rates] were paid," Section 4(e) of the Natural Gas Act does not specify to whom refunds are to be paid. And in *Federal Power Commission* v. *Interstate Natural Gas Co.*, 336 U.S. 577, the Supreme Court rejected the claim that pipeline purchasers were the legal owners of funds placed in escrow pursuant to the terms of a judicial stay of a Commission directed rate reduction, merely because the fund was created from their payments at the previous higher rate. See also *Central States Co.* v. *Muscatine*, 324 U.S. 138 (1945) (dissenting opinion).

Accordingly, we shall require Humble to retain the amounts of refund ordered herein until further order directing the nature of their disposition[3] and also to submit within 45 days of this order to the Commission and each customer a detailed report setting out, by purchasers, the amount of refund related to each rate schedule, the volume of gas sold thereunder and the period covered. We shall also by separate action direct each of the pipeline purchasers within ten days from the receipt of such report, to submit a report of their own setting forth whether they intend to pass on all or part of such refund amounts to their customers and the names of such customers and amounts of refund each would receive, or, if they claim the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by Humble (unless a state regulatory authority after notification of the sum to be made

[3] Exempted from this requirement are the refunds to be made to Texas Eastern Transmission Corporation and Arkansas Louisiana Gas Company, since the amount of refunds to those companies is *de minimis*.

available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from Humble (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

Settlement rates which are exceptions to the applicable area ceilings are proposed by Humble for three sales of natural gas made by it to United in South Louisiana.

Two sales to United are made under Humble's FPC Gas Rate Schedule Nos. 35 and 314 in the Duck Lake Field, St. Mary and St. Martin Parishes, Louisiana, where the increased rate of 22.95¢ now being charged subject to refund for each sale is proposed to be reduced to 18¢ per Mcf. The initial rate under Rate Schedule No. 35 was 13.5¢ per Mcf, however, this rate was for a period of approximately one year, at which time the contract provided that the rate would escalate to 21.2¢ per Mcf. During that period of time, the Supreme Court issued its opinion in *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672, affirming Commission jurisdiction of the sale of natural gas by producers, and when Humble subsequently filed for the 21.2¢ contract rate it was suspended by order of the Commission.[4] Humble's Rate Schedule No. 314 covers interest in the field acquired by it from C. N. Johnston on March 1, 1961. Johnston had filed for the 21.2¢ increased rate, but had not filed to make it effective.[5] After acquisition, Humble, on September 27, 1962, filed for the 21.2¢ per Mcf contract rate. Thus, the same circumstance pertain to each of these schedules. The rate agreed upon by the parties for these sales is below the applicable area initial ceiling. We have considered all of the circumstances surrounding these sales and find them to be similar to others where we have in such circumstances, regarding other sales made to United in the same field, found the increased rate to be in the nature of an initial rate, *The Ohio Oil Company, et al.*, Docket No. RI60-92, *et al.*, 27 FPC 1373; *Cities Service Company, et al.*, Docket No. G-8921, *et al.*, 28 FPC 1108; *R. H. Goodrich, et al.*, Docket No. G-8977, *et al.*, 29 FPC 397; *Hunt Oil Company*, Docket No. G-9065, *et al.*, 30 FPC 220; *Texaco Inc.*, Docket No. G-8969, *et al.*, 30 FPC 1631 (Order issued December 30, 1963). We, therefore, find the settlement rates for these sales to be proper and approve the same.

The third exception contained in Humble's proposal involves a sale to United in the Weeks Island Field, Iberia Parish, Louisiana under Humble's FPC Gas Rate Schedule No. 235 at a present rate of 23.55¢ per Mcf. Prior to February 4, 1960, this sale was made under a six year contract which was to expire in 1961 and the dedication was limited to the known productive limits of the field. On February 4, 1960, the parties entered into a new contract for a twenty year term and containing a definite area dedication. Subsequent thereto Humble acquired 6,340.23 acres outside the known productive limits of the field, and developed the same. The production from this acreage has contributed substantial quantities of gas reserves, which will greatly increase the daily deliverability under the contract. Consideration of all of the circumstances surrounding this sale causes us to believe it to be similar to others where we have considered such a unique situation to warrant exception to the applicable area ceiling, *Gulf Oil Corporation, et al.*, Docket No. G-9520, *et al.*, 29 FPC 837,

[4] *Humble Oil & Refining Company*, Docket No. G-9574 (Order issued October 21, 1955).
[5] *C. N. Johnston, et al.*, Docket Nos. G-9136 and G-9569 (Order issued August 29, 1963), 30 FPC 623.

and, therefore, we find the settlement rate of 17.5¢ per Mcf to be proper and approve the same.

The settlement proposal includes rates for which issuance of related permanent certificates is pending, some of which are for deliveries presently being made under temporary authority.[4] We propose to set such applications for abridged statutory hearing in accordance with Section 7 of the Natural Gas Act, indicating that the settlement rates, as provided for herein, shall be the initial price. The certificate applications in Docket Nos. CI60–578, and G–12353, CI61–771 and CI61–794 are presently consolidated in the proceedings in *Sunray DX Oil Company, et al.*, Docket No. G–4281, *et al.*, from which proceeding they shall hereinafter be severed, however the certificates to be issued in such proceedings, along with the others containing upward Btu adjustment clauses shall be so conditioned as to be subject to final determination in Docket No. R–200. Included among the pending certificate applications are five rate schedules in Texas Railroad Commission District Nos. 3 and 4 where sales are being made under temporary certificates and in-line rates have not been determined for such sales. Consistent with our settlement orders in *Gulf Oil Corporation, et al.*, Docket No. G–9520, *et al.* (*supra*); *Sinclair Oil & Gas Company*, Docket No. G–9291, *et al.* (*supra*) and *Socony Mobil Oil Company, Inc.*, Docket No. G–12193, *et al.* (order issued May 28, 1964) we shall condition the certificates to require adjustment of the rates under Humble's FPC Gas Rate Schedule Nos. 325, 341, 342, 349 and 350 to conform with the appropriate in-line price determination, and require refunds from the date of this order if any rates are reduced.

On June 4, 1964, the Pennsylvania Public Utility Commission (PUC) filed its comments in answer to Humble's motion. PUC questions whether the Commission's continuation of approving settlement proposals, such as Humble's,". . . best serves the public interest in producer regulation." As we have pointed out recently in our order approving the settlement in *Socony* (*supra*) we consider the refunds, which are based on cost-of-service determinations; the reduction in rates; and the stability in rates gained through moratoria, pending determination of just and reasonable rates in the area rate proceedings, to be in the public interest. PUC states that our approval of settlements removes ". . . a major segment of the producing industry from area rate proceedings." However as we stated in our order in *Southwest Gas Producing Company, Inc.* (Operator), *et al.*, Docket No. G–16714, *et al.*, 31 FPC 192 (January 27, 1964):

> All of our orders approving settlement proposals or agreements are unqualifiedly subject to final determination in area proceedings, or proceedings of a similar nature. * * *

Each of our settlement orders expressly provide that our approval of the settlement is without prejudice to any findings or orders we may issue in area rate or similar proceedings, and, further, is without prejudice to any claims or contentions any party may make in such proceedings. The reduction in rates obtained through settlement pending final determination in such proceedings, and the stability gained in the interim is of inestimable value to the consuming public. Our conditional approval of Humble's proposal results in Humble refunding approximately 62% of amounts collected above the settlement rates, subject to refund, and the reduced rates of $2,577,000 annually will constitute disallowance of approximately 56% of the increased rates currently being collected in Section 4(e) proceedings. Additionally, six of Humble's rates are

[4] See Appendix B attached hereto.

being reduced below the "last-firm-rate", of which three are not subject to Section 4 proceedings.[1]

As conditioned herein, we believe that the principles underlying the present settlement proposal are consistent with those utilized in previous major independent producer rate settlements.

Our action herein should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in future proceedings, including area rate or similar proceedings, involving Humble's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the Settlement Proposal filed by Humble and as herein conditioned on May 25, 1964, is in the public interest, and it is appropriate in carrying out the provisions of the Natural Gas Act, that it be approved and made effective as hereinafter ordered, and good cause exists for approving the settlement rates, for severing and terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The settlement of these proceedings on the basis of the settlement proposal as herein conditioned, filed by Humble on May 25, 1964, is approved and made effective subject to the terms and conditions herein.

(B) The applicable settlement rates set out in Appendix A hereto are approved, and such rates shall be effective as of July 1, 1964.

(C) The settlement rates approved herein shall be applicable during the moratorium period herein provided for to all sales of natural gas from all acreage dedicated as of the date of issuance of this order under each of the rate schedules currently on file with the Commission whether such sales are made by Humble, its successors or assignees.

(D) Approval of this settlement is conditioned so as to require Humble to reduce its rates under its FPC Gas Rate Schedule Nos. 325 and 342, Docket Nos. CI63–1057 and CI64–677, respectively, to the in-line rate finally determined, after court review or otherwise, in the *H. L. Hawkins, et al.*, proceedings, Docket No. G–18077, *et al.*, and to reduce its rates under its Rate Schedule Nos. 341, 349 and 350, Docket Nos. CI64–298, CI64–297 and CI64–299, respectively, to the in-line rate finally determined after court review or otherwise in the *Turnbull and Zoch Drilling Co. (Operator), et al.*, proceedings, Docket No. G–17960, *et al.* In the event that a rate is reduced as a result of such proceedings, Humble shall refund excess amounts collected from the date of this order. The refund requirement imposed herein shall not be construed to affect or limit the position of the parties in the *Hawkins* or *Turnbull* proceedings with respect to refund obligations under temporary authorizations.

(E) Humble shall compute the difference between the rates collected subject to refund and the related settlement rates for the period from May 1, 1961, to the date of this order, together with interest as specified in each docket to May 31, 1964. Humble shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on each of the purchasers involved, setting out by purchasers the amount of refunds related to each rate schedule

[1] The annual reduction in rates effectuated by our approval of this settlement under these six rate schedules approximates $900,000.

(showing separately the principal and applicable interest), the bases used for such determination and the periods covered.

(F) Humble shall retain the amounts shown in the report required under paragraph (E) above, subject to further order of the Commission directing the disposition of those amounts, *provided, however*, Humble shall within 90 days from the date of this order, (1) refund with interest as specified in each docket computed to May 31, 1964, the difference between the rates collected subject to refund and the related settlement rates, on and after May 1, 1961, to the date of this order for all of such of Humble's Rate Schedules, where the rates were collected subject to refund for sales of natural gas to Texas Eastern Transmission Corporation and Arkansas Louisiana Gas Company, and (2) report to the Commission in writing, the amount of refunds made to Texas Eastern and Arkansas Louisiana showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the settlement proposal as conditionally approved herein.

(G) If Humble elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6% per annum on all funds thus available from August 21, 1964, to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(H) If Humble elects to deposit the retained refunds in a special escrow account, Humble shall tender for filing on or before August 21, 1964, an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Humble and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Humble, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its rea-

sonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

(I) Humble shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order, including specifically the refund requirements under its Rate Schedule Nos. 39 and 126, and the requirement for possible future refunds under its Rate Schedule Nos. 325, 341, 342, 349 and 350.

(J) Any party to the proceedings or settlement negotiations having objections to the terms of this Order shall within 30 days from the date of issuance of this Order set forth such objections in writing to the Commission (Original and one copy), and by serving copies on the other parties.

(K) If as a result of any objections filed pursuant to paragraph (J) hereof, the Commission by subsequent order changes Humble's duties and obligations hereunder, Humble's acceptance of this settlement order shall not be binding on it without its express agreement.

(L) The pending certificate proceedings set out in Appendix B hereto shall not be terminated on the basis of the approval of the settlement proposal, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act and the terms and conditions of this order.

(M) Within 90 days from the date of this order, Humble shall make such filings under its rate schedules as are required to make effective the terms of the settlement proposal.

(N) Upon full compliance by Humble with all the terms and provisions of this order, the Section 4(e) proceedings listed in Appendix A and B hereto, and the Section 5(a) proceedings in Docket Nos. G–9287 and G–9288, shall terminate.

(O) Upon termination of the Section 4(e) proceedings listed in Appendix C hereto, in accordance with paragraph (N) above, said proceedings shall be severed from the consolidated proceedings in Docket Nos. AR61–2, AR64–1 and AR64–2, respectively; the Section 7(c) proceedings listed in Appendix C are hereby severed from their respective consolidated proceedings.

(P) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Humble, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against Humble or any other companies, person or parties affected by this order.

PACIFIC POWER & LIGHT COMPANY, PROJECT NOS. 2337 AND 1163

ORDER ISSUING LICENSE (MAJOR) AND ACCEPTING SURRENDER OF LICENSE (MINOR PART)

(Issued July 8, 1964)

Application was filed on January 25, 1963 by Pacific Power & Light Company (Applicant) of Portland, Oregon, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2337, known as Prospect No. 3 Hydroelectric Project, located on South and Middle Forks of Rogue River and Imnaha and Daniels Creeks, in Jackson County, Oregon, and affecting lands of the United States within the Rogue River National Forest.

Also on January 25, 1963, Applicant filed application for surrender of its license for minor-part Project No. 1163. This filing was pursuant to Commission order issued June 16, 1961 approving the transfer (among others) of the license for the minor-part project from The California Oregon Power Company to Applicant (See, 25 FPC 1154). The minor-part license covers a dam and about 4,000 feet of conduit within the Rogue River National Forest unconstructed at the time the license therefor was issued. These project works are among those included in the application for license for major Project No. 2337.

The Department of the Army and the Chief of Engineers, in reporting on the application for license, offered no objection to the granting of a license for the project.

The Department of the Interior, in reporting on the application for license, recommended, for inclusion in any license for the project, certain conditions in the interests of the Department.

The Department of Agriculture, in reporting on the application for license, recommended, for inclusion in any license for the project, certain conditions in the interests of the National Forest resources involved.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Maine, is authorized to do business in the State of Oregon, and has submitted satisfactory evidence of its compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(2) The project affects lands of the United States.

(3) Public notice of the application for license has been given as required by the Act. No protests have been filed. The Oregon State Game Commission filed on May 27, 1963 a petition to intervene in the interest of assuring, in any license issued, adequate protective facilities as are necessary to fully protect the fish and wildlife resources affected by the project. The Petitioner is made a party herein to the extent of its interest by Article 10 of the license, and we believe that such license Article affords the protection sought by Petitioner. No conflicting application is before the Commission. Publication of the application for surrender of license has been given. No protests or other petitions to intervene have been filed.

(4) The issuance of a license for the project will not interfere or be inconsistent with the purposes for which the Rogue River National Forest was created or acquired.

(5) The project will not affect a Government dam.

(6) The issuance of a license for the project will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(7) The project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(8) The installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 9,600 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(9) The amount of annual charges to be paid under the license for the use, occupancy and enjoyment of lands of the United States by the project is reasonable as hereinafter fixed and specified.

(10) The transmission facilities described in paragraph (B) below are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(11) The exhibits designated and described in paragraph (B) below, which were included as part of the application for license, conform to the Commission rules and regulations and should be approved as part of the license for the project, to the extent therein indicated.

(12) Acceptance of surrender of the license for minor-part Project No. 1163, effective as of December 31, 1963 (the date through which annual charges have been paid under that license) is appropriate.

The Commission orders:

(A) This license is hereby issued to Pacific Power & Light Company (Licensee) of Portland, Oregon, under Section 4(e) of the Federal Power Act (Act) for a period of 25 years, effective as of January 1, 1964, for the operation and maintenance of Prospect No. 3 Project No. 2337, affecting lands of the United States within the Rogue River National Forest, subject to the terms and conditions of the Act which is incorporated by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2337 consists of:

(1) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J, Sheet 1 (FPC No. 2337-1) Prospect No. 3 Project—General Map (Approved FPC No. 1163-1).

Exhibit K, Sheet 1 (FPC No. 2337-2) Prospect No. 3 Project—Detail Map (Approved FPC No. 1163-2).

Exhibit K, Sheet 2 (FPC No. 2337-3) Prospect No. 3 Hydroelectric Project—South Fork of Rogue River—Project Boundary.

(ii) Project works comprised of a concrete dam 150 feet long across the South Fork Rogue River at Imnaha Creek; a conduit about 2.5 miles long composed of wood stave pipe, canal, and tunnel sections; spillway; an intake; and a 3,200-

foot steel penstock leading to a concrete powerhouse containing one 7,200 kw hydroelectric unit which discharges into Daniels Creek; a 69-kv substation; a 69 kv transmission line extending from Prospect No. 3 to Prospect No. 2, a distance of approximately 6.8 miles; and appurtenant facilities; the location, nature, and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L, Sheet 1 (FPC No. 2337–4) Prospect No. 3 Project—General Designs and Dam Foundation Data (Approved FPC No. 1163–3), insofar as it shows the Plan, Elevation, and Section A–A for the dam and Typical Cross Section of Canal only.

Exhibit L, Sheet 2 (FPC No. 2337–5) Prospect No. 3 Hydroelectric Project—South Fork of Rogue River—Powerhouse.

Exhibit M comprised of two pages entitled, "General Description and General Specifications of Mechanical and Electrical Equipment", signed April 20, 1931, The California Oregon Power Company, by E. J. McKay Vice President.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–1 (Revised April 1, 1964) entitled "Terms and Conditions of License for Constructed Major Project Affecting Lands of the United States" (*infra*, p. 71). which terms and conditions designated as Articles 1 through 33, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 34. The Licensee shall adequately maintain the existing fences and construct such additional fences (including draft fences) as may be required to prevent animal access into the canal and to guide them from natural migration routes to the crossings. Two additional deer crossings shall be constructed by the Licensee, making a total of five. All fences and crossings shall be inspected annually and maintained by the Licensee. Specific details for design and location of all fences and crossings shall be approved in writing by United States Forest Service, Oregon State Game Commission, and Bureau of Sport Fisheries and Wildlife, Department of the Interior.

Article 35. The Licensee shall, within one year from the date of issuance of this license, file in conformity with the Commission's rules and regulations, an Exhibit K drawing showing the 69-kv project transmission line and its relationship to the subdivisions of the official government surveys.

Article 36. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations as in effect from time to time. The authorized installed capacity for such purpose is 9,600 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $173.04.

Article 37. The Licensee shall within one year from the date of issuance of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with ap-

propriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for Project No. 2337.

(E) Surrender of the license for minor part Project No. 1163 is hereby accepted, effective as of December 31, 1963.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission with 60 days from the date of issuance of this order.

FORM L–1

(REVISED APRIL 1, 1964)

TERMS AND CONDITIONS OF LICENSE FOR CONSTRUCTED MAJOR PROJECT AFFECTING LANDS OF THE UNITED STATES

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. No substantial change shall be made in the maps, plans, specifications, and statements described and designated as exhibits and approved by the Commission in its order as a part of the license until such change shall have been approved by the Commission: Provided, however, that if the Licensee or the Commission deems it necessary or desirable that said approved exhibits, or any of them, be changed, there shall be submitted to the Commission for approval amended, supplemental, or additional exhibit or exhibits covering the proposed changes which, upon approval by the Commission, shall become a part of the license and shall supersede, in whole or in part, such exhibit or exhibits theretofore made a part of the license as may be specified by the Commission.

Article 3. The project area and project works shall be in conformity with the approved exhibits referred to in Article 2 hereof. If the Licensee shall contemplate any alteration in or addition to the project area or project works shown and described by the approved exhibits referred to in Article 2 herein, the Licensee shall submit to the Commission for approval amended, supplemental, or additional exhibits under the provisions of said article covering such alteration or addition, together with a statement in writing setting forth the reasons which necessitate or justify such alteration or addition. Except when emergency shall require for the protection of navigation, life, health, or property, no substantial alteration or addition not in conformity with the approved plans shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct. Minor changes in the project works or divergence from such approved exhibits may be made if such changes will not result in decrease in efficiency, in material increase in cost, or in impairment of the general scheme of development; but any of such minor changes made without the prior approval of the Commission, which in its judgment have produced or will produce any of such results, shall be subject to such alteration as the Commission may direct. The Licensee shall comply with such rules and regulations of general or special applicability as the Commission may from time to time prescribe for the protection of life, health, or property.

Article 4. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission, whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 5. The operations of the Licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Commission may prescribe for the purposes hereinbefore mentioned.

Article 6. The actual legitimate original cost, estimated where not known, and the accrued depreciation of the project as of the effective date of the license shall be determined by the Commission in accordance with the Act and the rules and regulations of the Commission, and such cost less such accrued depreciation, so determined, shall be the net investment in the project as of such effective date.

Article 7. After the first twenty (20) years of operation of the project under the license, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Article 8. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 9. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 10. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 11. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 12. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 13. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided,

that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 14. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the Licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 15. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 16. The Licensee shall clear and keep clear to an adequate width lands of the United States along open conduits, and shall dispose of all temporary structures, unused timber, brush, refuse, or inflammable material resulting from the clearing of the lands or from the maintenance or alteration of the project works. In addition, all trees along the margins of reservoirs which may die during operations of the project shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission.

Article 17. In the construction and maintenance of the project, the location and standards of roads and trails, and other land uses, including the location and condition of quarries, borrow pits, spoil disposal areas, and sanitary facilities, shall be subject to the approval of the department or agency of the United States having supervision over the lands involved.

Article 18. In the construction and maintenance of the project works, the Licensee shall place and maintain suitable structures and devices to reduce to a reasonable degree the liability of contact between its transmission lines, and telegraph, telephone, and other signal wires or power transmission lines constructed prior to its transmission lines and not owned by the Licensee, and shall also place and maintain suitable structures and devices to reduce to a reasonable degree the liability of any structures or wires falling and obstructing traffic and endangering life on highways, streets, or railroads. None of the provisions of this article is intended to relieve the Licensee from any responsibility or requirement which may be imposed by other lawful authority for avoiding or eliminating inductive interference.

Article 19. The Licensee shall make provision, or shall bear the reasonable cost, as determined by the agency of the United States affected, of making provision for avoiding inductive interference between any project transmission line or other project facility constructed, operated, or maintained under the license, and

any radio installation, telephone line, or other communication facility installed or constructed before or after construction of such project transmission line or other project facility and owned, operated, or used by such agency of the United States in administering the lands under its jurisdiction.

Article 20. The Licensee shall clear such portions of transmission line rights-of-way across lands of the United States as are designated by the officer of the United States in charge of the lands; shall keep the areas so designated clear of new growth, all refuse, and inflammable material to the satisfaction of such officer; shall trim all branches of trees in contact with or liable to contact the transmission line; shall cut and remove all dead or leaning trees which might fall in contact with the transmission line; and shall take such other precautions against fire as may be required by such officer. No fires for the burning of waste material shall be set except with the prior written consent of the officer of the United States in charge of the lands as to time and place.

Article 21. Timber on lands of the United States cut, used, or destroyed in the construction and maintenance of the project works or in the clearing of said lands shall be paid for in accordance with the requirements of and at the current stumpage rates applicable to the sale of similar timber by the agency of the United States having jurisdiction over said lands; and all slash and debris resulting from the cutting or destruction of such timber shall be disposed of as the officer of such agency may direct.

Article 22. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon request of officers of the agency of the United States concerned, to prevent, make advanced preparations for suppression, and suppress fires on lands occupied under the license.

Article 23. The Licensee shall interpose no objection to, and shall in no way prevent, the use by the agency of the United States having jurisdiction over the lands of the United States affected, or by persons or corporations occupying lands of the United States under permit, of water for fire suppression from any stream, conduit or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license, or to the use by said parties of water for sanitary and domestic purposes from any stream or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license.

Article 24. The Licensee shall be liable for injury to, or destruction of, any buildings, bridges, roads, trails, lands, or other property of the United States, occasioned by the construction, maintenance, or operation of the project works or of the works appurtenant or accessory thereto under the license. Arrangements to meet such liability, either by compensation for such injury or destruction, or by reconstruction or repair of damaged property, or otherwise, shall be made with the appropriate department or agency of the United States.

Article 25. The Licensee shall allow any agency of the United States, without charge, to construct or permit to be constructed on, through, and across the project lands, conduits, chutes, ditches, railroads, roads, trails, telephone and power lines, and other means of transportation and communication not inconsistent with the enjoyment of said lands by the Licensee for the purposes stated in the license. This article shall not be construed as conferring upon the Licensee any right of use, occupancy, or enjoyment of the lands of the United States other than for the construction, operation, and maintenance of the project as stated in the license.

Article 26. There is reserved to the appropriate department or agency of the United States, or of the State or county involved, the right to take over, maintain, and supervise the use of any project road as a public road.

Article 27. The Licensee, its successors and assigns shall, during the period of the license, retain the possession of all project property covered by the license as issued or as later amended, including the project area, the project works, and all franchises, easements, water rights, and rights of occupancy and use; and none of such properties necessary or useful to the project and to the development, transmission, and distribution of power therefrom will be voluntarily sold, transferred, abandoned, or otherwise disposed of without the approval of the Commission: Provided, that a mortgage or trust deed or judicial sales made thereunder, or tax sales, shall not be deemed voluntary transfers within the meaning of this article. In the event the project is taken over by the United States upon the termination of the license, as provided in Section 14 of the Act, or is transferred to a new Licensee under the provisions of Section 15 of the Act, the Licensee, its successors and assigns will be responsible for and will make good any defect of title to or of right of user in any of such project property which is necessary or appropriate or valuable and serviceable in the maintenance and operation of the project, and will pay and discharge, or will assume responsibility for payment and discharge, of all liens or incumbrances upon the project or project property created by the Licensee or created or incurred after the issuance of the license: Provided, that the provisions of this article are not intended to prevent the abandonment or the retirement from service of structures, equipment, or other project works in connection with replacements thereof when they become obsolete, inadequate, or inefficient for further service due to wear and tear, or to require the Licensee, for the purpose of transferring the project to the United States or to a new Licensee, to acquire any different title to or right of user in any of such project property than was necessary to acquire for its own purposes as Licensee.

Article 28. For the purpose of determining the stage and flow of the stream or streams from which water is diverted for the operation of the project works, the amount of water held in and withdrawn from storage, and the effective head on the turbines, the Licensee shall install and thereafter maintain such gages and stream-gaging stations as the Commission may deem necessary and best adapted to the requirements; and shall provide for the required readings of such gages and for the adequate rating of such stations. The Licensee shall also install and maintain standard meters adequate for the determination of the amount of electric energy generated by said project works. The number, character, and location of gages, meters, or other measuring devices, and the method of operation thereof, shall at all times be satisfactory to the Commission and may be altered from time to time if necessary to secure adequate determinations, but such alteration shall not be made except with the approval of the Commission or upon the specific direction of the Commission. The installation of gages, the ratings of said stream or streams, and the determination of the flow thereof, shall be under the supervision of, or in cooperation with, the District Engineer of the United States Geological Survey having charge of stream-gaging operations in the region of said project, and the Licensee shall advance to the United States Geological Survey the amount of funds estimated to be necessary for such supervision or cooperation for such periods as may be mutually agreed upon. The Licensee shall keep accurate and sufficient record of the foregoing determina-

tions to the satisfaction of the Commission, and shall make return of such records annually at such time and in such form as the Commission may prescribe.

Article 29. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without any replacement, or shall abandon or discontinue good faith operation of the project for a period of three years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 30. Whenever the Licensee is directly benefited by the construction work of another Licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 31. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines from lands of the United States and restore said lands to a condition satisfactory to agency having jurisdiction over the lands and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 32. The right of the Licensee and of its transferees and successors to use or occupy lands of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 33. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly set forth herein.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

WISCONSIN MICHIGAN POWER COMPANY, PROJECT NO. 1759

ORDER APPROVING CHANGES IN TRANSMISSION FACILITIES

(Issued July 8, 1964)

On March 9, 1964, Wisconsin Michigan Power Company, licensee for Project No. 1759, applied for Commission approval of certain proposed relocation and

changes in the 69 kv electrical transmission facilities of the Twin Falls development of the project located on the Menominee River, Michigan-Wisconsin.

The proposed relocation and changes would include the removal of all 69 kv equipment from the powerhouse structure and the re-routing of the 69 kv transmission lines presently terminating at the powerhouse structure. The lines would then terminate at a new switching facility to be constructed in the immediate area, but which will be located outside of the present project boundary. Also, the 69 kv switching equipment will be removed from the 6.9/69 kv outdoor substation to the new switching station. Present plans call for this work to be completed in 1964.

The licensee advises that the proposed changes are necessary to improve system reliability and capacity by: permitting removal of the hazardous 69 kv indoor switching facilities; eliminating the existing 69 kv bus which covers a large area making operation difficult and exposing the bus to excessive faults; increasing the current capacity of certain lines now limited by the capacity of the roof bushing on the powerhouse structure; allowing the application of fast, modern breakers and improved protective equipment; and by conveniently allowing for additions contemplated in the future, but inconvenient under the present bus arrangement. The proposed changes will be advantageous to the licensee's transmission system since it will provide increased reliability, increase the current carrying capacity of certain lines, and facilitate switching on the 69 kv system.

The Commission finds:

Commission approval of the proposed changes will not be incompatible with the public interest as hereinafter provided.

The Commission orders:

The aforementioned proposed relocation and changes are hereby approved. provided that within three months after the construction is completed, the licensee for the project shall file for Commission approval a revised Exhibit L showing the project with the aforementioned construction as completed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

WISCONSIN PUBLIC SERVICE CORPORATION, PROJECT NO. 1957

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued July 8, 1964)

On February 19, 1964, Wisconsin Public Service Corporation, licensee for Project No. 1957, filed revised prints of Exhibit J & K map (FPC No. 1957-1), and requested our staff to reflect the revision on the Exhibit J & K map on file with the Commission, which had heretofore been approved by the Commission as part of the license for the project. The staff has made the revision as requested, and Commission approval of the revised exhibit is requested by the licensee.

The revision shows for the first time that a small parcel of land of the United States (less than one half an acre) has been inundated by the project reservoir. The parcel is described as Lot 9, Section 25, T. 40 N., R. 10 E., 4th P.M., Vilas County, Wisconsin. The license for the project was issued effective as of January 1, 1938.

The Commission finds:

(1) Exhibit J & K (FPC No. 1957–1), entitled "General & Detail Map of Project Area—Otter Rapids Hydro Electric Development" as further revised on February 19, 1964 by the staff, conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

(2) Superseded Exhibit J & K (FPC No. 1957–1), now on file with the Commission and which was approved by the Commission on August 16, 1950, should be eliminated from the license.

The Commission orders:

The revised exhibit described in finding (1) above is hereby approved as part of the license for Project No. 1957, and the superseded exhibit described in finding (2) above is hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

GEORGIA POWER COMPANY, PROJECT NO. 2237

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL COST, ACCRUED DEPRECIATION, NET INVESTMENT, AND CHANGES THEREIN, AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 9, 1964)

Georgia Power Company, Licensee for Project No. 2237,[1] filed on May 24, 1961, pursuant to Sections 4.1 and 4.20 of the Commission's Regulations under the Federal Power Act, its Initial Statement, showing a claimed cost of $1,333,-135.44, accrued depreciation in the amount of $500,593.62, and a net investment in the project of $832,541.82, as of March 1, 1959, the effective date of the license.

This statement also shows claimed net changes in project plant accounts consisting of gross additions of $818,383.59, gross retirements of $30,030.51, and contributions in aid of construction-Federal, of $411,550.39, resulting in a claimed net increase of $376,802.69, for the period from March 1, 1959 through December 31, 1960, and a total claimed actual legitimate original cost of the project of $1,709,938.13, as of December 31, 1960.

Licensee's claimed net change in project accrued depreciation shows a net decrease of $15,220.64, for the period from March 1, 1959, to December 31, 1960, and results in a total claimed project accrued depreciation of $485,372.98, as of December 31, 1960.

Commission's staff conducted a field examination of Licensee's books, records and other data for the purpose of determining the accuracy of Licensee's claims.

---

[1] The project is located near Roswell, on the Chattahoochee River, in Fulton and Cobb Counties, Georgia, about 12½ miles upstream from the City of Atlanta, and may be described as the Morgan Falls project. It was constructed and placed in operation in 1904. The license, authorizing construction, operation, and maintenance of the redeveloped Morgan Falls Project was issued pursuant to Section 4(e) of the Federal Power Act for a period of 50 years, effective as of March 1, 1959 (21 FPC 425, 428).

As a result of that examination, staff proposes, subject to Commission approval,[2] certain adjustments, agreed to by the Licensee, as follows: (1) a reduction of $1,137.50, including a reclassification within project plant accounts of $360.81, in the claimed actual legitimate original project cost as of March 1, 1959; (2) a decrease in contributions in aid of construction-Federal of $18,915.57, effecting an increase in the claimed actual legitimate original cost of $17,778.07, for the period from March 1, 1959, to December 31, 1960, and (3) an increase in accumulated provision for depreciation of project plant of $14,830.14, as of December 31, 1960. These adjustments and accounting dispositions of all amounts involved are summarized in the attached Schedules I and II.

By letter dated April 20, 1962, Licensee confirmed its agreement with the adjustments proposed by the staff and with the resulting project costs and depreciation.

The Georgia Public Service Commission was advised by letter of this Commission dated December 21, 1962 as to the proposed adjustments and resulting project costs and accrued depreciation. By its letter of December 27, 1962, the Georgia Commission indicated no objection thereto.

The Commission finds:

(1) Licensee, by its acceptance of the proposed adjustments, including the accounting dispositions and resulting project costs and project accrued depreciation, and the Georgia Public Service Commission by its concurrence, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The proposed adjustments including the accounting dispositions are reasonable and appropriate for the purposes of the Federal Power Act and, therefore, should be approved and directed as hereinafter provided.

(3) As of the effective date of the license, March 1, 1959, the actual legitimate original cost of Project No. 2237 is $1,331,997.94.

(4) The accrued depreciation of Project No. 2237 as of March 1, 1959, the effective date of the license, is $500,593.62.

(5) The net investment in Project No. 2237 as of March 1, 1959, the effective date of the license, is $831,404.32.

(6) The net increase in the actual legitimate original cost of Project No. 2237, for the period from March 1, 1959 through December 31, 1960, is $395,718.26, ($788,353.08, project electric plant in service less $392,634.82 contributions in aid of construction-Federal), and the resulting actual legitimate original cost of Project No. 2237 as of December 31, 1960 is $1,727,716.20, classified by accounts as shown in Schedule I.

(7) The net increase in project accrued depreciation of Project No. 2237 for the period from March 1, 1959 through December 31, 1960 is $14,830.14 and the accrued depreciation as of December 31, 1960 is $500,203.12, classified by functional groups as shown on Schedule III.

---

[2] Articles 21 and 22 of the license provide as follows: Article 21. The actual legitimate original cost, estimated where not known, and the accrued depreciation of the parts of the project completed prior to the effective date of the license shall be determined by the Commission as of such effective date, in accordance with the Act, and the rules and regulations of the Commission, and such cost less such accrued depreciation, so determined, shall be the net investment in the project as of such effective date. Article 22. The actual legitimate original cost of the parts of the project to be completed after the effective date of the license, and of any addition to or betterment of the project, shall be determined by the Commission in accordance with the Act and the rules and regulations of the Commission thereunder.

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments including accounting dispositions, proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and subsidiary project plant accounts showing the actual legitimate original cost of the project, as of December 31, 1960, in the amount of $1,727,716.20, classified by primary plant accounts as shown in Schedule I.

(D) Licensee, to the extent that it has not already done so, shall establish and maintain a project accumulated provision for depreciation in the amount of $500,203.12, as of December 31, 1960, classified by functional groups as shown in Schedule III.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission FPC Form No. 7 and three certified copies of the adjusting journal entries showing compliance therewith.

NORTHERN STATES POWER COMPANY (MINNESOTA), DOCKET NO. E-7168

ORDER AUTHORIZING THE ISSUANCE OF PREFERRED STOCK

(Issued July 9, 1964)

Northern States Power Company (Applicant), incorporated under the laws of the State of Minnesota and qualified to do business in the States of Minnesota, North Dakota and South Dakota, with its principal business office at Minneapolis, Minnesota, filed an application on June 1, 1964, for authorization, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding, 150,000 shares of Cumulative Preferred Stock with a par value of $100 per share.

Applicant proposes, on or about July 15, 1964, to invite sealed, written proposals for the purchase of the 150,000 shares of Cumulative Preferred Stock, $— Series, by newspaper publication and by distribution of a public invitation containing a statement of terms and conditions relating to proposals for the proposed issuance, together with an individual form of bid and purchase contract for the issuance here proposed.

Each proposal, which may be made by a single bidder or by a group of bidders, must be for the purchase of all the new Preferred Stock. In case the proposal of a group of bidders is accepted, the obligations of the members of the group, subject to the provisions of the purchase contract, shall be several and not joint to purchase the respective number of shares of New Preferred Stock indicated in the proposal opposite the names of such members. No bidder may submit

or participate in more than one proposal. All proposals must be on a form of proposal, signed by the bidder, and in the case of a proposal by a group of bidders, by the representative on behalf of the group. Each proposal shall specify (a) the annual dividend rate to be established for the New Preferred Stock, which rate shall be a multiple of $.01, and, (b) the price per share to be paid to the company for the New Preferred Stock, which price (exclusive of accrued dividends) shall be not more than $102.50 per share, nor less than $100 per share. Each proposal shall provide that accrued dividends on the New Preferred Stock from July 1, 1964, to the date of payment for the New Preferred Stock and delivery thereof will be paid by the purchaser or purchasers to the Company.

Unless postponed, all proposals for the purchase of the proposed issuance of Preferred Stock must be presented before 10:00 a.m., Central Daylight Saving Time on July 22, 1964, to the Applicant at Room T, Vault Floor, The First National Bank of Chicago, 38 South Dearborn Street, Chicago, Illinois, 60603. Each bid must be accompanied by a certified or bank cashier's check or check payable in Chicago or New York Clearing House Funds to the order of the Company, in the aggregate amount of $450,000. Unless the Applicant shall reject all proposals or exclude a proposal or proposals for reasons set forth in the invitation, it will accept the proposal which provides for the lowest cost of money.

The Applicant will use the proceeds from the sale of the New Preferred Stock to pay an equal amount of 1964 short-term bank loans. The Applicant had bank loans of $2,000,000 outstanding as of March 31, 1964, and at the time of the issuance and delivery of the New Preferred Stock, Applicant's outstanding bank loans will aggregate approximately $19,000,000. These loans replenished the general funds of Applicant which were reduced by 1964 construction expenditure payments.

Applicant's construction program for 1964 is estimated at $50,200,000 of which there is allocated $34,080,000 for electric production, transmission and distribution facilities, $6,020,000 for gas facilities, $181,000 for heating facilities, $640,000 for telephone facilities, and $9,280,000 for general expenditures. Completion of Pathfinder atomic plant and Riverside Unit No. 8 will require $7,197,000 in 1964 and other miscellaneous improvements of production facilities will require $621,000. Major transmission line construction includes, the start of a new 100-mile 345 kv line from Red Rock Sub to Adams Sub (Applicant's portion of Twin Cities-St. Louis tie), at a cost of $70,000 in 1964 and continuation of construction of the 14-mile, 345 kv line from Red Rock Sub to Minn-Wisc Boundary (Applicant's portion of Twin Cities-Chicago tie), at a cost of $848,000 in 1964. Construction of additional transmission lines during 1964 will require an expenditure of $2,422,000. The program also provides for the installation of new substation facilities at six locations at a total cost of $707,000. In addition, $519,000 has been allocated for the design and procurement of rights-of-way, $1,382,000 has been allocated for miscellaneous improvements to lines and stations, and $20,314,000 has been allocated for miscellaneous improvements and extensions to the distribution system to provide for new loads.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, the North Dakota Public Service Commission, and the South Dakota Public Utilities Commission and to the Governor of each of those States. Notice has also been given in the Federal Register on June 13, 1964 (29 F.R. 7620) stating that any person desiring to be heard or to make any protest with reference to the application, shall file petitions or protests on or before June 26, 1964 with the Federal Power Commission, Washington, D.C.,

20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described in the Commission's order issued September 1, 1955, *In the Matter of Northern States Power Company*, Docket No. E-6637 (14 FPC 946).

(2) The proposed issuance and sale of Preferred Stock as described above will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating under the laws of a State in which the security issue here involved is regulated by a state commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securities is therefore not exempt by virtue of that section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Preferred Stock, as hereinafter authorized, will be for a lawful object and within the corporate purposes of Applicant and compatible with the public interest which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service and is reasonably appropriate for that service.

The Commission orders:

(A) The proposed issuance and sale of Preferred Stock, as described above, upon the terms and conditions, and for the purposes specified in the application, is authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Preferred Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereon.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 619

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 9, 1964)

Pacific Gas & Electric Company, Licensee for Project No. 619,[1] from time to time filed statements, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from April 2, 1936, through December 31, 1954, a net increase in the actual legitimate original cost of the project of $683,062.92[2] consisting of gross additions of $1,057,663.01, gross retirements of $373,986.68, and contributions in aid of construction in the credit amount of $613.41, resulting in a claimed total actual legitimate original cost of the project as of December 31, 1954, of $9,692,905.01, as more specifically shown in the attached Schedule I.[3]

The staff made a field examination of licensee's books, records and other data for the purpose of ascertaining the correctness of the above claimed and recorded project costs for the period from April 2, 1936, through December 31, 1954. Following that examination agreement, subject to Commission approval, was reached between staff and representatives of Licensee with respect to proposed adjustments for the period from April 2, 1936, through December 31, 1954, affecting a net increase of $11,928.54 in claimed and recorded project costs as follows:

Net overstated and unrecorded retirements	$4,393.21
Overheads improperly capitalized	(1,460.95)
Nonproject costs	(11,236.90)
Cost of project facilities improperly classified as project No. 1962	20,233.18
Total	11,928.54

The detailed adjustments (including reclassification of certain items totaling $85,951.13 within project accounts) are summarized in the attached Schedule II.

The accounting dispositions of amounts involved in the proposed adjustments are shown by the following journal entry:

Account	*Title*	*Debit*	*Credit*
101	Electric Plant in Service		
	Project No. 619	$11,928.54	
	Nonproject	10,832.34	
	Project No. 1962		$20,233.18
108	Accumulated Provision for Depreciation of		
	Electric Plant in Service		
	Nonproject	404.56	
	Project No. 619	3,988.65	
			4,393.21
402	Maintenance Expense	767.66	
408	Taxes Other than Income	693.29	

[1] The project is located on the North Fork of the Feather River in Plumas County, California, and may be described as the Bucks Creek Development. The License issued pursuant to Section 4 of the Federal Water Power Act to the Feather River Power Company, authorizing the construction, operation and maintenance of the project is by its terms effective for a period terminating December 31, 1968. By order issued April 14, 1936, the Commission approved the transfer of the License from Feather River Power Company to Pacific Gas and Electric Company effective April 7, 1936.

[2] By order issued February 27, 1950 (9 FPC 528), the Commission determined the actual legitimate original cost of the project to be $9,009,842.09 as of April 1, 1936.

[3] Article 20 of the license provides for Commission determination of the actual legitimate original cost of the project.

After giving affect to the proposed adjustments, Staff recommends and Licensee concurs that the Commission determine the net increase or change in Project Cost for the period from April 2, 1936 through December 31, 1954 to be $694,991.46 and the resulting total project cost as of December 31, 1954 to be $9,704,833.55.

Licensee did not segregate and record on its books a depreciation reserve for Project No. 619. The staff has not completed its studies with respect to project depreciation reserve and recommends that this phase of the accounting examination be deferred for later consideration by the Commission.

By letter dated March 6, 1962, Licensee confirmed its agreement with respect to the proposed adjustments and resulting project costs.

The California Public Utilities Commission was advised by letter of this Commission dated June 28, 1962, of the proposed adjustments, and resulting project costs, all as recommended by this Commission's Staff and agreed to by Licensee as set forth above. By letter of July 11, 1962, addressed to this Commission's Regional Accountant, San Francisco, California, that Commission indicated no objection to the Staff's recommendations.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments, including the accounting dispositions, and resulting project costs, and its letter dated March 6, 1962, and the California Public Utilities Commission, by its letter dated July 11, 1962, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, proposed by the Staff and agreed to by the Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 619 for the period from April 2, 1936, through December 31, 1954, is $694,991.46, comprised of gross additions of $1,065,198.34, gross retirements of $369,593.47, and contributions in aid of construction in the credit amount of $613.41, and the resulting actual legitimate original cost of the project as of December 31, 1954 is $9,704,833.55, classified by primary accounts as shown in the attached Schedule I.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the accrued depreciation applicable to in-service project properties of Project No. 619 as of December 31, 1954, be reserved for future Commission consideration hereinafter provided.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including accounting dispositions, as proposed by the Staff and agreed to by the Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts for Project No. 619 showing the debit amount of $694,991.46 as the net increase or change in actual legitimate original project cost for the period from April 2, 1936. through December 31, 1954, and the debit balance of $9,704,833.55 as the actual legitimate original project cost as of December 31, 1954, classified by primary plant accounts of the

Commission's Uniform System of Accounts prescribed for Public Utilities and Licensees as shown in the attached Schedule I.

(D) Licensee shall within 90 days from the issuance of this order file with this Commission certified copies of Licensee's adjusting journal entry as of December 31, 1954, showing compliance with this order; three copies of that journal entry to be submitted to the Secretary, Federal Power Commission, Washington, D.C., 20426, and two copies thereof to be submitted to the Regional Accountant, Federal Power Commission, San Francisco, California, 94111.

(E) The matter of Commission determination of the amount of accrued depreciation applicable to in-service project properties of Project No. 619 as of December 31, 1954, is hereby expressly reserved for future Commission consideration and determination.

WISCONSIN VALLEY IMPROVEMENT COMPANY, PROJECT NO. 2113

ORDER MODIFYING ORDER ON REHEARING

(Issued July 9, 1964)

Pursuant to application filed March 16, 1964 by Wisconsin Valley Improvement Company, licensee for Project No. 2113, by order issued April 15, 1964, we granted rehearing of our order issued February 17, 1964, 31 FPC 417, approving project exhibits and fixing annual charges for the project.

In its application for rehearing, the licensee requested modification of the February 17, 1964 order to reduce the acres of lands of the United States occupied by the project from 101.30 acres, as specified in the order, to 17.10 acres, with a resultant decrease in the amount of annual charges for such occupancy.

A staff re-examination of the lands in question, based upon information furnished by the licensee and on additional land records now within the Commission, shows that the project actually occupies 22.10 acres of lands of the United States for purposes of annual charges. The difference between the licensee's figure of 17.10 acres and the staff's new figure of 22.10 acres is predicated on the fact that lands of the United States occupied by the project in Rainbow Reservoir comprise 17.15 acres rather than the 12.15 acres listed in the Commission's February 26, 1964 letter to the licensee.

The Commission finds:

It will be consistent with the public interest to modify our aforesaid February 17, 1964 order as hereinafter provided.

The Commission orders:

(A) Paragraph (E) of our February 17, 1964 order is hereby modified to read as follows:

(E) Article 32 of the license for the project is hereby modified to read as follows:

Article 32. The Licensee shall pay to the United States the following annual charges, effective as of August 1, 1943:

(i) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands (22.10 acres) the sum of $53.04.

(B) The aforementioned Commission order issued February 17, 1964, as modified by this order, shall be accepted by the licensee and returned to the Commission on or before July 31, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. RP64-9

ORDER ON APPEAL FROM RULING OF THE PRESIDING EXAMINER

(Issued July 10, 1964)

On May 7, 1964, during the course of the prehearing conference in this proceeding, the Presiding Examiner ruled that he proposed "to accept in this case the filed rates of the Cities Service Oil Company [Oil Company] and the Columbian Fuel Corporation [Columbian] as legitimate costs of service of the Cities Service Gas Company [Gas Company] exactly in the same form and extent as I will do

to all other producers supplying Cities Service Gas Company in respect of their filed rates," which, in effect, was a ruling that Gas Company was not required to adduce evidence pertaining to its affiliated gas purchases in this proceeding.[1]

On June 12, 1964, the Commission staff filed an appeal[2] herein requesting the Commission to overrule the Examiner's ruling, to direct the Examiner to require the Gas Company to adduce cost evidence in this proceeding to support the purchased gas expense claimed by Gas Company with respect to all of its purchases from its affiliated suppliers, and to consolidate with this proceeding the pending Section 4(e) proceedings involving sales to Gas Company by its affiliated suppliers. In its appeal, staff contends that, because of the relationship of the Gas Company, Oil Company, and Columbian, Gas Company is required to adduce cost evidence to support its claimed purchase gas expense from those suppliers under the Court's ruling in *City of Detroit* v. *F.P.C.*, 230 F. 2d 810, and the Commission's recent decision in *United Gas Pipe Line Company*, Opinion No. 428, issued May 14, 1964, 31 FPC 1180. Staff further states that it would not object to the evidence being supplied by the affiliated producers and would not oppose their petition to intervene herein, if tendered. Additionally, the staff contends that the cost evidence, sought to be required herein, may be a duplication of the evidence required in the pending producers' rate proceedings and, therefore, moved to have those rate proceedings consolidated with this proceeding.

On June 22, 1964, Gas Company filed its answer and objections to staff's appeal. In this document, Gas Company contends that "the real issue in this appeal is whether or not the rates for Oil Company's and Columbian's sales to Gas Company *must* be fixed *in this proceeding*" [emphasis in original] and that, based on our recent decisions in *Union Producing Company*, Opinions Nos. 414 and 414–A, 31 FPC 41 and 503, and *United Gas Pipe Line Company*, *supra*, the cost evidence sought by staff need not the adduced in this proceeding. However, the posture of the *United* case in reference to its purchased gas costs from its affiliated supplier, Union, was materially different from the instant proceeding. The *United* hearing commenced on November 27, 1962, approximately five months after the Examiner had issued his decision in the *Union* case (*Union Producing Company, et al.*, Docket No. G–13811, *et al.*). Therefore, the attempt to try the issue of Union's rates in the *United* proceeding would have resulted in a retrial of the same issues that the Examiner had ruled on in his decision in the *Union* case, which retrial would have unnecessarily prolonged the *United* proceeding to the detriment of the public interest. The instant proceeding is not similar to the *United* proceeding and, therefore, the cost evidence of Gas Company's affiliated suppliers, sought to be required herein by staff, will expedite, rather than prolong the final determination of this proceeding.

Under the *City of Detroit* case, the Court stated that the costs of a pipeline's own production should "be used at least as a point of departure" in ascertaining the costs that will be allowed in the pipeline's cost of service for such gas purchases (230 F. 2d at 810). In *Mississippi River Fuel Corp* v. *F.P.C.*, 252 F. 2d 619, the Court, in dealing with costs to be allowed a pipeline for its purchases from affiliated suppliers, stated (252 F. 2d 622):

> We think the Commission could no more test the reasonableness of inter-affiliate prices by the use of fair field prices (without more) than it could allow as costs the fair field prices (without more).

---

[1] Gas Company, Oil Company, and Columbian are subsidiaries of Cities Service Company.

[2] On June 17, 1964, staff filed a motion herein requesting the Commission to consider its appeal as having been filed under Section 1.18(d) of our Rules of Practice and Procedure. We grant this motion and will consider the appeal as having been filed under Section 1.18(d).

Based on those Court rulings, we stated, in the *United* case, "that we would be remiss in accepting Union's filed rates for United's purchased gas costs" (p. 1187). We would similarly be remiss in this instance if we failed to require Gas Company to adduce cost evidence related to gas purchases from its affiliates.

Gas Company also contends that the consolidation of the producers' rate proceedings with this proceeding would prolong and delay the eventual determination herein to the detriment of the public interest. Gas Company asserts that if Oil Company's and Columbian's pending rate cases with respect to sales to Gas Company are consolidated herewith, those companies would require a minimum period of six months in which to prepare for hearing. However, Oil Company and Columbian are presently preparing cost data for the year 1962 on all of their jurisdictional sales, including the sales to Gas Company, pursuant to questionnaires submitted to them by this Commission, which data are due to be filed on July 31, 1964. The test period involved herein is for the twelve months ending June 30, 1963. If the cost data due to be filed by Columbian and Oil Company based on the calendar year 1962 are claimed to be substantially out-moded in reference to the test year in this proceeding, such data can be updated, if necessary, upon a proper showing.

We are reluctant to delay the determination of this proceeding. However, this issue is no minor matter (*e.g.*, *Mississippi* and *City of Detroit* cases, *supra*) and, in this proceeding, affects approximately 10 percent of Gas Company's purchases for the test period. Accordingly, we shall require the Gas Company to submit cost evidence in support of the purchased gas expense claimed by it with respect to purchases from its affiliated suppliers and to file and serve such testimony and exhibits on the parties hereto on or before September 8, 1964. At the hearing now scheduled to convene on September 15, 1964, the Presiding Examiner shall set the dates for the filing of evidence by the interveners and staff, rebuttal testimony, and for cross-examination, on the issue of the amounts to be allowed in Gas Company's cost of service for affiliated gas purchases. We would be willing to consider a motion to try this issue apart from this proceeding and tentatively reflect the gas purchases from affiliates at the filed rates, provided Gas Company will stipulate that such reduced rates as may be determined for its affiliates in the separate proceeding will be reflected in the cost of service in this proceeding for all gas purchased from such affiliate and refunds, if any, resulting therefrom will be made by Gas Company to its customers from the date the proposed rates in this proceeding became effective subject to refund, *i.e.*, April 23, 1964. Absent such stipulation the procedure provided herein will be controlling.

The Commission orders:

(A) Gas Company, on or before September 8, 1964, shall serve on the parties to this proceeding its cost evidence comprising the direct testimony and exhibits on the issue of the amounts to be allowed in its cost of service for gas purchased from its affiliated suppliers.

(B) At the hearing scheduled to convene herein on September 15, 1964, the Presiding Examiner shall set the dates for the filing of answering testimony and exhibits, rebuttal evidence, and for cross-examination of the issue stated in Paragraph (A) above in conformity with our desire to expedite this proceeding.

(C) Gas Company, within 30 days from the date of this order, may file a motion herein with a stipulation, as contemplated above, requesting the Commission to establish a separate hearing on the issue stated in Paragraph (A) above.

(D) The hearing scheduled to commence herein on September 15, 1964, for cross-examination on all of the other issues in this proceeding shall be continuous until concluded as heretofore ordered.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

JONES-O'BRIEN, INC., ET AL. (OPERATORS), ET AL., DOCKET NO. RI64-403

ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDINGS IN PART

(Issued July 10, 1964)

On June 10, 1964, Jones-O'Brien, Inc., *et al.* (Operators), *et al.* (Jones-O'Brien) submitted an offer of settlement pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure.[1][2] The offer involves the proposed increased rate of 16.8263¢ per Mcf, suspended in the above-entitled proceeding,[3] for sales of natural gas made to Texas Eastern Transmission Corp. (Texas Eastern) under Jones-O'Brien's FPC Gas Rate Schedule No. 5, in Bethany-Longstreet Field, Caddo and De Soto Parishes, Louisiana (North Louisiana). Under the terms of the offer, Jones-O'Brien proposes to eliminate all price escalation provisions from its rate schedule and to establish a 16.7756¢ per Mcf rate for the subject sale. No protests or objections have been filed to the offer.

Concurrently, Jones-O'Brien filed a notice of change in rate to 16.7756¢ per Mcf, inclusive of tax reimbursement, at 15.025 psia under the subject rate schedule to be effective July 1, 1964[4] and an executed contract amendment eliminating all price escalation provisions under the instant rate schedule.[5]

The proposed settlement is consistent with the provisions of the *Seventh Amendment to the Commission's Statement of General Policy No. 61-1*, issued November 27, 1963, in Docket No. R-251, 30 FPC 1370, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Jones-O'Brien's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Jones-O'Brien's rate and rate schedule.

The Commission finds:

The proposed settlement, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Jones-O'Brien on June 10, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Jones-O'Brien on June 10, 1964, is hereby approved in accordance with the provisions of this order.

---

[1] Although no formal offer was filed, the notice of change and executed contract amendment filed by Jones-O'Brien are treated herein as constituting an offer of settlement within the meaning of the Seventh Amendment to the Commission's Statement of General Policy No. 61-1.

[2] Jones-O'Brien's offer specifically relates only to its own interest under the subject rate schedule. However, it is deemed to be applicable also to the signatory parties covered by its rate schedule to the extent they comply with the provisions of this order.

[3] The proposed 16.8263¢ rate has not been placed in effect subject to refund.

[4] Adequate notice has not been given for the proposed effective date.

[5] The notice of change and contract amendment is designated as Supplement No. 13 to Jones-O'Brien's FPC Gas Rate Schedule No. 5.

(B) Supplement No. 13 to Jones-O'Brien's FPC Gas Rate Schedule No. 5 is hereby accepted for filing, effective as of July 11, 1964. The settlement rate herein approved shall be considered applicable to Jones-O'Brien's interest and to the interest of any other signatory party covered by the subject rate schedule who files an executed contract amendment similar to the one filed by Jones-O'Brien, but shall not be applicable to any signatory party who does not so comply.

(C) The above-designated proceeding is hereby terminated as to Jones-O'Brien's interest and shall also be deemed terminated as to any other signatory party covered by the subject rate schedule who files an executed contract amendment in accordance with paragraph (B) hereof. As to any signatory party who does not so comply, Docket No. RI64-403 shall remain in full force and effect.

(D) The acceptance by the Commission of Jones-O'Brien's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Jones-O'Brien, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-246

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 10, 1964)

On April 20, 1964, Southern Natural Gas Company (Applicant) filed in Docket No. CP64-246 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain loop pipeline on its (1) Patterson Field Supply Line in St. Mary Parish, Louisiana, consisting of approximately 7.604 miles of 10¾-inch loop line extending from a point 12.577 miles north of the Lake Sand Receiving Station on the west leg of its South Louisiana Supply System to a point in the Patterson Field, St. Mary Parish, Louisiana, and (2) Calera Branch Line in Jefferson and Shelby Counties, Alabama, consisting of approximately 10.409 miles of 8⅝-inch loop line extending from M.P. 10.646 to M.P. 21.055 on said lateral, all as more fully set forth in the application on file with the Commission.

Applicant is presently taking gas from its own reserves in the Patterson Field through a 6⅝-inch line, and will with the proposed 7.604 miles of 10¾-inch loop line increase its take to avoid drainage by other producers in the field, and to maintain ratable production. The proposed loop line will have a maximum daily capacity of approximately 96,800 Mcf. The proposed looping of the Calera Branch Line will provide greater safety and security of operations, and will enable Applicant to make necessary repairs to the existing line.

The estimated cost of constructing the proposed Patterson Field Supply Line and the Calera Branch Line loops is $378,720 and $316,570, respectively, and will be defrayed from cash on hand.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation, having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The proposed construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Southern Natural Gas Company, in this proceeding authorizing the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in operation within 12 months from the date of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

AREA RATE PROCEEDING, ET AL. (SOUTHERN LOUISIANA AREA), DOCKET NO. AR61–2, ET AL.

ORDER ON MOTION FOR RECONSIDERATION OF SECRETARY'S REJECTION OF APPEAL

(Issued July 13, 1964)

On May 11, 1964, Hunt Oil Company and fourteen other Hunt entities filed a document entitled "Appeal From Presiding Examiner's Exclusion From Evidence

of Exhibit No. 182." On May 14, 1964, the Secretary rejected Hunt's appeal on the grounds that the Presiding Examiner had not made a finding of "extraordinary circumstances" within the meaning of Section 1.28(a) of the Commission's Rules of Practice and Procedure. On May 25, 1964, Hunt filed with the Secretary a letter requesting a definitive construction as to whether the rule invariably requires an examiner's finding as a prerequisite to an appeal. We treat Hunt's letter as a petition for reconsideration.

Rule 1.28(a) does not absolutely bar appeals where the examiner declines to find the "extraordinary circumstances", but we expect the would-be appellant to make a strong showing of extraordinary circumstances if he would justify our entertaining an interlocutory appeal. See *Area Rate Proceeding*, 29 FPC 1101 and cases there cited. Hunt's appeal document recited no pressing reason for immediate review besides the contention that the Examiner has erred in his rulings. Accordingly, the Secretary was justified in rejecting the appeal as it was presented. Objection to the Examiner's evidentiary rulings may be renewed when the case is properly before us on exceptions.

Our examination of Hunt's appeal indicates a possible need for clarification of our prior orders on admissibility of evidence. According to Hunt, our order of May 16, 1963, in this proceeding (29 FPC 981) has been construed as requiring the exclusion of Hunt's Exhibit 182 which purports to show the unit exploration and development cost, excluding return, for each of eighty-one respondents whose composite cost is shown in certain staff exhibits. Hunt has appended a copy of Exhibit 182 (but not of the related testimony nor of the Examiner's rulings) to its appeal document. The exhibit consists of four columns. The first column lists the numerical rank of the respondent (from 1 to 81). The second lists the respondent's name. The third lists unit cost (from zero to 42.33 cents per Mcf and the fourth lists total exploration costs as a percentage of total revenue. Hunt indicates, however, that its offer of proof would delete the names of the particular companies from the exhibit so as to make clear that Hunt is not attempting an individual cost presentation. Our prior orders do not require exclusion of such proof.

Our May 16, 1963, order merely holds that "individual company cost presentations" are not proper matters for consideration in determining any area price. (29 FPC at 982) The May 16 order adheres to the view declared early in the Permian Basin proceeding that in order for cost data to be useful in determining just and reasonable rates on an area basis "they must be consistently and uniformly developed on a group basis." (25 FPC at 616) Our prior holdings mean that a showing of Hunt Oil Company's costs would be irrelevant as such. We have never held, however, that an array, consistently and uniformly developed, if the ingredients of cost composites would be irrelevant if presented for purposes other than those of showing the costs of particular respondents. We go further to state that such arrays, particularly if they indicate the related gas volumes may well be relevant in analyzing composite cost presentations. Indeed, in the absence of such analyses the proponents of composite cost studies may be offering little more than "unsifted averages." *I.C.C.* v. *Mechling*, 330 U.S. 567, 583. We would welcome the appropriate presentation of such arrays.

We believe the foregoing statement offers adequate clarification to guide Hunt, the parties, our staff and the Presiding Examiner without necessitating an interlocutory ruling by the Commission as to the details raised by Hunt's appeal document. Accordingly, reconsideration of the Secretary's rejection of Hunt's appeal is hereby denied without prejudice to renewal at the proper time.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64-251

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 13, 1964)

On April 23, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP64-251 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain meter and regulator equipment to enable Applicant to render direct interruptible natural gas service to 8 industrial customers in Texas, Oklahoma, Kansas and Missouri, all as more fully set forth in the application.

Specifically, the lines which will be tapped, location, customer, use of gas, estimated annual sales volume for each customer and the average rate per Mcf for each customer are as follows:

(1) Superior 8-inch pipeline in Lincoln County, Kansas, for sale to Walker Products, Inc., for alfalfa dehydration operations (28,160 Mcf—28 cents).

(2) Eureka Field 4-inch gathering pipeline in Grant County, Oklahoma, for sale to Mr. Leonard Ranson for irrigation operations (500 Mcf—46 cents).

(3) Pampa Field 6-inch gathering pipeline in Gray County, Texas, for sale to Mr. Raymond Barrett for irrigation operations (500 Mcf—46 cents).

(4) Lindsay 16-inch pipeline in Garvin County, Oklahoma, for sale to Mr. R. E. Reeves for irrigation operations (500 Mcf—46 cents).

(5) Quapaw 16-inch pipeline in Newton County, Missouri, for sale to Mr. C. J. Elliott for truck stop operations (1,560 Mcf—52 cents).

(6) Alden Storage Field 2-inch pipeline in Rice County, Kansas, for sale to Mr. R. G. Wellman for irrigation operations (1,360 Mcf—44 cents).

(7) Chase 6-inch pipeline in Rice County, Kansas, for sale to the City of Lyons, Kansas, for a standby water pumping unit (500 Mcf—46 cents).

(8) Cement 16-inch pipeline in Cleveland County, Oklahoma, for sale to the Independent Manufacturing Company for steam generation for heating, manufacturing and processing of rubber products and foundry operations (6,000 Mcf—39 cents).

The total estimated cost of the 8 meters and regulators to be installed is $5,850, which cost will be paid out of treasury cash.

On June 18, 1964, the State Corporation Commission of the State of Kansas filed a notice of intervention in support of the subject application.

After due notice, no petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of pubic convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CUMBERLAND AND ALLEGHENY GAS COMPANY, DOCKET NO. CP64-183; WEIPENN GAS COMPANY, INC., DOCKET NO. CI64-915

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 13, 1964)*

Cumberland and Allegheny Gas Company (Cumberland) on February 18, 1964, filed in Docket No. CP64-183 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to (1) abandon by sale to Weipenn Gas Company, Inc. (Weipenn) its natural-gas facilities situated in the Otter and Salt Lick Districts, Braxton County, West Virginia, and (2) abandon the sale and transportation through said facilities of natural gas and the exchange of natural gas with Equitable Gas Company (Equitable), all as more fully set forth in the application and exhibits on file with the Commission.

*Amended by order issued July 31, 1964, *infra.*, p. 474.

Weipenn referred to above filed in Docket No. CI64-915 on February 14, 1964, an application for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act authorizing the sale of natural gas to Equitable, the transportation of natural gas for Equitable, and the acquisition of among other things facilities of Cumberland located in Braxton County, West Virginia, all as more fully set forth in the application and exhibits on file with the Commission.

Cumberland, a subsidiary of The Columbia Gas System, Inc., proposes to abandon by sale to Weipenn its off-system facilities located in Braxton County, West Virginia consisting of approximately 65,882 feet of 6-inch, 8-inch, 9⅝-inch, and 10-inch pipeline extending from the Engle Farm in Otter District, Braxton County, West Virginia, generally in a northeasterly direction to the Burnsville Compressor Station of Equitable situated in Salt Lick District, Braxton County, West Virginia, together with approximately 57,481 feet of connecting lines ranging from 2-inch to 6⅝-inch pipeline (designated "field lines"), and appurtenant measuring and metering facilities. Under an exchange agreement with Equitable entered into December 1, 1954, (Cumberland's FPC Gas Rate Schedule X-2) Cumberland is presently delivering on an exchange basis to Equitable at Equitable's Burnsville Compressor Station approximately 120,000 Mcf annually of natural gas produced and purchased in the Braxton County Field, as well as transporting and delivering to Equitable approximately 948,000 Mcf annually of Equitable's locally-produced gas from sources of production to Equitable's Burnsville Compressor Station at the eastern end of Cumberland's system.

Cumberland and Weipenn by agreement dated September 20, 1962, have provided for the sale for $25,000 and transfer to Weipenn of approximately 123,363 feet of various sized pipe and appurtenant facilities, nine producing gas wells, casing, tubing, etc., nine oil and gas leases covering approximately 1,036 acres, and also the assignment to Weipenn of all of Cumberland's interest in ten gas purchase contracts.

Weipenn proposes to sell approximately 12,000 Mcf of natural gas annually to Equitable, and to gather and transport approximately 948,000 Mcf annually of Equitable's locally produced gas, all to be delivered to Equitable at its Burnsville Compressor Station in accordance with the terms of their contract entered into April 26, 1963.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the applications and exhibits, submitted in support of the authorizations sought by Cumberland in Docket No. CP64-183, and Weipenn in Docket No. CI64-915, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Cumberland and Allegheny Gas Company, a West Virginia corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued January 5, 1944, in Docket No. G-387 (4 FPC 472).

(2) Weipenn Gas Company, Inc., a West Virginia corporation having its principal place of business in Charleston, West Virginia, upon acquisition of the facilities of Cumberland and the commencement of the sale and transportation of natural gas as proposed in Docket No. CI64-915 will be engaged in the business of transporting and selling natural gas in interstate commerce subject to the

jurisdiction of the Commission, and will therefore be a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities proposed to be abandoned by sale and transfer in Docket No. CP64–183 by Cumberland, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(4) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered and conditioned.

(5) The proposed acquisition of facilities by Weipenn, the sale and delivery of natural gas by Weipenn to Equitable, and the transportation of natural gas for Equitable by Weipenn as hereinbefore described, and as more fully described in the application filed by Weipenn in Docket No. CI64–915 are subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(6) The aforesaid proposed acquisition of facilities, and the transportation and sale of natural gas in interstate commerce by Weipenn are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Weipenn is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(8) Weipenn's related FPC Gas Rate Schedule and supplements should be accepted for filing as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the proposed abandonment by sale of facilities by Cumberland to Weipenn, and of the transportation and sale of natural gas by Cumberland as hereinbefore described and as more fully described in the application filed by Cumberland in Docket No. CP64–183 are hereby granted.

(B) A certificate of public convenience and necessity be and the same is hereby issued to Weipenn Gas Company, Inc., authorizing the acquisition of facilities from Cumberland, the sale and delivery of natural gas to Equitable, the transportation of natural gas for Equitable, and the sale and transportation for resale of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in Docket No. CI64–915, upon the terms and conditions of this order.

(C) The issuance of the certificate granted in paragraph (B) above is without prejudice to the requirement that Weipenn comply with the Commission's Uniform System of Accounts and the filing for Commission approval of appropriate accounting entries reflecting the transfer of the subject facilities.

(D) The certificate granted in paragraph (B) above is not transferable and shall be effective only so long as Weipenn Gas Company, Inc. continues the acts or operations hereby authorized, in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(E) The related rate filings listed below are hereby accepted subject to all applicable Commission Regulations under the Natural Gas Act, to be effective upon the date of this order:

Description and date of document	*Rate schedule designation Weipenn Gas Company, Inc.*
Contract 4–26–63	FPC Gas Rate Schedule No. 1
Agreement 4–26–63	Supplement No. 1 thereto
Assignment 9–20–62	Supplement No. 2 thereto

(F) Cumberland and Allegheny Gas Company shall advise the Commission of the date of abandonment within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-61

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING WITHDRAWAL OF INTERVENTION

(Issued July 13, 1964)

On September 16, 1963, as supplemented by letter filed June 10, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-61 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application and supplemental letter.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $5,000,000 with no single project to exceed a cost of $500,000, which costs will be financed from current working funds or through the sale of bonds or other long-term securities.

Due notice of the subject application was published in the Federal Register on October 18, 1963 (28 F.R. 11205). On November 4, 1963, Transwestern Pipeline Company filed a petition to intervene in this proceeding but on the basis of Applicant's supplemental statement of June 10, 1964, emphasizing that none of the facilities proposed under this application will be used to expand or enlarge Applicant's main line transmission facilities as presently certificated, said petition to intervene was withdrawn by Transwestern by letter filed June 11, 1964. No other petition to intervene, notice of intervention or protest to the granting of the subject application has been filed.

At a hearing held on July 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

(8) Good cause has been shown for permitting the withdrawal of the petition to intervene filed by Transwestern Pipeline Company on November 4, 1963.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964 and the total expenditure for facilities to be constructed thereunder are hereby limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

(E) The petition to intervene filed in this proceeding on November 4, 1963, by Transwestern Pipeline is hereby permitted to be withdrawn effective on the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP64-224

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ACCEPTING TARIFF SHEETS AND NOTICE OF CANCELLATION FOR FILING

(Issued July 13, 1964)

On April 3, 1964, The Manufacturers Light & Heat Company (Manufactures) filed in Docket No. CP64-224 an application pursuant to Section 7(b) of the

Natural Gas Act for permission and approval to abandon certain facilities and the service being rendered Mountain Gas Company (Mountain Gas) in Hamlin Township, McKean County, Pennsylvania, all as more fully set forth in the application on file with the Commission.

Manufacturers presently delivers and sells approximately 85,000 Mcf of natural gas annually to Mountain Gas from Manufacturer's 8-inch Line No. 4226 in Hamlin Township, McKean County, Pennsylvania under its CDS–1 Rate Schedule. Mountain Gas has requested termination of the service being rendered by Manufacturers for the reason that one of its customers, Pennzoil Company, has drastically reduced its take from Mountain Gas, and will not require any gas after May 1, 1964. Mountain Gas assertedly has ample gas from its own production and from independent producers to adequately supply remaining customers.

Upon termination of the sale to Mountain Gas, Manufacturers proposes to abandon its interconnection with Mountain Gas consisting of 35 feet of 2-inch line and 91-feet of 4-inch line, together with two (2) regulators and meters used for the delivery of natural gas to Mountain Gas.

On March 23, 1964, Manufacturers filed with the Commission its Fourth Revised Sheet No. 5 and its Seventh Revised Sheet No. 76 to its FPC Gas Tariff, Fourth Revised Volume No. 1, reflecting the termination of this sale. Concurrently therewith Manufacturers filed notice of the cancellation of its service agreement with Mountain Gas.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, The Manufacturers Light & Heat Company, a Pennsylvania corporation and a subsidiary of The Columbia Gas System, Inc., having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G–593, *et al.* (4 FPC 821).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that Manufacturer's Fourth Revised Sheet No. 5 and its Seventh Revised Sheet No. 76 to its FPC Gas Tariff, Fourth Revised Volume No. 1 and the notice of cancellation of its service agreement with Mountain Gas dated August 27, 1963, be accepted for filing effective April 25, 1964, as requested.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Manufacturers.

(B) Manufacturers shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(C) Manufacturers Fourth Revised Sheet No. 5 and its Seventh Revised Sheet No. 76 to its FPC Gas Tariff, Fourth Revised Volume No. 1, and the notice of cancellation of its service agreement with Mountain Gas dated August 27, 1963, are hereby accepted for filing effective April 25, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. CP64-222

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 13, 1964)

On April 1, 1964, Mississippi River Fuel Corporation (Applicant) filed in Docket No. CP64-222 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the transportation of natural gas for sale to The Ruberoid Company (Ruberoid) for use in the latter's plant near the Town of Annapolis, Iron County, Missouri, all as more fully set forth in the application.

Specifically, Applicant proposes to construct and operate 23 miles of 4½-inch O.D. pipeline from a point south of its Twelvemile Compressor Station, Madison County, Missouri, to the plant of Ruberoid, together with a tap connection and metering and regulating facilities. The total estimated cost of the proposed facilities is $338,850. Over a period of approximately seven years, Ruberoid will reimburse Applicant up to $286,000 of the estimated cost of the facilities.

Ruberoid's third year estimated peak day and annual natural gas requirements are 1,700 Mcf and 212,000 Mcf, respectively.

Ruberoid, a roofing material manufacturer, will utilize the natural gas for firing kilns and space and water heating.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississippi River Fuel Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G-291 (4 FPC 535).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Mississippi River Fuel Corporation, to construct and operate the proposed facilities and to transport and deliver a maximum daily volume of 1,700 Mcf of natural gas to Ruberoid as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in Paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Mississippi River Fuel Corporation for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-85

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 13, 1964)

On April 13, 1964, Northern Natural Gas Company (Northern) filed in Docket No. CP62-85 an application to amend the order of the Commission issued September 30, 1963, in Docket No. CP62-85, 30 FPC 859, which granted a certificate of public convenience and necessity authorizing, among other things, the construction and operation of main and branchline facilities to provide initial natural gas service to 76 communities including Alden, Iowa, all as more fully set forth in the application to amend on file with the Commission.

The application to amend states that Iowa Electric Light & Power Company (Iowa Electric), the distributor in Alden, has recently signed agreements to

serve two limestone quarries near Alden on an interruptible basis and has requested Northern to install facilities to provide this service. To provide the requested service Northern now requests authority to construct and operate 5.9 miles of 3-inch pipeline to Alden in lieu of 5.6 miles of 2-inch pipeline authorized by the aforesaid order issued September 30, 1963, and to modify measuring facilities for Alden so as to provide for two meters in lieu of one. Cost of the facilities requested in the application to amend is estimated to be $105,500.00.

Due notice of the subject application to amend and opportunity for hearing has been given by publication in the Federal Register on June 9, 1964 (29 F.R. 7439). No protest or petition to intervene has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued September 30, 1963, in Docket No. CP62–85 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued September 30, 1963, in Docket No. CP62–85 be and the same is hereby amended by authorizing Northern to construct and operate 5.9 miles of 3-inch branch pipeline to Alden, Iowa, in lieu of the 5.6 miles of 2-inch branch pipeline authorized by the aforesaid order, and to modify measuring facilities for Alden so as to provide for two meters in lieu of one, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold Woodward and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–112

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 13, 1963)

On April 17, 1964, Northern Natural Gas Company (Petitioner) filed in Docket No. CP64–112 a petition to amend the Commission's order issued February 10, 1964, in said docket by increasing the contract demand of the City of Ponca, Nebraska, from 538 Mcf of natural gas per day to 563 Mcf per day, an increase of 25 Mcf per day, all as more fully set forth in the subject petition.

The order issued February 10, 1964, 31 FPC 399, authorized Petitioner to construct facilities to provide an additional 20,031 Mcf per day of contract demand gas for resale to its existing customers for the heating season of 1964–65.

The application states that the City of Ponca, an existing customer, has advised Petitioner that an increase in its contract demand is required because of new building activity and the connection of new gas users. No additional facilities will be required to deliver the increased volumes.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on May 26, 1964 (29 F.R. 7031). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 10, 1964, in Docket No. CP64–112 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order of February 10, 1964, in Docket No. CP64–112 be and the same is hereby amended by authorizing Northern Natural Gas Company to sell and deliver to the City of Ponca, Nebraska, for resale an increase of 25 Mcf of natural gas per day over the volume of gas authorized by said order, all as heretofore described and as set forth in the subject petition.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–241

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued July 13, 1964)

On April 15, 1964, Northern Natural Gas Company (Applicant) filed in Docket No. CP64–241, an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and remove approximately 3.39 miles of 4-inch, 2.89 miles of 6-inch and 2.47 miles of 8-inch pipeline located in Stevens County, Kansas.

The facilities proposed to be abandoned consists of 4, 6 and 8-inch lines, with three wells connected to the 4 and 6-inch segments. Applicant states that due to the small size of the present lines a pressure drop occurs in this area of its gathering system which causes operating difficulties. Since Applicant has larger lines located in the immediate area, it proposes to overcome such pressure drop by connecting the three wells to the larger lines. The 8-inch line to be abandoned has no wells attached and will not be required after transfer of the wells from the 4 and 6-inch lines.

The abandonment and removal of the subject facilities will not result in the abandonment of any service now being rendered. The estimated cost of removing the lines is $21,300.

After due notice, no petition to intervene, or protest to the granting of the application has been filed. On June 19, 1964, the State Corporation Commission of the State of Kansas, filed a Notice of Intervention indicating active interest in the matter but stating that it did not intend to hinder the orderly processing of the application.

At a hearing held on July 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization herein and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as hereinbefore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and the abandonment and removal thereof by Applicant are subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be permitted and approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Northern Natural Gas Company of the facilities hereinbefore described, as more fully described in the application in this proceeding, is hereby granted.

(B) Applicant shall advise the Commission of the date of removal of said facilities within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SUN OIL COMPANY, DOCKET NO. CI60-75

ORDER AMENDING TEMPORARY CERTIFICATE, CONDITIONALLY ACCEPTING RATE FILING AND ORDERING REFUNDS

(Issued July 13, 1964)

On March 2, 1964, Sun Oil Company (Sun) filed an amendment to its application for a certificate of public convenience and necessity in the above-captioned docket and an application for an amendment to its presently effective temporary authorization in this docket. Sun seeks authorization to sell natural gas from certain acreage in the Lower Mud Lake Field, South Louisiana pursuant to an amendment to its contract with Tennessee Gas Transmission Company (Tennessee) which constitutes Sun's F.P.C. Gas Rate Schedule No. 119.[1] Sun's original application for a certificate was filed on January 20, 1960, and by order issued December 31, 1962, was consolidated for hearing with *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*[2] A temporary certificate to make the original sale at a total initial rate of 22.833¢ per Mcf, inclusive of tax reimbursement,[3] was issued to Sun on April 8, 1960.[4]

In its present application Sun states that its interest gas for which the amendment is sought has been delivered to Tennessee by Quintana Petroleum Corporation (Quintana), the operator of the property, under the Isaac Arnold, *et al.*, (Arnold) Rate Schedule No. 1. In its statement accompanying its rate schedule supplement filing Sun states that it had intended to include all of its interest in the Lower Mud Lake Field in its original contract but "through an oversight" left the subject acreage out of both its original contract with Tennessee and its original certificate application in Docket No. CI60-75.

Arnold, which until November 1, 1963, was the only signatory to a contract relating to the acreage which Sun now seeks to have its interest in covered by its Rate Schedule No. 119, settled its related certificate application in Docket

---

[1] The basic contract is dated December 21, 1959; the amendment is dated November 1, 1963.

[2] Unreported order.

[3] Volumes expressed at 15.025 psia.

[4] The presently effective rate under Sun's Rate Schedule No. 119, being collected subject to refund in Docket No. RI63-129, is 23.675¢ per Mcf.

No. CI60–237 under terms which include a total initial rate, effective April 1, 1963, of 20.625¢ per Mcf; a 5 year moratorium on rate increase filings with certain exceptions; extension of take-or-pay make-up period to 4 years and agreement that the applicable rate determined in Area Rate Proceeding AR61–2 will apply prospectively to such rate schedule.[5]

Since, as Sun states, its interest in the acreage which it now seeks to add to its Rate Schedule No. 119 was and is covered by Arnold's Rate Schedule No. 1 and Arnold's certificate in Docket No. CI60–237, the substantive matters involved in Sun's instant certificate application amendment and application for an amendment to its temporary authorization have been settled. Accordingly, we shall amend Sun's temporary certificate in Docket No. CI60–75 under the terms of the Arnold settlement. We shall defer final procedural action on the amendment to the application for a permanent certificate in Docket No. CI60–75 until after the issuance of our final order in the Union Texas Petroleum, *et al.*, consolidated proceeding wherein the original application of Sun in Docket No. CI60–75 is in issue.[6]

Since Sun has not yet made its share of the refunds required by the Arnold settlement,[7] we shall order such refunds together with interest at 7 percent per annum to be made at this time. Sun's supplementary rate filing, the contract amendment between it and Tennessee dated November 1, 1963, will be designated as Supplement No. 4 to Sun's F.P.C. Gas Rate Schedule No. 119.

The Commission finds:

(1) Sun Oil Company is a natural gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) It is appropriate in carrying out the provisions of the Natural Gas Act that the temporary certificate issued to Sun Oil Company in Docket No. CI60–75 on April 8, 1960, be amended as ordered below.

(3) The settlement proposal of Isaac Arnold, *et al.*, in Docket No. CI60–237 conditionally approved by the Commission on August 23, 1963, included the settlement of Sun Oil Company's interests in sales from acreage described in paragraphs 3 and 4 of Exhibit A to Isaac Arnold, *et al.*, F.P.C. Gas Rate Schedule No. 1.

The Commission orders:

(A) The temporary certificate issued to Sun Oil Company in Docket No. CI60–75 on April 8, 1960, is hereby amended to authorize the sales of natural gas in interstate commerce from acreage dedicated by the instrument described below in ordering paragraph (C) upon the same terms and conditions as Isaac Arnold, *et al.*, was allowed to make sales from the same acreage by the Commission's order of August 23, 1963, 30 FPC 550.

(B) Within 60 days from the date of issuance of this order Sun Oil Company shall refund to Tennessee Gas Transmission Company all amounts above 20.625¢ per Mcf inclusive of tax reimbursement, received by Sun Oil Company for deliveries of gas since April 1, 1963, attributable to the acreage dedicated by the instrument described below in paragraph (C) together with interest thereon computed at the rate of 7 percent per annum, such interest to accrue until such refund is made.

---

[5] *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 550.

[6] The Union Texas Petroleum, *et al.*, consolidated proceeding is pending before the Commission on exception to the presiding examiner's decision issued on January 14, 1964.

[7] All amounts above 20.625¢ per Mcf collected for deliveries made since April 1, 1963, the effective date of the rate reduction.

(C) Upon compliance with paragraph (B) above, the agreement between Sun Oil Company and Tennessee Gas Transmission Company dated November 1, 1963, and hereby designated Supplement No. 4 to Rate Schedule No. 119 shall be accepted for filing effective as of the date of this order.

(D) Within 30 days after making the refunds required by this order Sun Oil Company shall report to the Commission, in triplicate, the amount of refund made to Tennessee Gas Transmission Company, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with a release from the purchaser showing receipt of the refund and interest in conformity with this order.

(E) The temporary certificate issued to Sun Oil Company in Docket No. CI60–75 on April 8, 1960, as amended by this order remains in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP64–165

ORDER DENYING PETITION TO INTERVENE

(Issued July 13, 1964)

On June 30, 1964, Pennsylvania Gas and Water Company (Penn Gas) filed a petition to intervene in the above-entitled proceeding which involves an application filed January 24, 1964, by Tennessee Gas Transmission Company (TGT) seeking a certificate of public convenience and necessity authorizing TGT to construct and operate additional pipeline facilities, at an estimated cost of about $49,997,000, in order to increase its system annual average day delivery capacity by about 84,000 Mcf.

Penn Gas' reason for seeking permission to intervene in this proceeding is related solely to a dispute between TGT and Penn Gas regarding the interpretation of the "availability" clause in TGT's G–4 Rate Schedule. According to Penn Gas' petition to intervene, the dispute arose when Penn Gas began to purchase storage service from Transcontinental Gas Pipe Line Corporation (Transco) under the latter's GSS Rate Schedule. It is TGT's position that Penn Gas is no longer eligible to purchase gas under TGT's G–4 Rate Schedule, because Penn Gas now has underground storage available to it, and that Penn Gas will have to purchase gas under TGT's CD–4 Rate Schedule instead. Penn Gas, on the other hand, contends that it is still entitled to purchase gas under TGT's G–4 Rate Schedule and that TGT's interpretation of the availability clause is erroneous.

TGT constructs capacity to meet the full requirements of its CD customers on each day of the year, but constructs pipeline capacity to meet only the annual average day requirements of its G Rate Schedule customers. Consequently, although Penn Gas, under TGT's G–4 Rate Schedule, is entitled to purchase up to a maximum daily quantity of 29,182 Mcf for its Wilkes-Barre-Scranton Division, TGT's system is designed to have average daily pipeline capacity to deliver only 19,428 Mcf of the peak day requirements. TGT would deliver up to 9,754 Mcf, or the difference between the average annual daily quantity of 19,428 Mcf and the peak day requirements of 29,182 Mcf, from storage. However, when a customer is transferred from purchasing under the G–4 Rate Schedule to purchasing under the CD–4 Rate Schedule, TGT provides pipeline capacity to meet its full contracted demand quantity on each day of the year. Therefore, in its application in Docket No. CP64–165 TGT seeks authority to construct, *inter alia*, facilities which would enable TGT to deliver 9,754 Mcf of additional gas, or a total of 29,182

Mcf, to Penn Gas. This additional capacity would have to be provided in order to transfer Penn Gas to the status of a purchaser under the CD–4 Rate Schedule as opposed to a purchaser under the G–4 Rate Schedule.

In its petition to intervene, Penn Gas states that it executed a precedent agreement with TGT, "* * * acting under a mistake of fact and law, * * *" providing for the transfer of its purchases from the G–4 to the CD–4 Rate Schedule. Penn Gas contends that "a proper interpretation" of the availability clause in the G–4 Rate Schedule would require Penn Gas to be either a producer of natural gas or a direct purchaser of natural gas from a producer in addition to having underground storage available to it. Since it is neither a producer nor a direct purchaser from a producer, it claims that it is still entitled to purchase gas from TGT under the G–4 Rate Schedule.

Penn Gas also contends that having underground storage available to it from Transco is not the type of underground storage which would make it ineligible to purchase under the G–4 Rate Schedule even if TGT's interpretation of the G–4 Rate Schedule were otherwise correct. Additionally, Penn Gas claims that TGT's construction of the G–4 Rate Schedule is unlawful under the Natural Gas Act, that transferring Penn Gas to the CD–4 Rate Schedule will increase Penn Gas' cost of gas substantially and will adversely affect Penn Gas' customers, and that if Penn Gas is permitted to intervene in a hearing regarding TGT's application in Docket No. CP64–165, it will show that TGT's capacity is sufficient to provide for Penn Gas' needs so long as Penn Gas continues to purchase under the G–4 Rate Schedule, that it is unnecessary and unlawful to transfer Penn Gas to the status of a purchaser under the CD–4 Rate Schedule, and for these reasons there is no need to consider whether TGT's design day capacity should be increased by an additional 9,754 Mcf as alleged by TGT. Penn Gas thereafter requests that the Commission issue an order fixing a date for hearing with respect to that part of TGT's application relating to the 9,754 Mcf of design day capacity required for conversion of Penn Gas to the status of a customer purchasing under the CD–4 instead of the G–4 Rate Schedule.

On July 2, 1964, TGT filed an answer in opposition to the granting of Penn Gas' petition to intervene. TGT claims that it has consistently interpreted its G–4 Rate Schedule so as to require those customers who can control their purchases to receive service under TGT's CD–4 Rate Schedule which contains contract demand and minimum bill provisions as opposed to the G–4 Rate Schedule which does not contain minimum bill provisions. TGT alleges that it would be discriminatory against TGT's other customers to interpret the G–4 Rate Schedule in the manner contended for by Penn Gas.

TGT further points out that regardless of the final determination of the rate schedule eligibility dispute, the facilities for which authorization is sought in Docket No. CP64–165 should be constructed in order to provide the most economic capacity from the standpoint of orderly construction. TGT states that since the filing of its application in Docket No. CP64–165 it has already received requests for additional service totaling 22,624 Mcf and that these additional requests would utilize all of the unallocated capacity in its system, assuming construction of all the facilities requested in Docket No. CP64–165, except 4,000 Mcf. Additionally, TGT alleges that its customers' requirements increase each year by more than 50,000 Mcf per day and that even if TGT should be permitted to construct excess capacity in the amount of 9,754 Mcf, that such design day capacity when added to TGT's existing unallocated capacity would still provide TGT with only 1.23 percent of unallocated capacity.

The pipeline facilities which TGT seeks authority to construct consist entirely of loops to existing 30- and 36-inch lines except for about 44.4 miles of 26-inch pipeline to transport gas from South Pass Block 27 to Station 527 in southern

Louisiana and for replacement of some lateral pipelines in New England. TGT proposes to loop its main line at points extending from Louisiana to storage fields located in Pennsylvania and New York. As TGT points out, elimination of any specific part of these facilities would result in eliminating considerably more than 9,754 Mcf of capacity. Under these circumstances, even if this certificate proceeding were an appropriate forum for resolving the TGT-Penn Gas dispute and we were to be in agreement with Penn Gas, we would not deny the application merely because the additional 9,754 Mcf of capacity would temporarily be added to TGT's unallocated capacity.

In any event, we do not think that this certificate case is a proper vehicle for resolving the tariff dispute—a matter which, as TGT points out, may affect many of TGT's customers who have expressed no interest in becoming interveners in the certificate proceeding. According to Penn Gas' petition to intervene, TGT and Penn Gas are expected to have a conference some time after July 1, 1964, in an effort to resolve their rate schedule eligibility dispute. If TGT and Penn Gas are still in disagreement after this conference has been held, adequate means are available under the Natural Gas Act whereby Penn Gas can bring its dispute with TGT before the Commission for a decision regarding the proper interpretation of the availability clause in TGT's G–4 Rate Schedule. In the meantime we will protect Penn Gas' rights by providing in any certificate order we may issue that the authorization is without prejudice to its claim that it is entitled to remain a purchaser under the G–4 Rate Schedule and that issuance of the certificate is not to be interpreted as permanently allocating 9,754 Mcf of TGT's additional capacity to Penn Gas.

The Commission finds:

Good cause has not been shown by Penn Gas for its being permitted to become an intervener in the proceeding regarding TGT's application filed in Docket No. CP64–165.

The Commission orders:

The petition to intervene in Docket No. CP64–165 filed June 30, 1964, by Pennsylvania Gas and Water Company is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP64–165

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 13, 1964)

On January 24, 1964, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP64–165 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in order to increase its system design day capacity by 84,000 Mcf of natural gas and to sell and deliver additional volumes of natural gas to meet the increased requirements of existing customers, all as more fully set forth in the application.

Specifically, Applicant proposes to construct and operate approximately 197.09 miles of 26 to 36-inch mainline loops in states in the eastern half of the country from Louisiana to New York; 19,000 additional compressor horsepower at new

and existing compressor stations in Louisiana, Kentucky and New York and approximately 39.44 miles of 6 to 10-inch pipeline replacement in New England.

The application indicates that of the proposed increased design day capacity of 84,000 Mcf, Applicant proposes to utilize 62,060 Mcf for increased deliveries to contract demand, general service and storage service customers and the remaining 21,940 Mcf design day capacity will be available to new or existing customers. Applicant states that the proposed facilities will increase its system design day capacity from 2,840,000 Mcf to 2,924,000 Mcf.

The total estimated cost of the proposed facilities is $49,997,000, which cost will be financed by the sale of first mortgage bonds, debentures and preferred stock.

On March 16, 1964, and on March 23, 1964, El Paso Natural Gas Company and Transwestern Pipeline Company, respectively, filed petitions to intervene in this proceeding. By order issued May 26, 1964, said petitions were denied.

On June 30, 1964, Pennsylvania Gas and Water Company (Penn Gas) also filed a petition to intervene herein. By order issued July 13, 1964, Penn Gas' petition was denied. However, the authorization hereinafter granted to Applicant is without prejudice to Penn Gas' claim that it is entitled to remain a purchaser under Applicant's G–4 Rate Schedule and issuance hereinafter of the certificate to Applicant is not to be interpreted as permanently allocating 9,754 Mcf of Applicant's additional capacity to Penn Gas.

Another petition to intervene on behalf of several of Applicant's customers has been filed herein. The burden of said filing is that the petitioners do not request formal hearing in this proceeding and do not object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules, but that each petitioner desires to preserve its rights to appear and participate fully in the event that this matter should be set for formal hearing. Inasmuch as the shortened procedure is being used herein, no further action on said petition appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G–910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Tennessee Gas Transmission Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64-159

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued July 13, 1964)

On January 10, 1964, as supplemented on January 30, 1964, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP64-159 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the following described facilities:

(1) 5,417 feet of 4-inch transmission purchase lateral pipeline known as the "Sour Lake Lateral" running from M.P. 396.24 an Applicant's 30-inch main line to a point in the Sour Lake Field, Hardin County, Texas;

(2) 1,851 feet of 3-inch transmission purchase lateral pipeline, three purchase meter stations, one field booster compressor unit (No. 17) and one dehydration unit, collectively known as the "Mission Bridge Facilities" located in the Staff Area off Transco's 24-inch McMullen Lateral in Victoria County, Texas; and

(3) One field booster compressor unit (No. 6) located adjacent to and connected with Applicant's 14-inch Goebel Lateral in the Tynan Field, Bee County, Texas, approximately 18.14 miles northwesterly from Transco's 24-inch main line;

all as more fully represented in the application, and supplement in this proceeding.

These facilities originally were utilized in taking into Applicant's pipeline system natural gas purchased from independent producers in the respective fields

in which such facilities are located. Deliveries of gas by means of these facilities from each of the sources has now ceased due to exhaustion, of reserves, or decline to the point where the wells are no longer economically feasible to produce. All of the producers who supplied Applicant from the Sour Lake Field or Mission Bridge Area have received authorization from the Commission to abandon their sales to Applicant or have executed letter agreements terminating their gas purchase contracts with Applicant.

Applicant intends to salvage the "Mission Bridge Facilities" and hold them in storage for future use at other locations or for possible sale; to use the Tynan Field booster compressor unit to replace a unit in the Oakville Area recently destroyed by fire; and to abandon the "Sour Lake Lateral" in place.

The subject facilities will be abandoned in place, salvaged, or used at other locations on Applicant's system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement thereto and exhibits, submitted in support of the authorization sought herein and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 139).

(2) The facilities proposed to be abandoned as hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are subject to the jurisdiction of the Commission and the abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) Applicant, Transcontinental Gas Pipe Line Corporation, be and it is hereby permitted to abandon the facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding.

(B) Applicant shall advise the Commission of the date of completion of the subject abandonment within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TRANSWESTERN PIPELINE COMPANY, CP63–204, CP64–91; EL PASO NATURAL GAS COMPANY, CP64–76; GULF PACIFIC PIPELINE COMPANY, CP63–223

ORDER DENYING MOTIONS TO DISMISS

(Issued July 13, 1964)

On June 1, 1964, Gulf Pacific Pipeline Company (Gulf Pacific) and Humble Oil & Refining Company (Humble) filed motions to dismiss the application of El Paso Natural Gas Company (El Paso) in Docket No. CP64–76, in which El Paso pro-

poses the construction of facilities and the delivery of increased quantities of gas to the California market. Answers opposing the motions were filed by El Paso; Southern California Gas Company, Southern Counties Gas Company of California, and Pacific Lighting Gas Supply Company jointly; and by the staff of this Commission. While under § 1.12(e) of our Rules the motions may now be denied by lapse of time, we think it appropriate to express our views on the matter.

Both Gulf Pacific and Humble contend that El Paso's application is based on the assumption that Pacific Northwest Pipeline Corporation was lawfully merged into El Paso. Since the decision of the Supreme Court in *United States* v. *El Paso Natural Gas Company*, 376 U.S. 651, 84 S. Ct. 1044, decided April 6, 1964, held that the merger violated the Clayton Act and directed the divestiture of Pacific Northwest, Gulf Pacific and Humble contend that El Paso's application is rendered impossible of prosecution because founded on evidence that is now incompetent and on circumstances that have changed. El Paso alleges, however, that it is still able to render the service essentially as proposed although it will have to file updated evidence to reflect the effect of the divestiture. It now appears that it has actually served revised evidence (although the evidence has not yet been admitted), and that the hearing will be delayed little if at all.

We have no basis for assuming at this stage in the proceedings that El Paso's revised evidence is not competent evidence tending to support its proposed deliveries of gas to California in substantial accord with the proposal previously filed and the evidence it has already submitted. There is no justification for dismissing its application prior to affording it an opportunity to make such a showing, particularly in view of the Supreme Court's concern with maintaining competition for the California market.

California has had an increasing need for gas; this proceeding is designed to meet that need in the wake of our denial of El Paso's application for the Rock Springs project. *El Paso Natural Gas Co.* 30 FPC 77. It is in the public interest that all available methods of supplying that market be explored. We will not countenance unnecessary delays or maneuvering for position by untimely substitution of plans inconsistent with the basic schedule which we adopted in our order of August 22, 1963. But this order expressly provided that reasonable amendments to any of the comparative proposals would be entertained "in extraordinary circumstances and for good cause shown." (30 FPC 533, 535).

Humble also contends alternatively that the original evidence submitted by El Paso fails to support a previous amendment to its application. Reserving judgment upon the question of how substantial a deviation from El Paso's original applications would be appropriate, in view of the fact that they were filed when the possibility of an adverse determination in the antitrust action was clear, it seems obvious that El Paso was not required to assume it would lose the case to the extent of filing applications and supporting evidentiary material which reflected a divestment not yet ordered. Originally, El Paso sought permission to sell 250,000 Mcf of natural gas per day to Southern California Gas Company and Southern Counties Gas Company. Later it amended its application to sell up to 575,000 Mcf of gas per day to these companies for resale to Southern California Edison Company and the Department of Water & Power of the City of Los Angeles, or to sell the gas directly to Edison and the Department at their plants with 290,000 Mcf/d to be received from Transwestern Pipeline Company. Humble alleges that the record does not show contractual support for these sales. We do not believe that we should attempt to pass on this question here, or the collateral question of whether a showing of such contractual support is necessary to support El Paso's expanded proposal. These are matters which obviously

can more appropriately be passed upon by the Examiner in the first instance and reviewed by the Commission on exception from his initial decision.

The Commission orders:

The motions to dismiss El Paso's application in Docket No. CP64-76 filed by Gulf Pacific and Humble are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

DUKE POWER COMPANY OF NORTH CAROLINA, PROJECT NO. 2331

ORDER ISSUING LICENSE (MAJOR)

(Issued July 15, 1964)

Application was filed on December 20, 1962 by Duke Power Company of Charlotte, North Carolina (a New Jersey Corporation) for license under Section 4(e) of the Federal Power Act (Act) for the constructed Ninety-Nine Islands development, designated as Project No. 2331, located on the Broad River, South Carolina. On April 8, 1964, a supplement to the application was filed being a joint application by Duke Power Company, the New Jersey Corporation, and Duke Power Company of North Carolina, to substitute the latter company as Applicant for the license.

In a separate order issued May 18, 1964,[1] we approved the disposition by Duke Power Company of the whole of its facilities to Duke Power Company of North Carolina.

Project No. 2331, which is located about 6 miles south of Blacksburg, South Carolina, was placed in operation in 1910 and there has been no additional construction since. The project has a total installed capacity of 31,200 horsepower connected to generators having a total rated capacity of 18,000 kilowatts. The project develops approximately 70 feet of head. It operates as a run-of-river plant with the natural flows being augmented by releases from pondage during peak hours. The reservoir is silted to about elevation 509 feet and there is about 2 or 3 feet of drawdown available for usable pondage. This pondage is sufficient for daily regulation of flows. The silt is not expected to present any operation problems since the usable reservoir capacity can be preserved through the removal of the flashboards and the operation of sluices near the powerhouse. Applicant states that the average annual energy output for the 34 year period 1928 through 1961 was 64,200,000 kwh. The power developed is integrated into Applicant's electric system to meet its over-all load.

There are 49.1 feet of undeveloped head between Project No. 2331 and the existing Lockhart project operated by the Lockhart Power Company, which is located about 20 river miles downstream. The hydraulic capacity of the Ninety-Nine Islands project is about 4,000 cfs. A U.S. Corps of Engineers' study of a plan of comprehensive development[2] of the Santee-Congaree-Broad River system includes the Greater Lockhart project which, if constructed, would be located at river mile 73, would have its maximum power pool at elevation 510 feet, and would completely inundate both Project No. 2331 and the existing Lockhart project. While recent consultation between Commission staff and the Corps disclosed that present studies by the Corps of the Santee River Basin do not include the

[1] Duke Power Company, Docket No. E-7156, 31 FPC 1264.

[2] Senate Document No. 189, 78th Congress, 2d Session.

Broad River, provision is hereinafter made in the interest of a more comprehensive plan of development of the Santee-Congaree-Broad River system.

In its order issued November 21, 1963,[3] the Commission found that the Broad River is a navigable waterway of the United States from its mouth at Columbia, South Carolina, at least to a point in the State of North Carolina about 28 miles northerly from the North Carolina-South Carolina boundary, and about 141 miles upstream from Columbia. Project No. 2331 is within this 141-mile reach of Broad River.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the plans of the project structures affecting navigation are satisfactory, and that the plans of the structures affecting navigation had been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife resources.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of North Carolina, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received.

(3) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 24,000 horsepower, and the amount of annual charges, based upon such capacity, to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) The following described transmission facilities, while not included in the application for license, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project as hereinafter provided: four 44 kv lines, consisting of the circuits from the Ninety-Nine Islands project to: Gaffney Tie, Shelby, Kings Mountain, and Clover; one 33 kv line extending from Ninety-Nine Islands to Gaffney; and the 44 kv step-up transformers and facilities appurtenant thereto.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

---

[3] South Carolina Electric & Gas Company, Project No. 2315 (30 FPC 1346).

The Commission orders:

(A) This license is hereby issued to Duke Power Company of North Carolina (Licensee), under Section 4(e) of the Federal Power Act (Act), for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of the Ninety-Nine Islands Project No. 2331, located on the Broad River, a navigable water of the United States, in Cherokee County, South Carolina, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2331 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2331-2) General Map and Profile (FPC No. 2331-3) Transmission System Map (FPC No. 2331-4) Transmission System Details

Exhibit K: (FPC No. 2331-5) Project Area

(ii) All project works consisting principally of:

A concrete gravity spillway section 891 feet long; a concrete gravity bulkhead section 120 feet long tying into the west bank; a concrete intake and powerhouse section 196.7 feet long; a concrete gravity bulkhead section 359.5 feet long tying into the east bank; a 960 acre reservoir with normal pool elevation of 511.1 feet; a powerhouse containing six 5,200 hp turbines driving generators rated at 3,000 kw each; and appurtenant facilities: the location, nature and character of which structures are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L: (FPC No. 2331-6) Ninety-Nine Islands Station Plans, Profile & Spillway Rating Curve (FPC No. 2331-7) Ninety-Nine Islands Station Sections and Details

Exhibit M: Consisting of two typewritten pages, entitled, "General Descriptions of Mechanical, Electrical and Transmission Equipment", filed in the Commission December 20, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised November 1, 1963), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States", (30 FPC 1658) which terms and conditions, designated as Articles 1 through 27, are attached and made a part hereof, except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether

or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration therof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 29. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 24,000 horsepower.

Article 30. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 31. The Licensee shall, within one year from the date of issuance of this license, file in conformity with the Commission's rules and regulations an application for amendment of license to include the transmission lines listed in finding 6 above.

Article 32. Whenever the Licensee is directly benefited by the construction work of another Licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 33. The right, power, and authority is reserved to the United States to construct or to the Commission to issue a license authorizing the construction, operation and maintenance of a hydroelectric project which will more completely utilize the water resources of the reach of the Broad River in which the project is located.

Article 34. The acceptance of this license by the Licensee shall constitute its stipulation, consent and agreement made upon its own behalf and upon the behalf of its successors and assigns for the benefit of the United States, or the person or persons hereinafter constructing, operating and maintaining such more complete hydroelectric project or his or their successors and assigns, that said Licensee, its successors or assigns, shall surrender its license at such time as the project becomes inoperative by reason of inundation by such more complete hydroelectric project; Provided that Licensee shall be paid the net investment in Project No. 2331 upon surrender of its license; and provided further that Licensee shall not be entitled to any compensation for severance damages sustained by reason of inundation or destruction of the project or project works of Project No. 2331.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Commissioner Ross *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

LOWER VALLEY POWER AND LIGHT, INC., PROJECT NO. 1861

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued July 15, 1964)

Application was filed on August 12, 1960 by Lower Valley Power and Light, Inc., (Licensee) under Section 6 of the Federal Power Act (Act) for surrender of its license for major Project No. 1861 located on Flat Creek, a tributary of the Snake River, in Teton County, Wyoming, and affecting lands of the United States within the Teton National Forest and lands of the United States reserved for Elk Refuge.

The license was issued for a period of 50 years, effective as of February 1, 1944.

The application states that due to the high cost of operation, the project stopped operating in November, 1956, and no plans are being considered by the Licensee to rehabilitate the project.

The Forest Service has reported that restoration of the National Forest lands occupied by the project was completed on October 3, 1963. Annual charges under the license for the project have been paid through December 31, 1961, and the license instrument has been returned.

The Commission finds:

(1) Public notice of the application has been given as required by the Act. No protests or petitions to intervene have been received.

(2) Acceptance of surrender of the license for the project is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the license for Project No. 1861 is hereby accepted, effective as of October 3, 1963, subject to the payment of annual charges through said date in the amount of $38.58.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. E-7164

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE SINKING FUND BONDS

(Issued July 15, 1964)

By order issued June 29, 1964, in the above-entitled matter, the Commission authorized Montana-Dakota Utilities Co. (Applicant) to issue and sell at competitive bidding $12,000,000 principal amount of First Mortgage —% Sinking Fund Bonds, due July 1, 1984, subject to the provisions, among others, set forth in Paragraph (B) of that order as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on July 15, 1964, filed an amendment, pursuant to the requirements of the aforementioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it the bid of Eastman Dillon, Union Securities & Co. to purchase the proposed issuance of $12,000,000 principal amount of Bonds, for the price of 99.88% of principal amount, with an interest rate of 4⅝%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of Paragraph (B) of the Commission's order issued June 29, 1964, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above, upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized subject only to the provisions of paragraphs (C), (D) and (E) of the Commission's order issued June 29, 1964 in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NIAGARA MOHAWK POWER CORPORATION, PROJECT NO. 2330

ORDER ISSUING LICENSE (MAJOR)

(Issued July 15, 1964)*

Application was filed on December 14, 1962 by Niagara Mohawk Power Corporation (Applicant) of Syracuse, New York, under Section 4(e) of the Federal Power Act (Act) for the constructed Raquette River Project, designated as Project No. 2330, located on the Raquette River in St. Lawrence County, New York.

Project No. 2330 is located on the Raquette River downstream from Applicant's constructed and licensed Project No. 2084 and from constructed Project No. 2320. Project No. 2330 consists of four hydroelectric developments known as (going downstream) Norwood, East Norfolk, Norfolk and Raymondville. These developments were constructed between 1904 and 1928, various changes and additions having been made during these years.

The entire Project No. 2330 has a total installed capacity of 15,320 horsepower connected to generators having a total rated capacity of 11,500 kilowatts. The energy generated by the project is delivered to Applicant's transmission and distribution system for public utility purposes.

In Docket No. DI-179, In the Matter of Central New York Power Corporation[1] (Successor to Northern Development Corporation), the Commission in its Opinion, No. 185, issued November 22, 1949, found that the "Raquette River, from its confluence with the St. Lawrence River to at least Piercefield at about mile 91 is a navigable waterway of the United States." (8 FPC 390).

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the project structures affecting navigation are satisfactory, and that the plans of the structures affecting navigation had been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife resources.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have a termination date of December 31, 1993. Since there was no project construction after 1935, we will make the effective date of the license November 1, 1949, the first day of the month in which we determined the Raquette River to be a navigable water, as set forth above.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of New York and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

---

*See Opinion No. 481, issued November 15, 1965, 34 FPC 1298. Affirmed, *Niagara Mohawk Power Corp.* v. *F.P.C.* — F. 2d — (CADC–1967)

[1] Central New York Power Corporation was consolidated with two other companies on January 5, 1950 and the survivor became Niagara Mohawk Power Corporation.

(2) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received.

(3) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 15,300 horsepower, and the amount of such charges, based upon such capacity, to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) The following described transmission facilities, while not included in the application for license, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project as hereinafter provided:

(a) The 23 kv Norwood—Norfolk line, about 13 miles long;

(b) The 23 kv East Norfolk—Norfolk line, 4 miles long;

(c) The short Norfolk 2.4 kv underground cable.

(d) The Raymondville—Norfolk 115 kv line, 6.73 miles long; and

(e) The 23 kv substations at Norwood and East Norfolk and the 115 kv substation at Raymondville.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Niagara Mohawk Power Corporation (Licensee) of Syracuse, New York, under Section 4(e) of the Federal Power Act (Act) for a period effective as of November 1, 1949, and terminating December 31, 1993, for the continued operation and maintenance of Raquette River Project No. 2330, located on the Raquette River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2330 consists of:

(1) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2330-1) Entitled, "Raquette River Project—General Location Map"

Exhibit K–1: (FPC No. 2330–2) Entitled, "Existing Norwood Development—Detail Map"

Exhibit K–2: (FPC No. 2330–3) Entitled, "Existing East Norfolk Development—Detail Map"

Exhibit K–3: (FPC No. 2330–4) Entitled, "Existing Norfolk Development—Detail Map"

Exhibit K–4: (FPC No. 2330–5) Entitled, "Existing Raymondville Development—Detail Map".

(ii) Project works consisting of:

1. The Norwood development consisting of a concrete gravity type dam 23 feet high and 188 feet long, a 350 acre reservoir, a concrete intake structure, a concrete and masonry powerhouse containing a 2000 kw generating unit;

2. The East Norfolk development consisting of a concrete gravity type dam 16 feet high and 245 feet long, a 135 acre reservoir, an open steel flume and concrete intake structure, a concrete and masonry powerhouse containing a 3000 kw generating unit;

3. The Norfolk development consisting of a timber crib dam 20 feet high and 400 feet long, a ten acre reservoir, an open flume, a wood stave pipeline, a steel penstock with surge tank, a concrete powerhouse containing a 4500 kw generating unit; and

4. The Raymondville development consisting of a concrete dam 17 feet high and 293 feet long, a 50-acre reservoir, an open flume with a concrete intake structure, a concrete powerhouse containing a 2000 kw generating unit;

and appurtenant hydraulic, mechanical, and electrical facilities and miscellaneous project works

the location, nature, and character of which structures are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L, sheet No. 1 (FPC No. 2330–6) entitled "Existing Norwood Development Plan, Elevation and Sections Dam, Intake and Powerhouse";

Exhibit L, sheet No. 2 (FPC No. 2330–7) entitled "Existing East Norfolk Development Plan, Elevation and Sections Dam, Intake and Powerhouse";

sheet No. 3 (FPC No. 2330–8) entitled "Existing Norfolk Development Plan, Elevation and Sections Dam, Intake, Surge Tank, and Powerhouse";

sheet No. 4 (FPC No. 2330–9) entitled "Existing Raymondville Development Plan, Elevation and Sections Dam, Intake and Powerhouse"; and

Exhibit M, consisting of 5 typewritten pages and 4 maps, entitled "General Descriptions and General Specifications of Mechanical, Electrical and Transmission Equipment and their Appurtenances", filed in the Commission December 14, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission: also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States." (30 FPC 1658), which terms and conditions designated as Articles 1 through 27, are

attached and made a part hereof except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 29. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 15,300 horsepower.

Article 30. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 31. Whenever the licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States for the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 32. The Licensee shall, within one year from the date of issuance of this license, file in accordance with the rules and regulations of the Commission an application for inclusion in the project license of the following transmission facilities:

1. The 23 kv Norwood-Norfolk line, approximately 13 miles long.
2. The 23 kv East Norfolk-Norfolk line, 4 miles long.
3. The short Norfolk 2.4 kv underground cable.
4. The Raymondville-Norfolk 115 kv line, 6.73 miles long.
5. The 23 kv substations at Norwood and East Norfolk and the 115 kv substation at Raymondville.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

WESTERN MASSACHUSETTS ELECTRIC COMPANY, PROJECT NO. 2334

ORDER ISSUING LICENSE (MAJOR)

(Issued July 15, 1964)*

Application was filed on December 31, 1962 by Western Massachusetts Electric Company (Applicant) of West Springfield, Massachusetts, for license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2334, known as the Gardners Falls Project, located on the Deerfield River, in the Towns of Buckland and Shelburne, in Franklin County, Massachusetts.

As originally constructed in 1904, the project consisted of a dam, a power canal, and a powerhouse which contained two 400 kw generators driven by two horizontal waterwheels. Later equipment replacements, and safety and maintenance measures were as follows: 1914—two vertical waterwheels and two 940 kw generators were installed; 1924—a new 1,300 kw generator was installed; 1938—flood conditions made necessary the construction of protective structures and repairs to the existing facilities; and 1945—construction was accomplished to enhance the stability of the dam and to improve its hydraulic characteristics. No major changes were made in the project works since 1935. Power generated at the project is delivered to Applicant's distribution system for public utility purposes.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that the plans of the project structures affecting navigation are satisfactory, and that the plans of the structures affecting navigation had been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interest of fish and wildlife.

The Department of Health, Education, and Welfare, in reporting on the application, advised that the project does not constitute a source of pollution, and

*Modified on rehearing by order issued September 10, 1964, 32 FPC 733.

that it is not envisioned that the granting of a license for the project will create or intensify vector problems.

In its order issued October 29, 1963,[1] the Commission found that the Deerfield River and its tributaries from points upstream from the Somerset Reservoir to its confluence with the Connecticut River constitute navigable waters of the United States. Project No. 2324 is located within this reach of the Deerfield River.

For the reasons set forth in Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962, and a termination date of December 31, 1993.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Massachusetts and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The issuance of a license for the project will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development and for other beneficial public uses, including recreational purposes.

(5) The 2.3/13.8 kv substation, the 2.3/4.8 kv substation, and appurtenant electrical and mechanical facilities mentioned or referred to in paragraph (B) below, and which were included in the application, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(6) Although not included in the application for license, a double circuit 13.8 kv transmission line extending from the Gardners Falls Project to the 115 kv Montague substation is a part of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(7) The installed horsepower capacity of the project hereinafter authorized, for the purpose of computing the capacity component of the administrative annual charge, is 5,300 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Western Massachusetts Electric Company (Licensee) of West Springfield, Massachusetts, under Section 4(e) of the Federal Power Act (Act) for a period effective as of April 1, 1962 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2334, located on the Deerfield River, navigable waters of the United States, subject to the terms and conditions of the Act, which is incorporated herein by

[1] *New England Power Company*, Project No. 2323 (30 FPC 1120).

reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2334 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2334–1) "General Map of Project Area"

Exhibit K: (FPC Nos. 2334–2 and –3) "Detail Map of Area".

(ii) All project works as follows: (1) a 337 foot concrete gravity type dam constructed to elevation 332.79 feet (U.S.G.S. Datum); (2) a 1,300 foot canal parallel to the river with headgates at the west end of the dam and penstock headgates, sluice-gates, and gate-houses located at its downstream end; (3) a powerhouse containing two horizontal and three vertical units, operating under a 39 foot head, and having a total generator capacity of 3,980 kw and turbine capacity of 5,983 horsepower; (4) a 2.3/13.8 kv substation and a 2.3/4.8 kv substation; (5) appurtenant electrical and mechanical facilities, the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawings

Sheet 1 (FPC No. 2334–4) "Plan and Sections of Dam"

Sheet 2 (FPC No. 2334–5) "Plan and Sections of Canal"

Sheet 3 (FPC No. 2334–6) "Plan of Station"

Sheet 4 (FPC No. 2334–7) "Cross Sections of Nos. 1 and 2 Units"

Sheet 5 (FPC No. 2334–8) "Cross Section No. 3 and 4 Units"

Sheet 6 (FPC No. 2334–9) "Cross Section No. 5 Unit"

Exhibit M: Seven typewritten pages entitled, "General Description of Equipment and Appurtenances of the Project," filed in the Commission December 31, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (30 FPC 1658), which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof, except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the

Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 29. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 5,300 horsepower.

Article 30. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 31. Whenever the licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 32. The Licensee shall within six months from the date of issuance of this license, file with the Commission an application for amendment of this license to include the double circuit 13.8 kv Gardners Falls-Montague transmission line.

(D) The exhibits designated and described in Paragraph (B) above are hereby approved as a part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license.

In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

DEPARTMENT OF WATER RESOURCES OF THE STATE OF CALIFORNIA, PROJECT NO. 2426

ORDER ISSUING PRELIMINARY PERMIT

(Issued July 16, 1964)

Application was filed on November 14, 1963 by the Department of Water Resources of the State of California (Applicant) of Sacramento, California, for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2426, to be known as the California Aqueduct Project, to be located on the Sacramento-San Joaquin Delta System, in the Counties of Kern, Los Angeles, San Bernardino, Riverside, Contra Costa, Alameda, Stanislaus, Merced, Fresno, Kings, and San Luis Obispo, California, in the region of Castaic, Palmdale, Littlerock, Pearblossom, Hesperia, San Bernardino, Colton, Riverside, Sunnymead, Perris, Tracy, Los Banos, Kettleman City, and San Luis Obispo, California; and affecting lands of the United States within the Angeles and San Bernardino National Forests and other lands of the United States.

The Secretary of the Army and the Chief of Engineers have stated that there is no objection to the issuance of a preliminary permit for the project.

The Department of the Interior, in commenting on the application, recommended for inclusion in any preliminary permit for the project a special condition in the interests of fish and wildlife.

The Department of Agriculture, in commenting on the application, recommended for inclusion in any preliminary permit for the project conditions for the protection of the National Forest land and resources involved.

The Department of Health, Education and Welfare, in commenting on the application, stated that close liaison should be maintained by the permittee and the California State Department of Public Health as to appropriate prevention and control measures to be built into the project and continued as a part of the regular operations pertaining to features which may otherwise result in man-made aquatic habitats favorable for the production of mosquitoes and other insects of public health importance.

Applicant requests the period of any preliminary permit issued be for a period of 36 months. Since the large area traversed by the project proposed and the alternate routes to be studied will require considerably more time for investigation than a usual single project, we consider the period requested as reasonable.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit.

262-497—67——12

The Commission finds:

(1) Applicant is a municipal corporation organized under the laws of the State of California.

(2) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The proposed project will affect lands of the United States but will not affect any Government dam, and no reason is apparent at this time for development of the proposed project by the United States.

The Commission orders:

(A) This preliminary permit is hereby issued to the Department of Water Resources of the State of California (Permittee) for a period of 36 months, effective as of July 1, 1964, for the sole purpose of maintaining priority of application for license for Project No. 2426, affecting lands of the United States within the Angeles and San Bernardino National Forests and other lands of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed thereunder.

(B) Proposed Project No. 2426 will include the following facilities: *North San Joaquin Division*—Aqueduct features from Italian Slough in the vicinity of Tracy to San Luis Forebay on San Luis Creek; nine 34,500 and two 11,300 horsepower pumps; *South San Joaquin Division*—Aqueduct features from Kettleman City to Tehachapi Pumping Plant; three pumping plants; Buena Vista containing eight pumps; Wheeler Ridge I and II each containing eight pumps; *Tehachapi Division*—Aqueduct features from Tehachapi Pumping Plant to the surge tank of the Cottonwood Power Plant; eight pumps totaling 674,000 horsepower; *Antelope Division*—Aqueduct features from the surge tank of Cottonwood Power Plant to the junction of the East and West Branch Aqueducts near Fairmont Reservoir; Cottonwood Power Plant would develop 30,000 kilowatts under a static head of 208 feet; *West Branch Division*—Aqueduct features from Fairmont Junction to Castaic Reservoir; pumping plant would have a static lift of 271 feet; three power plants: Elizabeth Power Plant No. 1 would develop 58,000 kilowatts under a static head of 700 feet; Elizabeth Power Plant No. 2 would develop 36,000 kilowatts under a static head of 425 feet; Elizabeth Power Plant No. 3 would develop 50,000 kilowatts under a static head of 590 feet; Castaic Dam on Castaic Creek would be 325 feet high creating a reservoir of 350,000 acre-feet; *East Branch Division*—Aqueduct features from Fairmont Junction to Perris Reservoir; pumping plant containing four pumps operating under a static head of 535 feet; Cedar Springs Dam on West Fork of Mojave River would be 280 feet high creating a reservoir of 200,000 acre-feet; Devil Canyon Power Plant No. 1 would develop 97,000 kilowatts under a static head of 1,115 feet; Devil Canyon Power Plant No. 2 would develop 51,000 kilowatts under a static head of 647 feet; Perris Dam would be 120 feet high creating a reservoir of 100,000 acre-feet; *Coastal Aqueduct Division*—Aqueduct features from a turnout near Kettleman City to a terminal structure on Santa Maria River near San Luis Obispo—Santa Barbara County Line; Pumping Plant C–3 containing two 6,850 horsepower pumps operating under a static head of 211 feet; Pumping Plant C–4 containing two 2,530 horsepower pumps operating under a static head of 342 feet; Pumping Plant C–5 containing two 2,770 horsepower pumps operating under a static head of 374 feet; Pumping Plant C–6 containing two 5,610 horsepower pumps operating under a static head of 754 feet; San Luis Obispo Power Plant would develop 8,000 kilowatts under a static head of 993 feet; *Summary*—The pumping plants would develop 5,748 feet of

static head of which 4,678 feet of static head would be regained by power plants developing 330,000 kilowatts. *Alternate Route*—Oso-Pyramid Route is being considered as an alternate route to the Elizabeth Lake Canyon Route for the West Branch Aqueduct. Changes involved would be in the Antelope and West Branch Divisions. *Antelope Division (Alternate)*—Aqueduct features from Tehachapi Afterbay to the junction of the East and West Branch Aqueducts; Cottonwood Power Plant would develop 19,000 kilowatts under a static head of 152 feet; *West Branch Division (Alternate)*—Aqueduct features from Tehachapi Afterbay to Castaic Reservoir; Oso Pumping Plant would require an installation of 28,000 kilowatts for a static lift of 233 feet; Pyramid Power Plant would develop 65,000 kilowatts under a static head of 774 feet; Castaic Power Plant would develop 82,000 kilowatts under a static head of 1,040 feet; Apple Canyon Reservoir of 3,000 acre-feet would be created by a dam 213 feet high; Pyramid Dam on Peru Creek would be 342 feet high creating a reservoir of 143,000 acre-feet; *Summary (Alternate)*—The pumping plants would develop approximately the same 5,748 feet of static head of which 4,721 feet of static head would be regained by power plants developing 322,000 kilowatts.

(C) This permit is also subject to the terms and conditions set forth in Form P–1, entitled "Terms and Conditions of Preminary Permit" (16 FPC 1303–1305) which terms and conditions, designated as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six month period, from the effective date of the preliminary permit, to the Regional Engineer, Federal Power Commission, San Francisco, California, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period, and of the work contemplated under the preliminary permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning, cooperate with the U.S. Fish and Wildlife Service, the California Department of Fish and Game, and the U.S. Forest Service for the purpose of planning and designing adequate conservation measures: (1) to prevent loss of or damage to existing fish and wildlife resources, (2) to mitigate and compensate for the loss of or damage to those resources, and (3) to develop and improve those resources where practicable.

Article 11. The Permittee shall, prior to undertaking any investigation work under this preliminary permit on National Forest lands, consult with the Regional Forester at San Francisco, California, as to reasonable requirements relative to operations, field surveys, and explorations, and shall abide by such requirements; and shall cooperate with the Forest Service, Department of Agriculture, during the period of this permit to develop a plan for alleviation of damage to, and achieving maximum utilization of National Forest resources insofar as they are affected by the proposed project.

Article 12. The Permittee shall, during the period of project planning, consult with State of California, Department of Health, to determine the appropriate prevention and control measures to be given man-made aquatic habitats favorable to the production of mosquitoes and other insects.

Article 13. The Permittee shall, during the early period of project planning consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission Regulations under the Federal Power Act.

Article 14. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the permittee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

AMERICAN CAN COMPANY, PROJECT NO. 2212

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND NET CHANGE THEREIN; ACCRUED DEPRECIATION; NET INVESTMENT; AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 17, 1964)

American Can Company, Licensee for Project No. 2212,[1] on November 28, 1960, filed its initial statement, pursuant to Section 4.20 of the Commission's Regulations under the Federal Power Act, claiming for the existing Rothschild Project, as of August 1, 1943, the effective date of the license, an actual legitimate original cost of $1,264,577.96, and an applicable reserve for accrued depreciation in the amount of $794,861.83, resulting in a claimed net investment of $469,716.13.[2] In addition, Licensee's books and records show for the period August 1, 1943, through December 31, 1960, a net increase in project cost of $155,234.47, resulting in a total claimed or recorded actual legitimate original cost of the project as of December 31, 1960, of $1,419,812.43. The recorded net increase of $155,234.47 in the cost of the project for the period August 1, 1943, through December 31, 1960, results from recorded project gross additions of $196,379.83 and gross retirements of $41,145.36, and is more specifically shown in the attached Schedule I.

The Commission's staff made a field examination of books, records and other data of Licensee for the purpose of ascertaining the correctness of the claimed or recorded project costs and amounts of accrued depreciation applicable to in-service project properties for the above-mentioned period.

---

[1] The project is located on the Wisconsin River, a navigable waterway of the United States, and its tributary, Rib River, in the region of Wausau, Schofield, and Rothschild, in Marathon County, Wisconsin, and is known as the Rothschild Project. The license (issued pursuant to Section 4(e) of the Federal Power Act) authorizing the operation and maintenance of the constructed project is by its terms effective for a period of 50 years, commencing August 1, 1943, and was issued to the American Can Company. Licensee acquired the property comprising Project No. 2212 from Marathon Corporation, of Menasha, Wisconsin, the original applicant, and thereupon amended the latter company's application for license.

[2] Article 13 of the license provides for Commission determination of the actual legitimate original project cost and the accrued depreciation applicable to project properties as of the effective date of the license; the difference being the net investment of the Licensee in the project as of that time.

Following that examination, an agreement, subject to Commission approval, was reached between the staff and Licensee's representatives with respect to certain proposed adjustments involving (1) the reclassification of a total of $141,485.23 within the project plant accounts; (2) the elimination of $66,792.28 from the claimed and recorded project cost as of August 1, 1943; (3) the increase of the project reserve for depreciation as of August 1, 1943, as recorded by Licensee, in the net amount of $37,841.99; and (4) the accounting disposition of all amounts involved in the proposed adjustments.

The accounting for the proposed reclassifications within the project plant accounts, which do not affect the total claimed net project cost, is shown by the following composite journal entry:

Account No.	Titles	Debit	Credit
332	Reservoirs, dams and waterways	$125,132.84	
334	Accessory electric equipment	13,669.90	
330	Land and land rights		$40,229.22
331	Structures and improvements		91,410.05
333	Water wheels, turbines and generators		3,360.13
335	Miscellaneous power plant equipment		2,348.29
353	Station equipment		1,455.05

The proposed elimination of the net amount of $66,792.28 from the claimed and recorded project cost as of August 1, 1943, consists of the following items:

Excessive claimed costs related to project lands	($44,446.95)
Exclusion from claimed cost, the cost of nonproject transmission properties	(22,347.33)
Recorded cost not claimed	2.00
Total	(66,792.28)

Licensee and its predecessor did not maintain a separate depreciation reserve applicable to project property, and Licensee made no claim as to project depreciation subsequent to August 1, 1943.[3] Based upon depreciation rates developed by the American Appraisal Company in an inventory and appraisal of project properties in 1941–1942, the staff found Licensee's $794,861.83 claimed and recorded project reserve for accrued depreciation to be deficient, as of the effective date of the license, in the credit amount of $37,841.99. For the period August 1, 1943 through December 31, 1960, Staff recommends and Licensee concurs that provision for project depreciation be established in the net credit amount of $166,622.89, resulting in a total provision for project depreciation of $999,326.71 as of December 31, 1960.[4]

The proposed accounting for all amounts involved in the proposed adjustments and to establish in Licensee's records the recommended cost and accrued depreciation of the Rothschild Project as of December 31, 1960, classified by accounts prescribed in the Commission's Uniform System of Accounts Prescribed for Licensees and Public Utilities, as tentatively agreed to between the staff

[3] During the period from August 1, 1943, through December 31, 1960, Licensee or its predecessor did not record upon their books of account separate entries in a depreciation reserve account for Project No. 2212.

[4] The depreciation rates recommended by the American Appraisal Company were reviewed by the Staff and found to be within the range of rates compiled by the Commission from reporting utilities and licensees for hydroelectric properties. These rates were consistently applied to existing property costs as of August 1, 1943 and thereafter.

and Licensee's representatives, is shown by the following composite journal entry:

(1) Account No.	(2) Titles	(3) Debit	(4) Credit
	(A)		
101	Project electric plant in service	$1,353,020.15	
330	Land and land rights	51,698.21	
331	Structures and improvements	12,752.03	
332	Reservoirs, dams and waterways	1,078,097.12	
333	Water wheels, turbines, and generators	143,340.09

108	Accumulated provision for depreciation of project electric plant in service, hydraulic production plant		999,326.71

After giving effect to the above adjustments, the staff recommends and Licensee, by letter dated September 11, 1962,[5] concur that the Commission determine (1) the actual legitimate original cost and initial accrued depreciation of the Rothschild Project as of August 1, 1943, to be $1,197,785.68 and $832,703.82, respectively, resulting in a net investment of $365,081.86 as of that date; (2) the net increase or change in the actual legitimate original cost of Project No. 2212 during the period from August 1, 1943, through December 31, 1960, to be $155,234.47, consisting of project gross additions in the amount of $196,379.83 and gross retirements in the amount of $41,145.36; and (3) the actual legitimate original project cost as of December 31, 1960, to be $1,353,020.15, with a reserve for accrued depreciation applicable to in-service project properties of $999,326.71 as of that date; all as more specifically set forth in the attached Schedules I and II.

The Public Service Commission of Wisconsin was advised by letter of this Commission dated October 4, 1961 of the proposed examination of the claimed project costs, accrued depreciation and net investment, all as described above. By letter dated October 9, 1961, that Commission indicated that it had no interest in this matter because the American Can Company was not a utility subject to its jurisdiction.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments, including the accounting dispositions, and resulting project costs, depreciation reserves, and resulting net investment, and its letter dated September 11, 1962, and the Wisconsin Public Service Commission, by its letter dated October 9, 1961, have obviated the necessity for notice and opportunity to protest provided by Sections 4.4, 4.5, 4.22, and 4.23 of the Commission's Regulations under the Federal Power Act.

[5] Confirming its agreement to the proposed adjustments, accounting dispositions and resulting project cost and depreciation reserve for Project No. 2212.

(2) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by the Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) As of the effective date of the license, August 1, 1943, the actual legitimate original cost of the constructed portion of Project No. 2212 is $1,197,785.68; the net increase or change in the actual legitimate original cost of Project No. 2212 during the period from August 1, 1943 through December 31, 1960, is $155,234.47 consisting of project gross additions of $196,379.83 and project retirements of $41,145.36; and the resulting actual legitimate original cost of Project No. 2212, as of December 31, 1960, is $1,353,020.15, classified by primary plant accounts as shown in the attached Schedule I.

(4) As of August 1, 1943, the effective date of the license, the reserve for accrued depreciation applicable to in-service project properties is $832,703.82; the net increase or change in the project reserve for accrued depreciation for the period from August 1, 1943, through December 31, 1960, is $166,622.89; and the reserve for accrued depreciation applicable to in-service project properties as of December 31, 1960, is $999,326.71, all classified by functional groups as shown in the attached Schedule II.

(5) As of August 1, 1943, the effective date of the license, the net investment of the Licensee in Project No. 2212 is $365,081.86.

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall (a) establish and maintain control and detailed plant accounts for the constructed portion of Project No. 2212, showing the debit balance of $1,197,785.68 as of August 1, 1943, the debit amount of $155,234.47 as the net increase or change in the project cost of Project No. 2212 for the period from August 1, 1943, through December 31, 1960, and the resulting total debit balance of $1,353,020.15 for Project No. 2212 as of December 31, 1960, all as more specifically shown in the attached Schedule I, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees; and (b) establish and maintain a reserve account for accrued depreciation applicable to in-service project properties of Project No. 2212, showing the credit balance of $832,703.82 as of August 1, 1943, the credit amount of $166,622.89 as the net increase or change in the reserve for accrued depreciation applicable to project properties for the period from August 1, 1943 through December 31, 1960, and the credit balance of $999,326.71 as of December 31, 1960; all classified by functional groups as shown in the attached Schedule II.

(D) Licensee shall file with the Commission, within 60 days from the issuance of this order, FPC Form No. 7 and three certified copies of its adjusting journal entries showing compliance with this order.

Commissioner O'Connor *not participating.*

SCHEDULE I

AMERICAN CAN COMPANY, LICENSEE, PROJECT NO. 2212 (ROTHSCHILD)

Actual legitimate original cost

Account		Initial cost as of Aug. 1, 1943*			Net additions for the period from Aug. 1, 1943 through Dec. 31, 1960			Allowed cost as of Dec. 31, 1960
No.	Title	Claimed cost	Staff revisions	Allowed	As recorded	Staff revisions	Allowable	
	Hydraulic production plant

AREA RATE PROCEEDING (HUGOTON-ANADARKO AREA), DOCKET NO. AR64–1, ET AL., AND AREA RATE PROCEEDING (TEXAS GULF COAST AREA), DOCKET NO. AR64–2, ET AL.

ORDER UPDATING APPENDICES TO THE ORDER INSTITUTING AREA RATE PROCEEDINGS

(Issued July 17, 1964)

By Order issued on November 27, 1963, 30 FPC 1354, 28 Fed. Reg. 12645, the Commission instituted area rate proceedings in the natural gas producing areas named in the caption above. The attached Appendices, keyed to those of the November 27th order, list respondents and natural gas rate proceedings which are herewith added or deleted from each of the consolidated proceedings. These Appendices also indicate corrections to be made to those of the November 27th order.

Added respondents who desire to receive copies of filings made herein by other parties shall, on or before July 31, 1964, so notify the Secretary of the Commission by filing an original and three copies of a notice naming one representative to be served on their behalf. Thereafter the Secretary of the Commission shall promptly advise all participants in the rate proceedings of all such additional names of representatives to be served by issuing supplements to the Secretary's original service lists issued on March 12, 1964, pursuant to paragraph (B) of the Commission's order of January 30, 1964, herein.

APPENDIX A (SUPPLEMENT)

DOCKET NO. AR64–1, ET AL.

I. *Oklahoma Panhandle Area*

Add the following respondents:

Abercrombie, A. L.
Aladdin Petroleum Corporation
Caulkins Oil Company
Cherry, J. Blair
Consolidated Oil & Gas, Inc.
Davis, Daryl
GMC Oil & Gas Corporation
Jenkins, C. G.
Kewanee Oil Company
O'Hornett, Patrick J.
Owens, Rhea H.
Payne, W. C.
Petroleum International, Inc.
Petroleum Property Management, Inc.
Pickens, W. C.
Portman, William E.
Seneca Oil Company
Spencer Chemical Company
Tamarack Petroleum Company, Inc.
Universoil, Inc.
Van Harlow, William, Jr.
Viersen & Cochran
Warren American Oil Company
Western Oil Fields, Inc.
Peerless Oil & Gas Company

Delete the following respondents:

Anderson, Wendell W.
Brown, James G., & Associates
Briscoe, Powel
Cities Service Production Company
Natural Gasoline Corporation
Parker, George & Charles McCune
Republic Natural Gas Co.
Ridgeway & Morrison
Smith, W. T.
Texoma Production Co.

Correction:

Change Brown, Herman to Brown Estate, Herman.
Change Powers, M. F. to Powers, M. F., Estate of.
Change Tenneco Corp. to Tenneco Oil Company.
Change Viersen, Sam K., Jr. to Viersen, Sam K.

II. *Oklahoma Anadarko Area*

Add the following respondents:

Ames Gathering Company
Anderson, Harold H.
Baker, R. S.
Beard Oil Company
Bond, Roland S.
Calvert, F. A. & H. K., Calvert, Trustee
Cam Gas Company
Coles, Marvin J.
Consolidated Oil & Gas, Inc.
Crescent Oil & Gas Corporation
Earlsboro Oil & Gas Company, A Partnership
El Paso Natural Gas Products Company
GMC Oil & Gas Corporation
Goff Oil Company
Gungoll, Henry H.
Hall-Jones No. 4
Haury, Herman
Hefner Production Company, The
Hunt, H. L.
Kerr-McGee Oil Industries, Inc.
Lammerts, Robert P.
MacDonald Oil Corporation
McCoy, Alex W., Associates, Inc.
Magness Petroleum Company
Mercury Drilling Company
Midland Petrochemical Company
Mineral Mining Company

Add the following respondents—Continued

Northern Natural Gas Producing Company
Petroleum Consultants, Inc.
Petroleum International, Inc.
Reading and Bates Offshore Drilling Company
Ryan, Ray
Sarkeys, Inc.
Shadid Production Company
Simms, Cecil[1]
Smith, Homer L. d/b/a Smith Rodgers No. 1
Tekoil Corporation
Texas Gas Producing Company
Trice Production Company
Woody, E. M.

Delete the following respondents:

Cities Service Petroleum Co.
Colorado Oil & Gas Corp.
Great Western Drilling Co.
Republic Natural Gas Co.
Rowland, D. H.
Tenneco Corp.
Texoma Production Co.

Correction:

Change Brown, Herman to Brown Estate, Herman.
Change Cameron, A. A. to Cameron, A. A. d/b/a Cameron Oil Company.

III. *Texas Railroad Commission District No. 10*

Add the following respondents:

Agey, W. M. d/b/a Agey Drilling Company
Aikman Brothers
Atlantic Refining Company, The
British-American Oil Producing Company
Cooperative Refinery Association
Frontier Savings Stamps, Inc. of Lubbock Texas
Gray, Earl Q.
Gruenerwald, William & Associates, Inc.
H & Y Oil Company
Johnson, Theodore R.
McKnight, William L., d/b/a Arrowhead Exploration Company
Management Service Corp.
Mapco Production Company
Mudge, Jr., E. W.
O'Hornett, Patrick J.
Ross Petroleum, Inc.
Shelton Equipment and Machine Company, Inc.
Sidwell Oil and Gas, Inc.
Sohio Petroleum Company
Staley, Jack C.
Tamarack Petroleum Company, Inc.
Texas Crude Oil Company
Travis, Arnold M.
Van Harlow, William, Jr.
Warren American Oil Company
Whitehall Oil Company, Inc.
Wilcox Oil Company

Delete the following respondents:

Brown, James, G., & Associates
Green, E. L., Jr.
Kirby Production Company
Schafer Oil Corp.
United Producing Co., Inc.
Woodson Oil Co.

Correction:

Change Dubose, Frank F. to Dubose, Frank F.

[1] The named respondent appears d/b/a in docket numbers CI64–144, CI64–145, CI64–146, CI64–147.

IV. *State of Kansas*

Add the following respondents:

Alco Oil and Gas Corp.
Brady, George Austin, et al., d/b/a Brady Compressing Company
Campbell, Pearl G.
Chelsea Oil & Gas, Inc.
Cimarron Exploration, Inc.
Dale, Cloris
Globe Oil & Refining Company, The
Greenwich Oil & Gas, Inc.
Hanks, Roger C.
Hefner Production Company, The
Jabara Lease Committee, Agent for Warren S. Earhart, et al.
Livingston Oil Company
Lonita Oil Corporation, Inc.
Mapco Production Company
Millener, William S.
Monahan, Rex
Neuner, Alice A., Executrix of G. J. Neuner Estate
Osborn-Barrett Petroleum, Inc.
Porter Estate, Frank Martin
Quillen, Leslie A.
Secure Trusts
Stewart Oil Company
Williams, Robert L., d/b/a Imperial Oil Company
Young, Bert

Delete the following respondents:

Artnell Co.

CITY OF CLEVELAND, OHIO v. HOPE NATURAL GAS COMPANY, DOCKET NO. RP64–3

ORDER DISMISSING COMPLAINT

(Issued July 17, 1964)

On July 9, 1963, the City of Cleveland, Ohio (Cleveland), filed complaint against the rates charged by Hope Natural Gas Company (Hope), for gas sold under its FPC Tariff, Original Volume No. 1, as made effective November 1, 1962, and subsequently amended pursuant to the provisions of the Commission's order issued December 7, 1962 in Docket Nos. G–5474, G–12454, G–17220 and RP61–14. The sole basis for Cleveland's complaint is its allegation that it "believes that the rates of Hope are excessive and not the lowest reasonable rates." The complaint then requests that the Commission institute an investigation of Hope's rates and charges under Section 5(a) of the Natural Gas Act. The East Ohio Gas

[4] See Appendix C, footnote 1, herein.

Company, an affiliate of Hope in the Consolidated Gas System, is the sole distributor of natural gas in the City of Cleveland, and purchases from a number of suppliers, including Hope.

On August 16, 1963, Hope filed a motion to dismiss and answer to the complaint, stating, among other things, that Cleveland fails to allege a single fact in compliance with Section 1.6(b) of the Commission's Rules of Practice and Procedure which requires that formal complaints shall be so drawn as to fully and completely advise the Commission and the parties of the facts constituting the grounds of the complaint. In addition, staff investigation of Hope's operations and earnings conducted as part of our continual review of the earnings of natural-gas companies and with relation to the merger application at Docket No. CP63–272 of Hope and its affiliate, New York State Natural Gas Corporation, gives no indication of excessive earnings by Hope which would warrant granting Cleveland's request that we institute an investigation under Section 5 of the Act.

The Commission finds:

Upon basis of the foregoing, the complaint filed herein by the City of Cleveland should be dismissed and this proceeding should be terminated.

The Commission orders:

The complaint filed herein by Cleveland on July 9, 1963, is dismissed and this proceeding hereby is terminated, without prejudice.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CITY OF CLEVELAND, OHIO v. NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. RP64–14

ORDER DISMISSING COMPLAINT

(Issued July 17, 1964)

On December 4, 1963, City of Cleveland, Ohio (Cleveland) filed a complaint against the rates charged by New York State Natural Gas Corporation (New York Natural), for gas sold under its FPC Tariff, Original Volume No. 2, as made effective July 1, 1962, and subsequently amended by our order issued July 20, 1962, in Docket Nos. G–17296, G–19087 and G–20109. Cleveland's complaint is based on its statement that the "City believes that the rates of New York Natural are excessive and not the lowest reasonable rates" and requests the Commission to institute an investigation under Section 5 of the Natural Gas Act.

On January 10, 1964, New York Natural filed a motion to dismiss the complaint and answer thereto. The answer notes, among other things, that natural gas is distributed in Cleveland by East Ohio Gas Company, an affiliate of New York Natural in the Consolidated Gas System; that more than 95 percent of East Ohio's purchases of natural gas from New York Natural are made from the latter company's OSS system under a cost of service formula rate; and that Cleveland's complaint is fatally defective under Section 1.6(b)(2) of the Commission's Rules of Practice and Procedure because it "does not allege a single solitary fact constituting the grounds of its complaint in this proceeding."

At about the same time a staff investigation of New York Natural's operations and earnings was instituted. Following such investigation and conferences with the company, New York Natural on June 1, 1964, in Docket No. RP64–40, filed a

reduction in rates applicable to its General System sales and services under which East Ohio purchases its approximately additional five percent from New York Natural. Due notice of this rate reduction filing was published and no comments or objections thereto were received.

The Commission finds:

Upon consideration of the foregoing facts, Cleveland's request that we institute an investigation under Section 5(a) of the Natural Gas Act of New York Natural's rates and charges should be denied; its complaint herein should be dismissed and this proceeding terminated.

The Commission orders:

The complaint filed by the City of Cleveland on December 4, 1963, is dismissed and this proceeding hereby is terminated without prejudice.

OPINION NO. 435

EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP64-21

OPINION AND ORDER ADOPTING IN PART AND MODIFYING IN PART THE INITIAL DECISION OF PRESIDING EXAMINER, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, AND DENYING ORAL ARGUMENT

(Issued July 17, 1964)*

Syllabus

1. Commission *concludes* Colonials sales estimate, including residential, is reasonable and on basis thereof, market for East Tennessee project is adequate. Pp. 160, 161.
2. Determining whether a proposed pipeline project is economically feasible is matter of judgment on all the facts – – where extension to existing pipeline is proposed, Commission does not require that revenues must yield return comparable to that allowed on existing system operation. P. 161.
3. As stated in *Southern*, extension of branch lines for purpose of filling in existing service areas is to be encouraged, provided it results in no undue burden on existing customers. P. 161.
4. Certificate conditioned to require that Colonial obtain contracts or precedent agreements covering at least half its estimated interruptible industrial sales, which, with Virginia Commission authorization of its project, will help assure Colonial's feasibility. P. 162.
5. Benefits to public from project will outweigh any possible harm to Coal Interests. P. 162.
6. Commission *rejects* condition requiring Roanoke Gas to pay for last seven miles of East Tennessee's line; in general, seven mile segment seems to serve East Tennessee's pipeline function rather than Roanoke Gas' distribution function. P. 163.
7. Certificate conditioned to require pipeline to report to its resale customers and Commission, annually for five years after commencement of operations,

* Initial decision appears on p. 165. Order issued September 11, 1964 denied rehearing, 32 FPC 734.

all direct costs and expenses of new service and revenues resulting therefrom. P. 163.

8. Commission *issues* certificate of public convenience and necessity in proceeding arising under Section 7, of the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

WOODWARD, *Commissioner:*

This case involves an application filed by East Tennessee Natural Gas Company (East Tennessee) under Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing a proposed pipeline project and certain sales of natural gas. The fundamental question to be decided is whether the project and proposed sales meet the statutory requirements. The Presiding Examiner's initial decision issued on April 27, 1964 would grant East Tennessee a certificate subject to certain conditions which are discussed below. Our principal concern lies with issues raised in the exceptions filed in May 18, 1964, by the Coal Interests,[1] East Tennessee, and Roanoke Gas Company. Reply exceptions were filed by the Coal Interests and East Tennessee on May 28, 1964. The Commission's Staff recommended certification of the project and filed no exceptions.

East Tennessee proposes to construct and operate a 138-mile, 8⅝ths inch pipeline and appurtenant facilities at an estimated cost of $5,139,000, extending from Bristol, Virginia-Tennessee, up the southwestern valley of Virginia to the City of Roanoke. By means of these facilities, East Tennessee proposes to sell natural gas to two Virginia customers: Roanoke Gas Company (Roanoke Gas), the distributing company presently serving Roanoke and environs, which would purchase an estimated 7,789 Mcf on the peak day and 1,595,000 Mcf annually; and Colonial Natural Gas Company (Colonial), a newly organized company not yet in operation, which would purchase an estimated 18,005 Mcf on the peak

[1] Fuels Research Council, Inc., National Coal Association, and United Mine Workers of America.

day and 2,570,191 Mcf annually (all third-year figures at 14.73 psia for resale to 13 communities in the southwest Virginia valley.[2]

Colonial's project would cost an estimated $4,386,000, including taplines from East Tennessee's facilities, and distributing systems in the 13 communities Colonial would serve.

In deciding whether East Tennessee's project meets the requirements of the public convenience and necessity under Section 7(c), the following principal issues must be considered:

(1) Is East Tennessee's market adequate and is its project economically feasible?

(2) In determining the feasibility of East Tennessee's project, should the Commission consider the economic feasibility of Colonial's project?

(3) Should Roanoke Gas be required to pay for the last seven miles of East Tennessee's pipeline leading into Roanoke Gas' service area?

We agree with the Examiner that East Tennessee's project meets the requirements of public convenience and necessity, and that East Tennessee should be granted a certificate. We disagree with some of the Examiner's reasoning and conditions, however, and shall modify his decision accordingly.

Adequacy of East Tennessee's market.—Whether the market for East Tennessee's project is adequate depends upon the reliability of the estimates of Colonial's sales, particularly its residential sales, there being little controversy concerning Roanoke Gas' sales. Colonial estimates its total annual sales in the third year at approximately 2,500,000 Mcf, of which approximately 1,200,000 Mcf would be residential (mainly residential space heating), approximately 1,000,000 Mcf would be industrial, with the balance of approximately 300,000 Mcf being commercial, firm industrial, etc. Colonial's estimates are supported principally by testimony of its witness Ross and Exh. Nos. 1 and 14. They are also supported by East Tennessee and by the Commission's staff, a staff witness having spent a week in the field surveying Colonial's market.

The Examiner held that Colonial's estimates of its residential space heating sales are excessive and should be reduced by about half, to some 576,000 Mcf in the third year. This would reduce East Tennessee's market to Colonial from approximately 2,500,000 Mcf to approximately 2,000,000 Mcf in the third year. The Examiner found Colonial's estimate of attaching some 50 percent of the residential space-heating market to be excessive as a third-year accomplishment. In arriving at his estimate of Colonial's residential space heating sales, the Examiner relied upon his own calculations based upon record data of the residential sales experience of distributing companies in Virginia, rather than the several presentations adduced to support Colonial's estimates. The Examiner accepted Colonial's estimate of 1,000,000 Mcf for interruptible sales, subject to the condition that it obtain contracts or precedent agreements for half of this volume. He also accepted Colonial's estimates of commercial and other sales.

The Coal Interests argue that Colonial and the Examiner over-estimate Colonial's residential and other sales, and that the evidence supports a lower rate of space-heating attachments; that the prices for coal and oil in Colonial's service area would be less than Colonial's rate for natural gas; and that the Examiner's independent estimate is artificial and that, moreover, opportunity never existed to test it on the record.

We conclude that Colonial's estimate of its sales, including residential sales, is reasonable, and that on the basis thereof, the market for East Tennessee's

[2] The 13 communities Colonial would serve are Abingdon, Blacksburg, Cambria, Chilhowie, Dublin, Galax, Glade Spring, Marion, Pulaski, Radford, Rural Retreat, Saltville and Wytheville.

project is adequate. Determining the probable extent of Colonial's sales involves the difficult task of evaluating the conflicting predictions of experts. Although the Coal Interests' evidence was to the effect that Colonial would probably attach only some 25 percent of the residential space-heating market by the third year, in many instances distributing companies have attached 50 percent of that market in the third year, as predicted for Colonial by its witness and by Staff. The record indicates that in Colonial's case much will depend upon how energetic a sales campaign is conducted, and Colonial says that it intends to put forth the requisite effort. The relatively unfavorable experience of companies in East Tennessee, where low cost TVA power is available, and in Tidewater areas, where ocean-transported oil is available, does not necessarily apply to the southwestern valley of Virginia.

Assuming that other fuels have a price advantage over natural gas in some service categories, it appears from the record that there is still an adequate market for Colonial's gas in various categories at the rates proposed, which are basically the rates under which Roanoke Gas has grown and prospered. Colonial's estimate of 1,000,000 Mcf of interruptible sales in the third year appears modest, in view of conditions in the southwestern valley of Virginia which, as distinguished from some other areas in Appalachia lacking the Valley's resources, shows signs of developing into a relatively small but impressive industrial complex with a considerable market for gas for specialized uses. Even if we accept the Examiner's 50 percent reduction in Colonial's estimated space heating residential sales to achieve a margin of safety, the facts are clear that on this basis also, East Tennessee's market would be adequate.

Economic feasibility of East Tennessee's project.—Determining whether a proposed pipeline project is economically feasible is a matter of judgment on all the facts. In the case of a proposed extension to an existing pipeline, we do not require that revenues must yield a return comparable to that allowed on the existing system operation, here in excess of 6 percent per annum. Rather, as we said in the Opinion No. 424, and accompanying order issued April 6, 1964, in *Southern Natural Gas Company*, Docket No. CP63-26, *et al.*, 31 FPC 789 at 796 "* * * the extension of branch lines for the purpose of filling in existing service areas is to be encouraged whenever possible, provided that no undue burden is placed on the existing customers."

On the basis of its full estimated volume of sales to Colonial, East Tennessee's evidence shows that the Virginia extension would earn rates of return in the first three years of 4.45 percent, 8.04 percent and 8.13 percent, respectively. Assuming acceptance of the Examiner's reduction of Colonial's estimated sales to only 2,000,000 Mcf anually in the third year, East Tennessee's Virginia extension would still earn in excess of six percent, even when effect is given to the Coal Interests' proposed adjustment reducing East Tennessee's demand revenues. We agree with the Examiner that there is no merit to the further adjustments claimed by the Coal Interests.

Economic feasibility of Colonial's project.—The Examiner held that the economic feasibility of Colonial's project is not in issue in this proceeding since Colonial is not subject to our jurisdiction but to the jurisdiction of the Virginia Corporation Commission. We further thought that the Virginia Commission's review and authorization of Colonial's project would sufficiently assure its feasibility. Accordingly, the Examiner would attach a condition to East Tennessee's certificate requiring Colonial to obtain Virginia Commission authorization of its project.

The Coal Interests except to the Examiner's refusal to consider the economic feasibility of Colonial's project. They contend that since East Tennessee's project depends heavily upon Colonial's, we should determine whether Colonial's

project is economically feasible and should not leave this decision to the Virginia Commission.[8] They argue that Colonial's project is completely infeasible because Colonial has overestimated sales and revenues, and has underestimated expenses of construction and operating its system.

The parties have made an extensive record concerning Colonial's feasibility, which is a matter of material concern in this case, and it is appropriate that we state our conclusions respecting this matter.

East Tennessee contends that Colonial would earn rates of return of 6.40 percent, 7.21 percent, and 7.35 percent in the first three years on the basis of market estimates, and that reflecting the Examiner's reduction in residential sales, Colonial would still earn on the order of 7 percent in the third year.

If we accept the Examiner's reduction in estimated residential space heating sales and reduce revenues correspondingly, Colonial's indicated rate of return would be about 3.5 percent, reflecting the new Federal income tax rate and the reduction in East Tennessee's rates effective April 1, 1964. However, this estimated rate of return is quite conservative. Colonial's estimate of interruptible industrial sales, as well as its estimate of commercial and other sales, are relatively modest in view of the potential of its market area. Colonial's estimates of expenses appear reasonable and we perceive no warrant for increasing them. Finally, we are affirming the Examiner's condition requiring Colonial to obtain contracts or precedent agreements covering at least half of its estimated interruptible industrial sales, which, with the Virginia Commission authorization of Colonial's project, will help assure Colonial's feasibility.

Other factors affecting the public convenience and necessity.—East Tennessee's project also serves the public interest by providing Roanoke Gas with a source of supply additional to its present supplier, Atlantic Seaboard. This second supply is particularly desirable in view of the direction of growth of Roanoke Gas' market.

The Coal Interests contend that there is no public need for natural gas in the southwestern Virginia area, for other cheap fuels are plentiful, and industry has been established without natural gas. Further, the Coal Interests contend that East Tennessee's project would have a harmful effect on the fuel economy of the area, since Colonial, in order to salvage its allegedly non-feasible project, would have to make "dump" sales of gas.

These contentions must be rejected. The record shows a sufficient need for natural gas in the southwestern Virginia area, including the City of Roanoke, to meet the statutory standard. Also the facts indicate that the Coal Interests have overestimated the extent of possible harm to their interests from this project. The prospect of "dump" sales by Colonial would seem remote, for Exh. 38, sponsored by the Coal Interests, shows a price for industrial coal of approximately 23 to 30 cents per MMBtu's while the commodity price of gas to Colonial would exceed 30 cents per equivalent MMBtu's. In our judgment, the benefits to the public from the project will outweigh any possible harm to the Coal Interests.

Whether Roanoke Gas should pay for the last seven miles of pipeline.—The Examiner would condition East Tennessee's certificate to require Roanoke Gas to pay the cost, some $232,000, of the terminating seven miles of East Tennessee's line where it extends into Roanoke Gas' service between Salem delivery point and Clearbrook delivery point. The Examiner was of the view that, in essence, this seven-mile segment performs a distribution function for Roanoke Gas rather than a pipeline function for East Tennessee, and therefore should be paid for by Roanoke Gas.

[8] The Virginia Commission advised us by letter dated July 8, 1964 that it has authorized Colonial's project.

Roanoke Gas and East Tennessee except to the Examiner's conditions on numerous grounds.

We conclude that the Examiner's condition requiring Roanoke Gas to pay for the last seven miles of East Tennessee's line should be rejected. In general, it seems that the seven-mile segment serves East Tennessee's pipeline function rather than Roanoke Gas' distribution function. The segment follows a sparsely settled ridge where there is little retail market, and since Roanoke Gas will not be able to take gas except at the two stated delivery points, the segment could not actually be used as a distributing line. Neither could it be used by Roanoke Gas to perform a back-feeding function, and it could be used for only limited load balancing.

Other matters.—The Examiner would attach a condition to East Tennessee's certificate requiring the company to report to its resale customers and to the Commission annually for five years after the commencement of operations all the direct costs and expenses of the new service, and the revenues resulting therefrom. This condition, which was requested by the 26 intervening Tennessee distributing company customers of East Tennessee, is excepted to by East Tennessee, which requests that it be required to report only three years. We conclude that in the light of the questions respecting economic feasibility that have been raised in this case as described hereinabove, the Examiner's five-year requirement is reasonable and is required by the public convenience and necessity.

The Coal Interests except to the Examiner's conditions requiring Colonial to submit a certificate from the Virginia Corporation Commission authorizing Colonial's project, and contracts covering half of Colonial's interruptible industrial sales, to East Tennessee. We think it is reasonable to require that the Virginia Commission certificate and the contracts referred to above should be filed with this Commission.

The Presiding Examiner would impose a condition in effect requiring Roanoke Gas to comply with Atlantic Seaboard's CDS–PR (partial requirements) rate schedule. Since the President of Roanoke Gas made it abundantly clear on the record (Tr. 611–612) that Roanoke Gas will purchase the minimum monthly and minimum annual volumes prescribed by the said CDS–PR rate schedule or by any superseding rate schedule approved by the Commission, this condition is unnecessary.

Oral argument as requested by the Coal Interests is unnecessary, in view of the completeness of the briefs, the Examiner's decision and exceptions filed in this proceeding.

All exceptions, arguments and requests not discussed or granted herein have been considered but are without substantial support in the record or a reasonable basis in law or are immaterial to the proper disposition of this case and should be denied. The Presiding Examiner's initial decision issued herein on April 27, 1964, should be modified as herein set forth and as so modified should, to the extent consistent with this opinion and order, be adopted by the Commission as to the date of issuance of the Opinion and Order, to constitute herewith our decision in this proceeding.

The Commission further finds:

(1) East Tennessee is a "natural-gas company" within the meaning of the Natural Gas Act, as the Commission has heretofore found.

(2) East Tennessee's proposed facilities will be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and such facilities and the sales proposed thereby, as more fully described hereinabove and the Examiner's decision and the record

in this case, are subject to the requirements of subsections (c) and (e) of Section 7 of the Act.

(3) Subject to the requirements and conditions of this Opinion and Order, East Tennessee is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Act and the rules, requirements and regulations of the Commission thereunder.

(4) The construction and operation of the facilities proposed by East Tennessee and the sales of natural gas in the volumes specified hereinabove are required by the public convenience and necessity upon the conditions hereinafter prescribed, and a certificate authorizing the same should be issued as hereinafter ordered.

(5) The conditions attached to the certificate issued herein are required by the public convenience and necessity.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to East Tennessee authorizing the construction and operation of the facilities proposed by East Tennessee, and the sales of natural gas in the volumes specified hereinabove, upon the conditions hereinafter set forth.

(B) The following conditions are attached to the certificate issued East Tennessee and to the exercise of the rights thereunder:

(i) Colonial shall file with the Commission acceptable contracts or precedent agreements with prospective purchasers of interruptible gas service providing for the purchase of at least one-half of the planned sale of 1,026,513 Mcf per year by the second full year of operation.

(ii) East Tennessee shall file with the Commission and furnish to such of its resale customers as request it, supplemental accounting data in scope and form satisfactory to the Commission designed to show separately, (1) the gas plant, depreciation reserve, operating expenses (excluding purchased gas costs as well as indirect operating and administrative and general expenses), depreciation expense, and taxes other than income attributable to the facilities installed in Zone 3; and (2) the operating revenues from customers taking gas in Zone 3; such data to be filed annually for the first five calendar years after commencement of service in Zone 3 and at such times during those five years as may be required to correlate with the test periods used in any future rate proceeding. This requirement is without prejudice to the method to be used in any future proceeding for allocating costs of determining rates.

(iii) Colonial shall file with the Commission a certificate or authorizing license for its proposed operations issued by the State Corporation Commission of Virginia.

(iv) The general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of the Commission's Regulations shall attach to the certificate and to the exercise of the rights granted thereunder.

(v) East Tennessee shall file with the Commission in conformity with its Regulations and the record in this case, tariff sheets and service agreements satisfactory to the Commission applicable to the service authorized herein, at least 45 days prior to the commencement of service.

(vi) The results of East Tennessee's operations in the first year in Virginia (Zone 3) may not be utilized as the basis for a rate increase filing under Section 4 of the Natural Gas Act.

(C) Except to the extent herein granted, the exceptions to the Examiner's decision are denied.

(D) The Examiner's decision issued April 27, 1964 in this proceeding, is modified as above set forth and as so modified is, to the extent consistent herewith, adopted as part of this Opinion and Order.

(E) The Coal Interests' request for oral argument is denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER ON AN APPLICATION FOR A CERTIFICATE FOR A PIPELINE EXTENSION

(Issued April 27, 1964)

ELLIS, *Presiding Examiner:*

I. *Nature of the Case and Questions Presented*

This is a gas pipeline certificate case presented by the East Tennessee Natural Gas Company, whose present line crosses the state of Tennessee and serves at wholesale a great number of communities en route. They plan now to extend their line from Bristol, Virginia-Tennessee to Roanoke, Virginia, a distance of 138 miles, and to sell gas at wholesale to the Roanoke Natural Gas Company (supplementing Roanoke's present supply) and to Colonial Natural Gas Company, a new distributor organized to bring gas service to 13 towns en route. The only real difficulty and contention in the case is the feasibility of Colonial's project, at least so far as that reflects upon the feasibility of East Tennessee's extension, which is the direct issue here. Certain subsidiary questions arose as to the need for a special proviso to protect the market of Roanoke's present supplier (Atlantic Seaboard) and with respect to the furnishing of area cost data to East Tennessee's present customers, also a few other minor questions.

Position of the parties: A number of divergent interests have intervened and the various recommendations are summarized as follows:

East Tennessee Natural Gas Company is the applicant for the pipeline extension, has furnished the usual engineering and fiscal data to support its project, and has also independently reviewed and approved Colonial's intrastate project.

The two proposed customers, Roanoke and Colonial, appeared as interveners in support of East Tennessee's application and presented their separate proofs of feasibility and need for their proposed projects.

Twenty-six Tennessee distributors jointly intervened, not to support or oppose the project but to exact a certain condition pertaining to accounting and reporting. Atlantic Seaboard, the present supplier of Roanoke, intervened not to oppose the project but to call for a condition on the certificate with the aim of preserving the load factor of its present market with Roanoke.

The Commission's Staff made its own independent study of the application and made a field trip in the area, with the result that the Staff recommends the issue of the certificate with certain minor conditions which are not in controversy.

Claiming that Colonial's project (and, therefore, East Tennessee's) is manifestly and totally infeasible, the Fuels Research Council, Incorporated, the National Coal Association, and the United Mineworkers of America have jointly intervened and presented their own expert witness and independent cost studies on the Colonial project. Just shortly before the hearing these interveners also filed a motion to dismiss, claiming that certain data required by FPC Regulation § 157.14 was not furnished in complete form with the application. There is also a reference to § 156, but this pertains to Section 7(a) orders, a type of proceeding which is not here involved. So far as the motion refers to any requirements of the Regulations which are a responsibility of the applicant, the claimed deficiency (if any such there was) has been removed by the ample proofs, exhibits and data which were contained with the testimony served in advance, the exhibits therewith, and the other matters presented at the hearing. Accordingly, the motion to dismiss has become moot and is denied (25 FPC 1234, 1241).

II. *Procedural Record and Time Schedule Required*

This proceeding developed according to the following schedule:

1963

July 23: East Tennessee applies for a certificate of public convenience and necessity for the extension of its line.

August 30: Application supplemented, together with prepared direct testimony and exhibits.

September 26: FPC's notice published of the application filed.

November 4: East Tennessee files revised version of prepared testimony and exhibits.

December 3: FPC grants intervention to the Tennessee cities, Atlantic Seaboard Corporation, Roanoke, Colonial, and Fuels Research Council, Inc., United Mineworkers of America and National Coal Association.

December 9: FPC's notice of hearing issued.

1964

January 6–24: 14 days of hearing held, with one day recess.

February 10–March 11: A total of 10 briefs were filed by the several parties and interveners.

The parties are scheduling their operations to begin October 1, 1964, with the obviously desirable objective that the installation can be completed and the

customer connections installed in time to permit conversions to gas heating equipment and the use of gas by the consumers during the coming heating season. But the time schedule pertains mostly to Roanoke, whose management testified several times that it is imperative that Roanoke receive an additional gas supply for this coming winter of 1964–65, since 900 new customers are being added to their lines this year and their lateral supply lines leading in from the Atlantic Seaboard pipeline 28 miles away are taxed to capacity (6T734, Exhibit 19, page 4, Exhibit 20, page 4). However this admonition of urgency and immediacy is something less than demonstrated by the full record since their exhibit shows that Roanoke plans to purchase from East Tennessee only 1,720 Mcf of gas on its peak day next winter, and this amount is only a trifle more than its excess, *unused* peak-shaving capacity.[1] Be that as it may, the time schedule proposed is a pressing one since, after the FPC certificate issues, there still remain the matter of procuring the state certificate for Colonial, the sale of stock by Colonial, and the arrangement of financing by both East Tennessee and Colonial, before the work on the complete project can get under way.

III. *The Three Projects Described*

(A) *The East Tennessee extension*

The only construction project for which this Federal permit is directly requested is the program of East Tennessee to extend its present line from its terminus as Bristol, Tennessee-Virginia northeastwardly 138 miles to Roanoke, Virginia. The application for a certificate covers the construction of this line, to be of 8⅝ inch pipe, and the 11 taps and 15 meter stations to serve the 13 towns included in Colonial's project and three delivery points for Roanoke. Also, the application covers two new compressor stations along the line which will make the total investment come to $5,139,000.[2] Finally, the application covers permission to make the proposed sales to Colonial for the 13 towns en route and to Roanoke. While specific quantities are listed for the first, second and third years, East Tennessee wants its certificate to be "open end", *i.e.*, to cover the "requirements" of its two customers as they may develop in the indefinite future. (Initial Brief, page 4.) The Staff at page 35 say this will not do, in view of the size of the East Tennessee line and especially since the Roanoke sale is supplementary to another supply. In order to facilitate more responsible regulation, the certificate herewith authorizes sales in the quantities approximately predicted, without prejudice to any requested amendment of the certificate to meet new conditions as they arise. East Tennessee says all its previous certificates have covered their customers' "requirements", hence they want the same authority here, but since one of the two new customers will continue to get most of its requirements from another line, that would not literally be possible.

East Tennessee expects to seek financing for seven-eighths of the new investment, but has reason to expect to pay only five percent for it (Exhibit 11, schedule 1, Exhibit 26, page 2). A supply of gas is manifestly available through East Tennessee's contract already on file with its affiliate, the Tennessee Gas

---

[1] The same Exhibit 3 shows peak-shaving will be utilized on next winter's peak day to the extent of 6,480 Mcf, while Exhibit 9, Schedule 7 says Roanoke's peak-shaving facilities are estimated at 8,000 Mcf per day, or a difference available of 1,520 Mcf. Alternatively, their witness says at 6T792 the capacity is "close to 8.5 million" (meaning 8,500 Mcf), so there is 2,000 capacity available if the 1,720 purchase from East Tennessee does not arrive next winter.

[2] They are to be of 1,980 and 1,320 horsepower, respectively, and to cost $914,000 together, see Exhibit 6 and Exhibit 22, pages 5–8.

Transmission Company, a sale which is said already to have been authorized by the Commission (Exs. 4, 5, and 9T1301, 1303).

There is no doubt of the FPC jurisdiction since the proposal calls for the transportation and sale of gas in interstate commerce and the construction and operation of facilities therefor, all of which are within the purview of Section 1 and Section 7 of the Natural Gas Act. Note that the only sales covered by this application and to be made from the new pipeline extension are the sales for resale to be made to Colonial and Roanoke. East Tennessee does not contemplate or ask for any certificate authority related to any direct sales in Virginia for consumption by the buyer; indeed there are local excise tax reasons which have impelled the management to advise the forum that there is no program in view for any direct sales by East Tennessee within the borders of Virginia.

The quantities of gas to be sold under this proposal are set forth as follows on page 4 of the application:

To Colonial Natural Gas Company.	2, 570, 191 Mcf/annum	18, 005 Mcf/day
To Roanoke Gas Company----	1, 595, 000 Mcf/annum	7, 789 Mcf/day
Total----------	4, 165, 191 Mcf/annum	25, 794 Mcf/day

The peak day total, 25,794, will comprise 15.5 percent of East Tennessee's total wholesale sales and 13 percent of its total system peak firm sales (Exhibit 9, Schedule 2). The annual totals are about the same, 17.3 and 12.5 percent.[3] As of now, the two new customers do not expect to purchase any gas from East Tennessee on the latter's interruptible tariff. On the other hand, the Virginia customers do expect to sell a substantial quantity on an interruptible basis—that is, "valley gas" which has been taken under the regular tariff schedules and for which the demand charges have been paid.

While there is evidence on it, none is believed to be required to demonstrate public need, since the towns and cities en route between Bristol and Roanoke do not now have natural gas service. It should go without saying, to the extent that any demonstration would be supererogation, that these populated areas need and should have natural gas service and that many of their residents and business houses will buy gas when it is made available to them at comparable rates. (2 FPC 29, 56.) Also, since it has long since been known and published[4] that most gas is sold for industrial use, it can be taken as self-evident that the availability of gas would be useful to industry and to potential industry. What is true and obvious everywhere need not be made the matter of extensive or specific proof here.

The feasibility issue, and particularly the extent of the line within the Roanoke area, are considered below, under heading IV.

(B) *Colonial's plan to serve 13 towns en route*

Colonial Natural Gas Company is a recently organized Virginia corporation which plans to construct distribution systems in 13 towns scattered along the route between Bristol and Roanoke,[5] and to serve gas to their residents through 11 separate connections off the East Tennessee new line. They have received franchises from all of the towns, and they expect presently to apply for a state

[3] These figures do not count in the company's present interruptible sales from a special tariff, which are made at a number of points in Tennessee and whose total equals two-thirds of the company's total firm sales for the third year.

[4] *Minerals Yearbook*, U.S. Bureau of Mines, 1961.

[5] The thirteen towns are: Abingdon, Blacksburg, Cambria, Chilhowie, Dublin, Galax, Glade Spring(s), Marion, Pulaski, Radford, Rural Retreat, Saltville, Wytheville.

corporation commission authorization also. They plan to construct distribution systems throughout the towns and to build the "tap lines" to them from the East Tennessee line, which will be from one-half mile to 24 miles in length and from two and one-half inches to eight and one-half inches in size (Exhibit 14, pages 5–7). They plan on a total project cost, including pipe installed, right-of-way, valves and meters, and a small inventory of movable equipment and supplies, of $4,385,800, which comes to an average of $386 for each of the 11,354 customers expected to be attached.[8]

To raise this capital they have made a small initial sale of stock to the amount of $200,000, one-fifth of it paid in. They plan to sell $1,200,000 more in equity common stock and to raise the balance through a two-million-dollar issue of mortgage bonds at 5¾ percent and a $600,000 debenture at six percent. At the beginning of the second year, they will issue an additional mortgage for $400,000 at 5½. The program is to retire the debt by 20 equal annual payments, and for this program adequate financial evidence was brought in satisfactorily to demonstrate that the financing plan is sound, practicable and feasible (Exhibits 14 and 15).

However, Colonial's plan was severely attacked by the coal Interveners on the ground of feasibility, mostly to the point that its market estimates are too high and lesser to the point that its capital costs are too low. These questions are sufficiently treated below.

It can be taken as established—if the self-evident need be evidenced at all—that since the 13 towns do not now have natural gas service, at least some of the residents and business establishments and industries will want (if not require) natural gas service and that in the public interest it should be made available to them as a public convenience and necessity, in the language of Section 7 of the Natural Gas Act, provided there is met the basic standard of feasibility, not of Colonial, but of East Tennessee, the Applicant, whose project is the one covered by the Federal license and to which the Federal statutory standard applies. The primary responsibility for a certificate covering the feasibility of Colonial's distribution system is a matter for the state commission (see part V–C, below).

(C) *A supplementary supply is planned for Roanoke*

Roanoke Gas Company is the local public service corporation which now distributes natural gas in the city of Roanoke and various surrounding areas. They hold a state certificate which outlines Roanoke's service area to include some distance to the south and west, to the town of Shawsville, 18 miles from the city. (The Colonial project expects to have its potential service area reach up to that point.) Roanoke's sole present supplier of natural gas is the Atlantic Seaboard Corporation, whose gas reached them in 1950. Roanoke receives Seaboard gas at a station at Gala, 28 miles north of the city, and brings it to the populated area through an eight-inch main which has a 12-inch loop for 18 miles of the distance. Roanoke buys nearly 4,000,000 Mcf per year from Atlantic Seaboard, with a peak day maximum of 18,500, and even after East Tennessee's third year, the projections are that Seaboard will still supply 70 percent of Roanoke's need.

Without East Tennessee, it would not be impossible for Roanoke to arrange for its increased needs through its present supplier and the present delivery point at Gala north of the city. But the point is, this would require extensive construction and still would not bring the supply to the south and west side

[8] Exhibit 1, Schedules 2, 3, and 5. These are the total figures including the construction period and the first three years of operation.

of its service area, where the new growth is expected and a number of industrial sites are available. An increased Seaboard supply would require a capital outlay of about $2,000,000 in order to enlarge the lateral facility from the Seaboard line and "to encircle the westerly and southwesterly sections of the city and county of Roanoke and to integrate the loop line, as extended, into the distribution system in place." (Brief, page 6; Ex. 20, p. 3). This is about $1,600,000 more than will be required to make the two connections planned with East Tennessee, which will come in to the area from the southwest (6T822). The principal advantages of the program, so far as Roanoke is concerned appear to be: to receive the assurance of a second source of supply, to receive an increased supply by an installation which saves four-fifths of the capital costs, and the better to balance its system by bringing the new supply into the southwest side of its rather extensive market area, which is now farthest from their present sources.

To meet the needs of the 160,000 persons in their area, over 2,000 commercial establishments and a number of important industries, including the Norfolk and Western Railway, Roanoke's total program is to continue and slightly to increase their purchases from Atlantic Seaboard and at the same time, after investing $415,000 for loops and connections, purchase from the East Tennessee line up to 7,789 Mcf on a peak day at one, two, or three delivery points. That is the third year figure, for which the corresponding annual quantity is expected to be 1,595,000. Assuming the market develops (this subject is covered in the sections which follow) and assuming a sustained purchase program from Seaboard (see Part V below), there can be no doubt that the assurance of a second supply to Roanoke is in the public interest and that the sale would otherwise comport with the standards of public convenience and necessity.[7]

IV. *Feasibility of East Tennessee's Project*

It being clear, as stated, that a sufficient gas supply is available to East Tennessee and the capacity to carry it to the point of beginning of the project at Bristol (Exhibit 7), also that East Tennessee has the means of acquiring the capital financing needed, and that the new line has the capacity to carry the proposed amounts to the sales points, it remains to consider, in order to apply the public convenience and necessity test, whether the markets relied upon are sufficiently demonstrated and whether in other respects the project is economically feasible. Since, to some extent, the feasibility may be affected by that of their two customers, and since East Tennessee's markets are entirely dependent upon theirs, the projections for Roanoke and Colonial are first considered.

(A) *Roanoke's market is proved and established*

The plan is to sell to Roanoke 7,789 Mcf on the peak day in the third year and a total of 1,595,000 Mcf during that year, meaning the 12 months beginning December 1, 1966 (Exhibit 9, 9T1146).

Roanoke's market projection (Exhibit 3, Schedule 2) shows a total of 20,387 customers now on the rolls, increasing by 900 this year, a thousand next year, and 1,200 each year thereafter through 1967. The total, 25,718, indicates a very modest ratio, one to eight, compared to the area population of 160,000. Ninety percent of the customers will be residential, the rest commercial except for possibly 47 interruptible industrial purchasers.

---

[7] It was shown that the slightly higher cost of East Tennessee gas at the proposed rates, over the present Atlantic Seaboard rates, is more than offset by the carrying charges for the excess capital investment which would be required to connect with Seaboard for an expanded supply.

It is unusual that Roanoke has no clear figure on heating saturation, meaning the percentage of residential customers using gas for space heating. According to the figures in the exhibits cited, they expect the average residential customer to take .95 Mcf on the peak day and about 108 Mcf during the year (counting all domestic uses), which is slightly more than their actual experience of last year but explained in part by their experience that, in the areas of new construction, seven out of eight of the new homes sign up for gas for heating purposes (5T614). Based not upon actual figures but upon inference from the quantity metered to each residential customer, Roanoke estimates they now have 76 percent saturation—that is, more than three-fourths of their residential customers are residential heating customers (6T753). One actual figure of significance was that the average use per residential customer has more than doubled in the last 10 or 11 years, the latest figure being 90 Mcf per year (6T757).

On the whole, Roanoke's figures are not based on the formulae frequently used but rather are based upon actual experience, plus a projection of the continued growth and an actual listing of the larger users. If there were criticisms of this methodology, these doubts fall entirely in view of Roanoke's record—its market predictions during the past several years have been remarkedly accurate, within less than one-half of one percent. The attorney for their present supplier testified that Roanoke has "the highest degree of accuracy of any of our wholesale customers." (6T789)

Perhaps of equal importance is the evidence that the attachment of the new supply on the south and west side of the city and market area will permit Roanoke to serve areas not presently served and areas in which the city's growth is extending, including the new availability of a service to industry.

Roanoke is already an established going concern with substantial reserves and net income, and there appears no reason to doubt either that the sales predicted will be made or that the program is amply feasible.

With the feasibility clear, and reiterating the obvious benefits of a second source of supply, the saving of three-fourths of the capital expense the increase would cost from its present supplier, and the operational efficiency through bringing the supply into the southwest portion of the service area, it is concluded that the proposal to sell the quantities mentioned to Roanoke meets the test of public convenience and necessity. One question remains as to the sales delivery points, and a related item as to the demand quantity Roanoke has actually signed for; these are treated below under IV–C.

(B) *Colonial's project might prove to be feasible*

It is more fully developed below that the feasibility of Colonial's project is not itself directly required to be determined here.[8] This is not a proceeding under Section 7(a), *i.e.*, it is not the case of a distributor in an adversary proceeding seeking an order for a gas supply from a pipeline which appears in opposition, in which case the precedents are clear that it would be the FPC's responsibility and requirement that the proponent demanding service against the pipeline's recommendation must demonstrate that its project is feasible—see 27 FPC 967, 971, and the cases there cited. Rather, as stated, it is East Tennessee's proposed sale that is solely in issue, and its feasibility depends not at all upon Colonial's feasibility but only upon the reality of the market relied upon.

The point is that whatever the demonstrable and developed market of Colonial, nothing was developed to show that this market would not continue and be available to East Tennessee whether Colonial's project proves feasible or not. Staff Counsel was apt in pointing out that even if there should occur a financial dif-

[8] See Part V(C)(3) to the effect that this determination is a function of the state commission.

ficulty and reorganization of Colonial the new pipes would still be there and the customer connections would still continue. The witness agreed, saying: "All the mains would still be in the ground and in service. The customers would still be connected * * *." (4T561) The same witness (who was the engineer for the Colonial project and who has wide and successful experience in the building and rebuilding of gas projects) testified that to his knowledge no gas system has ever developed financial difficulty other than temporary, the customers have in all cases been protected, in some cases there have been passed dividends to the detriment of stockholders, but he does not "know of any property that has gone beyond the point of having to at worst defer interest payments on their debts."

In that light, Colonial's feasibility is not *per se* directly in issue here; no finding of its feasibility is here made or required to be made. Instead, all that is required is such examination of the Colonial project as will satisfy the forum that an ample market is available to East Tennessee such that the new extension will pay its way, that is, that it will not be a burden on the present customers of East Tennessee's existing line. That this is the true test, the effect on East Tennessee and its customers, is developed and fully restated in the Commission's decision of April 6 of this year, in the case of *Southern Natural*, Opinion No. 424, 31 FPC 789, at p. 796.

This portentious preface to Colonial's case is called for not primarily because of the unprecedented and strenuous opposition by the coal interests, who have introduced their own separate survey and expert testimony to the effect that Colonial's project is not feasible, but by the expressed doubts of the Tennessee cities which intervened to protect their interests and who have commented on the "thin coverage" of the return expected from the new part of East Tennessee's line, at least at first, and upon the optimistic sales predictions put in by Colonial's engineering witness. These indicia of skepticism, plus the numerous doubts and unproven assumptions apparent on the face of Colonial's presentation, do require careful examination of Colonial's case, not to render a pronouncement as to Colonial's feasibility but for the lesser and much simpler function of passing upon East Tennessee's sales predictions and net revenues which can be counted upon. This, under the decision last cited, is the true test to be applied.

(1) *Construction cost differences are not significant:* With the inquiry so narrowed, the first ground of the coal interests' case in opposition, based on the higher cost of construction, can be disposed of quickly. Colonial estimates its first year cost of installation at $3.5 million while the expert witness for the coal interests showed a figure $248,000 in excess of that, to which there is added $223,700 for the additional residential meters to put the estimates on an equal plane, or a total cost differential of $471,700 for the first year, somewhat more after the second and third years. But the differences were largely discredited during the cross-examination when it developed that the coal witness figured a slightly larger pipe size, did not allow for the freight, overstated the cost of valves and used costs that are rather unnecessarily high for surveying, mapping, and excavation. For example, the coal witness estimates $2,500 for each of the 40 miles of lateral tap lines for right-of-way and damages, as compared to $1,500, the rate estimated by the same witness for a similar project in the adjacent area not long ago, on which occasion he testified in favor of the project. (Compare 13T1832 with Exhibit 37, Schedule B, page 1.) The figure used by Colonial's engineer is $2,100 per mile. In any event, even if the construction should be 10 percent or more above the estimates, there is no suggestion this would seriously curtail the market, and Colonial's president specifically testifies they could absorb the difference without a problem (13T1891).

Colonial's figures work out to an investment of $386 per customer, which would be well within the range of reason and prudence if the number of customers predicted could be relied upon—this subject is covered below. The coal witness figures the investment per customer at $538, which would be a little higher than the normally acceptable range, but not without precedent (27 FPC 967, 973); but because of the uncertainty as to the number of customers, this standard or guide is of small service here.

Specifically, this review of construction costs does not pass upon the two or three very expensive lateral or tap lines which are being planned to be built by Colonial alone, without help or contribution of any kind from East Tennessee, since these matters will be subject to the state commission's certificate, as developed below. The particular reference is to the 24-mile lateral to Galax, a town of 5,254 persons expected to develop 1,140 customers and to require as much as 288,780 Mcf during the third year, all for a project cost, including the lateral, of $831,067, or $730 per customer (Ex. 29A, Sch. 2F). Neither is there to be inferred herefrom any sanction for the rather obvious overbuilding or oversizing of the lateral to Saltville, which is 7.2 miles of 8⅝-inch pipe for a total cost or investment of $310,738. If the exhibits are expected to be taken at their face value, all of this is for the service of a population of 2,844 among whom will be found 508 customers who will need 60,360 Mcf in the third year. All of the customers are residential except 11 commercial, and no industrial or interruptible load is said to be available at all. But the engineer furnished the information that the Saltville lateral of 8⅝-inch pipe (leading off the 8⅝-inch line of East Tennessee) has a capacity 21 times its maximum third year requirement (Exhibit 14, page 7). There is a very large industry there but Colonial has neither thought, plan, or hope to sell gas for its major needs, because, so Colonial represents, it will not be able to meet the competitive coal price. Instead, the only explanation for the size of the laterals is there are "the largest known deposits of gypsum and the native clays, and a potential for a tremendous gas industry." (2T170)

For the same reason, no finding or conclusion as to the capability of Colonial to sell the stock as proposed and accomplish the financing is believed to be appropriate or required, but this note is added that there is ample evidence to that effect, as furnished by the same witness who endorses the financing of the East Tennessee proposed investment. (Exhibit 15, page 5.)

(2) *Colonial's market estimates are the issue of the case:* It is re-emphasized that the program here under review is that of East Tennessee, not of Colonial, and the latter is involved only as it affects the former. East Tennessee's program is to deliver as much as 25,794 Mcf on a peak day and a little over 4,000,000, that is, 4,165,191 Mcf during the course of a year. The only customer aside from Roanoke is Colonial, and the sale that can be counted on to Colonial is of course no greater than Colonial can demonstrate it has the capacity to purchase; and that amount, as claimed, is 18,005 Mcf on the peak day and 2,570,191 during the year. This means that two-thirds of East Tennessee's sales are to go to Colonial, and it is the reality and validity of the estimates by both parties that this amount can be sold by Colonial and will therefore be sold by East Tennessee that is the principal issue in the case; it was the subject of several days of cross-examination and is the principal subject of the coal interests' counter case.

The problem is, as Colonial recognizes, that no one can know or demonstrate what Colonial's sales will amount to, that in every one of the presentations made by the expert witnesses on behalf of all parties there is to be found a mass of computations and projections but all of them beginning with certain

entirely undemonstrable and unverifiable assumptions, and that in each case there is submitted for reliance, after all, nothing much more than the empirical or pragmatic results of the several expert judgments which are quite immeasurable. Of the several approaches used by Colonial, East Tennessee, the coal interest, and the Staff, none of them can be received with assurance and certainty.

With that preface, and turning to Colonial's exhibits, the third year sales which are counted on to sustain the project and which East Tennessee counts on to sustain its project, are listed as two and one-half million Mcf during the third year of operation. The interruptible sales are just over one million, or 40 percent, and the only other class exceeding 100,000 is the residential sales of 1,216,796 Mcf 90 percent of it for residential space heating. The residential is 48 percent of the total so that these two classes are 88 percent of the total market claimed, hence the controlling consideration should be given to those two items.

(3) *Interruptible market:* While this is 40 percent of the claimed volume, it is only 23 percent of the claimed revenues. In this respect the present case differs markedly from that considered in the Commission's opinion of April 6 in Southern Natural Gas Company (No. 424), where the principal resale customer showed 80 percent of its sales would be interruptible. The point is that Colonial does not hope to compete for the primary market served by coal, that is, the industrial market (1T91). "Colonial's * * * major objective is to serve the domestic market, and to serve industrial customers only to the extent of balancing its load factor operation which I would recommend be held around the 60 to 70 percent load factor operation, supply interruptible customers from the valley gas generated from its own demand contracts, hold its cost of gas to a minimum and concentrate on the development of the domestic market." (Engineer Ross at 2T236.) Colonial lists only four interruptible customers who are estimated to use more than 10,000 Mcf per month each or 100,000 Mcf per year, and their estimated consumption totals 607,827 (2T234). Colonial does not represent that it has solicited contracts with these customers but presents them more as the type of load they expect or at least hope to get (2T247). Their witness has been "encouraged" by the responsible people in the firms concerned to think they will be connected.

Colonial's average interruptible sales rates will be 58 cents[9] per Mcf (compared to its residential resale average rate of $1.42 per Mcf), which may strongly affect the interruptible market to be envisioned (2T244). In fact, with industrial coal selling in quantity for less than two-thirds of that price, the coal interests would not fear the competition and would not be here in opposition, assuming a feasible project were proved and there were some guarantee the 58-cent price would be maintained (12T1631); but at the same time, with that price unusually high, there is less assurance that the sales can be made at all. Colonial follows Roanoke's rate schedule and last year only 29 percent of Roanoke's sales were in the industrial interruptible class (Exhibit 3). Corresponding figures for the present customers of East Tennessee are not at hand, but some comparison is noted from East Tennessee's market exhibits—the distributors off their line located in Tennessee take one-third, 33 percent, of their needs from East Tennnessee's interruptible tariff.[10] From this it may be inferred

[9] The 58-cent price is a rough average; under the tariff the interruptible usage must get over 7,000 Mcf in in one month before the lowest rate block is reached, which is 44.81 cents (Exhibit 1, page 14).

[10] Neither Colonial nor Roanoke expects to make any gas purchases from the interruptible tariff of East Tennessee.

that about that proportion of the Tennessee distributors' sales are on the interruptible sale basis.

The potential interruptible market relied upon comprises four establishments now using coal or oil whose total needs would amount to 607,827 Mcf, or about 60 percent of Colonial's total interruptible market proposed (2T234). Two of the firms have strongly indicated they will be customers, the other two might be also (4T534). In addition, Exhibit 34 lists 22 other prospects in the area and the total needs of all 26 come to nearly 2,000,000 Mcf, of which Colonial hopes to sell 55 percent. The coal witnesses are properly skeptical that any of these will be sold, but apparently some were conceded since their cost of facility exhibit (Exhibit 37, Schedule B) at one time listed five interruptible meters. Under recent precedents, the distributor would be expected to exhibit some signed agreement to insure a particular sale proposed where its amount comes to 15 percent of the total revenues. None of those on Exhibit 34 would approach even 10 percent of Colonial's revenues, let alone East Tennessee's, but about 20 percent of Colonial's revenues is expected to arise from this source. Since the inquiry here is East Tennessee's market, not Colonial's feasibility, the percentage-of-revenues test is not seen as controlling.

In view of the price expected to be charged and of the fact that no actual commitments at all have been received, it will be appropriate to require as a condition that, before East Tennessee undertakes construction, Colonial shall exhibit signed commitments from one or more customers in this category in such number and amount as to assure that at least half the planned sales of 1,026,513 will indeed be made by the second year, as their Exhibit 1, Sch. 5 disposes. The form and content of such a commitment to be exhibited to East Tennessee may follow that prescribed by the Commission in its decision of April 6 in the case of Southern Natural, which is cited above. With that reservation and condition, the proposed interruptible industrial market may be accepted as adequately established.

(4) *Firm gas market (non-residential)*: In its Exhibit 1 Colonial lists the usual other classes of gas markets, i.e., commercial, large commercial, public authority and firm industrial, for a total of 302 customers, separately classed for heating and other use; but the total firm usage for all these non-residential classes comes to only 276,493 Mcf in the third year, or a little over 10 percent of the total market claimed to exist in the area (3T302). Since that proportion is so small, and the number of customers and their usage does not appear out of line or unusual for a total of 13 towns with a population of about 57,000 in all, it is not necessary to recapitulate the extensive record made in opposition on these classes; it is enough to refer to the exhibit (No. 35) listing many pages of potential commercial customers, which seems adequately to support the expert witness' determination that sales of the order named will in fact be made. For even if these sales are overestimated by as much as one-third, this would affect the total sales by only three percent.

(5) *The residential heating market is over-stated:* Colonial plans to sell 1,099,682 Mcf for residential heating in the third full year of operation, this for service to 11,026 customers. These two numbers are the crux of the case. East Tennessee supports the figures; the FPC Staff witness has some doubts but agrees generally (12T1710). The coal witness concedes less than half the market claimed—some amount below 445,000 Mcf to 4,872 customers (Exhibit 37, Sch. C, page 1, column 4). But none of the various estimates is supported by a convincing exposition, for the reasons stated below.

(i) *Colonial's estimates are not to be taken literally:* For their project, Colonial employed, on East Tennessee's recommendation, an obviously capable and

highly experienced gas engineer, with a great deal of special experience in the field of gas distribution. He spent considerable time in the area and made two forms of residential surveys: (a) an actual count of the dwelling units available on the lines to be built, for a total of 19,062, and (b) a 10 percent sampling of residents' opinion together with a listing of the age and type of heating equipment in use. This led to the conclusion that 50 percent of the homes would be served for gas by the third year (Ex. 14, p. 12). His sales exhibit, Sch. 5, is figured on 11,026 home heating customers.[11] Most importantly, it is Colonial's case that virtually every home customer will use gas for space heating, and many of them for other uses also.

But the house survey announced no gas prices to be charged and sought no commitments, formal or otherwise; instead, it was substantially only a census to record the heating and other equipment in use in the houses covered (2T266). Manifestly, this is not the survey which past decisions have indicated might be required—see 17 FPC 118, 120. On the other hand, later experience seems to suggest that no survey a year or so in advance of the hearing is really effective accurately to foretell who or how many will in fact buy gas two to five years later.

The second problem is that Engineer Ross relies on experience, but can point to no gas system anywhere he has worked on which sells heating gas to 50 percent of the market, as here claimed (4T515–520). Figures from the Tennessee cities now on the line were offered, supposed to show 54.62 percent "saturation".[12] But the figures really establish only that 23 percent of these towns' homes heat with gas (4T566). This is Roanoke's experience also (4T501). The higher figure was evolved by writing off or not counting the areas of those towns which have not been reached by the gas lines (9T1227). That is all very well as far as it goes but is a long way from proving that if the Tennessee towns were fully piped, their customer count would double. Whatever the reasons that have impelled the Tennessee distributors to pipe only half of their streets, there is nothing to show that Colonial, which plans to lay a pipe to virtually every house,[13] will achieve throughout the same 50- or 54-percent saturation that the Tennessee towns have arrived at after 10 years *in* the merely 50 percent of their areas they have seen fit to serve with gas. One can only assume that if the unserved areas in the Tennessee cities were likely to produce customers they would have been piped long ago, and Colonial may well find certain areas of their towns are quite as unlikely also.

The third and greatest problem is that the witness does not present the 50 percent house heating figure as his true estimate of house heaters or even as being true at all; it is only an element in his formula for assessing the total market. This was not disclosed with the application, which was evidently to be taken at face value and which in fact sought a certificate without a full hearing, under the short procedure. When the 50 percent figure was questioned, the witness explained a number of times that "the real integrity of the estimate" is to be found *not* in the number of house heaters certified and sworn to but in

---

[11] The extra 1,495 over the 50 percent evidently is to come from new house construction.

[12] Note the word "saturation" is ambiguous. It means the share of the potential market; it is not here used to bear the meaning to which the Commission and the courts have attached so much significance, namely, the proportion of the actual house customers who heat their homes with gas—see 20 FPC 851 and *Michigan Consolidated Gas Company* v. *F.P.C.* (CADC, 1960), 283 F. 2d 204.

[13] A "unique proposal" (Colonial Initial Brief, page 19).

the total gas sales in the number of categories.[14] Such an indirect formula might be acceptable if shown to be reliable by a record of other projects so initiated which proved out by the acid test of realities, but no such proofs were here adduced.

For these three reasons,[15] the home heating estimated relied upon for nearly half of Colonial's market is not accepted.

(ii) *Are East Tennessee's market estimates reliable?* Both the Staff and Colonial make a great deal of the corroboration furnished to Colonial's project by East Tennessee's own technical Staff. It is true that East Tennessee's engineer in charge testified to the results of a study of the area made by East Tennessee beginning in 1958, at which time the company made an extensive survey, calling on all the commercial houses and industrial firms, with results which in his judgment support Colonial's exhibit and show it to be conservative. The residential market claimed was verified by using census and housing figures which developed that the potential residential market is something over 2,000,000 Mcf, of which a gas company should expect to sell 50 to 60 percent, producing a result which is said to tie in closely with Colonial's exhibit.

This concurrence by East Tennessee should be regarded as a most responsible one because it is, after all, East Tennessee that is investing $5 million in the plan to supply to Colonial the gas which Colonial's exhibit claims it can sell. Indeed, the Staff brief at page 24 makes reference to Colonial's nominal prediction that it will sell gas for home heating to 50 percent of the houses and says such an estimate is not a unique phenomenon, listing as proof seven or eight previous East Tennessee projects—under applications filed by East Tennessee with the FPC for a certificate to authorize sales to distributors in the state of Tennessee—in all of which the expert engineering testimony was to the effect that 45 percent to 60 percent of the "units" along the proposed distribution lines would attach for gas heating within three years.

The trouble is that the very East Tennessee projects referred to in the Staff brief and one or two others of note have demonstrated in the light of real conditions and actual events several years later that the predictions and

---

[14] By Mr. McGRATH:

Q. That works out in the third year to 58.3 percent of what you say is in the town, the number of houses.

A. You will give me a little latitude on roundoff, I am sure.

* * * * * * *

PRESIDING EXAMINER. In other words, he is going to sell a little more than half the houses.

The WITNESS. No, sir, I am going to sell the equivalent gas load which is now being used by substantially 50 percent of the domestic market.

PRESIDING EXAMINER. Now, wait—come again on that.

Mr. McGRATH. I don't get that, either.

PRESIDING EXAMINER. I thought what you were telling me was that you were going to heat 50 or 60 percent of the houses in Saltville.

The WITNESS. Mr. Examiner, I am estimating the amount of gas that I am going to sell. My method of estimating is the fuel requirements of 50 percent of that market as it exists in 1963. In other words, if you want to say half the houses—actually, I am interested in revenue and Mcf sales, and I have estimated my Mcf sales and revenues on the basis of the heating requirement of 50 percent of the heating market, which if it is not misunderstood could be called, say, half the houses existing there in 1963.

Now, there will be additional houses built during the subsequent years, as illustrated by the growth from 739 in March or April of 1960 up to 854 as of May of 1963. It is a method of estimating market sales. [*Cf.* 3T298–9, 344, 4T492, 574, Colonial Init. Brief, p. 18.]

[15] The witness' further point of reliance upon the unusual age of the present heating equipment in these towns is considered below, under Part IV(B)(5)(iii).

expert testimony filed in support of East Tennessee's applications are most unreliable indeed. Leaving out two new sales just authorized last year, the applications referred to have been compiled in the table below to show the peak firm day and per annum sales which were confidently predicted, sworn to and supported in the applications and testimony or both, and submitted by East Tennessee for several orders issued by the Commission during 1959 to 1962. The Staff says the actual service began in the same year it was authorized by the Commission's order or in some cases in the following year. But the contrast is remarkable between the figures given with assurance in advance, and the actual figures which East Tennessee itself now reports in the present case, that is, Exhibit 9 reporting the actual peak firm day and annual sales which have taken place in fact or which are being made this year. The net result is to show that the predictions three years in advance were two and one-third times the actual sales which later on occurred. There is reason now to endorse the reservation contained in the initial decision in one of the cases to the effect that the engineering report submitted with the case "is not hereby endorsed or approved." (23 FPC 916, 926). These patent and substantial differences on the record are not explained by the generalized statement that—

COMPARISON OF EAST TENNESSEE'S ESTIMATES FOR NEW PROJECTS WITH ACTUAL SALES REPORTED TWO-THREE YEARS LATER

Project proposed by East Tennessee	Percentage of over-estimate	Third year estimates and actual sales (Mcf)			
		Maximum day		Full year	
		As predicted by East Tennessee	As reported by East Tennessee (Ex. 9 filed in 1963)	As predicted by East Tennessee	As reported (Ex. 9 filed in 1963)
Sevier County Utility District, 23 FPC 469 (3/1/60)	215 238	2,568	816	349,634	103,319
Middle Tennessee Utility District, 23 FPC 916, (6/30/60)	153 139	7,599	3,008	725,652	303,621
Town of Livingston, 24 FPC 902 (10/24/60)	130 105	1,448	630	125,304	61 136

First Utility District of Maury County, 26 FPC 262 (8/7/61) 7(a) case uncontested	141 151	1,131	469	112,074	44,705

Our customers by and large have reached the loads which their engineers and their initial survey showed that they would reach.

Of course, we have got some customers that have not reached this potential yet, but it has not affected East Tennessee's financial condition. [8T1053.]

Particularly this does not explain what occurred only last year in the Unicoi project, authorized by an initial decision which became final by the Commission's order of February 14, 1963, granting East Tennessee's application under Section 7(c) to serve the Unicoi District, based on a market showing which predicted 59 percent space heating saturation and a peak firm day sale in the amount of 2,005 Mcf. Five months later, before, of course, there could have been a season's experience with which to test the predictions made, East Tennessee's application was submitted in the present case. The new application now changes the Unicoi prediction from 2,005 Mcf to 1,857 Mcf during the second, third and fourth years of that project. What occurred to cast doubt upon the prediction

and testimony which the Commission relied upon only five months before is not stated.

The Staff brief cites the predictions made in those six or eight cases in corroboration of the 50 percent space heating prediction here made, but the infirmities thus demonstrated in those predictions will require that corroboration to be sought elsewhere.

In any event, even if these discrepancies be subject to satisfactory explanation, it is nevertheless evident that the Tennessee experience is not adaptable to Virginia conditions. It was shown that, primarily because of the low electric rates (4 to 7.5 mills) the Tennessee retail market is for space heating and the attachment of a customer is for that purpose, occasionally for some other uses also. (The Tennessee distributors often keep no detailed records breaking down their sales between heating and nonheating.) However, in Colonial's area even the promotional electric rate is hardly competitive, being about double the gas costs for heating, hence the conditions peculiarly attributable to the low electric rates in the Tennessee valley will not necessarily be recapitulated in the valley of Virginia (4T569, 8T1086, 9T1150, 1172, 1186, 1207).

(iii) *FPC Staff supports the Colonial project and its markets:* Relying strongly on the growth and sales characteristics of the Roanoke distribution system, coupled with the Staff's own field survey of the Colonial market area, and announcing its own formula to predict the attachment of domestic heating customers, the FPC Staff concludes that the residential markets shown by Colonial are sound and that half of the 19,062 dwelling units can be attached as space heating customers within three years, which will be the source of well over half the company's revenues in the third year. The Staff endorses the project and recommends that the Commission's certificate issue. (Brief, page 26.)

The Staff's separate study makes an analysis of the heating equipment now in the homes in the area, based on the Colonial exhibit and the relative ages of the furnaces or other heating equipment. Their table of figures, derived from Exhibit 36, shows that a very few homes in the area heat with electricity (which will not be converted to gas) or else with propane (all of which will be converted). Predominantly, the homes are heated by the conventional fuels, a little over half using fuel oil and 40 percent using coal and wood. The Staff accepts the testimony of the gas engineers in the case to the effect that 10-year-old heating equipment in a home is subject to replacement or, as it is said, induces "strong proclivity toward replacement." Briefly, the Staff points out that one-third of the heating equipment in the homes in the area is already over 10 years old and that another third of the equipment will become 10 years old within another three years. All of these heating units, already or soon to be over 10 years old, are classified by the Staff "as comparable with attachments to new houses." To complete that comparison, there was testimony from the example of Roanoke to the effect that seven out of eight new homes are attaching to the gas lines and installing gas furnaces.

Upon the basis that the 10-year-old units are "susceptible of conversion", that is, to conversion or renewal, and counting that seven out of eight will elect gas rather than other fuels, but allowing another 20 percent discount for "failure to attach the susceptible", the Staff concludes with an estimate of residential attachments in three years of 9,196 (9,108 is what it adds up to), which corresponds approximately with the prediction of Colonial's witness that 50 percent of the 19,062 present units would be atached, i.e., 9,531.[16] Colonial and its wit-

[16] The Staff's figure already includes 700 out of the 1,000 new homes presumed or expected to be built, but Colonial uses the putative new construction to explain its anticipated eventual margain over the 50 percent first counted on, that is, to explain the 11,026 customers instead of 9,531 (3T337).

ness also rely heavily upon this sort of analysis, considering "that 30 percent of the equipment is over 10 years old which is normally, in the industry, considered about the replacement age." (2T271.)

The major premise of the Staff's study is to start with the assumption that, out of all of the furnaces in the 13 towns burning oil and all of the furnaces or other equipment burning coal or wood, a net of seven of every 10 which are 10 years or more old (or become 10 years old) can in fact be counted on to be converted to a gas furnace.[17] This analysis is along scientific lines and has the benefit of objectivity and rationalization provided, but only provided, there is some demonstration of the truth of its basic assumption at the starting point, namely, that out of every 10 coal, oil or wood furnaces or other heating equipment 10 years old, seven will be converted to gas.

The trouble is that the record is quite devoid of the slightest proof of that rather far-reaching assumption; there are no statistics of other towns' experience, nor of oil dealer published experience, nor of furnace equipment dealer published experience, nor any other tangible and credible probative proof that the householders in the valley of Virginia, or anywhere else for that matter, expect (that is, 70 percent of them) that after the tenth season of use of their present equipment they will replace it with gas heat. Perhaps that is so, but it is quite unproved. Note that the Roanoke experience is relied upon, but Roanoke spoke only of its fine sales experience with new homes and made no claim that seven out of 10 of the Roanoke area's oil furnaces are converted to gas on their tenth anniversary.

What is even more significant, the figures used show that 40 percent of the equipment to be converted now burns coal and wood, half of it is over 10 years old and about one-fourth between five and 10 years old. For this group, because of the superiority of gas over coal and wood, the one-out-of-eight discount is not applied; so that the net effect of the table is to assume that four out of five users of coal and wood in the valley will become gas furnace users in the next three years,[18] this notwithstanding the evidence that the gas, about the same or even more expensive than fuel oil, will cost the coal and wood users from 50 to 75 percent more for fuel, apart from the installation cost. This assumption may be quite true; on the other hand, it flies in the face of the fact that fuel oil has been sold freely in the valley for years, still 40 percent of the householders heat with coal and wood and have not seen fit to convert to oil. With the gas as costly as fuel oil and sometimes five percent or so higher, it is not clear how it can be so confidently assumed that these sawyers of wood and passers of coal will now decide to abandon the heating methods they have used for years, perhaps for generations, will incur the cost of changing over to gas equipment and will sign up for the new, convenient but manifestly much more expensive natural gas.[19] Why that is to be assumed to be true is not demonstrated.

This certainty of conversion of older equipment, whether wood, coal, or oil, is the foundation of the Staff's study, indeed also of much of Colonial's own market confidence. It can only be hoped that actual experience will validate these unproven assumptions.

Aside from the foregoing analysis (which, if its assumptions were provable, would be very valuable), the Staff is not in a position independently to verify

[17] That is, based on Roanoke's new house experience, seven out of eight of all the 10-year-old equipment is regarded as "susceptible", subject to a 20 percent discount for failure to attach the susceptible. The net result is to presume that seven out of every 10 furnaces will be converted to gas as soon as they are 10 years old.

[18] Except the few whose equipment is new and are not counted on at all.

[19] The local officials and residents who testified were quite clear that relative cost would be most significant in determining the number of conversions.

Colonial's program of heating 11,026 houses in the valley of Virginia. Their field survey of one week's duration did not include a house-to-house survey. Their witness finds that he cannot "completely endorse" Colonial's premise that all of its domestic customers will be househeating customers but finds it not unreasonable (12T1711). He finds the 50 percent saturation premise a reasonable one, but does not know of any other towns that have attained 50 percent heating; nor has it been possible to test the project by comparison with results attained in other towns in the area. There is an adequate "market in the area that could be attached." (12T1714).

A most conspicuous inadequacy is the entire lack of any compilation of statistics covering the hundreds of other towns in the same or comparable areas which have been certificated in the 22 years since Section 7(c) became a part of the Natural Gas Act and of the actual sales that have been made in those towns, especially in recent years. Neither is there any breakdown of the sales made by distributors generally to show their number of customers by domestic, commercial or other classification, nor of the number of customers attached in relation to the population or to the census of housing (12T1716). The Staff has made the best use available of the tools at hand (as witness page 25 of its brief) by compiling data from the applications filed for similar service in nearby areas. The Staff witness says that, under the approach normally used, "a town over here 10 miles away had this sort of results so we expect this sort of result in this application." (12T1713.) However, to apply this approach plainly would require some available figures of what the results are in this hypothetical town 10 miles away and in many other towns. Without such figures it is hard to see how such comparisons could be made; in fact, the Staff witness states frankly that the present project has not been tested according to this comparative approach normally used, at least "not in the detail that would lead me to make a complete unbiased statement." (12T1713.)

In that state of the record and in view of the doubts raised about the evidence furnished by Colonial, the corroboration relied upon from East Tennessee, and the extent of the verification by the Staff, it cannot be regarded that the residential sales as proposed have been proved.

(iv) *The coal interests' study is far from conclusive:* The several coal interests which intervened in the case made a separate study of the Colonial project, presenting as their own expert witness a veteran gas engineer with over 40 years in the business, much of it directly related to gas distribution systems in small communities and with special experience in the Virginia area where he lives. In previous cases he has sponsored or appeared in support of a number of gas distribution projects. Here he submitted a more or less conventional form of feasibility study on the Colonial Natural Gas Company, which concludes that Colonial's project will lose, that is, incur a net operating income deficit of from $248,700 to $299,400 in each of the first four years. The difference between this study and Colonial's Exhibit 1 lies partly in the higher cost of construction, as noted above, but mainly in the considerable write-down in number of customers in the various classes and the amount of sales to be expected. Thus, no interruptible business is expected at all, and under the heading "Residential—Heating & Combination" there is allowed a fourth year sale of 445,000 Mcf to 4,892 househeating customers (about half of the conceded 9,480 residential customers). With a total annual market allowed of only two-thirds of one million Mcf, instead of two and a half million as claimed by Colonial, it is not surprising that the resulting revenues would fall short of carrying the costs of the project.

The Coal interests' intensely adverse study does not go unnoticed in the briefs filed by Colonial, East Tennessee and the Staff. Much of these responses is unfortunately of the *ad hominem* variety because the witness' answers on cross-examination were not always crisp, succinct, and convincing. However, if there was a certain amount of vagueness and circumlocution, perhaps even some non-objective coloration, this witness had no monopoly of it.

Turning now to the merits, the witness points out first the difference in the typical househeating costs for the competing fuels, the significance of which can hardly be denied (3T365). While a great many figures on this came in from a number of sources, it does appear evident that the average home will be heated by Colonial for about $160 per year, while it could continue to be heated by oil for about $145 to $155, even more if there are some localities with unusually high fuel oil prices. With coal it is somewhat less than $100 per year, depending upon many particular circumstances.

To arrive at his conclusion that 4,872 homes will use natural gas for space heating, Coal's witness uses the same basic data developed by Colonial's engineer. Agreeing with his several colleagues that heating equipment replacement is more logical after 10 years, the coal witness refers to the same data used by the others and, instead of emphasizing the third column showing the furnaces over 10 years old, calls attention to the first column showing an equal number which are under five years old and therefore are not susceptible to conversion. After analyzing the results obtained in other towns in the state, the witness concludes as his best judgment that the househeating sales will reach the figure referred to.

But this study has the same infirmity which infects the others, that is, Colonial's and the Staff's. It depends entirely too much on the unproven assumption that the age of present equipment determines when and whether it will be converted to gas. This could be true but many other factors subsist also to affect that major premise; the syllogism "depends upon the truth of its premises" (Webster). It results that, as in the case of the other studies, the market prediction is primarily a judgment figure, and its evidentiary bases remain to be proved.

There was some further and valid objection that the standards used by the witness are much more conservative than those employed by him in other cases where he appeared to sponsor the project. One reference was to the case of Transcontinental, G–10000, where the present witness appeared on behalf of one of the parties and gave certain market predictions, including 100 percent space heating saturation for the predicted customers. The different standard here may be due to a different ratio of prices between oil and gas, it may be due to other factors, it may be an accumulation of experience; it is not at all necessary to ascribe the difference to the change in motivation.[20]

(v) *Colonial's annual market will reach 2,000,000 Mcf:* Far simpler, and far more credible is the approach which relies upon the actual, developed experience of other Virginia distributors. In the absence of a commanding showing that conditions in the Southwestern valley area are markedly different from

[20] It could be the witness merely wishes to avoid a repetition of what actually occurred In G–10000 with respect to some of the parties' evidence—compare 17 FPC 333, at page 356, which is the finding in the initial decision that the validity and reasonable accuracy of certain market testimony and market predictions in connection with the pipeline project were established beyond doubt, the estimates were conservative and creditable and the evidence uncontroverted. With this there is to be contrasted the Commission's statement made 6 years later, after these very projects came into financial difficulty for lack of sales as predicted, that "in the last analysis, the Commission cannot and does not underwrite the economic survival of a company" (28 FPC 979, 982).

those in the Shenandoah Valley or in the Piedmont and Tidewater areas of Virginia, the market to be expected here can be verified on the basis of what has occurred there. As stated, the Commission's files and the Staff's researches do not provide this data; but enough was supplied with Coal's Exhibit 37, which was said to have been taken directly from the official records on file at the State Corporation Commission at Richmond, as reported to that Commission by the several distribution companies. Schedule H lists nine distribution companies in the state [21] and reports they serve a total of 185,447 residential customers, of whom 57½ percent use gas for their space heating, or a total of 107,131 residential space heaters. Schedule I reports the area population served by the same nine companies as 1,203,700, which figures out at 6.7 population units per residential customer or 11.6 population units per residential heating customer. The population of the 13 towns to be served by Colonial (allowing a small number for two of the communities which did not seem to be of record) totals very close to 58,500. Applying the ratio stated, it appears reasonable to conclude that Colonial can attach 8,731 domestic customers and there can be expected to be included 5,043 domestic customers who will heat their homes with natural gas.

The other two factors in the computation are not in dispute; that is, the need for 24 cubic feet of gas for the average home per degree day deficiency or "*ddd*" as it is called, and a total of 4,690 degree days to be expected in Colonial's area. The result of multiplying those two factors times the 5,043 heating customers is a net annual residential heating sale of 567,640 Mcf, or a little more than half of that claimed by Colonial and one-fourth more than that conceded by Coal. Since Colonial claimed residential heating sales in the third full year at 1,099,682 Mcf, this results in a reduction of their claimed total sales by 532,042 and thus reduces the total market claim of 2,519,802 to a new total for the third full year of 1,987,760. This may be increased slightly to allow for an obvious minimum of new construction in the 13 towns during the next three years. Assuming there cannot fail to be three new houses per town per year, of which, as in the case of Roanoke, seven out of eight will heat with gas, this will produce 109 additional customers whose gas heating needs would come to 12,240 Mcf, making a net total third year market for Colonial at 2,000,000 Mcf instead of the 2,519,802 originally claimed.

It is upon that market, i.e., 2,000,000 Mcf per year to Colonial, and the sale to Roanoke above determined that the project of East Tennessee is to be judged for its feasibility. No other finding, reference or conclusion as to Colonial is here called for, made or required—*i.e.*, if Colonial's sales program is carried out as aggressively and effectively as promised, its full sales may develop and its feasibility ensue, but this eventually is not required to be determined or forecast by the federal commission.

(C) *As limited, East Tennessee's project is feasible and is approved*

There were reviewed in the foregoing the various elements, other than markets and feasibility, tending to establish that East Tennessee's proposal to extend its line to the Roanoke area and make the two sales for resale as proposed meets the accepted tests of public convenience and necessity. With respect to that remaining element, the markets and feasibility, it is settled by numerous decisions that feasibility is to be determined from an incremental study to establish whether the net revenues from the new service (receipts minus purchased gas costs) will exceed the extra operating expenses and will produce a

[21] Excluding two serving also other areas. For the comparative methodology, see 21 FPC 552, 557, 566; 19 FPC 143.

significant and respectable return, if not necessarily a fully adequate one, on the added investment for the pipeline extension.[23]

To meet that test, East Tennessee submitted a compilation of ten tables and schedules (Ex. 12, Schedules 10–18) which compute the operating revenues, charges, operating income and rate of return on the new plant investment. That investment approximates $5,000,000 and the operating income from its use as planned comes to about $390,000 in the second and third years, which produces accordingly an incremental rate of return of 8.04 percent and 8.13 percent. (For the first year, the rate is about half that.)

Assuming its various premises, no particular objection was raised to this computation once it was recognized as purely an incremental study which did not involve or imply at this stage an allocation to the new service in Virginia of its proper share of the operating costs now being incurred in Tennessee. That allocation would be more appropriate when the rates to be charged are the subject of a rate proceeding. The operating revenues were figured on the total annual sales as proposed, or 4,165,191 Mcf, of which five-eighths, or 2,570,191 Mcf was to be sold to Colonial. While the sale in that full amount might possibly transpire, especially in view of the aggressive sales campaign which is part and parcel of Colonial's program, nevertheless it is concluded above that the demonstrated assurance of Colonial's market would seem to be limited to 2,000,000 Mcf.

It becomes necessary accordingly to adjust the feasibility study, (Ex. 12, Schedule 10) to reflect the third year sales to Colonial at the 2,000,000 Mcf referred to. For this purpose, the item for operating revenues is reduced by $193,000 and the item for purchased gas costs by $120,000 (both applying the commodity rate only). This makes $73,000 less net taxable income and reduces state and federal taxes by about $40,000. All of this leaves a new operating income of slightly over $350,000 which is over seven percent of the added investment or rate base. The net result is, even with this possible loss of one-fifth of the sale to Colonial, that East Tennessee's Virginia extension is fully able to "pay its way". It will not burden the present customers of East Tennessee and will continue to give promise of benefitting its present customers, after a reasonable developmental period by absorbing a part of the cost of service on the present line.[24]

One comment appears required upon an apparent discrepancy between the sales to Colonial and to Roanoke. For some reason unexplained, Colonial has been called upon to execute a precedent agreement which specifies (and fixes demand charges upon) contract demand quantities gradually increasing to 18,005 Mcf by the third year,[25] the full amount of the sale to be authorized.

---

[23] See the decision of April 6, 1964, in the case of *Southern Natural*, Opinion No. 424; *Northern Natural*, Opinion No. 404 of September 30, 1963, 30 FPC 859; *Minneapolis Gas Co.* v. *F.P.C.* (CADC), 278 F. 2d 870. The test used in the case of *Michigan Wisconsin* for its extensions to Menominee and Baraboo (22 FPC 775, 25 FPC 1234), relating the dollars invested to the annual sales in Mcf, is not helpful here, where the extent of the market to be served is itself very much in issue. *Cf. East Tennessee*, 23 FPC 916, and *Kansas-Nebraska*, 29 FPC 1058.

[24] Before the $33,000 net reduction just computed, this benefit to the present customers of East Tennessee was reported as an annual reduction in the cost of serving them by $104,000 in the third year (10T1360). But all of these computations are subject to the Commission's *caveat* in *Northern Natural*, 22 FPC 523, 525: "In view of the many variables introduced in considering market and revenue estimates for a projected period of three years, any test of feasibility by its very nature can be nothing more than an approximation." *Cf.* 17 FPC 800, 801; 10 FPC 469, 515.

[25] Ex. 9, Sch. 10. The balance of Colonial's need, 1,072 Mcf, if and when its sales develop, will be supplied by peak shaving equipment (Ex. 1, Sch. 6). The figures are adjusted to the pressure base.

But Roanoke is treated differently, since its agreement[25] requires demand charges (by December 1966) for a contract demand of only 5,766 Mcf out of the total sales authorization requested of 7,789. This difference may be counterbalanced by the 48 percent minimum commodity charge which Roanoke assumes responsibility for under the partial requirements tariff applicable to Roanoke on the basis of its alternate supply from another pipeline. Anyway, Roanoke stands ready to raise its agreed quantity when it is needed (Brief, page 4).

(1) *The Roanoke extension.* One question was reserved about the construction program and is included in the elements and circumstances which, compiled and proved, are needed to establish the "public convenience and necessity" of East Tennessee's total program. That question relates to the final seven miles of East Tennessee's new line, which connects Roanoke's two delivery points[26] as first planned, "A" and "B" on the map herewith, which comes from Exhibit 3.

The problem is why, in the public interest, that final seven miles, all within Roanoke's service area, is planned to be built by East Tennessee, instead of by Roanoke. That is, whether the line A—B is actually to serve a pipeline function at all or whether East Tennessee's function is discharged by full delivery at or before point A, the "Salem Delivery", and whether line A—B in practical effect is really to operate as a part of Roanoke's distribution circuits. In the latter event the seven miles would be Roanoke's burden, to be paid for by Roanoke and its ratepayers. As it is, the plan for East Tennessee to build it means, in the long run, that Colonial's ratepayers will pay for two-thirds of it while Roanoke's pay but one-third.[27]

The capital cost in question is $232,305.50, and using Roanoke's figure of 14 percent for the annual depreciation and other expense burden associated with such an investment[28] the resulting abatement of East Tennessee's cost of service would approximate $32,600.

Manifestly, there would be no question here if this final seven miles of East Tennessee's new extension were part of a long-range program to extend their line north or east from Roanoke, at some later date. But that is not the plan. East Tennessee's witness so testified, pointing out there are no attractive markets in prospect to the North, and that the only unserved area to the East is Bedford, which, at 25 miles, would not be justified. Lynchburg, the city beyond, already has two suppliers and when Bedford does acquire service it will doubtless be by Lynchburg Gas Company, which has the franchise (8T1068). The same witness later on reiterated there is no plan to extend beyond Roanoke (12T1737).

This question, though raised at the hearing, is not treated in the briefs. When the question was asked why East Tennessee projects their line not only into Roanoke's area but clear across its southern border to Clearbrook (point B on the map), the only response noted was, "because that is the best way to get into Roanoke's system." (*Cf.* 5T652 and 8T1082). This in the face of the flow diagram (Ex. 7) which shows that three-quarters of the peak firm delivery to Roanoke is to be taken off at point A, the Salem Delivery, while the final seven miles, A—B to Clearbrook, is to carry only the small remainder, 1,947 Mcf, though the line A—B is of the same full size, 8⅝".

---

[25] Ex. 9, Sch. 11.

[26] At the hearing the application was amended to include a third delivery point at some unannounced step.

[27] Ex. 12, Sch. 11.

[28] The exact mileage is 7.75 at $28,362 per mile (Ex. 8, Sch. 1), or $219,805.50, plus $12,500 for the metering station at point B (Ex. 8, Sch. 3). For the 14 percent, see 6T819, and compare the use of 15 percent by *Michigan Wisconsin Pipe Line Co.*, 21 FPC 552, 558.

The true purpose of the A—B extension was revealed more by Roanoke than by Tennessee. Five years ago, Roanoke's franchise area was extended ten miles or more westward to Shawsville (apparently off the map to the left). New business, including industry, is opening in the western area between Salem and Shawsville, and Roanoke does not now have the line capacity to serve it (Ex. 19, 5T624, 650). Most significantly, Roanoke would build an 8⅝" line clear to Shawsville if East Tennessee's new line were not to be there to supply the need; the new pipeline will have Roanoke's building of 17 miles of line to connect points on their system (6T713–717). As it was put another way, if East Tennessee's extension did not come in to meet their need as planned, Roanoke would be forced to complete the loop of their large-diameter line around part of Roanoke (5T629). (See also the revelational quotation that appears on page 170, *supra*.)

The combined plan to which East Tennessee agreed already saves Roanoke $1,600,000 of construction—without it Roanoke would invest $2,000,000, including $721,000 for a new supply lateral to the North to meet Atlantic Seaboard's line. Under East Tennessee's plan Roanoke will spend only $415,000.[29] Since East Tennessee's extension A—B is to carry only one-fourth of their sale, it is plain that pipeline interstate transportation is not its prime purpose. Rather, it is evident the extension to be paid for by East Tennessee is primarily to substitute in some part for the $1,279,000 ($2,000,000–$721,000) of loops and distribution circuits which Roanoke would require without it. A reference to the map confirms the conclusion suggested by the testimony that the extension is to serve Roanoke's distribution program, to complete its southern loop, and is not to carry out any proper function of East Tennessee. It will not be a facility "used and useful" in the pipeline program, and its cost should not be shared by East Tennessee's other customers.[30] It follows that the final seven miles of East Tennessee's proposed line, if it is to be paid for by East Tennessee, does not meet the test of public convenience and necessity which the law requires for its licensing.

In that view a condition is required for East Tennessee's certificate to the effect that the A—B line may be certificated to East Tennessee only if Roanoke elects to make a capital contribution to meet its cost of construction. Otherwise, the line will be approved as far as Salem Delivery only.[31] In order that East Tennessee's rates may be reviewed to reflect this small change in the costs (also the cost of purchased gas reduction mentioned at the hearing (Ex. 24) as well as the benefit of the new income tax rates), it is added that East Tennessee's rates, when filed, will be subject to the approval of the Commission.

V. *Conditions To Be Attached to the Certificate*

Two of the interveners and the FPC Staff have, after full participation, concluded that they do not object to the issuance of a certificate to East Tennessee as requested, but each has stipulated that this concurrence is dependent upon the attachment of certain conditions to the certificate to take care of particular problems or doubts. They are in effect provisos under Section 7(e) of the Natural Gas Act, which authorizes the Commission—"to attach to the issuance

---

[29] This is to build the two connecting lines shown, viz.: C—B (5.9 miles at 8", for $177,708) and D—A (5.8 miles for $237,062). The latter, a 12" line, is to receive the main supply from East Tennessee's 8⅝" line.

[30] The contrast is noteworthy between this solicitous treatment of Roanoke (a partial requirements customer) and the quite opposite treatment of Colonial, which is entirely dependent on East Tennessee, and is called on to build its eleven laterals all the way up to 24 miles in length without contribution or sharing of any kind by East Tennessee.

[31] Note that even this point is well within Roanoke's service area, by about ten miles.

of the certificate and to the exercise of the rights granted thereunder such reasonable terms and conditions as the public convenience and necessity may require."

(A) *Seaboard seeks to preserve its present market with Roanoke*

(1) *Seaboard's PR tariff is now under judicial review:* A major pipeline, that of the Atlantic Seaboard Corporation, is the present supplier to Roanoke, one of the two distributor customers of East Tennessee's new extension. Seaboard does not demand to share in the increased market of Roanoke, but does feel called upon to seek, on behalf of its other customers, a protection for the continuation of its present market, under which Seaboard delivered to Roanoke 3,790,551 Mcf of gas during 1963 with a peak day delivery of 18,500, at an approximate load factor of 60 percent, under Seaboard's Rate Schedule CDS–1 (Exs. 3 and 31). When Roanoke's second supply from East Tennessee comes into being, Roanoke will expect to convert to Seaboard's Rate Schedule PR–1, which is applicable to distributor companies from the Seaboard line having a second source of supply. So long as that "PR" schedule is in effect, Seaboard would not require a condition or need other action in the present matter; their trouble is that the PR schedule approved by the Commission in 1962 (28 FPC 860) is now under the cloud of a pending judicial review in the United States Court of Appeals for the District of Columbia Circuit, under its Docket No. 17,738, in a review brought by an intervener, the Lynchburg Gas Company. The case has been briefed and argued and is now under submission to the panel of the court. Fearing that the result of this review may be to disallow entirely its PR (or partial requirements) rate schedule, and thereby cancel the protection it affords against the loss of current markets through minimum monthly and annual commodity charges Seaboard here seeks a special condition, to take effect only in that eventuality, as follows:

> This order is conditioned upon Roanoke's taking gas from Atlantic Seaboard at a Contract Demand load factor not less than sixty percent (60%) during any year (twelve months beginning December 1), and not less than thirty percent (30%) during any month from and after commencement of deliveries by East Tennessee to Roanoke; and Roanoke's Contract Demand with Atlantic Seaboard in effect at any time not being reduced by mutual agreement between Roanoke and Atlantic Seaboard; provided that this condition shall not be effective in any period during which Roanoke purchases gas from Atlantic Seaboard under an effective FPC Rate Schedule providing for minimum monthly and minimum annual commodity payments. [Exhibit 31, Page 9, Direct Testimony of John Cornell.]

It will be perceived that under its proviso Seaboard's proposal has no effect and is in limbo so long as its partial requirements rate schedule continues in effect. Reduced from its complications, the net effect of the PR tariffs is to require that the purchaser pay for a minimum commodity volume of 80 percent of its actual load factor purchases during the base period (7T940). The suggested new provision would require continuance of the full, actual historical load factor (with another change thought to off-set that difference).

The point of the problem facing Seaboard is that, under the rate formula which bears the name of this very line, much of the fixed costs of the pipeline—that is, the capital charges incurred and to be recovered annually without regard to the duration of a particular use of the line during the year—are assessed and recouped through the commodity charge normally collectible only for gas actually sold and delivered. Thus, a distributor customer for whose needs (along with others') the line was designed and built would no longer be contributing its share of the capital charges if it so altered its purchase progarm as to take gas only

during and for its peak periods of need, such as during the winter heating season. This possibility does not arise in the case of a distributor customer which, having no other supply, perforce must buy year-around from Seaboard, but the possibility could occur, indeed has occurred in some cases, that the distributor customer which is permitted to attach a second source of supply could manipulate its purchases in such a way as to utilize Seaboard solely as a peaking service during its days and months of greatest need. Necessarily this would result in an increased cost burden for Seaboard's other customers who would in effect be assessed a greater share of the capital or fixed costs of the pipeline.

It is to meet this problem that the Commission considered a number of proposed solutions and evolved the current partial requirements tariff for Seaboard, adopting a formula proposed by a group of interveners in Seaboard's tariff or rate case which appear to be distributors somewhat in the position of Roanoke. The reported decision does not indicate that Roanoke was a party, though it doubtless could have been on application submitted for intervention (28 FPC 860, 861, 865). The Commission's aim, according to the opinion which approved and prescribed the partial requirements tariff "is to protect the many customers dependent upon the Columbia companies from being required to pay the higher rates which may result from the deterioration of some of Columbia's markets."

The fact is that neither of the affected parties has any objection to protection of the Seaboard market at Roanoke to the extent provided by the PR tariff. For all the talk about Roanoke, it is remembered that it is East Tennessee that is the applicant in this case, not Roanoke, and any certificate condition is directed primarily against East Tennessee—that is, a condition under Section 7(e) of the Natural Gas Act can do no more than restrict the sale by East Tennessee which is proposed to be made under the authority of the license to be granted to East Tennessee under that section.

(2) *The theory or principle of protection to Seaboard is not or should not be in question:* East Tennessee's brief dated March 10 states the point quite succinctly:

> Much of Seaboard's brief is devoted to argument in favor of the proposition that a pioneer supplier of gas to a distributor should be protected by certificate condition against subsequent alternate suppliers. East Tennessee does not oppose this argument in principle, [Page 47.]

Likewise, Roanoke, the other party affected, said a number of times at the hearing and in its brief at page 16 that it accepts Seaboard's partial requirements rate schedule and is willing to execute an agreement with Seaboard to buy gas under it. The only objection to the underlying principle of some protection for Seaboard's market comes in the Staff's brief, to the effect that the public interest "would be harmed by adoption of the generalized principle that the volume of a gas market previously held by a sole supplier should be preserved at its past magnitude from the competition of a second source of supply." Insofar as this is contrary to the Commission's decision of 1962, reaffirmed in 1963 and prescribing the joint requirements schedule for the purpose of providing the protection referred to,[2] this objection is inadmissible, quite apart from the analysis

[2] From 28 FPC 860, 862: "We are of the opinion that the Columbia companies have shown that some protection through revised tariffs for partial requirements customers is necessary to prevent the deterioration of Columbia's sales upon which its present rates are based, with a possible increase in its rates to its remaining customers. * * *." Furthermore, the present suggestion seems to be contrary to the assurances given to the Court of Appeals in the case now there pending as shown by the numerous references in the Commission's brief to its adoption of the "principle of not taking action which may substantially impair a certificate once issued." Or "the elimination of the possibility that a second supply may have adverse repercussions on the first supplier's costs and rates" (pages 16 to 30, seriatim).

provided by Seaboard's reply brief claiming the cases the Staff relies upon are in fact authorities to the contrary. Hence it is concluded that the principle which Seaboard seeks is entirely a proper one and requires appropriate recognition The real problems which the proposal gives rise to are the other objections in which all the other parties variously join to the effect that, on its merits, Seaboard's proposal is objectionable because it provides for a great deal more protection than that provided by the partial requirements tariff applicable to other distributor customers in like situation; secondly, that the procedure for adoption of the protection by the medium of a certificate condition is inappropriate, unnecessary and unrealistic on procedural or mechanical grounds; and third, that, as strenuously put by Roanoke, the proposal is basically and fundamentally objectionable, indeed illegal, on jurisdictional grounds. These points are considered below.

(3) *Seaboard's proposal differs from its PR tariff:* Roanoke's objection to the proposed condition seems primarily to be based upon jurisdictional grounds, see below, but its brief of February 7 quite plainly puts the first point that the quoted proposal would require Roanoke to maintain a 60 percent load factor with Atlantic Seaboard (which is about its historical figure) whereas the partial requirements tariff will require only a 48 percent load factor. Roanoke has several times said it is ready to buy under the partial requirements tariff, but for obvious reasons it objects to a condition which seems to be somewhat more onerous. No answer to this at all is found in the reply brief from Seaboard, nor is the answer satisfactory which is found in its initial brief to the effect that if Roanoke's market predictions work out as hopefully expected there will be no problem since the quantities purchased will exceed the minima required under either the tariff or the proposed condition. This point was raised also at the hearing, when the Examiner asked in effect why, if what Seaboard needed is merely assurance of the protection of its PR rate schedule, does it seek here a provision with different terms and different effects, noting the testimony that its annual burden might be greater by as much as $200,000 (7T966). In response, Seaboard's witness mentioned two reasons for proposing a condition different from the PR tariff. The first reason is that "We tried to keep it as simple as we possibly could without working into it the provisions of the industrial redetermination." (Referring to an adjustment provision of the PR tariff which is not included in the present proposal.) It is agreed, upon reading the PR tariff, that simplicity is or should be the aim, but the complications of the arrangement desired are so obvious and so numerous as to prevent its consummation here. Secondly, according to the Seaboard witness, there is one other customer with a special provision more or less like the one now proposed. But that one has a long history of litigation on a special circumstance and hardly needs to be emulated (28 FPC 882).

It is believed the real reason for the special provision proposed, calling for a continuation of the present load factor instead of 80 percent of it, is the witness' statement at 7T968: "It is our contention or our feeling that the load factor requirements should be based on 100 percent of the historical takes." But that is the contention and the feeling which the Commission overruled in its decision of November 27, 1962, the one which is now *sub judice*, and the present certificate case of East Tennessee is not to be the back—or side-door through which Seaboard relitigates the appropriate provision for its insurance against losses due to market changes of its partial requirements customers. It is concluded, accordingly, that the only condition to be considered is a condition stipulating that Roanoke shall indeed purchase under the partial requirements tariff, not under a special and more onerous provision. It is considered below

whether that condition is needed at all and, if so, whether it is jurisdictionally available in this proceeding.

(4) *Is the proposed condition premature, unrealistic and unnecessary?* Seaboard has said a number of times that if there were no pending cloud on the partial requirements tariff there would be no problem, they would not be here, and no condition would be needed or called for. Correspondingly, Roanoke has said a number of times that it fully expects to sign up for gas under the partial requirements rate schedule, when the time comes, and is fully prepared to stand by its terms, for better or for worse. Hence the impression is that too much is being made of this problem both on the part of the party proposing the condition (which already has what it wants) and on the part of the party primarily opposing it (which, aside from its proper objection to the form, is rather put to it to find any real reason to oppose some proper condition to protect its present supplier's market). The Staff quite properly points out that the outcome of the court case is necessarily conjectural; and it does seem unusual, indeed inappropriate, to undertake at this time to fashion some alternate form of protection for Seaboard to take effect if, as and when the protection now prescribed by the Commission's order shall have been negated by the possible court decision which might occur.

Seaboard explains this anomaly by pointing to what has occurred in at least one other case, which causes Seaboard to view with alarm the possibility that, upon the cancellation of its PR tariff following a court decision, Roanoke might then be free to abandon its purchase program from Seaboard, entirely except for periods of peak winter needs and might turn instead to East Tennessee for its sole year-around supply. Of course, this conceivably could happen if East Tennessee's capacity were now in being and its supply adequate to meet any such call *and* if its rates were such as to make this alternate attractive. But the apprehension felt seems to be an extreme of caution indeed when it is considered both that the rates as now proposed call for a higher commodity rate by East Tennessee than the rate being charged by Seaboard, and anyway their line is not built and the line that is being certificated, an eight-inch transmission facility, has not been shown to be even capable of carrying such a load to Roanoke, even if there were a disposition of the parties to do so; nor is it clear that the sale to Roanoke herewith certified could cover such a volume.

On the other hand, Roanoke's objections (if any there should now be) to a condition limited to the present PR tariff seem equally over-apprehensive. Roanoke's President has assured the forum that Roanoke expects to subscribe to the PR tariff and to continue to buy from Seaboard the same quantities as that recently experienced; in fact, its exhibit shows a slight increase. Hence there can hardly be practical objection to a condition simply requiring adherence to the partial requirements tariff which has been promulgated for this very situation. If the result of the court review is to affirm and validate the PR tariff, then the problem is at an end. If otherwise, if the review results in the cancellation of that tariff and the loss of that protection, then the practical effect of the condition herewith is to form a basis for reopening this proceeding, if called upon, in order by amendment of the certificate to make any necessary realignment of Roanoke's jurisdictional purchases from its two suppliers in order to achieve the objectives fairly sought for both under the Natural Gas Act.[25] In other words, the requirement that Roanoke actually sign up under the PR tariff before taking any East Tennessee gas merely calls upon Roanoke

[25] Note the discussion in the *PR* case, 28 FPC 860, about the possibility of providing the needed protection to Columbia (Seaboard) through proper conditions in certificate proceedings involving competing suppliers.

to carry out the program which it has already promised with the proviso that this form of protection for Seaboard may have to be reconsidered or revised or amended if it shall fail the test of the current judicial scrutiny. By the insertion of the PR tariff requirement here as a condition, all parties to the proposed new sale to Roanoke are on notice that Roanoke's entire natural gas supply arrangements might conceivably be subject to reconsideration, in which event all parties here concerned will have their opportunity to appear, propose and oppose.

Something of this sort was suggested to Seaboard at the hearing (7T973), and the only objection by Seaboard seemed to be that during the interim period following the possible annulment of its PR tariff and pending a new hearing to reopen the certificate or establish a new tariff and while that proceeding is coming to a new conclusion, there might be such alteration in Roanoke's purchase program that there would be established a new and substandard historical base with the result that a new minimum purchase requirement would be entirely too minimum and result in possible loss. It is quite true that such a case could, even by proper means, be made to take some time.

It seems rather farfetched in the present context to apprehend the result referred to; anyway Seaboard and the Commission itself would not be as powerless and futile as their fears presuppose. First, a new action by Seaboard might take the form of a revised tariff filing under Section 4 of the Gas Act and (according to the experience of the filing of its present PR tariff) the new provisions could be made effective in just 43 days after it is filed (see 28 FPC 860 at page 861). Second, even if Roanoke should contrive—contrary to their assurances which are fully accepted here—by some fell means to work a quick reversal of its purchase schedule, there would be nothing to prevent the Commission and Seaboard from establishing some new arrangement based not upon any such abnormal purchase period but upon its record of several years past.

Thus it is believed that the only protection really required in the circumstances is to accept Roanoke's assurance that it will sign up under the PR tariff and, as a result of its insertion here as a condition, make it clear that, should the PR tariff no longer avail of its purpose, these proceedings are subject to such further reconsideration as may be necessary to determine what sales by both companies to Roanoke and in what quantities are called for in the public interest and will truly meet the standards of the public convenience and necessity. That is, will serve the interests of both suppliers of Roanoke and of all of the consumers concerned both at Roanoke and up and down the entire lines of both suppliers.

(5) *Is a condition affecting Roanoke jurisdictionally effective?* Both the Commission Staff and Roanoke have joined in the highly technical and legalistic objection to the effect that this proceeding involves the certificate applied for by East Tennessee to license the pipeline and the sales of gas East Tennessee proposes to make; that Roanoke is not a party but is only an intervener for the purpose of supporting that proposal of East Tennessee; and that there would be a serious lack of jurisdiction, indeed of due process, in the issue of an order in such a proceeding undertaking to settle the separate and unrelated state of affairs between intervener Roanoke and another intervener, Atlantic Seaboard. The Staff looks upon that action as the imposition of an injunctive order upon Roanoke without providing "the correct judicial procedure but resulting in a problem of judicial due process." The objection may not be perfectly apprehended, since this is not a court action and the reference to judicial procedure or process is not understood. Roanoke states the objection upon a little broader basis, saying it is a distribution company not subject to the jurisdiction of the Commission and claiming in effect that its appearance in

the case is a special one only, not general, merely to support East Tennessee's request for a certificate and not itself asking for any affirmative relief, order, allocation or otherwise and hence not subject to the Commission's control, citing Section 1 of the Natural Gas Act.

But all of this theory ignores the plain language of the statute cited, which requires the Commission to regulate "the sale in interstate commerce of natural gas for resale"—that is, the proposed transaction between East Tennessee and Roanoke. Although the legal incidence of that regulation is addressed to the seller, necessarily the control of that sale or any other sale affects or limits or controls to that extent both parties to the transaction, both the buyer and the seller, and to that extent regulates the buyer as well as the seller.[24] Since the sale is subject to regulation, Roanoke can lawfully buy only pursuant to that regulation and to that extent it necessarily is subject to the Commission's jurisdiction, which is quite separate, apart and unaffected by the exemption of Roanoke's distribution activities from Federal regulation.

The real point these juridicial objections overlook is that what is asked for is a condition to be attached to East Tennessee's sale. No order or injunction is requested or considered itself directing Roanoke to buy from Atlantic Seaboard or not to buy, or in fact to do anything. Only if Roanoke chooses at its option to go through with the purchase of what East Tennessee proposes to sell does Roanoke find itself in the position of complying with the conditions which the law may find to be required to be attached to that sale.

Thus the point is that the sale by East Tennessee proposed to be made to Roanoke can be certificated only if it meets the test set out in Section 7 of the Natural Gas Act—that is, whether the proposed sale is or will be required by the present or future public convenience and necessity. That same section goes on to authorize the Commission to attach to the exercise of the right granted under the certificate "such reasonable terms and conditions as the public convenience and necessity may require." So the inquiry is whether the sale by East Tennessee to Roanoke would meet the public convenience and necessity test *if* its result were to permit Roanoke to abandon its program of annual purchases from Seaboard. Bearing in mind that the public convenience is much broader than that of East Tennessee and that of Roanoke, but includes all persons affected, it is necessarily regarded and hereby found that the sale by East Tennessee to Roanoke will not meet the test of public convenience and necessity to the extent that it would make it possible for Roanoke by that means to cast off to Seaboard's other customers Roanoke's share of the burden of paying for Atlantic Seaboard's fixed or capital costs. This *nexus* between the certificate to a second supplier and the buyer's program with his first supplier was explained to the court in the Commission's brief in the pending Lynchburg case at page 30 in this succinct form: "With the elimination of the possibility that a second supply may have adverse repercussions on the first supplier's costs and rates, the Commission can more readily certificate multiple suppliers." The error of the jurisdictional objection lies in reading Seaboard's request too literally, as if it were a separate plea for what the Staff calls injunctive relief unrelated to the East Tennessee sale. In truth, the point of Seaboard really is that Tennessee's sale as proposed does not meet the public convenience test because of the widespread harm which that sale could make possible, *i.e.*, the higher costs chargeable to Seaboard's

[24] Thus, from the Commission's brief in Lynchburg, page 16: "Just as the company is restricted to serving only those customers authorized by the Commission, the purchasers can buy only as authorized by the Commission. Being thus restricted to supplies certificated by the Commission, local distribution companies, serving ultimate consumers, are given reasonable assurance of adequate service at just and reasonable rates."

other customers. But Seaboard's proposed condition is offered to help Tennessee qualify its proposal under the public convenience test by avoiding or obviating the adverse effect referred to. A proper condition thus merely amounts to a stipulation or proviso to Tennessee's sale to Roanoke to the general purpose that the new sale supplement Roanoke's former supply and not displace it. With that amendment, eliminating the adverse effect all along Seaboard's line, the proposed sale by East Tennessee can meet the public convenience test the statute requires, but otherwise not.

In that light the legal incidence of the condition is on the proposed seller and affects the buyer only if the buyer proposes to take advantage of the proposed sale. Even if it be regarded in the practical light that it is Roanoke that will be affected and will have to comply, the fact remains that *both* purchases by Roanoke—that is, present purchase from Seaboard and the new one from Tennessee—are fully subject to the Commission's jurisdiction; and where the second sale necessarily may adversely affect the first one, it is hypertechnical indeed, in fact specious, to object on such grounds to whatever revisions or conditions are needed to be attached to the second sale in order to avoid the adverse effects on the first sale.

The result is to require a condition merely to the effect that the sale by East Tennessee is authorized to be made and it will meet the public convenience test only so long as Roanoke subscribes and complies with the partial requirements tariff of Seaboard as it now reads or as it may be amended or replaced. If that condition becomes onerous, inappropriate or ineffective, any of the parties is free to seek an appropriate amendment of the certificate.

(B) *Accounting requirements proposed by the Tennessee cities*

East Tennessee's line crosses the entire state of Tennessee, from west to east, in two segments and presently terminates at Bristol. The 26 distributor utilities serving Chattanooga, Knoxville and other communities en route have jointly intervened not to endorse or oppose the project for the extension of the line into Virginia but merely to assure themselves that the costs attributable to the new service in Virginia are not collected from the present customers in Tennessee. Their brief exhibits certain questions, if not doubts, as to whether the entire project is economically feasible, and they refer to the optimistic approach of the engineering witness for the Colonial project.

However, based upon the management's assurance that the project should produce some benefit to East Tennessee's present customers through an eventual reduction in the cost of service, the Tennessee cities do not oppose the project but ask only for certain special accounting reports with which the Tennessee cities can make their own determination as to whether the new project, after it gets underway, is truly paying its way. The report request is an annual one, to show all the direct costs and expenses connected with the new service and the revenues resulting.

After a certain amount of negotiation during the hearing, the request was agreed to by East Tennessee with only two or three modifications remaining in question. Since the Staff recommends the provision, also East Tennessee accepts it in principle and no parties otherwise criticize or object, its full language is not here stated but will be found in the order appended hereto. The modifications sought are minor and can be disposed of quickly, as follows:

(1) East Tennessee wants assurance that the expenses required to be reported annually to their customers include only the direct charges and not the indirect expenses. That is what the Tennessee cities meant (14T1909), so the verbiage has been added to make that clear, as requested by East Tennessee.

(2) The cities have agreed to settle for an annual report rather than a semiannual one, but they oppose East Tennessee's request to cut down the

reporting period from five years to only three years. East Tennessee points out that three years is the normal test of feasibility and the duration of the Commission's projections of expenses, sales and revenues. But that does not necessarily allay the apprehensions of the Tennessee customers who are, after all, called upon to contribute to the company's revenues about $13,000,000 per year.[35] It should be borne in mind that, under the "cost of service" restitution concept, the parties deal not at all as independent bargainers, rather East Tennessee is roughly in the position of a cost-plus contractor with a direct claim upon the cities and distributors for reimbursement of costs incurred or at least those predicted to be incurred.[36] Hence the cities which are asked to underwrite their costs for East Tennessee are entitled to whatever showing is necessary to satisfy them of their validity; *ergo*, the provision remains at five years.

(C) *Staff's suggested conditions:*

The Staff's brief suggests three further conditions to be attached to the certificate, all of them appearing to be noncontroversial, as follows:

(1) *Rate Level:* Because East Tennessee's revenues show only a very thin coverage during the first year of operation, over its outgo for the same period, the Staff seeks a stipulation to preclude the use of that first year experience as a basis for a rate increase filing. Without objection, such a provision has been drafted and is included in the order herewith.

(2) *Rate design:* The second suggestion seems merely to want recognition that East Tennessee's extension into Virginia has not yet been built so that the design of rates with a separate zone for the Virginia customers, slightly higher than the rates charged up the line, has not been tested by performance data. Assurance is evidently thought to be needed to the effect that the rate design "will be amenable to test and determination on the basis of actual sales, revenues, costs and other performance data after a period of developmental experience." All of this would seem to be obviously true under Sections 4 and 5 of the Natural Gas Act (and the case of Mobile). Also, it was several times agreed at the hearing[37] that the consideration of proposed rates at this stage is limited to their broad effect on the question of public convenience and necessity. No determination of their lawfulness is here undertaken or implied, and if a stipulation is wanted, it is hereby restated that the order herewith does not imply a finding that the proposed rates are just and reasonable or otherwise necessarily lawful and binding; but they will be subject to such considerations as may be called for at the time of their formal filing and from time to time thereafter, as provided in Sections 4 and 5 of the Natural Gas Act. See also page 186, *supra*.

Similarly, Staff's Exhibits 27 and 28 propose certain formal or minor changes in the language of the tariff sheets proposed to be filed covering the new Zone 3 rates for this new area, and East Tennessee has indicated its willingness to incorporate these changes in their tariffs when filed (12T1724).

(3) *State certificate:* Staff's third condition would require "that a local, state authorization be in hand." The reference is not to East Tennessee, for whose proposed sales this certificate is their license, but to Colonial, which proposes to distribute and sell at retail in the 13 communities along the line. Colonial now has received the franchises from all 13 towns covered in its program (1T57, 3T284), but needing also an appropriate certificate from the state corporation commission, Colonial has no objection to the attachment of a condition to the certificate now issued specifying that East Tennessee proceed with its project only after the state commission has issued its certificate (final brief, page 4).

[35] Exhibit 12, Schedule 2, page 3, line 99.

[36] *Cf.* Bonbright, "Principles of Public Utility Rates" (1961), pp. 23, 24, 50, 67, 72, *passim*.

[37] 11 T. 1608, 12 T. 1697, 1703.

This condition is required not for any technical legal reason since (as Roanoke was at pains to point out) the function of local distribution and the physical facilities therefor are not subject to the Federal Commission's jurisdiction or responsibility. This condition, which, as in the case of Roanoke, calls for action not by East Tennessee but by the supporting intervener, Colonial, is required for the same reason that Roanoke's condition is required—that is, further to establish the public convenience and necessity of East Tennessee's proposed sale.[28]

The point is this. It was established that before its certificate issues, the State will require a complete showing of the feasibility of Colonial's program (1T101), in fact they have already received a copy of the engineering study which is here as Exhibit 1. Indeed, it was shown that not only does the state corporation commission at Richmond require the showing of economic feasibility but it has in the past turned down some projects because in their judgment they were not economically feasible (11T1552). Since, under the law, the function of distribution and retail sale is a matter for state regulation, the responsibility for determining feasibility of the program is primarily upon the state commission, which has the advantage of familiarity with local conditions and also performance records of the sales, revenues and heating saturation actually achieved in nearby and comparable towns (see Exhibit 37, Schedule G), a class of data which the FPC Staff does not have available for the use of the Federal Commission (12T1716). Hence, as the perhaps most acceptable and probative determinant of Colonial's feasibility, insofar as that is needed to establish East Tennessee's feasibility, a state corporation certificate will be required to be "in hand" as a condition precedent to East Tennessee's project.[29]

VI. *Findings and Order*

Upon consideration of the whole record, including the application filed, it is further found and concluded that:

(1) East Tennessee Natural Gas Company is a "natural-gas company" within the purview of the Natural Gas Act.

(2) East Tennessee's proposed facilities will be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the requirements of Section 7 of the Natural Gas Act.

(3) Subject to the limitations below, the construction and operation of the facilities and the sales of natural gas proposed by East Tennessee are required by the public convenience and necessity; East Tennessee is able and willing properly to do the acts and to perform the services proposed, and to conform to the Natural Gas Act and the rules and requirements of the Commission pursuant to the law; and a certificate of convenience and necessity should issue as herein ordered and conditioned.

---

[28] If there were any real jurisdiction question applicable to Roanoke's case (V(A) above) because it requires Roanoke to readjust its jurisdictional purchase program with Seaboard, how much more would there arise a jurisdictional defect in a condition seeking to control another intervener, Colonial, and to require it to take certain nonjurisdictional action under the state law. That type of condition is not at all uncommon. In fact, there is or should be no jurisdictional question at all in either case so long as the condition operates to qualify East Tennessee's sale under the public convenience test.

[29] Compare the regulations applicable to communities requesting an adverse order against a pipeline for natural gas service, under Section 7(a) of the Natural Gas Act: Where the proposed municipal distributor furnishes a state certificate of convenience and necessity, it is not required to submit with its application the usual three-year study showing annual revenues and sales by classes of service and the corresponding operating expenses (FPC Regulations, Section 156.5(a)(15)(iii)). If the state commission can be relied upon to be responsible for the feasibility question in a controverted case of an order against a pipeline, *a fortiori* that should suffice where the pipeline approves the project and commends its feasibility.

(4) The conditions attached to the certificate here issued are required by the public convenience and necessity.

ACCORDINGLY, IT IS ORDERED, subject to review by the Commission, that:

(A) A certificate of public convenience and necessity is hereby issued to the East Tennessee Natural Gas Company, upon the conditions set forth below, for the construction and operation of the facilities proposed, as described above and in its application, and for the sale of natural gas to the Colonial Natural Gas Company and the Roanoke Gas Company, in the maximum amounts of 18,005 and 7,789 Mcf in any one day, respectively.

(B) The certificate for the construction is subject to the following conditions precedent:

(i) Colonial shall exhibit to East Tennessee acceptable contracts or precedent agreements with prospective purchasers of interruptible gas service providing for the purchase of at least one half of the planned sale of 1,026,513 Mcf per year by the second full year of operation.

(ii) East Tennessee shall file with the Commission, and furnish to such of its resale customers as request it, supplemental accounting data in scope and form satisfactory to the Commission designed to show separately, (1) the gas plant, depreciation reserve, operating expenses (excluding purchased gas costs as well as indirect operating and administrative and general expenses), depreciation expense, and taxes other than income attributable to the facilities installed in Zone 3; and (2) the operating revenues from customers taking gas in Zone 3; such data to be filed annually for the first five calendar years after commencement of service in Zone 3 and at such times during those five years as may be required to correlate with the test periods used in any future rate proceeding. This requirement is without prejudice to the method to be used in any future proceeding for allocating costs or determining rates.

(iii) Colonial shall exhibit to East Tennessee a certificate or authorizing license for its proposed operations issued by the State Corporation Commission of Virginia.

(iv) The general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of the Commission's Regulations shall attach to the certificate and to the exercise of the rights granted thereunder.

(v) East Tennessee shall receive from Roanoke Gas Company a contribution in aid of construction in the amount of $232,305.50 (subject to audit and adjustment to the cost incurred for the construction between Salem Delivery and Clearbrook); otherwise, in the alternative, the line authorized to be constructed by East Tennessee is limited to the extension from the Bristol terminus of the present line to, and only to, the point marked "Salem Delivery" in Exhibit 3.

(C) The certificate for the proposed sales is subject to the following conditions precedent:

(vi) East Tennessee's rates for its proposed sales, when filed pursuant to the Regulations under the Natural Gas Act, shall be subject to further order and approval of the Commission.

(vii) The sale to Roanoke Gas Company may begin and may continue only when and while Roanoke subscribes to and complies with the partial requirements tariff of the Atlantic Seaboard Corporation as that tariff now reads or as it may be amended or replaced.

(viii) The results of East Tennessee's operations in Virginia (Zone 3) may not be utilized as the basis for a rate increase filing under Section 4 of the Natural Gas Act.

WILLIAM L. ELLIS,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

IOWA SOUTHERN UTILITIES COMPANY, DOCKET NO. E-7044

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued July 17, 1964)

Iowa Southern Utilities Company (Applicant), incorporated under the laws of the State of Delaware and qualified to do business as a foreign corporation in the State of Iowa, with its principal business office at Centerville, Iowa, filed a supplemental application on May 20, 1964, pursuant to Section 204 of the Federal Power Act, seeking an order authorizing the issuance of additional shares of Common Stock under Applicant's Employee Stock Purchase Plan.

By order issued August 27, 1962, in this docket, the Commission authorized Applicant to issue 10,000 shares of Common Stock, $15 par, pursuant to an Employee Stock Purchase Plan. By order issued July 1, 1963, in Docket No. E-7103, the Commission authorized Applicant to issue up to 1,859,628.2 shares of Common Stock, $10 par, to accomplish a two-for-one split in Applicant's Common Stock and a reduction in the par value from $15 to $10 per share. In its application for the two-for-one split, Applicant did not request any increase in the number of shares for issuance under its Employee Stock Purchase Plan. Immediately prior to the two-for-one split and reduction in par value, the Applicant had issued 459 shares of Common Stock, $15 par, to its employees and had 9,541 shares, $15 par, reserved for the purpose of the Plan. After giving effect to the stock split and to the change in par value and to the sales prior to January 31, 1964, to fully implement the Plan as originally considered, there should remain as of January 31, 1964, 18,205 shares, $10 par, reserved for the purpose of the Plan.

Applicant now requests that the Commission amend its order issued on August 27, 1962, so that the maximum number of shares to be issued under the Plan will be raised to 20,000 shares at $10 par, including those shares authorized in Docket No. E-7103.

Applicant also requests an exemption from the Commission's competitive bidding requirements. On the basis of the present market price of about $25 per share, the entire 20,000 shares of Common Stock, $10 par, for issuance under the Plan would produce proceeds of about $500,000. In accordance with Section 34.1a(a)(3) of the Commission's Regulations under the Federal Power Act, since the proceeds of the Common shares will be less than $1,000,000, and also because of the nature of the issuance, competitive bidding is not required.

Written notice of the application has been given to the Iowa State Commerce Commission and to the Governor of that State. Notice was published in the Federal Register on June 13, 1964 (29 F.R. 7620) stating that any person desiring to be heard or to make any protest with reference to the application should, on or before June 30, 1964, file petitions or protests with the Federal Power Commission, Washington, D.C., 20426. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) The proposed issuance and sale of an additional 10,000 shares of Common Stock, $10 par, for a total of 20,000 shares of Common Stock, $10 par, pursuant to the provisions of the Applicant's Employee Stock Purchase Plan described in the Commission's order of August 27, 1962, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(2) The proceeds from the sales of the shares of Common Stock for issuance under the Employee Stock Purchase Plan will be less than $1,000,000, and, therefore, the proposed issuance and sale of Common Stock is exempt from the competitive bidding requirements by reason of paragraph 34.1a(a)(3) of the Regulations under the Federal Power Act.

(3) The proposed issuance and sale of Common Stock, as hereinafter authorized will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of additional shares of Common Stock $10 par value, as described above, under the Employee Stock Purchase Plan not to exceed the total of 20,000 shares including the number of shares heretofore issued under the Plan upon the terms and conditions, and for the purposes specified in the Commission's order of August 27, 1962 in this docket is hereby authorized, and the Commission's order of August 27, 1962 is hereby modified accordingly.

(B) The proposed issuance and sale of the additional shares of Common Stock are hereby exempted from the competitive bidding requirements of Sections 34.1a(b) and (c) of the Commission's Regulations under the Federal Power Act.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations or cost, or any other matter whatsoever which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. RP64-40

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING, APPROVING AGREEMENT REDUCING RATES, AND MAKING RATES EFFECTIVE

(Issued July 17, 1964)

New York State Natural Gas Corporation (New York Natural) on June 1, 1964, tendered for filing certain revised tariff sheets[1] to its FPC Gas Tariff, Third Revised Volume No. 1 and Original Volume No. 2 subject to the terms of its proposed Agreement submitted therewith. The proposed changes would reduce rates and charges, effective June 1, 1964, for jurisdictional sales from

[1] Third Revised Volume No. 1: Second Revised Sheets Nos. 20-B and 20-L; Fifth Revised Sheet No. 20-M; Eighth Revised Sheet No. 20; Ninth Revised Sheet No. 17-A; Tenth Revised Sheet Nos. 4, 5, and 8; Eleventh Revised Sheet No. 16; Twelfth Revised Sheet No. 18; Thirteenth Revised Sheet No. 10. Original Volume No. 2: Twelfth Revised Sheet No. 14.

New York Natural's General System in the amount of approximately $1,006,000 annually, as based on its operations, with certain adjustments, for the twelve (12) months ended December 31, 1963.

The above-identified rate filing reflects the reduction in the Federal income tax rate for corporations which became effective January 1, 1964, as well as the reduction which will become effective January 1, 1965; reductions in the rates of suppliers to New York Natural and various smaller reductions in costs.

New York Natural's proposed Agreement for reduction in rates developed from conferences with the Commission staff after an investigation by the staff of the 1963 operations of New York Natural. The reduced rates proposed by New York Natural, to become effective on June 1, 1964, are set forth in Appendix A hereto.

The proposed Agreement in Article III thereof sets out those obligations in the Rate Settlement Agreement in Docket No. G–17296, *et al.*, (1962 Settlement) conditionally approved by Commission order issued July 20, 1962 (28 FPC 191) which are discharged by the instant proposal. All other obligations of the 1962 Settlement not specifically listed in Article III are continuing obligations of New York Natural, except that pursuant to Commission approval granted December 20, 1963, the accounting for underground storage of gas has been changed to an annual last-in-first-out (LIFO) method.

New York Natural's rate reduction proposal is subject to the further following conditions:

(a) That the rate reductions filed by Texas Eastern Transmission Corporation, in Docket No. RP64–36, for effectiveness as of January 1, 1964; the rate reduction of *Tennessee Gas Transmission Company*, in Docket No. G–11980, *et al.*, for effectiveness April 1, 1964; and the rate reduction of *Hope Natural Gas Company*, in Docket No. G–5474, *et al.*, for effectiveness April 1, 1964, shall be accepted and made effective as requested.[2]

(b) That the Commission shall accept the tendered proposal of New York Natural in its entirety.

(c) That neither New York Natural, the Staff, nor any other person shall be bound or prejudiced by any ratemaking principle, or any method of cost-of-service determination, or any allocation underlying or supposed to underlie any of the rates provided for herein.

In addition, the Commission is requested to waive compliance by New York Natural with the requirements of the Commission's Regulations under the Natural Gas Act, particularly Part 154 thereof, to the extent necessary to effectuate all of the provisions of the proposal.

After due notice given, no protests or objections to New York Natural's proposed revised rates have been received.

The Commission finds:

(1) Good cause exists for waiving the requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the above-identified revised tariff sheets may become effective on June 1, 1964, as hereinafter ordered.

(2) The above-identified revised tariff sheets should be accepted for filing. The rates and charges provided for therein, under the terms and conditions

---

[2] The rate reductions of Texas Eastern and Tennessee Gas Transmission were accepted by order and by letter respectively on April 24, 1964.

of New York Natural's Agreement, are proper and in the public interest in carrying out the provisions of the Natural Gas Act and should be made effective as hereinafter provided and ordered.

The Commission orders:

(A) The 30-day period of notice required by Section 154 of the Commission's Regulations under the Natural Gas Act is hereby waived with respect to the effective date of the abovel-dentified tariff sheets.

(B) The above-identified revised tariff sheets are accepted for filing to become effective as of June 1, 1964, as proposed by New York Natural, subject to the terms and conditions of this order.

(C) New York Natural shall comply with each of the provisions of the Agreement accompanying its proposal submitted herein on June 1, 1964.

(D) Nothing contained in this order, or in the proposed Agreement submitted by New York Natural on June 1, 1964, shall be construed as relieving New York Natural of the obligations undertaken by it in its Rate Settlement Agreement approved July 20, 1962, in Docket No. G–17296, *et al.*, except the provisions specified in Article III of the instant Agreement and the adoption of the LIFO method of accounting for underground storage of gas approved by the Commission on December 20, 1963.

(E) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, New York State Natural Gas Corporation, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against New York Natural Gas Corporation or any other persons or parties affected by this order.

APPENDIX A

NEW YORK STATE NATURAL GAS CORPORATION

RATES FOR GENERAL SYSTEM SALES AND SERVICES

Rate schedule	Cents per Mcf[1]	
	Present rates	Proposed rates
	Cents	*Cents*
CQ–1:		
Base	39.78	39.53
Excess	42.78	42.53

Sales from general system:		
Aggregate of 50,000 Mcf per day	68.28	67.26
All additional	53.28	52.68

[1] Mcf at 14.73 psia except sales under OSS Rate Schedule which are at 15.025 psia.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CITY GAS COMPANY OF NEWTON, N.J., DOCKET NO. CP64-238

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 20, 1964)

On April 14, 1964, City Gas Company of Newton, N.J. (Applicant) filed in Docket No. CP64-238 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Tennessee Gas Transmission Company (Tennessee) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in the Town of Newton, the Borough of Sussex and the Townships of Wantage and Hampton, all in New Jersey, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 19 miles of 4-inch pipeline from the communities to be served to Tennessee's transmission facilities. In addition Applicant will construct and operate distribution facilities in Sussex, Wantage and Hampton and convert the manufactured gas system in Newton to natural gas.

The application shows the total estimated third year peak day and annual natural gas requirements for the communities to be served to be 1,275 Mcf and 175,400 Mcf, respectively.

The estimated cost of Applicant's project in the first year of operation is shown to be $265,044, which cost will be financed by the issuance of additional common stock and the sale of First Mortgage Bonds.

On May 18, 1964, Tennessee filed an answer to the subject application stating that it does not oppose an order directing it to serve Applicant as requested.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 20, 1964, (29 F.R. 7897). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G-910 (6 FPC 777).

(2) Applicant, City Gas Company of Newton, N. J., is a public utility duly organized and existing under the laws of the State of New Jersey and is authorized to engage in the business of rendering gas service in said State.

(3) It is necessary and desirable in the public interest that Tennessee be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 1,275 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from Tennessee, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant

and Tennessee in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Tennessee serve Applicant, as proposed, will not place any undue burden upon Tennessee nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Tennessee Gas Transmission Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 1,275 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application.

(B) Tennessee shall report to the Commission in writing the date of commencement of service to Applicant.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Tennessee, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Tennessee in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CUMBERLAND AND ALLEGHENY GAS COMPANY, DOCKET NO. CP64-129

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 20, 1964)

On December 4, 1963, Cumberland and Allegheny Gas Company (Applicant) filed in Docket No. CP64-129 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to construct and operate 1160 feet of 4-inch pipeline, together with the necessary measuring and regulating equipment to provide natural gas to the Mullenax Lumber Company (Mullenax) in the City of Parsons, Tucker County, West Virginia, all as more fully set forth in the application on file with the Commission.

The proposed service (industrial sale) will be rendered from Cumberland's existing 12-inch transmission Line No. 8000, which extends through the Black Fork District, Tucker County, West Virginia. Applicant states the service can be rendered without impairing its ability to render adequate service to existing markets and customers. The estimated maximum daily and annual requirements of Mullenax are stated to be 30 Mcf and 5900 Mcf, respectively, and will be subject to curtailment, if necessary, for the protection of service to domestic customers.

The estimated cost of facilities is $8,775, of which $4,640 will be contributed by Mullenax.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the

application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Cumberland and Allegheny Gas Company, a West Virginia corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued January 5, 1944, in Docket No. G–387 (4 FPC 472).

(2) The proposed construction and operation of facilities and transportation of natural gas as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and transportation of natural gas as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP64–206

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued July 20, 1964)

On March 18, 1964, The Manufacturers Light & Heat Company (Applicant) filed in Docket No. CP64–206 an application pursuant to Section 7(c) of the

Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas transmission facilities and, pursuant to Section 7(b), for permission and approval to abandon by replacement certain other natural gas transmission facilities, all as more fully set forth in the application.

The pipelines proposed to be constructed hereunder consist of (1) 15.2 miles of 20-inch gas transmission pipeline extending from Applicant's Donegal Storage Field Compressor Station in Donegal Township, Washington County, Pennsylvania, in a northwesterly direction to a point of connection with Applicant's 12-inch Line No. 5 in Cross Creek District, Brooke County, West Virginia, and (2) 3.5 miles of 12-inch gas transmission pipeline extending from a point in Grant District, Hancock County, West Virginia, to Chester, West Virginia. The estimated total capital cost is $1,242,000 for the 20-inch line and $223,000 for the 12-inch line which is to be financed through the issuance and sale of promissory notes or common stock to Applicant's parent company, The Columbia Gas System, Inc.

The pipelines proposed to be abandoned by replacement consist of 3.5 miles each of 8-inch Line No. 24, 10-inch Line No. 23 and 12-inch Line No. 25 extending from a point in Grant District, Hancock County, West Virginia, to Chester, West Virginia. Age and deteriorated condition necessitate replacement of these lines.

The construction and operation of the 15.2 miles of 20-inch line are necessary in order to serve the 1964–65 winter requirements of Applicant's market area. Construction of 3.5 miles of 12-inch line is proposed as the initial step of a plan to replace lines and to upgrade the facilities in this area.

Due notice of the subject application has been given by publication in the Federal Register on June 17, 1964 (29 F.R. 7733). No protest, petition to intervene or notice of intervention has been filed herein.

At a hearing held on July 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Manufacturers Light & Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of August 31, 1943, in Docket No. G–496 (3 FPC 1079).

(2) The facilities proposed to be constructed and operated as hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Said construction and operation of the facilities proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(6) The facilities proposed to be abandoned by Applicant as hereinbefore set forth, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission, and the abandonment of said facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Manufacturers Light & Heat Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months of the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-232

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 20, 1964)

On April 9, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64-232 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities consisting of a meter station and connection on Applicant's existing transmission facilities in Rock Island

County, Illinois, and the sale and delivery of natural gas to Illinois Power Company, an existing customer of Applicant, for resale and local distribution in the Villages of Reynolds and Sherrard, and the unincorporated Community of Preemption, Illinois, all as more fully set forth in the application.

Applicant estimates the cost of the proposed facilities to be $9,800 which will be defrayed from funds on hand.

Illinois Power Company proposes to serve the Villages of Reynolds and Sherrard and the unincorporated Community of Preemption from the quantities of natural gas which Applicant has heretofore been authorized to sell and deliver to Illinois Power Company. The sale will be made pursuant to the terms and conditions of Applicant's FPC Gas Tariff and executed service agreements.

Illinois Power Company was granted a certificate of public convenience and necessity by the Illinois Commerce Commission for the proposed service on March 4, 1964.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G–9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to Illinois Power Company, as hereinbefore described, and more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas to Illinois Power Company, as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all appli-

cable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within sixty days of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-253

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 20, 1964)

On April 23, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64-253 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities consisting of a meter station and connection on Applicant's existing transmission pipeline in LaSalle County, Illinois, and the sale and delivery of natural gas to Illinois Power Company, an existing customer of Applicant, for resale and local distribution in the Villages of Sheridan, Newark and Millington, and the unincorporated Communities of Norway and Millbrook, Illinois, all as more fully set forth in the application.

Applicant estimates the cost of the proposed facilities to be $15,700, which will be defrayed from funds on hand.

Illinois Power Company proposes to serve the Villages of Sheridan, Newark and Millington and the unincorporated Communities of Norway and Millbrook, Illinois, from the quantities of natural gas which Applicant has heretofore been authorized to sell and deliver to Illinois Power Company. The sale will be made pursuant to the terms and conditions of Applicant's FPC Gas Tariff and executed service agreements.

Illinois Power Company was granted a certificate of public convenience and necessity by the Illinois Commerce Commission for the proposed service on March 26, 1964.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to Illinois Power Company, as hereinbefore described, and as more fully described in the

application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas to Illinois Power Company, as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within sixty days of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 233

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 20, 1964)

Pacific Gas & Electric Company, Licensee for Project No. 233,[1] filed a statement with the Commission, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for Pit Plants Nos. 3, 4 and 5 for the periods from August 1, 1925, May 16, 1927, and January 1, 1946[2] respec-

[1] The project is located on the Pit River in Shasta County California and affects lands of the United States within the Shasta and Lassen National Forests. It is comprised of three developments or plants, Pit Nos. 3, 4 and 5. The license for Project No. 233 authorizing the Pit No. 3 development was issued October 23, 1923, pursuant to Section 4 of the Federal Water Power Act (Fourth Annual Report of the Federal Power Commission, p. 91), for a period of 50 years. The license authorization for the Pit No. 4 development was issued August 3, 1926, pursuant to Section 4 of the Federal Water Power Act (Seventh Annual Report of the Federal Power Commission, p. 59), for a period from August 3, 1926 to October 23, 1973. By order authorizing amendment of license issued June 9, 1942 (3 FPC 730) the license was amended to authorize the construction of Pit No. 5.

[2] Licensee's FPC Form No. 8 as filed for Pit No. 5 covers the period from January 1, 1946, through December 31, 1957. However, only the changes for the period from January 1, 1946, through December 31, 1954, were verified by the staff.

tively through December 31, 1954, a net increase in the original cost of the project in the amount of $656,934.66. That increase consists of gross additions of $708,559.62, gross retirements of $185,814.34 and debit adjustments of $134,189.38. The resulting claimed total actual legitimate original cost of Project No. 233 as of December 31, 1954 is $48,068,969.37.[3]

The Commission staff made a field examination of Licensee's books and records and other data for the purpose of ascertaining the correctness of the aforementioned claimed and recorded project cost changes for the periods noted above.

Following that examination, the staff proposed certain adjustments, and the accounting dispositions therefor, agreed to by the Licensee, subject to Commission approval, involving a reclassification of project costs in the amount of $3,900.32 within the project plant accounts, and a reduction of $50,532.89, in the project claimed cost for the period August 1, 1925 through December 31, 1954; in addition to the credit adjustment of $50,532.89 to the claimed cost, a net credit amount of $18,759.83 is required to adjust the recorded cost to the claimed cost, resulting in a net reduction in the recorded cost of $69,292.72. The resulting total actual legitimate original cost of the project as of December 31, 1954, amounts to $48,018,436.48 as shown in the attached schedules, I and II.

The detailed proposed adjustments to claimed costs are as follows:

Adjustment No.	Description	Debit (credit)
1	Nonproject plant	($30,605.44)
2	Taxes capitalized	(13,268.01)
3	Hydrographic expenses capitalized	(6,569.44)
4	Reclassification between detailed plant accounts	
	Total adjustments	(50,532.89)

The accounting disposition of the amounts involved in the proposed adjustments are shown by the following composite journal entry:

Account No.	Title	Debit (credit)
	Adjustments:	
100.1	Electric plant in service—Project No. 233	($69,292.72)
	Recommended accounting disposition:	
100.1	Electric plant in service—nonproject	44,860.91
110.0	Nonutility property	4,594.36
250.1	Accumulated provision for depreciation of electric plant in service—Project No. 233	1,036.00
271.0	Unappropriated earned surplus	18,801.45
	Total	69,292.72

Staff analysis of Licensee's provisions for project depreciation has not been completed and the staff recommends that the Commission defer for future

[3] By order issued December 7, 1948 (7 FPC 1076), the Commission determined the actual legitimate original cost of the Pit No. 3 plant as of June 30, 1930, exclusive of additions and retirements from August 1, 1925, through June 30, 1930, to be $12,503,274.56; the Pit No. 4 plant as of October 31, 1930, exclusive of additions and retirements from May 16, 1927, through October 31, 1930, to be $1,672,821.77; and by order issued December 3, 1957 (18 FPC 742), determined the actual legitimate original cost of the Pit No. 5 plant as of December 31, 1945, to be $33,235,938.38.

consideration and determination the amount of accrued depreciation applicable to in-service project properties as of December 31, 1954.

Based upon the proposed adjustments, the staff recommends and Licensee concurs, that the Commission determine: (1) the net increase or change in the actual legitimate original cost of Project No. 233 for the period from August 1, 1925 through December 31, 1954 to be $606,401.77, comprised of gross additions of $678,193.33, gross retirements of $185,814.34 and debit adjustments of $114,022.78; and (2) the actual legitimate original cost of the project as of December 31, 1954 to be $48,018,436.48, classified by plants and primary plant accounts as shown in the attached schedule I.

By letter dated June 3, 1963, Licensee confirmed its agreement with respect to the proposed adjustments, accounting dispositions and resulting project costs.

The California Public Utilities Commission by letter of June 14, 1963 advised that it has no objections to the staff recommendations.

The Commission finds:

(1) Licensee by its tentative agreement to the proposed adjustments including the accounting dispositions and resulting project costs and California Public Utilities Commission by its letter dated June 14, 1963 as set forth above, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions as proposed by the staff and agreed to by Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 233 for the period from August 1, 1925 through December 31, 1954 is $606,401.77, comprised of gross additions of $678,193.33, gross retirements of $185,814.34 and debit adjustments of $114,022.78; and the resulting actual legitimate original cost of the project as of December 31, 1954 is $48,018,436.48, classified by plants and by primary plant accounts as shown in the attached schedule I.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that a determination of the accrued depreciation applicable to in-service project properties of Project No. 233 as of December 31, 1954 be reserved for future Commission consideration as hereinafter provided.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts for Project No. 233 showing the debit amount of $606,401.77 as the net increase or change in the actual legitimate original cost of the project for the period from August 1, 1925 through December 31, 1954 and the total debit balance of $48,018,436.48 as the actual legitimate original cost of the project as of December 31, 1954, all as more specifically shown in the attached schedule I.

(D) The matter of Commission determination of accrued depreciation applicable to in-service project properties of Project No. 233 as of December 31, 1954, is hereby expressly reserved for future Commission consideration and decision.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission certified copies of Licensee's adjusting journal entry showing compliance with this order; three copies of the journal entry to be submitted to the Secretary, Federal Power Commission, Washington, D.C., 20426, and two copies to be submitted to the Regional Accountant, Federal Power Commission, San Francisco, California, 94111.

[1] Account references are to account numbers and titles prescribed in the Commission's uniform system of accounts for public utilities and licensees effective prior to Jan. 1, 1961 ..... (666,778.97)

Net recorded changes over claimed changes for period under review. 18,759.83

[2] Total excess of recorded cost over claimed cost at Dec. 31, 1954. Excess recorded cost over approved cost of Pit No. 5 Plant as of Dec. 31, 1945, was eliminated from the plant accounts in Dec. 1957 pursuant to Commission Order Issued Dec. 3, 1957 (18 FPC 742).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST, NET CHANGE THEREIN, AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 20, 1964)

Pacific Power & Light Company, Licensee for the Iron Gate development of Project No. 2082,[1] on February 4, 1963, filed its initial statement, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for Project No. 2082 (Iron Gate development), as of July 31, 1962, an actual legitimate original cost of $8,437,751.29. In addition, Licensee's books and records show for the period August 1, 1962, through December 31, 1962, a net increase in the development's cost of $44,205.80, resulting in a total claimed or recorded actual legitimate original cost of the Iron Gate development of Project No. 2082 as of December 31, 1962, of $8,481,957.09.[2]

The Commission's staff made a review of the books, records and other data of Licensee for the purpose of ascertaining the correctness of the claimed cost of the Iron Gate development of Project No. 2082 as of July 31, 1962, the correctness of recorded changes in the development's cost to December 31, 1962, and the resulting cost of Iron Gate development of Project No. 2082 as of December 31, 1962.

Following that examination, an agreement, subject to Commission approval, was reached between the staff and Licensee's representatives with respect to certain proposed adjustments involving (1) the elimination of a net amount of $314.44 from the claimed and recorded cost of the development as of July 31, 1962, and the reclassification of a number of items totaling $130,508.16 within development plant accounts as of that date; (2) the reclassification of certain items in the amount of $34,660.47 within development plant accounts for the period from August 1, 1962, through December 31, 1962; and (3) the accounting disposition of all amounts involved in the proposed adjustments.

Based upon the proposed adjustments, the resulting revised actual legitimate original cost of the Iron Gate development of Project No. 2082 as of July 31, 1962, is $8,437,436.85; the net increase or change in the cost of the development for the period from August 1, 1962, through December 31, 1962, is $44,205.80; and the resulting revised actual legitimate original cost of the Iron Gate development of Project No. 2082 is $8,481,642.65 as of December 31, 1962.

The proposed eliminations from claimed initial cost of Iron Gate development as of July 31, 1962, in the net amount of $314.44 are composed of the following items:

---

[1] The Iron Gate development or Iron Gate Plant is one of seven hydroelectric developments licensed as Project No. 2082. It is located on the Klamath River in California and Oregon, and affects lands of the United States. The license (issued pursuant to Section 4(e) of the Federal Power Act) for Project No. 2082 was issued originally to The California Oregon Power Company for a period of 50 years commencing March 1, 1956. By order issued June 16, 1961 (25 FPC 1154), the Commission approved the transfer of the license for Project No. 2082 from The California Oregon Power Company to Pacific Power & Light Company. In a separate order issued on that date (25 FPC 1156), the Commission approved the merger of The California Oregon Power Company and Pacific Power & Light Company, with the latter to be the surviving corporation.

[2] Articles 47 and 48 of the license provide for Commission determination of the actual legitimate original cost of the portion of the project completed prior to the effective date of the license and the actual legitimate original cost of the parts of the project to be completed thereafter, together with any additions to or betterments of the project.

Elimination of improper land costs	($7,876.08)
Correction of interest during construction and elimination of credits for power produced during construction	(8,274.75)
Correction of salvage credited to construction equipment	15,746.39
Total	(314.44)

The proposed reclassifications totaling $165,168.63 within the development plant accounts consist of the following amounts by accounts:

Initial project cost

Account No.	Title	Amount, debit or ( ) credit
336	Roads, railroads, and bridges	$130,508.16
330	Land and land rights	(130,508.16)
	Aug. 1, 1962 through Dec. 31, 1962	
336	Roads, railroads and bridges	34,660.47
330	Land and land rights	(34,660.47)

The proposed accounting dispositions of the amounts involved in the adjustments to bring Licensee's claimed or recorded cost of the Iron Gate development as of December 31, 1962, into agreement with the recommended cost of that development tentatively agreed to between the staff and Licensee's representatives are shown by the following composite journal entry:

Account No.	Title	Debit	Credit
101	Electric plant in service—Project No. 2082, Iron Gate Plant		$314.44
183	Preliminary survey and investigation charges		15,746.39
121	Nonutility property	$6,106.90	
216	Unappropriated earned surplus	9,953.93	

Licensee, by letter dated January 6, 1964, confirmed its agreement with respect to the proposed adjustments, including the accounting dispositions and resulting costs of the development.

The California Public Utilities Commission and the Public Utility Commissioner of Oregon were separately advised, by letters of this Commission dated January 15, 1964, of the proposed adjustments, including the accounting dispositions and resulting costs of the development. By their respective letters dated January 21, 1964, and January 24, 1964, the California Public Utilities Commission and the Public Utility Commissioner of Oregon indicated their concurrence with the staff recommendations.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments, including the accounting dispositions and the resulting costs of the Iron Gate development of Project No. 2082, and its letter dated January 6, 1964, the California Public Utilities Commission, by its letter dated January 21, 1964, and the Public Utility Commissioner of Oregon, by his letter dated January 24, 1964, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

	Total overhead construction costs	944,342.26	(8,274.75)	936,067.51					
	Total indirect and overhead construction costs	3,369,233.78	(674.66)	3,368,559.12					
	Total Iron Gate Plant	8,437,751.29	(314.44)	8,437,436.85	8,437,436.85	44,205.80		44,205.80	8,481,642.65

( ) Denotes credit.

(2) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) The actual legitimate original cost of the Iron Gate development of Project No. 2082 as of July 31, 1962, is $8,437,436.85; the net increase or change in the actual legitimate original cost of the development from August 1, 1962, through December 31, 1962, is $44,205.80; and the resulting actual legitimate original cost of the Iron Gate development of Project No. 2082 as of December 31, 1962, is $8,481,642.65, all classified by primary plant accounts as shown by the attached schedule.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments and accounting dispositions, as proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for the Iron Gate development of Project No. 2082, showing the debit balance of $8,437,436.85 as of July 31, 1962; the debit amount of $44,205.80 as the net increase or change in the cost of the development for the period August 1, 1962 through December 31, 1962; and the total debit balance of $8,481,642.65, as the actual legitimate original cost of the Iron Gate development of Project No. 2082 as of December 31, 1962, all as more specifically shown in the attached schedule classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(D) Licensee shall file with the Commission within 90 days from the issuance of this order three certified copies of FPC Form No. 7 showing compliance therewith. Two conformed copies of FPC Form No. 7 are to be sent to the Regional Accountant, Federal Power Commission, San Francisco, California.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black

PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI64–1154

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, ACCEPTING FPC GAS RATE SCHEDULE AND SUPPLEMENTS FOR FILING, ACCEPTING NOTICE OF WITHDRAWAL OF SUPPLEMENT TO FPC GAS RATE SCHEDULE, AND REQUIRING REFUNDS

(Issued July 20, 1964)

On March 31, 1964, Pan American Petroleum Corporation (Applicant) filed in Docket No. CI64–1154 an application pursuant to Section 7(c) of the Natural Gas Act authorizing the sale of natural gas in interstate commerce for resale to Trunkline Gas Company (Trunkline) at a price of 20.625 cents per Mcf at 15.025 psia from Applicant's "shallow" rights underlying its leasehold interest in Block 27, offshore Vermilion Parish,[1] Louisiana, all as more fully set forth in the application.

On March 20, 1964, the Commission issued a declaratory order in Docket No. G–15438, *et al.*, in which it was found that Applicant had no certificate authori-

[1] The acreage is within the tax jurisdiction of the State of Louisiana.

zation to make the subject sale from Block 27 although the sale was in fact being made since August 30, 1960, at a rate of 24.05 cents per Mcf at 15.025 psia. The Commission ordered Applicant to file an application pursuant to Section 7 of the Natural Gas Act for the subject sale with the same terms as the settlement proposal of Union Oil Company of California (Union Oil) in Docket No. CI62-806 (except as to refunds) as amended by Supplement No. 5 to Union Oil's FPC Gas Rate Schedule No. 61 (amendment of November 14, 1963). Applicant and Union Oil each own an undivided one-half interest in the subject acreage in Block 27. Applicant was further ordered to provide in its application to refund to Trunkline all amounts above 21.25 cents per Mcf collected from the date of initial delivery through March 31, 1963, and all amounts above 20.625 cents per Mcf collected since that date, together with interest on all amounts refunded computed at a rate of seven percent per annum to accrue through December 31, 1963. These refund requirements are consistent with those in Applicant's settlement of its *Union Texas Petroleum* proceeding dockets. See orders of November 19, 1963 and February 4, 1964, in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.* The application filed on March 31, 1964, conforms to the requirements of the Commission's order of March 20, 1964.

Concurrently with the subject application Applicant has filed the related gas purchase contract, as supplemented, as an FPC gas rate schedule. Applicant requests that Supplement No. 2 to its FPC Gas Rate Schedule No. 258, pursuant to which the uncertificated sale has been made, be withdrawn.

Trunkline is a natural gas pipeline company subject to the Commission's jurisdiction under the Natural Gas Act and in turn has customers who are natural gas pipeline companies. In view of the Commission's duty to insure that the ultimate consumers of natural gas actually receive all of the benefits of the Commission's rate regulation to which they may be entitled, the Commission will take action here to assure that, within the limits of its jurisdictional reach, the refunds to be ordered actually flow to those parties legally and equitably entitled thereto.

We are not here determining that a pipeline purchaser from Applicant or one down the line in the chain of resales between Applicant and ultimate consumer is never entitled as a matter of law or equity to retain all or part of the refunds received from a supplier. We conclude only that merely because a pipeline may be under no special express requirement to flow refunds through to its customers, and may not previously have passed on to its customers the higher gas costs arising from the heretofore uncertificated sale which is the subject of this order, does not determine that the pipeline customer is entitled to retain such refunds.

Accordingly, Applicant will be required to retain the refunds due Trunkline subject to further orders of the Commission. Also, in further orders of the Commission, Trunkline's pipeline purchasers will be required to submit reports setting forth their intentions with respect to any refunds they may receive, and, if they do not intend to pass such sums on to their customers, setting forth why they believe they are entitled to receive such funds.

Applicant may elect, at its option, to either use these funds in its business and pay 6% interest thereon or to deposit such funds in a special escrow account for the sole benefit of the ultimate owners of such refunds and credit all interest actually earned thereon to the escrow account.

After due notice no notice of intervention or protest to the granting of the application has been received. A petition to intervene was filed and withdrawn by Long Island Lighting Company. No other petition to intervene has been received.

At a hearing held on July 16, 1964, the Commission on its own motion received and made part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Pan American Petroleum Corporation, is engaged in the sale and delivery of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sale of natural gas hereinbefore described, as more fully described in the application in this proceeding, is being made in interstate commerce subject to the jurisdiction of the Commission, and such sale by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale of natural gas by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should be required to make such refunds as hereinafter ordered.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the contract, as supplemented, submitted by Applicant should be accepted for filing as an FPC gas rate schedule and that the notice of withdrawal of Supplement No. 2 to Applicant's FPC Gas Rate Schedule No. 258 should be accepted for filing.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued, upon the terms and conditions of this order, authorizing the sale by Applicant herein of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the application and exhibits in this proceeding.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase

contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act.

(D) Within 90 days from the issuance of this order, Applicant shall compute as refunds to Trunkline all amounts above 21.25 cents per Mcf collected from the date of initial delivery through March 31, 1963, and all amounts above 20.625 cents per Mcf collected since that date, together with interest at the rate of seven percent per annum computed on refunds of amounts collected through December 31, 1963.

(E) Applicant shall retain the refunds ordered by paragraph (D) above, subject to further order of the Commission. If Applicant elects to commingle these funds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6% per annum on all funds thus available beginning 90 days from the issuance of this order to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(F) If Applicant elects to deposit the refunds due to Trunkline in a special escrow account, Applicant shall tender for filing within 90 days of the issuance of this order an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon Trunkline. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Applicant and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Applicant, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

(G) The contract, as supplemented, submitted by Applicant as an FPC gas rate schedule is accepted for filing as of the date of initial delivery and is designated as follows:

PAN AMERICAN PETROLEUM CORPORATION

Rate schedule	Supplement	Description and date of instrument
303		Contract 6-26-58.
303	1	Amendment 2-18-59.
303	2	Amendment 6-14-60.
303	3	Amendment 11-18-63.
303	4	Letter 3-31-64.
303	5	Letter 4-28-64.

(H) The notice of withdrawal of Supplement No. 2 to Applicant's FPC Gas Rate Schedule No. 258 be and the same is hereby accepted for filing effective 30 days after the date of filing.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

UNITED FUEL GAS COMPANY, DOCKET NO. G-20270; ATLANTIC SEABOARD CORPORATION, DOCKET NO. G-20272

ORDER GRANTING REHEARING FOR THE PURPOSE OF FURTHER CONSIDERATION

(Issued July 20, 1964)

On June 2, 1964, the Commission issued Opinion No. 430 and accompanying order requiring United Fuel Gas Company and the Atlantic Seaboard Corporation to file rates satisfactory to the Commission and to make refunds. Applications for rehearing have been filed by the following parties: The Dayton Power and Light Company on June 29, 1964; Baltimore Gas and Electric Company on June 30, 1964; Commonwealth Natural Gas Corporation on July 1, 1964; The City of Columbus, Ohio, on July 1, 1964; the Independent Natural Gas Association of America on July 2, 1964; United Fuel Gas Company and Atlantic Seaboard Corporation on July 2, 1964; Washington Gas Light Company on July 2, 1964; The United Gas Improvement Company on July 2, 1964; The Manufacturers Light & Heat Company and Cumberland and Allegheny Gas Company on July 2, 1964; The Ohio Fuel Gas Company on July 2, 1964; and Roanoke Gas Company on July 6, 1964.

In light of the complex nature of the questions raised, we deem it appropriate to grant the applications for the purpose of further consideration. Accordingly, ordering paragraphs (B) and (C) of Opinion No. 430, 31 FPC 1342, will be stayed pending decision on rehearing.

The Commission orders:

(A) The applications for rehearing filed by the parties referred to above are hereby granted for purposes of further consideration.

(B) The requirements of ordering paragraphs (B) and (C) of Opinion No. 430 are hereby stayed pending further order of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

WISCONSIN POWER & LIGHT COMPANY, DOCKET NO. CP64-229

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued July 20, 1964)

Wisconsin Power & Light Company (Applicant) filed in Docket No. CP64-229, an application on April 7, 1964, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to extend its existing transportation facilities (from its Marshfield-Appleton line), to establish physical connection of such facilities with facilities proposed to be constructed by Applicant, and to sell natural gas to Applicant for distribution in Manawa, Wisconsin, all as more fully set forth in the application.

Applicant proposes to construct and operate a distribution system in the Town of Manawa, Wisconsin, as well as 1.8 miles of 4-inch pipeline extending from Manawa to a city gate measuring and regulating station, at which point connection will be made with the facilities requested to be constructed and operated by Michigan Wisconsin.

Annual and maximum day requirements (Mcf @ 14.73 psia) of Manawa for the initial three-year period are estimated to be as follows:

	First year	Second year	Third year
Annual	21,902	50,559	62,755
Maximum day	181	417	519

The total estimated cost of the transmission and distribution facilities for the project at the end of the third year is $181,778, which cost will be defrayed from cash on hand or proceeds from the sale of securities as may be necessary as part of Applicant's overall construction program.

The Public Service Commission of Wisconsin on March 23, 1964, granted Applicant authorization for the proposed distribution system and related facilities.

On April 24, 1964, Michigan Wisconsin filed an answer to the application and stated therein it had no objection to the entry of an order requiring it to provide the requested service and to construct 2 miles of 4-inch lateral pipeline connecting its system to the proposed facilities of the Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 10, 1964 (29 F.R. 7481. No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G-669 (5 FPC 953).

(2) Applicant, Wisconsin Power & Light Company, a Wisconsin corporation having its principal place of business in Madison, Wisconsin, is a corporation

legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, up to 519 Mcf of natural gas on a maximum day and 62,755 Mcf annually for distribution and resale as hereinbefore described.

(4) The requirement that Michigan Wisconsin serve Applicant, as hereinafter ordered, will not (a) place an undue burden upon Michigan Wisconsin, (b) require Michigan Wisconsin to enlarge its transportation facilities or (c) impair Michigan Wisconsin's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in the Town of Manawa, Wisconsin, within one year from the date of the issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell and deliver up to 519 Mcf of natural gas on a maximum day and 62,755 Mcf annually to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-261

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 21, 1964)

On April 29, 1964, as supplemented on May 4, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64-261 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in Rock Island County, Illinois, in order to sell and deliver natural gas to Iowa-Illinois Gas & Electric Company (Iowa-Illinois), an existing customer, for resale and distribution in the unincorporated communities of Edgington, Taylor Ridge and Illinois City, Illinois, all as more fully set forth in the application, as supplemented.

Specifically, Applicant proposes to construct and operate (1) three tap connections, (2) three meter stations and (3) three 3-inch lateral pipelines each 200 feet in length.

The total estimated peak day and annual natural gas requirements for the three communities are 417 Mcf and 37,486 Mcf, respectively. Applicant states that service to the three communities will be from volumes of natural gas heretofore authorized to be sold by Applicant to Iowa-Illinois.

The total estimated cost of Applicant's proposed facilities is shown to be $54,000, which cost will be financed from funds on hand.

It appears that Iowa-Illinois has received appropriate authorization from the Illinois Commerce Commission.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on July 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP64-237

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 21, 1964)

On April 14, 1964, as amended on June 1, 1964, Transwestern Pipeline Company (Applicant) filed in Docket No. CP64-237 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 and the operation of routine field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application and amendment.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with the said system.

The total cost of the facilities covered by this application will not exceed a maximum of $1,000,000, with no single project to exceed a cost of $250,000, which costs are proposed to be financed from funds made available by company operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order accompanying Opinion No. 328 issued August 10, 1959 (22 FPC 391, 402).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

ALABAMA POWER COMPANY, PROJECT NO. 2146

ORDER FURTHER AMENDING LICENSE AND APPROVING REVISED EXHIBITS

(Issued July 22, 1964)

Alabama Power Company, licensee for Project No. 2146 (Coosa River Project in Alabama and Georgia) filed with the Commission on September 16, 1963, an application for amendment of license to provide for raising the normal water surface elevation of the Lock 3 reservoir from 505 to 508 feet during the summer months of the year or the non-flood season when surcharge flood control storage is not required.

The proposed Lock 3 changes are the results of continuing studies by the licensee to obtain optimum over-all power benefits from the proposed development, and can be accomplished (1) without significant changes in the concrete structures, (2) by the acquisition of additional lands, and (3) by changing the height of the spillway gates from 26 feet to 29 feet. The estimated increase in capital cost to cover these changes is $431,750, and is based on unit costs which the licensee secured from its most recent contracts. It is estimated that the additional 3 feet of gross head obtained by increasing the maximum power pool elevation from 505 to 508 feet as hereinafter provided, will permit the recovery of practically all the lost or undeveloped head between the Lock 3 development and the upstream Weiss development and will provide, during system peak load conditions, about 7,300 kw of net additional dependable capacity and, during

a normal water year, about 5.0 million kwh of net additional energy, based on an initial and ultimate installation of 72,900 kw (3 units of 24,300 kw each). Based on an estimated value of $27.53 per kw-yr. for dependable capacity and 2.51 mills per kwh for average annual energy, the annual value of the power increase, about $213,500, exceeds the estimated annual costs of about $52,900, by $160,600.

Representatives of the Corps of Engineers and the licensee have held conferences recently to discuss the proposed license amendment to permit raising the pool level of the Lock 3 reservoir, during the summer months, from elevation 505 to 508 feet. As a result of these conferences, it was concluded that a satisfactory regulation plan, not detrimental to downstream flood control and navigation, can be developed with the drawdawn from elevation 508 in advance of floods limited to elevation 505. It was also concluded that lowering the pool below elevation 505 should not be permitted until a satisfactory advance flood evacuation plan to elevation 500 can be developed, and that power pool filling should not begin until April 15 and not reach elevation 508 prior to May 1 of each year. A new article has been developed for inclusion in the amended license and will supersede proposed Exhibit H–Fig. 1 included in the application for amendment of license.

It thus appears feasible to permit the raising of the water surface elevation of the Lock 3 pool during the summer months. In addition the increased elevation should enhance the recreational values of the reservoir and should be an aid to navigation during the low flow months. The Lock 3 powerhouse installation remains the same as before, namely 72,900 kw (3 units of 24,300 kw each).

On August 19, 1963, the licensee filed for Commission approval, revised Exhibit L drawings showing proposed changes and modifications to the Jordan No. 2 development of the Coosa River Project No. 2146 located on the Coosa River in Alabama and Georgia. The application was filed pursuant to the provisions of Article 30 of the license.

Continued subsurface explorations and review of the design of the Jordan No. 2 development by the licensee has resulted in the following proposed described changes which are shown on the revised drawings: (1) relocation of the powerhouse to a site where the rock is at a lower elevation and still suitable for a foundation, thus resulting in less rock excavation; (2) the powerhouse relocation would require the tailrace canal to be realigned to lower ground resulting in less canal excavation and the taking of less cultivatable land; (3) the powerhouse design has been changed from an indoor type to a semi-outdoor type, utilizing a steel spiral scroll case; and (4) the powerhouse intake control gate would be changed from a vertical-lift type to a radial gate type.

The above-described proposed Jordan No. 2 powerhouse design changes would result in an estimated savings in capital costs in the amount of about five percent, or approximately $2,300,000, even though more land will be required for the tailrace canal. Estimated costs were based on unit costs which the licensee secured from its most recent contracts. The increased amount of land required for the tailrace canal was found to be necessary to provide an area to receive the excavation resulting from canal construction and for the future maintenance of the canal itself.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation are satisfactory and have been approved pursuant to Section 4(e) of the Federal Power Act.

It has been called to our attention, partly by the licensee, and partly by others, that free public access to Project No. 2146 pursuant to Article 7 of the license may be rendered largely ineffective because the licensee has not acquired

the necessary interests in sufficient project lands adjacent to the reservoirs to provide the public an effective free access for recreational purposes.

Failure to acquire the necessary interest in sufficient lands initially may result in higher costs and delay the establishment of adequate free access areas. We are, therefore, including a provision in this amendment to provide the Commission with additional information and to assist the licensee in providing the public with free access areas for recreational purposes.

The Commission finds:

(1) Public notice of the application for amendment of license has been given. No protests have been received.

(2) The following described revised Exhibit L drawings, filed with the Commission on September 16, 1963, conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit L–Revised, Sheets Nos. 7, 7A and 7B (FPC Nos. 2146–173, –174, and –175) now part of the license and which have been superseded, should be eliminated from the license for the project:

Exhibit L	FPC No.	Title, Coosa River development lock 3 dam
Revision No. 1, Sheet No. 7	2146–213	Plan and typical sections.
Revised, Sheet No. 7A	2146–214	Powerhouse transverse section.
Revised, Sheet No. 7B	2146–215	Powerhouse transverse section.

(3) Exhibit M (Revision No. 3) entitled "General description of mechanical, electrical and transmission equipment", filed as part of the application for amendment, conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit M (Revision No. 2) now part of the license and which has been superseded, should be eliminated from the license for the project.

(4) The following described revised Exhibit L drawings filed August 19, 1963, conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit L drawings, Sheets Nos. 25A, 26A, 27A, 28A, and 29A (FPC Nos. 2146–129 through –133), now part of the license and which have been superseded, should be eliminated from the license for the project:

Exhibit L	FPC No.	Title, General design drawings—Coosa River development—Jordan Dam No. 2
Revised, Sheet No. 25A	2146–202	General plan.
Sheet No. 25B	2146–203	Typical sections through intake, tailrace and dike.
Revised, Sheet No. 26A	2146–207	General arrangement of powerhouse.
Revised, Sheet No. 27A	2146–208	Powerhouse section.
Revised, Sheet No. 28A	2146–209	Powerhouse-longitudinal section along center line units.
Revised, Sheet No. 29A	2146–210	Powerhouse plan at elevation 157.0.
Sheet No. 29B	2146–211	Powerhouse plan at elevation 139.5.
Sheet No. 29C	2146–212	Powerhouse plan at elevation 129.5.

The Commission orders:

(A) The license for Project No. 2146 is hereby further amended by adding thereto the following articles:

Article 50. The maximum normal water surface elevations for the Lock 3 development shall be at 505 feet from November 5 through April 15, and at 508 feet from May 1 through October 31 of each year, and the temporary lowering of the water surface elevation below these maximum normal water surface

elevations, in the interests of flood control and navigation, shall be in accordance with such reasonable rules and regulations as may be prescribed by the Secretary of the Army.

Article 51. The Licensee shall, within six months after the issuance of this order, submit to the Commission for approval, a proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

(B) The revised Exhibit L drawings described in finding (2) above are hereby approved as part of the license for Project No. 2146, and the Exhibit L drawings mentioned in the same finding as being superseded are hereby eliminated from the license for the project.

(C) The Exhibit M (Revision No. 3) described in finding (3) above is hereby approved as part of the license for Project No. 2146, and the Exhibit M (Revision No. 2) mentioned in the same finding as being superseded is hereby eliminated from the license for the project.

(D) The revised Exhibit L drawings described in finding (4) above are hereby approved as part of the license for Project No. 2146, and the Exhibit L drawings mentioned in the same finding as being superseded are hereby eliminated from the license for the project.

(E) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

GAFFNEY PIPELINE COMPANY, DOCKET NO. CP64-278

DECLARATION OF EXEMPTION

(Issued July 22, 1964)

On May 18, 1964, Gaffney Pipeline Company (Applicant) filed in Docket No. CP64-278 an application pursuant to Section 1(c) of the Natural Gas Act for exemption from the provisions thereof.

Upon the basis of the application filed, the exhibit appended thereto, and the files of the Commission, it appears that:

(1) Applicant, a wholly-owned subsidiary of United Cities Gas Company, is a South Carolina corporation duly authorized to do business in said State;

(2) Applicant operates 1.3 miles of 4-inch pipeline from a point on the main transmission line of Transcontinental Gas Pipe Line Corporation within the State of South Carolina to Gaffney, South Carolina;

(3) All natural gas received by Applicant from Transcontinental is transported and sold within the State of South Carolina and all of Applicant's related facilities are located within said State; and

(4) The State of South Carolina Public Service Commission has certified to the Federal Power Commission that it has and is exercising regulatory jurisdiction over the rates, services and facilities of Applicant.

Wherefore, the Commission declares, by reason of the foregoing: Gaffney Pipeline Company is exempt from the provisions of the Natural Gas Act and the orders, rules and regulations of the Commission issued thereunder.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NORTHERN STATES POWER COMPANY, DOCKET NO. E-7168

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF PREFERRED STOCK

(Issued July 22, 1964)

By order issued July 9, 1964, *supra*, p. 85, in the above-entitled matter, the Commission authorized Northern States Power Company (Applicant) to issue and sell at competitive bidding 150,000 shares of Cumulative Preferred Stock, par value $100 per share, subject to the provisions, among others, set forth in Paragraph (B) of that order as follows:

(B) The proposed issuance and sale of Preferred Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereon.

Applicant, on July 22, 1964, filed an amendment, pursuant to the requirements of the aforementioned Commission order, in which it states, among other things, that it proposes to accept as representing the lowest annual cost of money to it, the bid of Eastman Dillon, Union Securities & Co., Harriman Ripley & Co., Incorporated, and Kidder, Peabody & Co. Incorporated to purchase the 150,000 shares of the proposed issuance of Preferred Stock for $100.19 per share, with a dividend rate of $4.56 per share.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements relative to the issuance and sale of Preferred Stock contained in Paragraph (B) of the Commission's order issued July 9, 1964, in the above-entitled docket; and under the bid it proposes to accept for the purchase of the proposed issuance of Preferred Stock, the price per share of Preferred Stock to be received by Applicant and the dividend rate to be paid thereon are reasonable.

(2) The proposed issuance and sale of Preferred Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price per share of Preferred Stock to be received by Applicant and the dividend rate to be paid thereon by Applicant under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Preferred Stock referred above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of Paragraph (A) and of Paragraphs (C), (D) and (E) of the Commission's order issued July 9, 1964, in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. G–14721

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 23, 1964)

On January 22, 1964, Cities Service Gas Company (Applicant) filed an application to amend the Commission's order issued October 6, 1958, in Docket No. G–14721 by authorizing Applicant to transport and deliver an additional 125,316 Mcf of natural gas annually, on a direct interruptible basis, to the City of Chanute, Kansas, for the use by the latter in its power plant, all as more fully set forth in the application to amend.

The order of October 6, 1958, 20 FPC 460, authorized Applicant, among other things, to acquire and operate certain facilities and to render direct interruptible natural gas service to the City of Chanute, among other industrial customers.

The herein proposed additional volumes will be used in two new dual fuel engine driven electric generating units to be added to Chanute's existing municipal power plant.

No additional facilities will be required for the proposed service since Applicant will make deliveries at the existing town border connection.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 25, 1964 (29 F.R. 8128). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued October 6, 1958, in Docket No. G–14721 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued October 6, 1958, in Docket No. G–14721 be and the same is hereby amended by authorizing Applicant to transport and deliver an additional 125,316 Mcf of natural gas annually, on a direct interruptible basis, to the City of Chanute, Kansas, for use by the latter in its power plant, all as hereinbefore described and as set forth in the application to amend.

(B) The certificate, as amended hereby, is granted on the express condition that the additional volume of gas authorized to be delivered herein shall be subject to any curtailment on interruption required to meet existing or future

contracted maximum delivery obligations of Cities Service for firm resale service to its customers.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

THE MONTANA POWER COMPANY, PROJECT NOS. 5, 1473, 1869

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 23, 1964)

The Montana Power Company, Licensee for Project No. 5[1] (Kerr), 1473[2] (Flint Creek), and 1869[3] (Thompson Falls) from time to time filed statements, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the periods indicated below the net increases in the actual legitimate original cost indicated:

Project No.	From—	To—	Claimed net increase
5	Jan. 1, 1941	Dec. 31, 1959	$10,060,382.24
1473	July 1, 1938	do	3,561.53
1869	Jan. 1, 1938	do	128,874.41

The claimed net increases in cost would result in claimed total actual legitimate original cost of the projects as of December 31, 1959 in the amounts shown below:

Project No.	Claimed actual legitimate original cost as of Dec. 31, 1959
5	$19,224,134.55
1473	389,237.48
1869	3,979,991.73

The Staff made an examination of licensee's books and records for the purpose of ascertaining the correctness of claimed and recorded net increases in project plant accounts for the periods indicated above. Following that examination, an agreement, subject to Commission approval, was reached between staff and representatives of the licensee with respect to certain proposed adjustments for the periods indicated above and in the amounts indicated on the attached Schedule I together with the accounting dispositions thereof also as indicated on that Schedule.

---

[1] By order issued March 31, 1948 (7 FPC 528) the Commission determined the actual legitimate original cost of Project No. 5 (Kerr) as of December 31, 1940, to be $9,163,752.31.

[2] By order issued December 3, 1947 (6 FPC 1052) the Commission determined the actual legitimate original cost of Project No. 1473 (Flint Creek) as of July 1, 1938, to be $385,675.95.

[3] By order issued June 26, 1956 (15 FPC 1596) the Commission determined the actual legitimate original cost and accrued depreciation of Project No. 1869 (Thompson Falls) as of January 1, 1938, to be $3,851,117.32 and $503,571.83, respectively.

Based upon the proposed adjustments, staff recommends and Licensee concurs, that the Commission determine the net increases or changes in project costs, for the period indicated, to be in the amounts shown below together with the resulting actual legitimate original cost of the projects as of December 31, 1959:

Project No.	Period	Net increases	Original cost as of Dec. 31, 1959
5	Jan 1, 1941–Dec. 31, 1959	$9,187,838.77	$18,351,591.08
1473	July 1, 1938–Dec. 31, 1959	3,561.53	389,237.48
1869	Jan. 1, 1938–Dec. 31, 1959	139,250.67	3,990,367.99

These amounts are shown more fully in the attached Schedule II.

Staff analysis of Licensee's provisions for project depreciation as of December 31, 1959, has not been completed, and the staff proposes that the Commission defer for future consideration and determination the amount of accrued depreciation applicable to in-service project properties as of that date.

By letters dated April 12, April 25, and April 15, 1963, Licensee confirmed its agreement with respect to the proposed adjustments, accounting dispositions and resulting project costs.

By letter dated May 6, 1963, the Montana Board of Railroad Commissioners concurred in the proposed adjustments, accounting dispositions and resulting project costs.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments, including the accounting dispositions, and the resulting costs and its letters of April 12, 15, and 25, 1963, and the Montana Board of Railroad Commissioners by its letter of May 6, 1963 have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The adjustments described above including the accounting dispositions, as proposed by staff and agreed to by Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and therefore, should be approved and directed as hereinafter provided.

(3) The net increases or changes in the actual legitimate original costs of Project Nos. 5, 1473 and 1869, for the periods indicated below, are in the amounts as shown, together with the resulting actual legitimate original costs of the projects as of December 31, 1959:

Project No.	Period	Net increases	Original cost as of Dec. 31, 1959
5	Jan. 1, 1941–Dec. 31, 1959	$9,187,838.77	$18,351,591.08
1473	July 1, 1938–Dec. 31, 1959	3,561.53	389,237.48
1869	Jan. 1, 1938–Dec. 31, 1959	139,250.67	3,990,367.99

These amounts are more fully shown in the attached Schedule II classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the accrued depreciation applicable to in-service project properties of Project Nos. 5, 1473, and 1869 as of December 31, 1959 be reserved for future Commission consideration as hereinafter provided.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions proposed by the Staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts showing: (1) for Project No. 5 the debit amount of $9,187,838.77 as the net increase or change in the project cost for the period from January 1, 1941 through December 31, 1959, and the total debit balance of $18,351,591.08 as the actual legitimate original cost of the project as of December 31, 1959; (2) for Project No. 1473 the debit amount of $3,561.53 as the net increase or change in the project cost for the period from July 1, 1938 through December 31, 1959, and the total debit balance of $389,237.48 as the actual legitimate original cost of the project as of December 31, 1959; and (3) for Project No. 1869 the debit amount of $139,250.67 as the net increase or change in the project cost for the period from January 1, 1938 through December 31, 1959, and the total debit balance of $3,990,367.99 as the actual legitimate original cost of the project as of December 31, 1959; all as more specifically shown in the attached Schedule II classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(D) The matter of Commission determination of the accrued depreciation applicable to in-service project properties of Project Nos. 5, 1473, and 1869 as of December 31, 1959, is hereby expressly reserved for future Commission consideration and decision.

(E) Licensee shall within 90 days from the issuance of this order, file with the Commission certified copies of Licensee's adjusting journal entry as of December 31, 1959 showing compliance with this order; three copies of that journal entry to be submitted to the Secretary, Federal Power Commission, Washington, D.C., 20426, and two copies thereof to be submitted to the Regional Accountant, Federal Power Commission, San Francisco, California, 94111.

SCHEDULE 1

THE MONTANA POWER COMPANY, LICENSEE

PROJECT NOS. 5, 1473, AND 1869—SUMMARY ACTUAL LEGITIMATE ORIGINAL COST

Project		Allowed cost		Net additions from date of allowed cost to Dec. 31, 1959			Allowed cost as of Dec. 31, 1959
Number	Name	Cost as of	Amount	Claimed	Net adjustment	Allowed	
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
5	Kerr	Dec. 31, 1940	$916,375,231	$1,006,038,224	($87,254,347)	$918,783,877	$18,351,591
1473	Flint Creek	July 1, 1938	38,567,595	356,153	0	356,153	38,923,748
1869	Thompson Falls	Jan. 1, 1938	385,111,732	12,887,441	1,037,626	13,925,067	399,036,799
Total (memo only)			1,340,054,558	1,019,281,818	(86,216,721)	933,065,097	2,273,119,655

OPINION NO. 437

THE SUPERIOR OIL COMPANY, DOCKET NO. G-6067

OPINION AND ORDER GRANTING MOTION FOR MODIFICATION OF CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 23, 1964)*

Syllabus

1. Viewing substitution of new acreage in place of that previously certificated as new sale, Commission *holds* it can and must determine initial price conditions required by public convenience and necessity as of date of such substitution. P. 242.
2. Substitution of new acreage, dedicating new reserves to interstate commerce and removing therefrom other reserves previously dedicated, is not mere amendment to contract and certificate carrying with it the price applicable to formerly dedicated acreage. P. 243.
3. *Graridge* is not in point--it involved substitution of different seller with no other change in contract; present case involves change in source of supply. P. 243.
4. Instant case is more nearly analagous to *Hassie Hunt Trust* where Commission held that substitution of new seller and new source of supply constituted new contract rather than mere amendment of old one. P. 243.
5. Fact that in 1958 Superior was allowed an amendment to its certificate similar to that sought here is not persuasive—such amendment was granted without hearing and without objection; such precedents are of little weight where apparently question was not adequately raised and considered. P. 243.
6. On basis of *Union Texas* and evidence here, Commission *finds* in-line price from date of execution of new contract [for substituted acreage] to January 1, 1963, is 18.5 cents per Mcf. P. 243.
7. Commission *rejects* contention that premium should be allowed over and above in-line price for delivery of gas onshore rather than at offshore platform--absent unusual circumstances in-line price will be applied at point of delivery negotiated at arm's-length between parties. P. 243.
8. Fact that producer must transport gas to pipeline in order to make a sale does not justify higher price in an in-line proceeding. P. 243.
9. It is proper that Superior's certificate include same conditions as to moratorium on price increases as are incorporated in producer's certificate in *Union Texas*. Pp. 243, 244.
10. In proceeding under Section 7 of the Natural Gas Act, Commission *modifies* prior certificate order to provide for substitution of reserves.

H. W. Varner and *W. T. Kilbourne, III* for Superior Oil Company.

Charles V. Shannon for American Louisiana Pipe Line Company.

Kent H. Brown and *Morton L. Simons* for Public Service Commission of the State of New York.

David Lichtenstein for the Staff of the Federal Power Commission.

*Initial decision appears on p. 245. Order issued October 8, 1964 denying reconsideration, 32 FPC 951.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

BLACK, *Commissioner:*

The present case arises from a motion to modify a certificate of public convenience and necessity, issued pursuant to Section 7(c) of the Natural Gas Act, by substituting new acreage in place of that previously certificated.

The principal issue before us in this proceeding is whether the Commission should treat such substitutions of new acreage as mere modifications of existing contracts, leaving prices and all other terms and conditions of the contracts as originally established, or whether such a substitution creates a new and different contract of sale, which must be passed upon and conditioned as though it were presented to us for the first time for certification. For the reasons hereinafter discussed, it is our view that such substitutions are to be treated, in all essential attributes, as new sales. We therefore hold that the Commission can and must determine the initial price and other conditions required by the public convenience and necessity as of the date of such substitution in the same manner and under the same conditions as would apply if the parties had themselves treated this as a new sale.

By contract of July 17, 1963, Superior Oil Company (Superior) sold 1⅛ trillion cubic feet of natural gas to American Louisiana Pipe Line Company (Am-La) from acreage in southern Louisiana and the adjacent offshore area. The original contract dedicated five blocks of acreage to this sale, two in southern Louisiana and three offshore thereof. It was certificated by order of this Commission on May 9, 1955, 14 FPC 1246 at the original contract price of 20 cents per Mcf. Subsequently, the contract and certificate were amended to substitute two blocks of offshore acreage for the three offshore blocks previously dedicated. On May 6, 1963, Superior filed a motion to further amend the certificate by substituting a new block of undedicated offshore acreage for the two offshore blocks presently certificated.

After hearing, the presiding examiner permitted the substitution of the new acreage, conditioned upon an initial price of 19.0 cents per Mcf, but left open for our consideration whether a moratorium should be imposed upon price increases pending the determination of an area rate. The matter is now before us on exceptions by Superior and Am-La, who contend that the contract price of 20.0 cents per Mcf should be left undisturbed, and also on exceptions by the Commission staff and the intervener, Public Service Commission of the State of New York (PSC), who contend that the proper initial price is 18.5 cents per Mcf.

It appears from the record that the substitution of the new acreage would be to the benefit of all concerned, including the ultimate consumer and no one has opposed the substitution. We are concerned solely with the initial price and other conditions on which the substitution will be certificated.

Superior and Am-La urge that the contract price of 20 cents per Mcf should apply, as this is merely an amendment to an existing certificate. They point out that no terms of the contract would be changed except for the substitution of the new acreage; the parties would be the same; price, point of delivery, and all other terms would remain unchanged; and much of the acreage now dedicated would remain subject to the contract and certificate. They cite the prior action of the Commission in 1958 in allowing a similar amendment to this very certificate without a hearing and without any redetermination of price, and they cite our recent decision in *Graridge Corporation*, Opinion No. 408, 30 FPC 1156, as further authority for allowing the contract price to stand unchanged.

We think the substitution of new acreage, dedicating new reserves to interstate commerce and removing from interstate commerce other reserves which were previously dedicated, is not a mere amendment to the contract and certificate which should carry with it the price applicable to the formerly dedicated acreage. *Graridge Corporation, supra*, is not in point; that case involved the substitution of a different seller, with no other change in the contract, while the present case involves a change in the source of supply. The present case is more nearly analogous to *Hassie Hunt Trust (Operator), et al.*, Opinion No. 412, 30 FPC 1438, in which we held that the substitution of a new seller and a new source of supply constituted a new contract rather than the mere amendment of an old one. We there determined that the old contract price would not be carried over where new acreage was substituted by a new party, and we determined a new price applicable to the new certification. We think the same principle applies here.

The fact that in 1958 the Commission allowed Superior an amendment to its certificate similar to that sought here is not persuasive. The 1958 amendment was granted without a hearing and without objection. Such precedents are of little weight where, as here, it does not appear that the question was ever adequately raised and considered by the Commission.

Under these circumstances, we must proceed to determine the initial price upon which this certificate will be issued as though this were a new application based upon a contract dated April 1, 1963, the date of agreement between Superior and Am-La to substitute the new acreage for the old. *Hassie Hunt Trust (Operator), et al., supra.* No evidence was presented as to the in-line price for offshore Louisiana in 1963; there was incorporated by reference the evidence as to prices in 1962 and earlier. On the basis of that evidence we have found the in-line price up until January 1, 1963, to be 18.5 cents per Mcf. *Union Texas Petroleum, et al.*, Opinion No. 436, this date, *infra*, p. 254. As we have said in that case, an in-line price, once established, is presumed to continue until substantial evidence is presented that it has changed. There is no such evidence in the record before us. For the purposes of this case, therefore, an in-line price of 18.5 cents per Mcf will be recognized as extending through April 1, 1963.

Superior and Am-La have contended that a premium should be allowed over and above the in-line price by reason of the delivery of the gas onshore, rather than at the offshore platform. This contention must be rejected. Except in unusual circumstances, we shall apply the in-line price to the point of delivery negotiated at arm's-length between the parties. There may be many reasons for differences in delivery points. It is not appropriate to convert a Section 7 in-line price proceeding to a determination of the cost of transportation. An area in-line price is applicable to sales of gas by a producer throughout the area. The presiding examiner was correct in holding that the costs incurred in making onshore delivery need not be considered in the determination of the proper in-line price applicable to these sales. *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652 (CA10, 1963). The fact that it is necessary for a producer to transport its gas to a pipeline in order to make a sale does not justify a higher price for the gas in an in-line proceeding, *Hassie Hunt Trust (Operator), et al., supra; Amerada Petroleum Corporation*, Opinion No. 422, modification denied Opinion No. 422–A, 31 FPC 623 and 1315, respectively.

The question of whether a moratorium on price increases should be included as a condition in Superior's certificate was raised by the presiding examiner and left for determination by the Commission. We think it proper that the

same conditions be incorporated in Superior's certificate as are incorporated in the producers' certificates in the area in-line price proceeding, *Union Texas Petroleum, et al., supra.*

The contract amendments underlying Superior's present motion contained a condition that the substitution of acreage should be void unless this Commission acted upon the proposed modification of the certificate by June 1, 1964. The modified certificate will be conditioned, therefore, upon the filing of an agreement between Superior and Am-La extending the time for the Commission to act until the effective date of this order.

The Commission finds:

(1) Superior Oil Company is engaged in the sale of natural gas in interstate commerce for ultimate public consumption and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described are to be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Subject to the requirements of our order herein and the conditions attached to the certificates herein issued, Superior Oil Company is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas by Superior Oil Company, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are and have been required by the public convenience and necessity, and an amended certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The conditions attached to the amended certificate herein issued are required by the public convenience and necessity.

(6) Except as herein granted, the exceptions to the presiding examiner's decision should be denied.

The Commission orders:

(A) The motion of Superior Oil Company to modify its certificate of public convenience and necessity is granted upon the terms and conditions of this order.

(B) The modified certificate is hereby conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 18.5 cents per Mcf at 15.025 psia for any natural gas originating in the Vermilion Area Block 14 Field from the date of issuance of this order and until such price may be lawfully changed in the manner provided for in the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Superior Oil Company shall file a supplement to its presently filed rate schedule reflecting the conditioned price as the initial price for gas originating in the Vermilion Area Block 14 Field in lieu of the initial price provided in its contract: provided that the notice provisions of Section 154.94(b) and the detailed submittal provisions of Section 154.94(f) of the Commission's Regulations Under the Natural Gas Act are waived insofar as they apply to the reduction in rate hereby ordered.

(D) The certificate as modified shall contain the express condition that the allowance of the take-or-pay-for provision in the contract in question is subject, so far as natural gas originating in the Vermilion Area Block 14 Field is concerned, to our ultimate disposition with respect to such provisions in the rule-

making proceeding in Docket No. R–199. Upon the establishment, by regulation or policy statement, of a general policy governing such provision in producer contracts, Superior Oil Company shall within 30 days file an amended rate schedule in conformity therewith, acceptable to the Commission. Superior Oil Company shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantity. Any changes or modifications to be made in accordance with this paragraph shall be prospective only.

(E) The certificate as modified is further conditioned to provide for a moratorium on the filing of all price increases in excess of 23.55 cents per Mcf at 15.025 psia with respect to natural gas originating in the Vermilion Area Block 14 Field, pending the issuance of a final decision in the Area Rate Proceeding in Docket No. AR61–2, *et al.*, or until July 1, 1967, whichever is earlier.

(F) The certificate as modified shall be conditioned upon Superior Oil Company filing with this Commission, within 30 days of the issuance of this order, an amendment to its agreement with American Louisiana Pipe Line Company providing that the agreement between the two companies for the proposed substitution shall be valid if the Commission shall approve the requested modification of the certificate by the effective date of this order.

(G) The certificate herein issued is not transferable and shall be effective only as long as Superior Oil Company continues the acts and operations hereby authorized in accordance with the provision of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificate herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or order which have been or may hereafter be made by the Commission in any proceeding now pending or may hereafter be instituted by or against Superior Oil Company. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provisions in gas purchase contracts here involved.

(I) Except as herein granted, the exceptions to the presiding examiner's decision are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON MOTION TO MODIFY CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY BY SUBSTITUTING RESERVES

(Issued January 15, 1964)

LEVY, *Presiding Examiner:* This proceeding is based upon a motion by the Superior Oil Company (Superior) filed May 6, 1963, for modification of a certificate of public convenience and necessity to substitute undedicated offshore acreage for other unconnected offshore acreage presently dedicated to the purchaser, American Louisiana Pipe Line Company (American) under the terms of a contract dated July 17, 1953, as amended. The original certificate, issued in the above-captioned docket on May 9, 1955, 14 FPC 1246 approved without condition the initial contract price of 20¢ per Mcf, exclusive of tax reimbursement.

On September 18, 1963, the Commission issued an order setting this matter for hearing " * * * to determine whether the proposed amendment authorizing sales from the new acreage should be granted at a rate higher than the existing ceiling price of 19.5¢ per Mcf." The Public Service Commission of New York (PSC) was permitted intervention by order dated October 15, 1963. Hearing was held on October 16 and October 23, 1963. Initial briefs were filed by Superior, American, PSC, and Staff. Reply briefs by Superior and American were filed December 16, 1963.

Background of the Proceeding

The original contract of sale between Superior and American dated July 17, 1953 provided for the sale of 1⅛ trillion cubic feet of gas from some eight separate leases of Superior in five separate fields; Deep Lake, Constance Bayou, Block 149 West Cameron, Block 71 and Block 76, Vermilion Area. Deep Lake and Constance Bayou are onshore in Cameron Parish, Louisiana, and subject to the taxing authority of the state of Louisiana. The latter three fields are offshore.[1]

The 1953 contract provided for the sale and delivery at a central point onshore (now fixed as the tailgate of Superior's Lowry extraction plant) of 1⅛ trillion cubic feet of gas to be produced from Superior's leases in any of the five specified fields. American agreed to pay an initial price of 20¢ per Mcf of gas delivered to its mainline, plus 1.5¢ per Mcf reimbursement of the Louisiana severance tax. The contract permits a 2.5¢ escalation at the end of each five-year period. Deliveries commenced in August 1956 from "onshore" acreage, but Superior has not sought the 2.5¢ escalation permitted by the contract since August 15, 1961. To date all deliveries have been made from the onshore fields.[2]

The daily contract quantity is fixed under the contract on the basis of one million cubic feet of daily contract delivery volume for each eight billion cubic feet of the recoverable reserves, or a daily contract quantity of 166,667 Mcf per day at 15.025 psia. American may take up to 125% of this amount (208,000 Mcf) or as little as 75%, on any day (Item B, p. 12, Tr. 48–49). Following the completion of American's pipeline in August 1956, Superior commenced delivery from the "onshore" Constance Bayou and Deep Lake Fields via a 27-mile pipeline from those fields to a point of connection with American's mainline at Lowry, Louisiana. Superior is authorized to process all gas prior to delivery. Its processing plant at Lowry also handles gas from a number of other fields but the major volumes processed are those dedicated to American from the present "onshore" fields.

On April 15, 1958, Superior and American agreed that Superior's acreage in the then undedicated "offshore" Block 71 Field, West Cameron Area be substituted for the then dedicated acreage in the "offshore" Block 71 and 76 Vermilion Area. Superior's motion on July 2, 1958, to modify the certificate so as to authorize the substitution, was justified on the ground that it would permit the construction of a single pipeline to connect the offshore gas reserve to the onshore point of delivery without reducing the amount of gas available. Otherwise, two separate pipelines would have to be laid from the offshore fields to the same central onshore delivery point. Superior's motion was granted without condition in the absence of protest or objection, by order of the Commission dated August 29, 1958.[3] The Commission's order recited in pertinent part:

> The proposed substitution will eliminate the necessity for Superior to construct about 49.5 miles of pipeline, largely offshore, to the deleted acre-

[1] The terms "onshore" and "offshore" are used in this initial decision solely with reference to the taxing authority of the state of Louisiana, "onshore" being used to cover lands deemed within such authority, and "offshore" being used to cover lands in the Federal Domain not subject to state taxing authority.

[2] 400 billion cubic feet had been produced by July 1, 1963 (Tr. 206–7). Reserves were estimated originally at 1,012 billion cubic feet of recoverable gas.

[3] The released acreage (Vermilion Blocks 71 and 76 Fields) was certified by the Commission on August 10, 1959, 22 FPC 369, for sale at 21.4¢ to Transcontinental Gas Pipe Line Corp. (Docket No. G–16380) without rate condition. After remand, the initial price for this sale was conditioned to 18½¢ per Mcf by the Commission's opinion in *Placid Oil Co.* No. 398, issued July 17, 1963, 30 FPC 283 and 682, now pending on review in the U.S. Ct. of Appeals.

age. The tract proposed to be added will be crossed by a proposed 52 mile line, also largely offshore, to another dedicated tract * * * *The Commission orders:* (a) the Order of the Commission issued on May 9, 1955, in Docket G–6067, granting a certificate of public convenience and necessity to The Superior Oil Company, be and the same here is amended so as to substitute one heretofore undedicated tract of about 22,500 acres, known as Block 7 Field, West Cameron Area, Louisiana, for two presently dedicated tracts aggregating about 9,500 acres known as offshore Block 71 and 76, Vermilion Area, Louisiana * * *

The Present Proposal

On April 1, 1963, Superior and American amended their contract to eliminate Superior's offshore reserves in the West Cameron Area Blocks 71 added in 1958, and 149 (37,500 acres), and to substitute uncommitted acreage in the offshore Vermilion Area Block 14 Field (4,490 acres). The proposed substitution was supported by the testimony of Superior's witness Norman and American's witnesses Ogier and Thompson. They testified that Superior's onshore gas reserves are now depleted to the point where such fields can no longer provide the full volumes to which American is contractually entitled (208,000 Mcf per day) which American requires particularly during winter months. Moreover, Superior is presently suffering a drainage loss in Block 14 Field by reason of the fact that other producers (Union Oil Company of California and Pan American Petroleum Corporation) are selling gas at the platform, from adjacent leases in that field, to Trunkline Gas Company at 22¢ per Mcf. The Block 14 Field is closer to the shore (33 miles) than the Block 149 and 71 Fields (52 miles) and has greater recoverable reserves, approximately 500 billion cubic feet v. 300 billion cubic feet. Accordingly, these witnesses testified that the proposed substitution will permit a saving in offshore pipeline costs of approximately 1.44 million dollars, and reduce the unit gathering cost from 4.77¢ per Mcf to 1.9¢ per Mcf. The total cost of connecting existing offshore reserves (including the cost of production facilities) is alleged to be 5.895¢ per Mcf, as against a total cost of 2.468¢ per Mcf to connect Block 14 reserves. The greater Block 14 reserves will improve Superior's deliverability and insure takes up to 125% of the daily contract quantity when required, although the total contract volume will still be limited to 1½ trillion cubic feet. Moreover, American will get the offshore Block 14 Field gas in the Federal Domain without having to pay Superior 1.5¢ per Mcf as tax reimbursement for onshore gas which American is obligated to do under the contract, a net decrease in American's purchase gas costs of 1.5¢ per Mcf.

The Position of the Parties

Superior contends that its motion to substitute the proposed offshore acreage without condition should be approved as required by the public convenience and necessity because of the many benefits to Superior, American, and the consumer. These include a reduction in gathering cost ($1.44 million) to Superior, a reduction in purchase gas cost (1.5¢ per Mcf) to American, improved deliverability by reason of the greater Block 14 reserves, and alleviation of Block 14 drainage. Superior emphasizes that, other than the proposed substitution of offshore reserves, its 1953 contract with American remains the same in all respects. If the substitution is denied, it could, without further Commission authorization, connect presently dedicated Block 149 and 71 offshore Fields and collect the 20¢ per Mcf contract price previously certified at greater cost to itself, American, and the consumer.

Superior's position is supported by American which argues additionally that the proposed substitution under the 1953 contract does not represent a new sale. Consequently, the 20¢ price per Mcf is not subject to the "in line" test applicable to new sales. In any event, even if the "in line" price is applicable, the deliveries here will be made at American's mainline rather than the offshore platform. The 20¢ price is allegedly justified by reason of the contract provision for onshore mainline delivery by the producer to the pipeline without an additional charge for gathering and transportation.

Staff and PSC do not oppose the proposed substitution of reserves. They argue, however, that the 20¢ per Mcf contract price is 1.5¢ higher than the 18.5¢ level previously determined to be in line for southern Louisiana. Consequently, they urge that the substitution be conditioned at 18.5¢ per Mcf for deliveries from Block 14. Both reject the view that Superior should be allowed any additional increment above 18.5¢ for alleged special features or services not found in the contracts used to establish the in line price. The sole issue presented, therefore, is the price at which the proposed substitution should be authorized.

Discussion

1. All parties agree that the proposed substitution of reserves is in the public interest and should be approved. The alternatives presented, however, restrict the Commission to the 20¢ contract price or the alleged 18.5¢ in line price. Superior and American cite the Commission's recent decision in *Graridge Corporation*,[4] Op. No. 408, Docket No. G–19246 *et al.*, 30 FPC 1156, decided October 31, 1963, for the proposition that the previously certified 20¢ contract price should not be reviewed in this proceeding and that the imposition of any price condition would inhibit the proposed substitution to the detriment of Superior, American, and its customers. A rule applicable to changes in title, however, does not necessarily apply to changes in reserves. A change of ownership where the same sale from the same acreage at the same terms is being made to the same purchaser has no impact on the price levels at which gas is being produced and sold. An authorization to sell from new acreage with reserves substantially in excess of presently dedicated offshore acreage at a price in excess of the 19.5¢ guideline, as well as the 18.5¢ in line, price may have a serious upward impact on the weighted average price at which gas is being sold in southern Louisiana. The distinction, therefore, between a succession-in-interest[5] and a substitution of acreage with greater reserves and greater deliverability is one of substance which renders the rationale of the Graridge decision inapplicable to proposed substitutions of reserves in above ceiling certifications where the reserves substituted exceed in quantity or quality the dedicated acreage which is to be released.

The Commission, as it noted recently in *Tennessee Gas Transmission Co.*, Docket No. CP61–106, Op. No. 413, 30 FPC 1477, issued December 12, 1963. "* * * has an obligation to scrutinize with great care the intial cost of a new gas supply before permitting it to be attached to an interstate pipeline for transportation and sale under the Act" (p. 1480). This applies to the substitution of reserves under old contracts as well as initial prices under new contracts. The proposed substitution of Block 14 gas for sale to American represents in substance a new jurisdictional gas supply.

[4] Where, in an application by the successors-in-interest, the Commission held that prices in previously received final, permanent certificates were not subject to review and reduction because of a transfer of title to the gas producing properties.

[5] An additional distinction lies in the fact that a substitution of acreage requires the agreement of the parties. A change in title may be made *ex parte*, or take place by operation of law.

Nor is the Commission disabled from conditioning the price at which the new Block 14 gas may now be sold to American because the initial 1953 contract price of 20¢ was certified in 1955. Concededly, the Commission's power to condition a certificate is co-extensive with its power to reject or deny the certificate. Similarly, its power to condition the price at which the proposed substitution may be made is as broad as its power to reject or deny the substitution of reserves. The power to condition the certificate includes the power to condition the substitution. All that is required is that the substitution, and the conditions under which it may be authorized, be justified by the public interest, convenience and necessity.

Moreover, the argument that this is not a new sale but a modification of an old contract which precludes examination of the 20¢ contract price misses the point that the substitution agreement of April 1, 1963 is a new agreement in respect of Block 14 reserves. The fact that the old contract is ratified as to all other terms and conditions does not change the fact that the initial price for the sale of Block 14 gas to American was negotiated on April 1, 1963. As noted by the Commission in *Hassie Hunt Trust, et al.*, Op. No. 412, 30 FPC 1438 at 1443–1444, issued December 9, 1963:

> The Commission's decision in *CATCO* holds that "in-lineness" is to be decided as of the time the contracts were made since "it was then the parties agreed on a price." In the four sales here under discussion it appears that on February 15, 1961, new parties agreed to sell gas from a new field under terms of an earlier contract with a different party. It would seem clear that the "meeting of the minds" for the sale of this particular gas took place in February 1961, and the fact that the parties chose to make the sale by ratifying an earlier contract of another party cannot make the agreement retroactive to the earlier contract date or erase events which occurred between May 15, 1959, and February 15, 1961, and which may have led to the decision to use the earlier, high priced contract.

2. The proposed 20¢ rate for sales from the new offshore Block 14 acreage exceeds the current 19.5¢ ceiling price for southern Louisiana sales referred to in the Commission Order in this proceeding of September 18, 1963. It is not in line with other properly [6] certificated rates in the area. Consequently, it cannot be used as a point of reference in determining the public interest price level for the proposed substitution. Staff and PSC maintain that Superior should not be allowed to charge more than 18.5¢ per Mcf for sales from the substituted acreage. The Examiner concludes that the substitution should be authorized at 19¢ for the reasons and subject to the further conditions hereinafter specified.

Staff and PSC rely on the 18.5¢ in line price as determined for this area in the *CATCO*, *United* and *Placid* cases [7] for contracts entered into prior to the Commission's Fourth Amendment to the Statement of General Policy No. 61–1, issued

[6] By this we mean certificates issued in compliance with the principles laid down by the Supreme Court in *CATCO*, 360 U.S. 378, and followed in subsequent cases: *United Gas Improvement Co.* v. *F.P.C.*, 287 F. 2d 159 (CA 10); *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817 (CA 9), certiorari denied *sub nom. Superior Oil Co.* v. *United Gas Improvement Co.*, 365 U.S. 881; *P.S.C. of New York* v. *F.P.C.*, 287 F. 2d 146 (CADC), certiorari denied *sub nom. Hope Natural Gas Co.* v. *P.S.C. of New York*, 365 U.S. 880, and *Shell Oil Co.* v. *P.S.C. of New York*, 365 U.S. 882; *United Gas Improvement Co.* v. *F.P.C.*, 290 F. 2d 133 (CA 5), certiorari denied *sub nom. Sun Oil Co.* v. *United Gas Improvement Co.*, 368 U.S. 823; *United Gas Improvement Co.* v. *F.P.C.*, 290 F. 2d 147 (CA 5), certiorari denied *sub nom. Superior Oil Co.* v. *United Gas Improvement Co.*, 366 U.S. 965.

[7] *CATCO* (27 FPC 96), *United*, Op. 399, 30 FPC 329, July 17, 1963, *Placid Oil Co.* Op. 398, 30 FPC 283, July 17, 1963.

on October 31, 1961, 26 FPC 661, when it reduced the area price ceiling from 21.25¢ to 19.5¢ per Mcf for initial offshore sales in southern Louisiana not subject to the state tax.

They argue that the 18.5¢ in line price for the period 1954 through 1962[8] should be maintained intact for all subsequent sales without modification or adjustment short of a rate proceeding for so-called premium features, special benefits, or any other reason. Staff concludes that (Staff br. p. 44):

> We submit that there is no other way to effectively hold the line except by adhering to the price of 18.5¢ for Southern Louisiana with an allowance only for a state tax. Any other way would open up a Pandora's box and throw the Commission back to the pre-Catco despair of evaluating a host of premiums (or allegedly unique services) made available to the pipeline versus benefits derived by the producer (liquid extractions, etc.).

PSC states (PSC br. p. 7):

> To the extent the sale has premium features which together with other relevant factors may justify a contract price in excess of the in-line level, this matter may be considered in a subsequent rate case, since the producer remains free to file for his contract level and to collect the higher price, subject to refund, pending the outcome of the rate case. Such a procedure is eminently fair to the producer, and it avoids turning the certificate case into an evidentiary jungle.

Whatever the merits of this argument, it was considered and rejected by the Commission in *Medina Gathering Corporation*[9], Opinion No. 397, 30 FPC 227, issued July 16, 1963, where the Commission determined that the alleged premium features must be evaluated "at the stage of certification" rather than deferred for consideration in a rate proceeding under Section 4 of the Act.

In *CATCO*, *United* and *Placid*, cited *supra*, where the 18.5¢ in line price for southern Louisiana was established, the sale and delivery were made to the pipeline at the offshore platforms. The 18.5¢ in line price was a well-head price. The contract between Superior and American, however, provides that deliveries will be made onshore at American's mainline. Thus, argue Superior and American, while the 18.5¢ per Mcf may be the appropriate in line price for deliveries at the offshore platforms, it is not in line where the producer is obligated to gather and transport the gas from the offshore platforms to the pipeline's mainline onshore. Under the proposed substitution Superior will install a 33-mile 20-inch line from offshore Block 14 to a point of connection with its Constance Bayou line 15 miles south of Lowry (Tr. 53, 100, 117, exhibit 2). American maintains that there has been a 1.75¢ per Mcf differential in contract price where the pipeline rather than the producer agreed to gather the gas in the field and transport it to its main transmission line, 20¢ per Mcf for gas delivered to the

[8] The initial decision of the Hearing Examiner in *Southern Natural Gas Co.*, issued October 24, 1963, 31 FPC 801, finds that the proper price line in the southern Louisiana area in June 1962 was 18.5¢ per Mcf, without tax reimbursement. An additional 1¢ was allowed for the premium features in the contracts, volume of gas supply, ten year make-up provision, slow build-up in contract quantities, and onshore delivery to Southern.

[9] The Commission stated in pertinent part:

> * * * The Examiner was of the view that it was unnecessary to resolve this and other questions surrounding the alleged premium feature since the claim could more appropriately be raised in defense of the justness and reasonableness of any increased rate that the producers might file. *We believe, however, that a consistent application of the "in line" comparison requires that we give consideration at the stage of certification to any additional feature of the proposed sale which is of objectively measurable value.* [Opinion No. 397, 30 FPC 227 at 232; italics and item emphasis supplied.]

See also *Panhandle Eastern Pipe Line Co., et al.*, 27 FPC 35, where the Commission allowed the producer (Shell Oil Co.) 2.5¢ for gathering, compression, and dehydration of gas above the in line wellhead price.

main transmission line but only 18¼¢ per Mcf for gas delivered in a field to which the pipeline [10] had to build a lateral (Tr. 215).

The provision for delivery by Superior to its processing plant at Lowry and American's mainline represents an important saving to Superior and the pipeline which inures to the benefit of all parties.

This difference in the conditions of delivery [11] between the contracts used to determine the 18.5¢ line and the 1963 agreement covering the proposed substitution would justify an adjustment to the in line price to the extent that this premium factor could be objectively measured. The difficulty lies in quantifying the difference.

Superior maintains that it will cost at least 1.9¢ per Mcf to gather and transport Block 14 gas to the point of delivery. PSC argues that this unit transportation cost assumes an unreasonably low and expensive 40% annual use of pipeline capacity and that operation at 80% of capacity would reduce that transportation cost to 0.97¢ per Mcf. An additional problem lies in the fact that the gas is transported to Superior's processing plant where the liquid hydrocarbons are extracted and retained by Superior for its own benefit. Some portion of these transportation costs should be charged against the revenues Superior obtains from the sale of such liquids. It is obviously unreasonable to charge the total cost of transporting the gas, including the liquids retained by Superior, to the pipeline. Nor would it be proper merely to add an allocated portion of the transportation cost to the in line price of 18.5¢. As noted in *CATCO* (27 FPC 100), it is improper to apply an increment derived from cost factors to a base derived from field prices. Staff also argues that production from Block 14 will yield a larger income to Superior, since the gas delivered to the Lowry plant from Block 14 will have a higher percentage of recoverable liquids than the gas from presently dedicated acreage.

Superior takes the position in its reply brief (p. 15) that the matter of income from liquids extracted by Superior at its Lowry Plant is immaterial.

In any event, it is not possible on this record to make a cost allocation between costs properly chargeable to the gathering and transportation of the hydrocarbons retained by Superior and the gas delivered to American; nor would such an allocation be meaningful since the essential criteria determining the appropriate price condition is comparability not cost.[12]

[10] See American Louisiana's 1953 contracts with British American Oil Producing Company (Item E, p. 11); Kerr-McGee Oil Industries, Inc. (Item E, p. 12) and Pan American Petroleum Corporation (formerly Stanolind Oil & Gas Company (Item E, p. 13). Also see contracts listed in American's brief p. 19.

[11] The Commission's original Statement of General Policy 61–1, issued September 28, 1960, 24 FPC 818, fixing guideline prices indicated that these prices were subject to adjustment to take into account contract provisions which may affect the actual price, such as conditions of delivery.

[12] See *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652 (CA 10) decided March 28, 1963, where the Court, in sustaining the Commission's refusal to allow an extra amount for gathering and processing Red Wash Field gas by the producer stated in part (pp. 659–660):

> Beyond this, however, we also have serious doubts as to whether any of the costs or delivery services urged by petitioner to sustain the initial price of 18.5 cents are relevant at all in determining the "in line" price of a Section 7 proceeding. The *CATCO* case, *supra*, directs the Commission to "hold the line" on price while the "just and reasonable" price is being determined in an appropriate proceeding. The Court, in *United Gas Improvement Co.* v. *Federal Power Commission*, *supra*, said that "The 'hold the line' technique spelled out in *CATCO* is a stopgap devise; that the "in line" price should be determined by comparing the proposed price with existing producer prices in the area; and that "comparative purposes does not require examination into factors such as relative production costs which are not reflected in specific terms of the contracts." (283 F. 2d at pages 822 and 825). We do not think that the commission was required in this case to consider the exploration and drilling costs or the cost of delivery services in arriving at the "in line" price in a certification proceeding. The consideration of these matters may properly be left to a Section 4 proceeding.

Assuming, however, the relevance of cost criteria and the Superior's "actual costs will range between 1.9¢ and 2.5¢ per Mcf to make the onshore delivery" (Superior's rep. br. p. 12), a premium price for this transportation service is not justified under the substitution agreement. Superior's present contract with American requires it to deliver gas from the presently dedicated offshore West Cameron reserves at the 20¢ contract price. According to Superior's presentation, this will cost 5.89¢ per Mcf, approximately 3.4¢ per Mcf more than the cost of delivering the Block 14 gas. The proposed substitution, therefore, will reduce Superior's costs to the point where it will net 16¢ per Mcf by delivering Block 14 gas at the 18.5¢ in the line price (18.5¢ minus 2.5¢ equals 16¢) rather than 14.1¢ (20¢ minus 5.9¢ equals 14.1¢) by delivery from the present offshore reserves at the 20¢ contract price, and, as noted by PSC (br. p. 11) this gives no effect to any benefit to Superior resulting from the termination of existing drainage at Block 14 by other producers.

In *Medina*, cited *supra*, the Commission offset the six-month peaking feature by permitting the producers to maintain the contract escalations. Here the premium feature of onshore delivery is offset by the additional benefit to Superior from the Block 14 connection as compared with its present obligations under the contract to connect and deliver gas from the West Cameron offshore reserves as needed.

This is not to say that the 18.5¢ in line price as determined in *CATCO* and *Placid* is a rigid unchanging price line applicable to all future initial sales. Nor is 18.5¢ the price at which all gas is to enter the interstate market in southern Louisiana short of an adjudicated just and reasonable rate under Sections 4 and 5 of the Act. The 19.5¢ ceiling price, issued on October 31, 1961, has been continued in effect after the 18.5¢ in line determination of *CATCO* and *Placid* and has been the basis for numerous Commission actions in approving initial sales in excess of 18.5¢ in temporary authorizations, uncontested proceedings, and settlements. The 1¢ differential between the 18.5¢ in line price and the 19.5¢ ceiling price appears to have been retained to afford the Commission the necessary flexibility to make price adjustments in the light of post policy statement developments and the special terms and conditions of particular contracts and sales.

The Commission's recent decision in *Hassie Hunt*, cited *supra*, rejects the view that the pre-policy level must necessarily prevail for post-policy contracts.

> While the impact of the policy statement is one factor to be considered in the proceeding covering the post-policy statement contracts, there are other compelling reasons for severing these contracts and consolidating them with all of the other applications contemporaneously executed. It is important to recognize the key element in our in-line determination is the time at which the contract in issue was executed. We cannot assume that the evidence upon which we govern an in-line determination for contracts in the late 1950's can automatically be applied to contracts executed in the 1960's. On the contrary it would seem clear that the evidence must relate to a period reasonably contemporaneous with the contracts in issue. The evidence in this proceeding was focused upon the pre-policy statement period and the date of the policy statement therefore provides a convenient dividing point, without which we would be determining 1963 prices on the basis of contract prices in the previous decade. [30 FPC 1438 at 1442.]

The price line that is closest to the terms and conditions under which the April 1, 1963 substitution of reserves was negotiated is 19¢, the settlement rate [18]

[18] Staff notes that the 19¢ rate has been the settlement rate for all offshore sales in south Louisiana regardless of what service the producer performs. These settlements have also included a moratorium on escalations and an extension of the "make-up" period (br. p. 41).

at which offshore sales in southern Louisiana have recently been authorized. And, as noted by the Court in *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817, 823, C.A. 9th, "* * * The line referred to in *CATCO* may properly be referenced to relevant existing producer prices under which substantial amounts of natural gas move in interstate commerce."

In *Columbia Gulf Transmission Company, et al.*, Docket No. CP64–1, 30 FPC 1297, the Commission approved the sale of 6.1 trillion cubic feet of gas to the Columbia Gas system at 19¢ per Mcf for offshore gas for the first 23 years. The Commission order recites in pertinent part (p. 1299):

> We find the proposed sales, as reflected in the contracts and offer of settlement to be in the public interest. The price approved herein for the sales pursuant to the settlement offer is the same as has been previously approved pursuant to other settlement proposals for sales in the southern Louisiana area.[4] The guarantee of such a substantial quantity of gas at a price which is not the subject of escalation over a 23 year period is in the public interest, as are the provisions allowing for the make-up of any take-or-pay quantities over the life of the contract and the wide daily swing in takes of gas by United Fuel and the graduated schedule of daily contract quantities.

[4] See orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.) in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

In *Texas Eastern Transmission Corp., et al.*, Docket No. CP64–5, *et al.*, the Commission on December 19, 1963, approved the sale of 4.4 trillion cubic feet of gas from offshore southern Louisiana over a 26-year period at an initial price of 19¢ at a 100% load factor with no escalation for the first 10 years.

3. Superior has not sought the 2.5¢ escalation permitted by the contract since August 15, 1961, and states that it does not currently propose to seek such increase if its current proposal is allowed (Tr. 56). The proposed 20¢ price is not approved, however, and the contract presently authorizes an increase in the onshore price to 24¢, including tax reimbursement, and 22.5¢ for offshore gas. In *Placid*, Op. No. 398, p. 298, the Commission concluded that triggering and price redeterminations will take place in southern Louisiana at a price in excess of 23.55¢ per Mcf, including tax reimbursement, and ordered a moratorium on all price increases in excess of 23.55¢, pending a final decision in the area rate proceeding or until July 1, 1967.

The Commission noted that all permanent certificates issued in southern Louisiana since the remanded *CATCO* proceeding have contained a similar provision and that the inclusion of such a moratorium assuring price stability pending the final rate determination "has been a major factor in our decision to issue those certificates." (p. 298.)

None of the parties proposed a moratorium in this proceeding as a condition of the proposed substitution and the record is barren of any evidence or discussion as to whether or not such a condition is appropriate here, and if so, its precise terms and provisions. The moratorium issue is necessarily involved in this proceeding but the parties should have an opportunity to present their position to the Commission before any final determination is made. Accordingly, the parties, in any exceptions they may file to this decision, may express their views in opposition to, or in support of, a moratorium on price escalation pending a just and reasonable rate determination. This will enable the Commission to give serious consideration to the problem of a moratorium as a condition of the proposed substitution, and to its precise terms

and provisions, should it conclude that a moratorium here is required by the public interest. In this connection, it should be noted that the validity of the moratorium in *Placid* is *sub judice* in *Callery Properties Inc.* v. *F.P.C.*, CA 5 No. 20872, *et al.*, now pending for decision after a stay of the Commission's order was granted on October 18, 1963 [Reversed and remanded, 335 F. 2d. 1004].

In summary, the Examiner has concluded that the motion to modify the certificate of public convenience and necessity by substituting reserves should be granted upon condition that the initial price for the sales proposed from the substituted acreage be not greater than 19 cents per Mcf at 15.025 psia. The question as to whether there should be a further condition—a moratorium on price escalation under the contract pending a rate determination—is left undecided by the Examiner because of the absence of any analysis or discussion in the record and the briefs. This will afford the parties an opportunity on exceptions to present their positions on this issue, should they wish to do so, and permit the Commission to give appropriate consideration to the moratorium question.

WILLIAM C. LEVY,
Presiding Examiner.

OPINION NO. 436

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 23, 1964)*

Syllabus

1. **In-line price is not mechanical reflection of certificated prices or of market– –** rather it is Commission's considered judgment as to maximum initial price appropriate in interest of public convenience and necessity, reflecting current conditions in industry. P. 260.
2. **Once in-line price has been established for an area,** it shall be presumed to continue until sufficient evidence is presented that there has been a change. P. 260.
3. **Commission *concludes* that for period prior to January 1, 1960, in-line price in southern Louisiana may be taken as established at 18.5 cents per Mcf,** plus 1.5 cents reimbursement for Louisiana severance tax where applicable. P. 260.
4. **Earlier determinations of in-line prices in southern Louisiana area, as well as elsewhere, have relied principally upon initial prices for gas sold** under permanent certificates involving substantial volume of interstate gas. P. 261.
5. **Here, as in previous in-line determinations, prices under temporary certificates are given lesser weight.** P. 262.
6. **In-line initial price in southern Louisiana for all periods [1960 through 1962]** in question is 18.5 cents per Mcf plus 1.5 cents reimbursement for Louisiana severence tax– –a total initial price of 20 cents. P. 262.

---

*Initial decision appears on p. 279. Order issued August 27, 1964 partially granted rehearing for purposes of reconsideration, 32 FPC 666; Opinion No. 436–A modifying and granting stay issued October 8, 1964, 32 FPC 952, amended by order issued November 23, 1964, 32 FPC 1359. Set aside on *Catco* settlement issue, *sub nom. Continental Oil* v. *F.P.C.*, 373 F. 2d 96 (CA10–1967; #8117). Remanded on 1.5¢ tax reimbursement issue; set aside on refund power, otherwise affirmed, *sub nom. Pan American Petroleum Corp.* v. *F.P.C.*, —— F. 2d. ——. (CA10–1967; #7912). (Petition for certiorari pending on #7912).

7. Instant record contains nothing to cause change in prior determinations that in-line initial price of 18.5 cents should apply in offshore Louisiana area as well as within southern Louisiana. P. 263.
8. Certificate conditioned to provide that take-or-pay requirement in contracts be subject to provisions of final rulemaking order in Docket No. R-199, with producers not being required to accept provisions for less than 80 percent of annual contract quantities. P. 264.
9. Certificates conditioned to prohibit any change in rate in excess of 23.55 cents per Mcf, inclusive of tax reinbursement, prior to final determination of Area Rate Proceeding, Docket No. AR61-2, or July 1, 1967, whichever is earlier. P. 264.
10. Refunds required where producers accepted temporary certificates containing express refund conditions. P. 264.
11. Commission *defers* question of whether refunds should be ordered where temporary certificates did not contain refund condition- -*allows* participants to file briefs on issue. P. 265.
12. Fact that condition in temporary certificate did not specifically provide for payment of interest is insufficient to relieve producer of such obligation on money of which it had use. P. 265.
13. Where producer accepted temporary certificate, originally with a refund condition, it is in a poorer position to claim inequity than are those who accepted such certificates in belief no refund could be required. P. 265.
14. Fact that some producers received more favorable treatment is not persuasive argument that another should be accorded like treatment. P. 265.
15. Whether refunds should be ordered of amounts collected pursuant to take-or-pay clause determined to be in excess of in-line price, is question to be determined on same basis as that of whether refund should be ordered of amount in excess of in-line price collected for gas actually delivered. P. 266.
16. Assignment of a part of dedicated and producing acreage must under authority of *Graridge Corporation*, be treated in same manner as assignment of entire producing acreage- -thus assignees are placed in shoes of assignors. PP. 266, 267.
17. On remand of *General Crude* case to Examiner, the initial price of any acreage which may not previously have been dedicated shall be fixed at 20 cents per Mcf; for gas from assigned acreage, 18 cents per Mcf. P. 267.
18. In accordance with principle of placing assignee in shoes of assignor, General Crude's permanent certificate will be conditioned with respect to assigned acreage to require refund of difference between rates collected prior to January 1, 1962, under temporary certificate and rate or rates ultimately fixed by final order in Area Rate Proceeding, Docket No. AR61-2. P. 268.
19. Reasons for placing assignee in shoes of assignor also applies in case of assignee of non-productive acreage. P. 268.
20. Additional acreage [added to original contract by amendment] should be subject of a separate permanent certificate providing for an initial price of 20 cents per Mcf. PP. 268, 269.
21. There is no basis for argument that 19.5-cent settlement price for offshore CATCO gas should continue pending results of Area Rate Proceeding since instant proceeding is a "similar proceeding" within contemplation of settlement agreement. P. 269.
22. Producers, through their own inaction, cannot be allowed to cast upon consuming public burden of invalid Louisiana gathering tax which they could have recovered had they taken necessary steps- -language of temporary authorization should not be construed to require actual receipt of

money where, but for producers' own fault, money would have been received. P. 271.

23. Commission *issues* certificates of public convenience and necessity under Section 7 of the Natural Gas Act.

Justin R. Wolf, Charles A. Case, Jr., and *Stanley Wanger* for Union Texas Petroleum; The California Company; C. H. Lyons, Jr., and M. F. McCain.

Harold L. Talisman for Alabama Gas Corporation.

Harry S. Littman for Alabama Gas Corporation, and Piedmont Natural Gas Company, Inc.

Edward S. Nail, Joseph W. Morris, and *N. Kenneth Scott, Jr.* for Amerada Petroleum Corporation.

Charles V. Shannon and *Louis Flax* for American Louisiana Pipe Line Company.

Paul S. Davis for American Natural Gas Production Company.

J. Evans Atwell for Agnes Cullen Arnold, et al.; Isaac Arnold, et al; Austral Oil Company; Perry R. Bass, Operator, et al.; Crown Central Petroleum Corporation; J. M. Flaitz, et al.; Geological Geophysical Associates, Inc., Operator, et al.; R. E. Kellerman; Robert W. O'Meara; Joseph M. Rault, Jr., Inc.; Sword Co., et al., by its Agent, K & H Operating Co.; Ted Weiner, Operator; Gene M. Woodfin, et al.; and Texas Crude Oil Company.

E. J. Kremer, Jr., for The Atlantic Refining Company.

Bernard A. Foster, Jr. for The Atlantic Refining Company; The British-American Oil Producing Company; Cities Service Production Company; Colorado Oil & Gas Corporation; Michel T. Halbouty; Humble Oil & Refining Company; Magna Oil Corporation; Murmanill Corp.; Robert B. Prentice; Shoreline Exploration; Skelly Oil Company; Tex-Star Oil & Gas Corporation; and J. C. Trahan Drilling Contractor.

Roy T. Durst for Perry R. Bass, Operator, et al.

Philip R. Collins for Earl G. Bateman, Operator, et al.

Joe M. Holliman and *John L. Arrington, Jr.* for Beck Oil Company, et al.; and Falcon Seaboard Drilling Co. (Operator) et al.

John W. Glendening, Jr. and *John S. Schmid* for The Berkshire Gas Company; Boston Gas Company; The Bridgeport Gas Co.; Bristol and Warren Gas Company; Brockton Taunton Gas Company; Buzzards Bay Gas Company; Cambridge Gas Company; Concord Natural Gas Corporation; The Connecticut Gas Company; Fall River Gas Company; Fitchburg Gas and Electric Light Company; Gas Service, Inc.; The Greenwood Gas Company; The Hartford Electric Light Company; The Hartford Gas Company; Haverhill Gas Company; City of Holyoke, Massachusetts Gas & Electric Department; Lowell Gas Company; Manchester Gas Company; Mystic Valley Gas Company; New Bedford Gas & Edison Light Company; The New Britain Gas Light Company; New Haven Gas Company; The Newport Gas Light Company; North Attleboro Gas Company; City of Norwich, Department of Public Utilities; The Pequot Gas Company; Providence Gas Company; South County Gas Company; Springfield Gas Light Company; Tiverton Gas Company; Valley Gas Company; City of Westfield Gas and Electric Light Department; and Worcester Gas Light Company.

John A. Gage for Boston Gas Company.

Daniel F. Wheeler for The Bridgeport Gas Company.

Jack Corman for the British-American Oil Producing Co.

Cecil N. Cook and *Neal Powers, Jr.* for Bradco Properties, Inc.; George R. Brown; E. Cockrell, Jr.; Freeport Oil Company; John W. Mecom; Petroleum, Inc.; and U.S. Oil of Louisiana, Inc.

Richard L. Brickley for Brockton Taunton Gas Company.

Edwin F. Russell and *Harry G. Hill, Jr.* for The Brooklyn Union Gas Company.

Boyd D. Taylor for Cabot Corporation.

Woolen H. Walshe for The California Company.

R. J. Leithead and *Gentry Lee* for Cities Service Production Company; and Columbian Fuel Corporation.

Charles H. Toll, Jr. for Concord Natural Gas Corporation; and Manchester Gas Company.

C. William Cooper, Norman A. Flaningam, and *Thomas F. Brosnan* for Con-Gas Service Corporation.

Christopher T. Boland for Con-Gas Service Corporation; and Texas Gas Transmission Corporation.

James B. O'Malley and *Eugene B. Thomas, Jr.* for Consolidated Edison Company of New York, Inc.; and Orange and Rockland Utilities, Inc.

Tom Burton, Joseph C. Johnson, and *Bruce R. Merrill* for Continental Oil Company.

Charles B. Parker for Dorn & Miller Company; and Forest Oil Corporation.

Richard F. Generelly for Dorn & Miller Company; Forest Oil Corporation; General American Oil Company of Texas; and Mound Company.

Thomas G. Roderick, Jr., for The East Ohio Gas Company.

William R. Cook and *Halcyon G. Skinner* for Fitchburg Gas & Electric Company; and Springfield Gas Light Company.

H. H. Hillyer, Jr. for J. R. Frankel, et al., (successors to Berkshire Oil Company); and Harvey Peltier.

W. P. Barnes and *Cecil A. Munn* for General American Oil Company of Texas.

Frank J. Coyle for The Greenwich Gas Company.

John E. Thomason, Arthur F. Whitt, and *Anthony G. Riddlesperger* for Gulf Oil Corporation.

Sherman S. Poland for Michel T. Halbouty: Shoreline Exploration; Tex-Star Oil & Gas Corporation; and J. C. Trahan, Drilling Contractor, Inc.

H. Bissell Carey, Jr. for the Hartford Electric Light Co.

George N. Beauregard for City of Holyoke, Massachusetts, Gas and Electric Department.

J. J. Schmidt for Hope Natural Gas Company.

Thomas A. White for Hope Natural Gas Company; and The River Gas Company.

Jesse H. Foster, Jr. and *Albert C. McClain* for Humble Oil & Refining Company.

Thomas G. Crouch for Hunt Oil Company; H. L. Hunt; and Hassie Hunt Trust.

Robert W. Henderson for Hunt Oil Company; H. L. Hunt; Hassie Hunt Trust; and Placid Oil Company.

William W. Brackett and *Kenneth Wagner* for Jupiter Corporation.

Lynn Adams, Jack T. Conn, and *William Amory Underhill* for Kerr-McGee Oil Industries, Inc.

Morton L. Simons, David K. Kadane, Edward M. Barrett and *Bernard Hulkower* for Long Island Lighting Company.

Edward L. Twomey for Lowell Gas Company.

Robert M. Vaughn, Morton Taylor, and *Harold L. Kennedy* for Marathon Oil Company.

George E. Morrow, Reuben Goldberg, and George Spiegel for Memphis Light, Gas & Water Division.

Paul Montgomery for Irvin Miller (Operator).

D. G. Allen for Mystic Valley Gas Company.

Cornelius C. Moore for Newport Gas Light Co.

Kent H. Brown and *Mrs. Barbara M. Suchow* for New York Public Service Commission.

G. Kirby Herrington for New York State Natural Gas Corporation.

John N. Worcester for North Attleboro Gas Company.

C. W. Barbee and *R. J. Nery* for North Carolina Utilities Commission.

Carroll L. Gilliam, Dean J. Capp, J. P. Hammond, T. C. McCorkle, Harold H. Young, Jr., and *William H. Emerson* for Pan American Petroleum Corporation.

Frederick D. Cornelius, Herbert E. Squires, and *Alan R. Squires* for Pennsylvania Public Utilities Commission.

James B. Sayers for The Peoples Natural Gas Company.

Vincent P. McDevitt, Samuel G. Miller, Henry P. Sullivan, and *Donald Blanken* for Philadelphia Electric Company.

Richardson Dilworth and *William T. Coleman, Jr.* for Philadelphia Gas Works Division of the United Gas Improvement Company.

Kenneth Heady, John R. Rebman, and *H. K. Hudson* for Phillips Petroleum Company.

Dale A. Wright, and *Kenneth Brim* for Piedmont Natural Gas Company, Inc.

Paul W. Hicks for Placid Oil Company.

I. Beverly Lake for Public Service Company of North Carolina, Inc.

William R. Duff, J. Harry Mulhern, James R. Lacey, and *Edward S. Kirby* for Public Service Electric and Gas Company.

Guy H. Woodward and *George Otey, Jr.* for Samedan Oil Corporation.

Donald A. Mulvihill for Joseph E. Seagram & Sons, Inc., d/b/a Frankfort Oil Company.

Oliver L. Stone and *T. G. Johnson* for Shell Oil Company.

Angus A. Davidson, Charles E. McGee, and *James D. McKinney, Jr.* for Sinclair Oil & Gas Company.

Bradford Ross for Skelly Oil Company.

Tom P. Hamill and *R. D. Haworth* for Socony Mobil Oil Co., Inc.

William K. Tell for Sohio Petroleum Company.

George B. Meckum, III, and *Robert M. Goorick* for Southeastern Public Service Company.

William S. Tarver, Peter G. Smith, and *Hugh J. Morgan, Jr.* for Southern Natural Gas Company.

Robert C. Koury for South Jersey Gas Company.

Frederick G. Emerson for Southwest Gas Producing Co., Inc., et al.

Emmons Sebenius and *Donald G. Ingersoll* for State Exploration Company.

John A. Ward, III, Phillip D. Endom, Joiner Cartright, Herf M. Wienert, Martin A. Row, and *Robert E. May* for Sun Oil Company.

Homer E. McEwen and *Dale E. Doty* for Sunray DX Oil Company.

H. W. Varner, Homer Penn, and *William T. Kilbourne, III*, for The Superior Oil Company.

Roy C. Alletag and *Robert E. Shaw* for Tenneco Corporation; and Tennessee Gas Transmission Company.

W. C. Braden, Jr., and *B. J. Williamson*, for Tennessee Gas Transmission Company.

Alfred C. DeCrane, Jr. and *James J. Flood, Jr.* for Texaco Inc.

George J. Meiburger for Texas Gas Exploration Company.

Robert O. Koch and *William E. Feldhaus* for Texas Gas Transmission Corporation.

Clyde E. Willbern for Tidewater Oil Company.

William H. Davidson, Jr., William N. Bonner, Jr., Richard J. Connor, and *Thomas F. Ryan, Jr.*, for Transcontinental Gas Pipe Line Corporation.

Frank D. Horning, Jr., C. Frank Reifsnyder, and *Patrick G. Sullivan* for Union Oil Company of California.

Willis L. Meadows for Union Producing Company.

W. O. Crain for Union Producing Company; and United Gas Pipe Line Company.

Frederick H. Clark for United Fuel Gas Company.

J. David Mann, Jr., William W. Ross, and *John E. Holtzinger, Jr.* for The United Gas Improvement Company.

Vernon Woods for United Gas Pipe Line Company.

Ernest N. Agesti for Valley Gas Company.

Edward M. Lee for City of Westfield Gas and Electric Light Department.

William I. Harkaway and *David B. Ward* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

BLACK, *Commissioner:* The questions to be determined in this proceeding are the prices and other conditions to be included in permanent certificates to be issued under Section 7 of the Natural Gas Act for sales of natural gas in southern Louisiana and the adjacent Federal domain offshore. Of the 362 dockets originally consolidated in this proceeding, approximately two-thirds have been severed and settled. The remaining dockets involve contracts of various dates from 1947 through 1962. The presiding examiner's initial decision of January 14, 1964, determined that the in-line price for all gas produced in the Federal domain off the shore of Louisiana for the period from June 7, 1954 (the effective date of the Commission's regulation of producers), through December 31, 1962, was 18.5 cents per Mcf and that the same in-line price, plus 1.5 cents reimbursement for Louisiana severance tax, obtained for this period in southern Louisiana. The examiner's decision also provided that the permanent certificates to be issued to the producers should include certain conditions as to take-or-pay provisions of the producers' contracts and as to moratoria with respect to price increases.

The case is now before us on exceptions filed by producers, interveners, and the Commission staff. Insofar as the exceptions are of general application, they will be considered as having been made for the benefit of all to whom they might apply. Such exceptions were taken to the exclusion of evidence, to the conditions as to take-or-pay provisions of the producers' contracts, to the moratoria with respect to price increases, to the ordering of refunds where refund conditions were found in temporary certificates, and to the refusal to order refunds where refund conditions were not found in temporary certificates. A number of dockets present special problems which are not of general application, and these will be separately considered.

Few of the parties have requested oral argument. The issues have been thoroughly considered in the able briefs presented by the participants. In our judgment, oral argument would contribute nothing to justify the attendant delay and expense. The motions for oral argument will be denied.

The facts have been set forth in the initial decision of the presiding examiner, and will be referred to here only to the extent necessary to make plain the reasons for our determinations.

The In-Line Price

The principal questions to be determined in this proceeding are the in-line prices applicable in southern Louisiana and offshore thereof during the relevant

periods. Such prices will determine the initial prices in the permanent certificates in the majority of the dockets now before us. The in-line price is not a mechanical reflection of certificated prices or of the market. It is, rather, the Commission's considered judgment as to the maximum initial price appropriate in the interest of the public convenience and necessity reflecting the current conditions in the industry. Further, it is our view that once an in-line price has been established for an area, it shall be presumed to continue until sufficient evidence is presented that there has been a change.

The presiding examiner found a single in-line price of 18.5 cents per Mcf, plus 1.5 cents tax reimbursement where applicable, for the entire period from June 7, 1954, through December 31, 1962. His initial decision was rendered before issuance of the opinion of the Commission in *Amerada Petroleum Corporation*, Opinion No. 422, 31 FPC 623, modification denied Opinion No. 422–A (1964) 31 FPC 1315. Under the principles laid down in that case and in *Skelly Oil Company*, 28 FPC 401, modified, 28 FPC 1065, on appeal *P.S.C. of New York* v. *F.P.C.*, 329 F. 2d 242 (CADC, 1964), cert. den. 377 U.S. 963 (June 8, 1964), we must here determine the in-line price for the period prior to the issuance of a guideline price applicable in the area, and a separate in-line price for the period subsequent to the issuance of such a guideline price.

The Commission's Statement of General Policy No. 61–1, issued September 28, 1960, 24 FPC 818, did not specify any guideline price applicable to natural gas produced in southern Louisiana, or in the Federal domain offshore. On October 25, 1960, 24 FPC 902 the first amendment to that statement established a guideline price of 21.5 cents per Mcf applicable in southern Louisiana, exclusive of tax reimbursement. (No separate guideline price was established at that time for gas produced in the Federal domain off the shore of Louisiana.) On October 31, 1961, 26 FPC 661, the fourth amendment to Statement of General Policy No. 61–1 reduced the guideline price applicable in southern Louisiana to 21.25 cents per Mcf (including tax reimbursement), and for gas produced in the Federal domain off the shore of Louisiana, the same amendment established a guideline price of 19.5 cents per Mcf.

We note at the outset that the question of the appropriate in-line price for gas from southern Louisiana and the offshore Federal domain for the years 1956, 1957, 1958, and 1959 has been considered by the Commission on three prior occasions: *CATCO*, 27 FPC 96 (1962); *Placid Oil Company*, 30 FPC 283, mod. 30 FPC 682 (Opinion No. 398–A, 1963); and *United Gas Pipe Line Company*, 30 FPC 329 (1963). In each proceeding, on the basis of evidence substantially similar to that before us here, we concluded that the proper initial price was 18.5 cents per Mcf, plus 1.5 cents reimbursement for Louisiana severance tax where applicable.

The evidence presented in the present proceedings for contracts entered into from 1957 to 1959 corresponds with that on which our three prior determinations of the in-line price for this area were based and we find no reason to depart from the conclusions reached in these cases. Accordingly, we conclude that for the period prior to January 1, 1960, the in-line price may be taken as established at 18.5 cents per Mcf, plus 1.5 cents reimbursement for Louisiana severance tax where applicable.

The in-line prices must now be determined for the following three periods: the year 1960 up until October 25, the date of issuance of the first guideline price; October 26, 1960, to October 31, 1961, the period from the issuance of the first guideline price until the issuance of the second guideline price; and November 1, 1961, to the end of 1962, the period after the issuance of the second guideline price.

In our earlier determinations of in-line prices in this area, as well as elsewhere, we have relied principally upon the initial prices for natural gas sold under permanent certificates where substantial volumes of gas were moving in interstate commerce under such permanent certificates. For the three periods for which we have not yet determined an in-line price, the initial prices for natural gas sold under permanent certificates in southern Louisiana (and off the shore of Louisiana, but within its jurisdiction) are as follows:

Contracts dated Jan. 1, 1960, to Oct. 25, 1960

Price [1]	No. of sales	1961 volume (Mcf)
12.5	1	684, 534
16.25	1	360, 000
18.3	1	91, 972
18.5	1	409, 428
18.75	3	1, 155, 535
19.5	9	1, 586, 897
19.75	1	177, 994
19.9	4	1, 747, 696
20.375	4	487, 739
20.75	1	135, 156
21.75	2	1, 983, 440
23.25	2	14, 763, 997

Contracts dated Oct. 26, 1960, to Oct. 31, 1961

Price [1]	No. of sales	Volume in Mcf (one year projected)
10.5	1	186, 000
14.25	1	257, 297
15.8007	5	953, 975
16.25	1	65, 403
17.75	1	506, 943
19.75	2	614, 820
19.9	1	279, 550

Contracts dated Nov. 1, 1961, to end of 1962

Price [1]	No. of sales	Volume in Mcf (one year projected)
10.75	1	960, 000
18.0	1	28, 800
19.5	3	888, 000
19.75	1	7, 200

[1] In cents per Mcf, including reimbursement for Louisiana severance tax.

Contracts falling in the first of these periods, January 1 to October 25, 1960, accounted for a substantial volume of gas moving in interstate commerce in 1961 under permanent certificates—a total volume of nearly 23.6 million Mcf. Of these 30 certificates, 21 provided for a price, including tax reimbursement, of less than 20 cents per Mcf, with the largest number at any one price being the 9 certificates at 19.5 cents per Mcf. Two certificates at 23.25 cents per Mcf accounted for nearly 14.8 million Mcf of the total volume. These two certificates were issued at a point in time when the Commission was applying pricing standards in certificate cases which have since been disapproved by the courts. The weighted average price for all the contracts under permanent certificate is, as indicated below, approximately the same as prevailed in 1957 and 1958. Under these circumstances we think that the in-line price for this period should also be set at 20 cents, including reimbursement for Louisiana severance tax.

Contracts falling in the period between the issuance of the two guideline prices (from October 26, 1960, to October 31, 1961) accounted for a less substantial volume of gas moving in interstate commerce under permanent certificates. The projected annual volume was approximately three million Mcf, whereas 10.8 million Mcf moved under temporary certificates. For contracts dated in the period from November 1, 1961, to the end of 1962, the volume moving in interstate commerce under permanent certificates is about 1.9 million Mcf, compared with 18 million Mcf moving under temporary certificates.

The weighted averages of the initial prices for natural gas sold in southern Louisiana (and offshore, but subject to Louisiana tax) under temporary and permanent certificates have been computed for the three periods in question and for the three prior years. These weighted averages are as follows:

Contract date	Weighted average price in cents per Mcf, including reimbursement for Louisiana severance tax	
	Permanent certificates	Temporary certificates [1]
1957	21.7702	19.5573
1958	21.8988	22.1654
1959	20.8814	22.2080
Jan. 1, 1960–Oct. 25, 1960	[2] 21.767	22.76
Oct. 26, 1960–Oct. 31, 1961	[3] 17.1478	21.25
Nov. 1, 1961–Dec. 31, 1962	[4] 15.0194	20.87

[1] Pending in present proceeding.
[2] For the year 1960, the figure is the same.
[3] For the year 1961, the figure is 17.3020.
[4] For the year 1962, the figure is 14.5590.

We note the marked decline in permanently certificated prices in this area in the last two periods subsequent to the issuance of the guideline prices. This might indicate that there had been a decline in the in-line price for this area. We think, however, that an insufficient volume of gas has moved under these contracts to establish a lower in-line price than prevailed in the earlier periods. Further, the weighted average of prices specified in permanent certificates relating to contracts of the period January 1 to October 25, 1960, is distorted by the two contracts, previously mentioned, at 23.25 cents per Mcf for nearly two-thirds of the volume for that period. Also, the weighted average of prices specified in permanent certificates relating to contracts of the November 1, 1961–December 31, 1962, period is distorted by one certificate, covering more than half the volume of gas, issued at 10.75 cents per Mcf. The effect of these distortions must, of course be considered in the exercise of our discretion.

In view of the nature of the proceedings for issuance of temporary certificates, we will here, as in previous in-line determinations, give the prices under temporary certificates lesser weight. A slight decline is reflected, in prices at which temporary certificates were issued during these later periods, but the weighted average of prices specified in these temporary certificates still remained above the corresponding average for the 1957 period.

We do not think this evidence is sufficient to establish that a change in the in-line price has taken place in this area between January 1, 1960, and December 31, 1962.

In light of all these circumstances, we find that the in-line initial price in southern Louisiana for all the periods in questions is 18.5 cents per Mcf, plus 1.5 cents reimbursement for Louisiana severance tax—a total initial price of 20 cents per Mcf.

We find nothing in the record to cause us to change our prior determinations that the in-line initial price of 18.5 cents should apply in the Federal domain off the shore of Louisiana, as well as within southern Louisiana itself. (Within the domain of Louisiana, as has been said, an additional 1.5-cents reimbursement for Louisiana severance tax may be added.) There were no permanent certificates involving gas in the Federal domain off the shore of Louisiana under contracts dated in any of the three periods we are considering. Temporary certificates covered the following sales of gas outside Louisiana's jurisdiction;

Contracts dated Jan. 1, 1960, to Oct. 25, 1960

Price [1]	No. of sales	1961 volume (Mcf)
21.5	2	7,320,000

Contracts dated Oct. 26, 1960, to Oct. 31, 1961

Price [1]	No. of sales	Volume in Mcf (one year projected)
19.5	4	12,532,500

Contracts dated Nov. 1, 1961, to end of 1962

Price [1]	No. of sales	Volume in Mcf (one year projected)
19.5	2	720,000

[1] In cents per Mcf. No Louisiana tax was applicable.

With no sale under permanent certificates involving contracts dated in any of the three periods under consideration, and with so few sales under temporary certificates, we do not think the Federal domain contracts alter in any way the conclusions previously set forth.

The presiding examiner excluded evidence offered by various producers as to individual companies' cost of service, nationwide costs of the industry as a whole, costs restricted to the area in question, and evidence as to the financial requirements of the industry and the economic needs of the nation. It is the firmly established position of the Commission that such evidence is not admissible. The arguments of the producers that such evidence is necessary in determining a just and reasonable rate are not in point.

> * * * § 7 does not stipulate that the Commission must find the initial rate to be just and reasonable but simply that the service proposed is required by the present and future public convenience and necessity * * * [*F.P.C.* v. *Hunt*, 376 U.S. 515 at 521, 84 Sup. Ct. 861, 865 (1964).]

The Commission in the instant proceeding has issued an order dated March 31, 1964, 31 FPC 756, denying a motion to reopen the proceeding to admit cost evidence, and stating that such evidence

> is not relevant in producer certificate cases where the initial price should be determined by reference to the "in-line" price in the area. *Skelly Oil Company*, 28 FPC 401, 410–412, on appeal *P.S.C. of New York* v. *F.P.C.*, 329 F. 2d 242 (CADC–1964); Cert. den. 377 U.S. 963 (1964); *Placid Oil Company*,

30 FPC 283, Opinion No. 398, issued July 17, 1963; *Texaco Seaboard Inc.*, 29 FPC 593, 595; *United Gas Pipe Line Co.*, 30 FPC 329, Opinion No. 399, issued July 17, 1963, at p. 332; *California Oil Company* v. *F.P.C.*, 315 F. 2d 677 (CA10); *The Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677 (CADC).

Reconsideration of that order was denied by the Commission in an order issued May 27, 1964, which reiterated that such evidence was not relevant in this proceeding. The exceptions to the exclusion of evidence will be denied.

The Condition as to Take-or-Pay Provisions

The order accompanying the initial decision conditions the take-or-pay requirement in each contract to be subject to the provisions of our final order in the rulemaking proceeding in Docket No. R–199. This, as well as the limitation in the condition that the producers will not be required to accept provisions for less than 80 percent of the annual contract quantities, is in line with the general practice in our recent decisions. *Amerada Petroleum Corp., supra; Hassie Hunt Trust, Operator, et al.*, Opinion No. 412, 30 FPC 1438 (1963); *Placid Oil Company, supra; United Gas Pipe Line Company, et al., supra; Texaco Seaboard, Inc., et al.*, 29 FPC 593 (1963); *Skelly Oil Company, supra; Shell Oil Company, Operator, et al.*, Opinion No. 434, 32 FPC 34 (1964).

The exceptions to the condition will be denied.

The Moratorium on Excessive Price Increases

The presiding examiner's proposed order provided that each certificate issued should be subject to a condition that no change in rate providing for a price in excess of 23.55 cents per Mcf, inclusive of tax reimbursement, shall be filed prior to the final determination of the Area Rate Proceeding, Docket No. AR61–2, *et al.*, or July 1, 1967, whichever is earlier. Provisions to the same effect were included in the Commission orders in *Placid Oil Company, supra*, and *United Gas Pipe Line Company, supra*, and we find nothing in the producers' exceptions which would lead us to depart from this established practice.

Transcontinental Gas Pipe Line Corporation (Transco) has urged that a moratorium should be placed upon all price increases above the in-line price here determined, and has stated that any such price increases by its suppliers will compel Transco to apply for increase in its own rates. We do not believe that established Commission policy should be altered at this time. Any increase applied for by Transco will be dealt with in the appropriate proceeding.

Refunds

The presiding examiner, in his initial decision, would distinguish between the refund obligations of producers who accepted temporary certificates containing express refund conditions, and those whose temporary certificates contained no such condition. Certain producers whose temporary certificates contained express refund conditions except to the examiner's proposed order calling for such refunds. Such refunds are in accord with the established Commission practice, and have been recognized and approved by the courts.[1] We find nothing in the producers' exceptions that convinces us that a departure from this practice would be in the public interest. Accordingly, the exceptions will be denied.

[1] Most recently in *P.S.C. of New York* v. *F.P.C.*, 329 F. 2d 242 (CADC, 1964), cert. den. 377 U.S. 963 (June 8, 1964).

Refunds in the Absence of Refund Conditions

The presiding examiner, however, did not order similar refunds in cases where the temporary certificates did not contain refund conditions. This action was in accord with the practice of the Commission prior to the decision in *P.S.C. of New York* v. *F.P.C., supra.* In that case, however, the court held that the Commission has power to order such refunds and should do so if the equities of the case so dictate. Two dockets were remanded for determination by the Commission as to whether the equities indicated that refunds should be required although refund conditions were not contained in the temporary certificates.

In *Amerada Petroleum Corp., supra,* the Commission deferred the question whether refunds should be ordered in such cases, but the participants were permitted to file briefs on the issue. The same procedure will be followed here. In addition, the participants may state any additional facts which they believe might affect the determination as to whether refunds should be ordered, and the evidence by which such facts are to be established. With respect to such facts as we find relevant, and which are not now established in the individual dockets, an opportunity will be provided for the submission of admissible evidence.

General American Oil Company of Texas (Docket No. CI61–1230) would be required by the presiding examiner's proposed order to pay interest on the amount that it was ordered to refund. It has excepted to this part of the order on the ground that, while the temporary certificate contained a refund condition, said refund condition did not include any provisions for interest. The fact that the condition in the temporary certificate did not specifically provide for the payment of interest is insufficient to relieve the producer of the obligation to pay interest on the money of which it had the use.[3]

In Hurley Oil and Gas Company, Docket No. G–17775, the Commission issued a temporary certificate containing a refund condition. The producer, after accepting the temporary certificate, applied to the Commission for an order to strike the refund condition, urging that other producers similarly situated have been given temporary certificates without refund conditions. The order was issued without opposition. The producer, however, had failed to serve Public Service Commission of the State of New York (PSC) with notice of its motion. When PSC learned of the motion, the matter was reopened. The Commission vacated its order striking the refund condition and referred the docket to the presiding examiner to allow both PSC and the producer to present evidence. PSC offered no evidence; the producer offered cost-of-service evidence which the presiding examiner properly excluded.

We agree with and adopt the presiding examiner's conclusion that the refund condition should not be stricken from a temporary certificate under these circumstances, but we place our decision upon another ground as well. It has already been determined that, standing by itself, the absence of a refund condition from a temporary certificate is not sufficient to prevent a refund being ordered as a condition of the permanent certificate. Hurley Oil and Gas Company accepted its temporary certificate, originally, with a refund condition; to that extent it is in a poorer position to claim inequity than are producers who accepted such certificates in the belief no refund could be required of them.

The fact that some other producers received more favorable treatment is not a persuasive argument that Hurley Oil and Gas Company should be accorded like treatment. As the producer has already had an opportunity to present the equities of its case, a decision need not be deferred. The exception of Hurley Oil and Gas Company on this point is denied.

---

[3] *Texaco Inc.* v. *F.P.C.*, 290 F. 2d 149, 157 (CA 5, 1961).

K & H Operating Company, Agent for Sword Co., *et al.*, also accepted a temporary certificate with a refund condition. Thereafter, it obtained a Commission order striking the refund condition from the temporary certificate. The Commission's order struck the condition despite opposition by PSC. The order was never served upon PSC. PSC now asserts that the failure to serve the order on it deprived PSC of its opportunity to apply for rehearing and for court review. PSC argues that the order, therefore, is just as much a nullity as in the case of Hurley Oil and Gas Company, where the failure to serve the motion deprived PSC of its opportunity to oppose at Commission level the removal of a refund condition from a temporary certificate.

K & H Operating Company, like Hurley Oil and Gas Company, is in a poorer position to claim inequity than are those who accepted temporary certificates in the belief that no refund would be required of them. K & H Operating Company may present a brief, and a statement of any additional facts which would militate against requiring refunds to be made, together with a statement of any evidence it wishes to introduce in support of such facts. In the absence of a showing of such facts, the refunds will be ordered.

In Docket No. CI61–182, Transco has made payments to General American Oil Company of Texas (General American) for gas not yet taken, pursuant to the take-or-pay provisions of its contract. These prepayments were made on the basis of a price of 23.55 cents per Mcf, the initial price provided in the temporary certificate. The temporary certificate contained no refund condition. The proposed order provides for an initial price of 20.0 cents in the permanent certificate, but does not provide for any refund of the difference (3.55 cents) between 23.55 and 20.0 cents per Mcf, whether paid for gas actually delivered or pursuant to the take-or-pay provisions of the contract.

Transco has excepted to the omission from the proposed order of a requirement that refund be made of 1.55 cents per Mcf of the amount paid pursuant to the take-or-pay provisions of the contract. It is our view that such a take-or-pay clause requires payment to be made by the purchaser on the same basis as though gas had been delivered physically at the point in time at which the obligation to pay arose under the take-or-pay clause. Whether a refund should be ordered of amounts collected pursuant to the take-or-pay clause which are determined to be in excess of the in-line price is a question to be determined on the same basis as the question whether a refund should be ordered of amounts in excess of the in-line price collected for gas actually delivered. The parties may show, of course, any equities applicable in the determination of one of these questions which may not be applicable in the other case; but in the absence of such a showing, the two questions should be similarly decided. General American and Transco will be permitted to submit briefs and evidence as to any equities which may bear upon the decision.

Pending Proceedings Under Section 4(e)

Union Texas Petroleum (Union Texas) and General Crude Oil Company (Operator) (General Crude) have raised the question of the effect of the present proceeding upon pending proceedings under Section 4(e) of the Natural Gas Act. It is not our intention to disturb any of these proceedings or preadjudicate any of the issues to be determined in them. Paragraph (C) of the presiding examiner's proposed order will be revised to reflect this determination.

The Succession Cases

We agree with the decision of the presiding examiner that the assignment of a part of dedicated and producing acreage must under the authority of *Graridge*

Corporation, Opinion No. 408, 30 FPC 1156 be treated in the same manner as an assignment of the entire producing acreage, and that the assignees be placed in the shoes of their assignors. No exceptions were taken by any parties to these views. We think, however, that the application of these principles requires modification of the final results reached by the presiding examiner in a few dockets.

Under the proposed order, J. C. Trahan, Drilling Contractor, Inc. (Operator), et al. (Trahan) (Docket No. CI61–452), and Shoreline Exploration Inc. (Shoreline) (Docket Nos. CI62–73 and CI62–102), would receive permanent certificates at the last firm rate of their assignors. These assignors, however, had filed for increased rates prior to the assignments to Trahan and Shoreline. Trahan and Shoreline have received temporary certificates at the increased rates. The assignors were collecting the increased rates subject to the possibility of refund as a result of the Section 4(e) proceeding. Trahan and Shoreline are not parties to any 4(e) proceeding. They say that in order to place them in the same position as the assignors they should be allowed to continue to collect the increased rates subject to an express condition in the permanent certificates that they remain liable for refunds of the difference between the currently effective rates and the rate or rates ultimately fixed by final order in the Area Rate Proceeding, Docket No. AR61–2, *et al.*

We think that this result is consistent with the precedent established in *Graridge Corporation*, *supra*, and the order herein will so provide.

General Crude (Docket No. CI61–1280) has excepted to the determination of the presiding examiner that the acreage concerned in its docket is assigned acreage. The proposed order would provide for an initial price in the permanent certificate of 18 cents, the last firm rate of the assignor. General Crude contends that it is entitled to the in-line price of 20 cents per Mcf, which would apply in the case of newly dedicated acreage, as only part of the acreage covered by the certificate was assigned. If General Crude is correct in its contention that a portion of the acreage was dedicated for the first time under the temporary certificate to General Crude, and was never previously dedicated, the correct determination in this docket would be that the initial price applicable to such acreage as was not previously dedicated should be 20 cents per Mcf. The record, however, does not establish to our satisfaction what the facts in this case are. Accordingly, this docket will be remanded to the presiding examiner for a determination as to whether the facts are as alleged by General Crude. On remand, the initial price applicable to any acreage which may not previously have been dedicated shall be fixed at 20 cents per Mcf, while gas from assigned acreage shall be treated as provided by the presiding examiner's proposed order.

There remains the question of the amount of possible refunds. The temporary certificate issued to General Crude covering all this acreage contained a refund condition with a 20-cent floor; that is, General Crude, under the terms of the condition, would be liable to refund the difference between the amounts it actually collected and 20 cents per Mcf if the initial price fixed in this proceeding were 20 cents per Mcf or less. The refund condition did not provide that General Crude would be liable to refund the difference between the amounts collected and the initial price or prices established in this proceeding.

It is unnecessary, however, for us to determine whether the refund floor in the temporary certificate would prevent us in this proceedings from ordering refunds of amounts below the 20-cent floor. With respect to the unassigned acreage, the initial price here determined of 20 cents per Mcf coincides with the 20-cent refund floor. With respect to the assigned acreage, the assignor had filed an increased rate prior to the assignment to General Crude; and General

Crude thereafter filed for two additional increases, the first of which became effective January 1, 1962. Any question of refunds by General Crude after the date of its own filing for an increased rate will be determined in the Section 4(e) proceeding now pending, to which the refund floor has no application. In accordance with the principle of placing an assignee in the shoes of its assignor, a condition will be included in the permanent certificate to be issued to General Crude, with respect to the assigned acreage, that General Crude shall be liable to refund the difference between the rates collected by it for the period prior to January 1, 1962, under its temporary certificate and the rate or rates ultimately fixed by final order in the Area Rate Proceeding, Docket No. AR61–2, *et al.* This condition will equate the refund possibility, for the period not subject to General Crude's Section 4(e) proceeding, with what would have existed had no assignment taken place.

The presiding examiner's proposed order would have required General Crude to refund the difference between the price authorized in its temporary certificate (20.4 cents per Mcf) and the refund floor of 20 cents per Mcf. Although no exception was taken on this point, we think no refund should be ordered here with respect to gas from the assigned acreage. Refunds with respect to this acreage for the period after January 1, 1962, will be determined in the pending Section 4(e) proceeding, consolidated in the Area Rate Proceeding, and General Crude's refunds for the period prior to January 1, 1962, with respect to this acreage will also be subject to the determination of the area rate or rates in the Area Rate Proceeding by virtue of the condition to be incorporated in the permanent certificate.

The presiding examiner ruled that where a producer took an assignment of acreage previously dedicated to interstate commerce but not yet producing, the contract must be treated as a new contract and not as an assignment of acreage under an old contract. This ruling was in accord with the rulings of the Commission until 1962. Later policy, however, has been to treat the assignee of nonproductive acreage in the same manner as the assignee of producing acreage. See letter order issued February 25, 1963, in Mayflo Oil Company, Docket No. CI63–473. We think that the reasons for placing the assignee in the shoes of his assignor apply in the case of the assignee of nonproductive acreage.

There remains but one docket unsettled in which the result reached by the presiding examiner will be changed as a result of this reasoning. Earl G. Bateman (Docket No. CI61–1325) was issued a temporary certificate with an initial price of 23.25 cents per Mcf, and the proposed order would provide an initial price in the permanent certificate of 20 cents per Mcf, the in-line price. Earl G. Bateman's assignor, however had been issued a permanent certificate at 23.55 cents per Mcf. Accordingly, we think that a permanent certificate should be issued to Earl G. Bateman at the same initial price as that of his assignor.

Separate Certificate for Additional Acreage

Additional acreage was added to the original contract of Union Texas (Docket No. G–13221) by an amendment dated February 22, 1962. An amendment was filed to the certificate application asking a total price of 22.24 cents per Mcf be provided for gas from the additional acreage. A separate temporary certificate was issued July 10, 1962, providing for an initial price of 21.25 cents per Mcf without any refund condition. Union Texas points out that the presiding examiner's initial decision did not provide for a separate certificate for gas from the additional acreage, although this was accorded to other producers in similar cases in this proceeding. (Initial Decision, page 315.) No objection has been made to this by any participant.

The additional acreage should be the subject of a separate permanent certificate, providing for an initial price of 20 cents per Mcf. Decision as to whether a refund will be ordered will be deferred, and Union Texas may present a brief and make such showing of the equities as it wishes in accordance with our determination with respect to other producers having no refund condition in their temporary certificates.

CATC, Docket Nos. CI62–135, CI62–137, CI62–146, and CI62–147

In these dockets, involving sales from offshore platforms within the Federal domain, temporary certificates were issued at 21.4 cents. Thereafter, a settlement price of 19.5 cents per Mcf was approved by the Commission. The settlement provided:

> * * * that such price shall be changed to agree prospectively with whatever *initial service price* is determined by the Commission in an order which becomes final and no longer subject to judicial review in Docket No. AR61–2, *et al.*, or *other similar proceeding* * * * [Emphasis added.]

At the time of these settlements, these dockets were consolidated in the Area Rate Proceeding, Docket No. AR61–2, *et al.*, one subject of which was the establishment of initial service prices for the area. However, the proceeding was later divided, and the determination of all initial service prices therein involved were placed in the instant proceeding.

We find no basis for overruling our earlier decision of April 10, 1963 (29 FPC 730), denying the producers' motion for severance from this proceeding, nor do we find any basis for their argument that the 19.5-cent settlement price should continue pending the results of the Area Rate Proceeding. We have determined that the instant proceeding is a "similar proceeding" within the contemplation of the settlement agreement. By the terms of the settlement, the initial price is to be adjusted to conform, prospectively, with the in-line price herein determined, and our order will so provide.

Prices and Conditions for Phillips, Kerr-McGee and Jupiter

Phillips Petroleum Company (Phillips) and Kerr-McGee Oil Industries, Inc. (Kerr-McGee), sold gas from Rollover Field, within the Federal domain off the shore of Louisiana, and from Hog Bayou Field, off the shore of Louisiana but within that State's jurisdiction, under contracts dated in February 1953. The gas from the Hog Bayou Field was delivered onshore in southern Louisiana at a price of 16.4 cents per Mcf. The sales were made to Niagara Gas Transmission, Ltd. (Niagara), for export to Canada. Delivery was actually made to Tennessee Gas Transmission Company (TGT) as agent for Niagara; TGT, under a separate contract with Niagara, delivered equal quantities to Niagara at the Canadian border near Buffalo, New York. These sales continued until November 5, 1958, when Niagara assigned its contract to TGT.

The sales from the Rollover Field were made to The Jupiter Corporation (Jupiter) although the original contract was with Jupiter's predecessor. The contract price to Jupiter was 14 cents per Mcf at the offshore platform. Jupiter, after gathering, dehydrating, separating out liquids, and transporting the gas to a delivery point onshore in southern Louisiana, resold the gas for 16.4 cents per Mcf to Niagara for export to Canada. As in the case of Hog Bayou gas, delivery was made to TGT as agent for Niagara, and TGT delivered equal quantities to Niagara at the Canadian border.

In substance, Jupiter acted as a transporter from an offshore platform to the delivery point onshore, receiving for its services 2.4 cents per Mcf. The transactions, however, were couched in the form of sales by Phillips and Kerr-McGee to Jupiter and resales from Jupiter to Niagara.

Deliveries under the contracts with Niagara continued from both the Rollover and Hog Bayou Fields until November 5, 1958, when Niagara assigned its contracts to TGT.

All parties concerned, including this Commission, regarded these sales prior to November 5, 1958, as being outside the jurisdiction of this Commission, although applications were made for temporary certificates (limited in time) for interim sales made in 1954 while waiting for Niagara to make ready to receive the gas. When Niagara began to accept deliveries, the Commission itself suggested that the applications with respect to the interim sales should be withdrawn. No application was made for temporary or permanent certificates covering sales made to Jupiter or Niagara prior to November 5, 1958. When Niagara assigned its contracts to TGT, however, Phillips, Kerr-McGee, and Jupiter recognized that sales from November 5 onward would be subject to Commission jurisdiction and applied for temporary certificates. By letter agreements dated September 22, 1958, the price to Niagara at the onshore delivery point in southern Louisiana was increased to 21.3333 cents per Mcf, plus .75 reimbursement for Louisiana tax where applicable, effective November 1, 1958—4 days before the effective date of the assignments to TGT. Accordingly, the initial price specified in the temporary certificates for gas delivery to TGT was 21.3333 cents per Mcf, plus .75 reimbursement for Louisiana tax where applicable.

Long Island Lighting Company (Lilco) has presented the argument for the first time in its exceptions that these sales were jurisdictional from the beginning, even though neither the parties nor the Commission apparently regarded them as being jurisdictional prior to November 5, 1958. This matter was not argued before the presiding examiner, nor dealt with in the briefs of other participants. We think so important and novel an issue should be decided only after the Commission has had the benefit of a full discussion. Accordingly, decision as to the initial rates in these dockets will be deferred to allow all interested participants to present briefs upon the jurisdictional question, and the consequences which would follow upon its decision. When the permanent certificates issue in these dockets, the initial prices therein prescribed shall be retroactive to the effective date of this order, and provision will be made for refund of any amounts in excess of such initial prices collected subsequent to the effective date of this order.

Refund of Reimbursement for Invalid Tax

The presiding examiner's proposed order would require Phillips Petroleum Company, in Docket No. G–16612, and Kerr-McGee Oil Industries, Inc., in Docket No. G–16719, to refund the amounts paid them by the purchasers as reimbursement for a Louisiana gathering tax later declared unconstitutional by the Louisiana Supreme Court.

The temporary authorization in each of these dockets contained a condition that the tax reimbursement should be refunded to the purchaser "should such tax be held invalid and *refunded by the State*." [Emphasis added.] The producers have never received a refund from the State of Louisiana and cannot do so, since they did not protest at the time they paid the illegal tax. They state that their reasons for not protesting were the same as the reasons made known to the Commission in *Texaco, Inc., et al.*, 27 FPC 441 (1962). In that case, the

reasons advanced were found inadequate by the Commission. In the opinion on the application for rehearing, 27 FPC 847, the Commission said at page 849:

> * * * Admittedly, if there had been no way by which the producers could have recouped from the State of Louisiana the amounts required to be refunded to their customers, we would have a different question. Procedures for obtaining a tax refund did exist, however, and the fact that some of the producers elected not to avail themselves of these procedures, and thus cannot at this late date be made whole, is not a sufficient reason to inflict upon their customers the burden of an invalid and readily avoidable tax.

We cannot allow the producers, through their own inaction, to cast upon the consuming public the burden of an invalid tax which the producers could have recovered had they taken the steps to do so. The language of the temporary authorization should not be construed to require the actual receipt of the money where, but for the producers' own fault, the money would have been received.

If we assume, *arguendo*, that the language of the temporary certificate would require no refund under these circumstances, the producers would be in no better case. Even in the absence of a refund condition, the Commission has power to order refunds to be made, and is required to decide whether refunds should be made on the basis of the particular equities in the individual case. *P.S.C. of New York* v. *F.P.C., supra.* Every equitable consideration requires that refunds be ordered here. The producers' exception to this part of the presiding examiner's proposed order will be denied.

The proposed order would require payment of interest on the above refunds at six percent on amounts collected prior to March 1, 1961, and at seven percent on all amounts collected thereafter. We feel that the producers here should be treated in the same manner as those in *Texaco Inc., et al., supra.* Accordingly, no interest will be charged for any period prior to May 5, 1962, 91 days after the decision in *Texaco Inc., et al.*, was issued, and the amount of interest which would have been paid to the producers by the State of Louisiana, had the producers protested payment of the invalid tax, will not be included in the amount to be refunded. The producers will be required to pay interest at seven percent from May 5, 1962, on all amounts collected by them as reimbursement for the tax later declared invalid.

Interest on Refunds

The proposed order would require payment of interest on all refunds at six percent on amounts collected prior to March 1, 1961, and at seven percent on all amounts collected thereafter. The initial decision, at page 316, *infra* thereof and the date of the Commission order on which the presiding examiner relied, indicates that the correct date for the change from six to seven percent interest is March 1, 1960. The proposed order will be amended to reflect the correct date.

The Commission finds:

(1) Each of the applicants listed in Appendices B, C, and D is engaged in the sale of natural gas in interstate commerce for ultimate public consumption and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are or, upon commencement of the sale, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants listed in Appendices B, C, and D is (a) able and willing to perform the service proposed in the respective application, (b) a party to a gas sale contract negotiated at arm's-length and in good faith, and (c) willing and able to do the acts and perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder. Appendix E applicants have shown good cause why their service should be abandoned and why their dockets should be terminated.

(4) The sales of natural gas by the independent producers referred to in the above paragraph (1), together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are and have been required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) The proper in-line initial price to be incorporated in permanent certificates covering the sale of natural gas in southern Louisiana and off-shore thereof under contracts dated at any time prior to January 1, 1963, is 18.5 cents per Mcf at 15.025 psia, plus reimbursement for Louisiana severance tax, where applicable, of not more than 1.5 cents per Mcf.

(7) Except as herein granted, the exceptions to the presiding examiner's decision should be denied.

The Commission orders:

(A) Paragraph (C) of the presiding examiner's proposed order is amended to read as follows: "Each certificate issued severally as provided in paragraph (A) above is hereby conditioned to prohibit any total initial price for natural gas at 15.025 psia, including all reimbursements and changes, greater than the certificated price listed opposite the applicable docket number in Appendices B, C, and D, from the date of issuance of this order, except as such prices may be lawfully changed in the manner provided by the Natural Gas Act, and subject to any such lawful changes which are now the subject of other proceedings before the Commission. Within 30 days from the date of issuance of this order each of the applicants receiving certificates in paragraph (A) above with a conditioned initial price different from the initial price provided in the contract shall file supplements to their presently filed rate schedules reflecting the conditioned price as the initial price in lieu of the initial price provided in the contract; provided that the notice provisions of Section 154.94(b) and the detailed submittal provisions of Section 154.94(f) of the Commission's Regulations under the Natural Gas Act are waived insofar as they apply to the reductions in rates hereby ordered.

(B) Paragraph (F) of the presiding examiner's proposed order is amended to read as follows:

> Each of the applicants listed in Appendix C shall, prior to or within 60 days after the final determination of these proceedings, refund to the purchasers the difference between the price charged and collected for gas covered by the respective applications and the applicable certificated price listed in Appendix C except as other refund conditions have been established by prior order of the Commission and reflected in the text of this decision or in a particular provision of this order. Interest shall be paid on all such refunds at the rate of six percent per annum for all amounts collected prior to March 1, 1960, and at the rate of seven percent per annum for all amounts

collected thereafter, except that in Docket Nos. G–15542, G–16612 and G–16719 the interest on the refunds ordered of amounts collected as reimbursement for the invalid Louisiana gathering tax shall be at the rate of seven percent per annum from May 5, 1962, whereas no interest shall be paid for any period prior to May 5, 1962 on such amounts.

(C) The decision whether refunds should be ordered as a condition to the permanent certificates listed in Appendix B is deferred for subsequent determination. Within 30 days from the date of issuance of this order the parties to this proceeding, to the extent desired, may file briefs directed to the issue whether refunds should be ordered in any or all of the dockets and to the extent of such refunds, if any. Replies may be filed within 10 days of service of the briefs. Any party who wishes to introduce into the record evidence as to additional facts which might bear upon the ultimate determination of this matter shall file with its brief, within 30 days from the date of issuance of this order, a statement of such additional facts and of the evidence by which it is proposed to establish such facts.

(D) The certificate herein issued to J. C. Trahan, Drilling Contractors, Inc. (Operator), *et al.*, in Docket No. CI61–452 and to Shoreline Exploration, Inc., in Docket Nos. CI62–73 and CI62–102 shall contain the following condition: "The producer, although authorized to collect the initial rate herein provided, shall remain liable for, and by acceptance of this certificate agrees to remain liable for, refund (with interest) of the difference between any amounts collected by it from a purchaser (with respect to natural gas produced from the acreage covered by this certificate, whether before or after the issuance of this certificate) and the rate or rates ultimately determined to be applicable in the area by final order issued in the Area Rate Proceeding, Docket No. AR61–2, *et al.*, or such other applicable proceeding as the Commission may order for the determination of rates under Section 4(e) of the Natural Gas Act, whether or not the producer shall be a party to such proceeding."

(E) Docket No. CI61–1280, General Crude Oil Company (Operator), *et al.*, is remanded to the presiding examiner for determination in accordance with this opinion, as relevant to that docket.

(F) The decision as to the proper initial rates and other particular conditions in Docket Nos. G–16611, G–16612, G–16718, G–16719 and G–16679 will be deferred, except as herein provided. Any interested participant may within ninety days of the effective date of this order file with the Commission a brief upon the question of whether sales made by the sellers under the contracts involved in these dockets were subject to the jurisdiction of this Commission prior to November 5, 1958, and upon the consequences following from a decision upon this question. Nothing herein shall affect the decision of the Commission with respect to the refund of reimbursement for invalid taxes in Docket Nos. G–16612 and G–16719.

(G) Except as herein set forth to the contrary, the exceptions to the presiding examiner's decision and proposed order are hereby denied.

(H) The motions for opportunity to present oral argument before the Commission are denied.

(I) The presiding examiner's initial decision and proposed order, to the extent not inconsistent herewith, are adopted as part of this opinion and order.

(J) Appendices A, B, C, D and E hereto attached shall be substituted for Appendices A, B, C, D and E to the presiding examiner's proposed order.

APPENDIX A

DOCKETS AUTHORIZING ABANDONMENT OR TERMINATION OF SALES

Docket No.:	*Applicant*
G-19297	Irwin & Bess

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 14, 1964) [1]

WESTON, *Presiding Examiner:* This is a consolidated proceeding instituted by orders of December 31, 1962, January 22, 1963 and February 7, 1963, which brought together 362 separate "certificate" dockets involving sales of natural gas from Southern Louisiana by almost every major gas producer in the United States market, many of the minor gas producers, and a few pipeline companies making field sales as producers. The dockets involve the same principal question: the proper initial price for new sales of gas to interstate pipeline companies from the Southern Louisiana (including offshore Louisiana) pricing area. The issue is framed in terms of pennies, within a possible range of, say, 18.5 cents and 25 cents per Mcf (thousand cubic feet). However, the contracts involved in this proceeding deal with annual sales volumes on the order of 575 million Mcf. (Exh. 1, Schedule 1.) It is apparent that, especially over a time-span of several years, many millions of dollars of realizations by gas producers or savings by gas consumers, are involved in the issue. See generally,

[1] The proceeding involves a very large number of independent producers, and (because some producers are involved in more than one docket) an even larger number of applications. For clarity and efficiency, groups of producers and dockets appear in the Appendix hereto, according to the dispositions made of the applications.

Swidler, "New Directions in Gas Regulation," address of September 19, 1961, to the Independent Natural Gas Association, Houston, Texas; mimeo. copy p. 3.

As will be seen, a large number of the dockets have been settled and therefore severed from this proceeding and terminated. Fourteen dockets were severed and disposed of by the Commission in *Graridge Corp., et al.*, Docket No. G–19246, *et al.*, Opinion 408 30 FPC 1156 issued October 31, 1963. Two dockets severed herefrom have been the subject of a Presiding Examiner's decision of October 24, 1963 (*Southern Natural Gas Co.*, Docket No. CP63–26, *et al.*, 31 FPC 801).

Because they involve recent successions to sellers' interests, acreage conditions, and other changes in situation requiring certification under the Natural Gas Act, fourteen of the dockets in this proceeding stem from contracts dated prior to 1955; one dating back to 1945. The rates under these contracts are, with one exception, at levels reached in more recent years; eight provide for over 20 cents per Mcf.[2] The number of contracts included in this proceeding dated in years subsequent to 1954 are as follows: 1955—eight; 1956—six; 1957—twelve; 1958—thirty-eight; 1959—sixty-nine; 1960—ninety-five; 1961—seventy-six; 1962—thirty-four.

Virtually all of the sales considered herein have been temporarily authorized by *ex parte* Commission action, and deliveries are being made. Some of the temporary authorizations contain refund conditions, and some do not. The sales are sorted into appropriate categories for disposition in accordance with the determinations made herein, in the appendices to this decision.

FORMAL PROCEEDINGS AND STIPULATED FACTS

In prehearing conferences, the parties stipulated that applicants' contract and certificate filings established (a) arm's-length bargaining, and (b) ability and willingness of applicants to perform in accordance with the contracts, the Natural Gas Act, and the Commission's valid promulgations thereunder.

Thereafter, prepared testimony and exhibits were served; hearings commenced June 11, 1963, continued from time to time, and concluded July 23, 1963; simultaneous initial briefs were filed September 16, 1963 and simultaneous answering briefs were filed September 30, 1963.

On June 18, 1963, an appeal by substantially all of the producers from rulings excluding evidence, next considered, was certified to the Commission. By order of July 8, 1963, the Commission denied the appeal, deferring decision on the correctness of the exclusionary rulings until decision on the merits, and indicating that "sufficient guidelines with respect to the types of evidence which will be considered by us in certificate proceedings involving initial price determinations" have been set forth in *Skelly Oil Company*, 28 FPC 401, 411, *Texaco Seaboard, Inc.*, 29 FPC 593, and *El Paso Natural Gas Co.*, 29 FPC 1175, Opinion 390 issued June 19, 1963. Accordingly, the correctness of the rulings will be determined herein.

EVIDENCE OFFERED, EVIDENCE REJECTED, EVIDENCE CONSIDERED

Evidence offered. The producers offered testimony and exhibits covering a great variety of presentations which they claim are relevant to the issue "whether a proposed sale of gas in accordance with the contract provisions is required by the present or future public convenience and necessity." (Continental Oil

[2] Including tax reimbursement. All figures in this decision, except where otherwise noted, include tax reimbursement where provided for in the contract, because such reimbursement is part of the total cost of the gas to the consumer.

Company, brief, p. 20.) [3] It may be said that such evidence includes every type of presentation heretofore made to the Commission which tends to justify contract prices at the higher levels reached in recent years on the basis of: producer costs; cost-of-service; rate of return; trends in cost of production intrinsically and comparatively; trends in actual production; the intrinsic and comparative value of gas to pipelines and consumers; the needs of the oil and gas industry and of particular units of that industry—nationwide and in Southern Louisiana; and on the basis of considerations arising out of geological, economic, social, legal and psychological facts and contentions adduced by the producer witnesses (supported in many cases by charts, graphs and other analyses).

Quoting again from Continental's brief, p. 20—

> It is the producers' position that the value of gas as a commodity is the key determinant, and that the public interest would best be served by authorizing the proposed sales at prices in accord with this commodity value. We offered extensive economic evidence to show "the reason why" contract prices for gas reflect commodity values, to show "the reason why" contract prices and commodity values have changed over the past period, and to show "the reason why" the proposed sales, at the contract prices, are required by the present and future public convenience and necessity.

A detailed description of each item of evidence offered by the producers is unnecessary in view of the definitive Commission policies recently enunciated, considered *infra*. However, we should for illustrative purposes instance the first item of excluded testimony and rejected accompanying exhibit. Robert H. Park, assistant Division Manager, Gas Division, Domestic Producing Division, Texaco Inc., was presented to give 37 pages of testimony and a 12-schedule exhibit (Exh. 3, rejected) designed to show the following—

> The purpose of my testimony is to present a study analyzing the current costs on a nation-wide basis experienced by the producers in finding and developing supplies of gas well gas, and to demonstrate the financial requirements of the producers of natural gas in their efforts to find and develop such gas supplies. From these data are derived the estimated market prices required for current sales of gas in order to meet the producers' requirements for financing the necessary gas supplies. These necessary market prices demonstrate that the prices contained in the contracts for the sale of gas produced in South Louisiana in the various fields in this proceeding are not higher than those required by the financial need of producers and are, therefore, required by public convenience and necessity.

Mr. Park's studies have led him to the conclusion that in order to meet the minimum financial requirements of the producer companies, "it is necessary to have a nation-wide average price level for current new sales of natural gas of approximately 23 cents per Mcf." Exh. 3–A (rejected), p. 7. In Southern Louisiana, Mr. Park suggests a level of not less than 110% of the national average, and the certification of contract prices up to 25 cents or 26 cents per Mcf. *id.*, pp. 36–37.

Evidence rejected. Without going into further detail at this point, suffice it to say that all testimony and exhibits described above, which may be further summarized as proposed evidence related to costs, values, needs and public policy applicable thereto, were excluded from consideration in this proceeding. *Placid Oil Company*, 30 FPC 283, Opinion 398 issued July 17, 1963 and Opinion 398–A, 30

[3] Many of the producers have, in short-form briefs, announced their acceptance of and concurrence in the Continental presentation.

FPC 682, issued September 11, 1963, on appeal to CA5 No. 20891; *Skelly Oil Company*, 28 FPC 491, 410–412, on appeal to CADC, Nos. 17582 *et al.*; *Texaco Seaboard, Inc.*, 29 FPC 593, and Opinion 383–A (on rehearing) issued August 27, 1963, 30 FPC 613; *United Gas Pipe Line Co.*, 30 FPC 329, Opinion 399 issued July 17, 1963; *Standard Oil Company of California*, 27 FPC 1153, rehearing denied, 28 FPC 292; affirmed in, and see also *California Oil Company* v. *F.P.C.*, 315 F. 2d 652 (CA10); see also *The Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677 (CADC). In general, these references are to recent court and Commission applications, in respect of evidence to be considered, of the general principles laid down in *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378, hereafter usually called the "Catco" case.

In the order of December 31, 1962 instituting this proceeding [unreported], the Commission pointedly refers to its efforts to "hold the line on prices," and in this connection cites *Skelly* as a decision which "helped to crystallize the principles and guidelines to be employed in the certification of sales by independent producers." (Mimeo. copy, p. 10.) The fair inference is that the Commission wanted to make it very clear that the principles and guidelines adopted in *Skelly* to govern admission of evidence, *inter alia*, were to be used in the proceeding at bar, rather than certain variant and inconclusive observations about evidence contained in prior Commission and court cases.

Evidence considered. In general, the evidence admitted into the record dealt with the actual prices of new gas in Southern Louisiana, covering all or selected parts of the period 1954–1962 inclusive. The scope of the proceeding was thus sharply narrowed. Nonetheless, extended controversy developed between the producers on one hand, and Staff and Eastern Seaboard Intervenors[4] on the other, as to what actual prices should be given controlling weight in the determination of the price-line applicable to the contracts involved in this proceeding.

Conclusion. These rulings on evidence are of course rulings on matters of substance and great importance. A price-line determined, *e.g.*, with reference to the Hassie Hunt Trust "1960 Cost of Service Study (Using Relative Cost and Modified Btu Allocations) patterned after FPC Opinions 338 and 339" (Exh. 13, rejected), would not be a price-line derived only from comparison of the Hassie Hunt Trust prices with other gas prices in the area. Actual receipts of Hassie Hunt Trust from its gas sales contracts may be seriously affected by the rejection of cost of service evidence.

Aside from the citation of controlling Commission decisions, the reasons for the rulings excluding evidence will not be developed further at this point. These rulings follow one of several aspects of current Commission policy concerning initial prices for new gas. All aspects of current Commission policy are best understood in the light of past policy and past error in the control of initial prices, as next considered.

THE EVOLUTION OF AND THE PRESENT CONTENT OF THE PRICE-LINE CONCEPT

In fixing the proper initial price for the gas sold under dockets consolidated herein, should we look exclusively at other gas prices existing in the area? Should the gas prices to which we refer include only prices which have been certificated by the Commission, *i.e.*, prices allowed for sales in interstate commerce? Should such prices to be considered herein exclude prices which the Commission has erroneously, or in the abuse of its discretion, as determined by court decisions, allowed in the past, and other prices at the same levels? If

[4] The Brooklyn Union Gas Company, *et al.*, comprising a group of gas distribution companies serving New York, New Jersey, Pennsylvania and the New England States.

these questions are answered in the affirmative, then what is the reason for such a Commission policy?

We must start with the recognition that the Commission's policy with respect to the correct price for new gas connections has evolved and changed over the years since the *Phillips* decision of June 7, 1954. We will find that some of the Commission's past expressions and certifications not only do not accord with present policy, but do not accord with proper policy and proper exercise of discretion, as determined by reviewing courts. It is because these past expressions and certifications were made in error, and as a result of an abuse of proper Commission discretion, that certain prices heretofore established and still being charged by producers in Southern Louisiana should be disregarded in the determination of the proceeding at bar.[5] It will simplify the necessary case-by-case analysis to divide the history of Southern Louisiana pricing (with some reference to general pricing policy) into three separate periods, which periods to some extent overlap.

A. *Period of Substantially No Interference With the Open Market*

This period extends roughly from June, 1954, when the *Phillips* case[6] was decided and the Commission's jurisdiction in the premises first appeared, through December, 1959, when the Supreme Court summarily reversed a divided decision of the Third Circuit, which had found "not unreasonable" an "exercise of judgment" by the Commission certificating an unconditioned sale of Southern Louisiana gas (on shore and offshore) at prices ranging from 22.4 cents to 23.3 cents per Mcf. *PSC of N.Y.* v. *F.P.C.*, 361 U.S. 195, reversing *United Gas Improvement Co.* v. *F.P.C.*, 269 F. 2d 865, 869 (CA3).

It appears that up to the end of 1958, the Commission price-conditioned a producer sale of natural gas in only one instance, which was reported in *Cities Service Gas Co.*, 14 FPC 134, affirmed *sub nom*, *Signal Oil & Gas Co.* v. *F.P.C.*, 238 F. 2d 771 (CA3), certiorari denied, 353 U.S. 923. In that case, a 12-cent price was conditioned to 10 cents, on evidence the proposed price would constitute a new high and trigger favored-nations clauses in the north-central region of Oklahoma. (See 14 FPC at 140.)

In 1959, several Commission orders imposed price conditions. See *Transwestern Pipeline Co.*, 22 FPC 391, 542, 574, and *Phillips Petroleum Company*, 22 FPC 694, 1021. However, despite the Supreme Court's "strictures"[7] in the now famous *Catco* case,[8] most of the Commission's decisions through 1959 certified the initial prices arrived at by bargaining on the open marketplace, marked by competitive bidding between pipelines, without price conditions designed to "hold the line" at pre-existing levels. *Catco* did not mark the beginning of firm control, but the beginning of a period of uncertainty.

Staff's brief in this proceeding correctly characterizes the "limited approach" of the Commission during the period 1954–1959 by reference to the opinion in *Seaboard Oil Co.*, 19 FPC 416. The philosophy and public policy expressed in this opinion, now known to be erroneous, was the policy underlying many of

[5] The discussion does not proceed on the currently familiar basis of "suspect" or "tainted" prices for reasons that are implicit in the foregoing, but which will later be spelled out. There is a genuine, not merely a semantic, difference between reasoning based on a so-called "suspect price doctrine" (Staff Br., 28, 30) and reasoning based on recognition of error or abuse of discretion.

[6] *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672.

[7] Term used by Judge Hastie, dissenting in the *UGI* case, *supra*, 269 F. 2d at 869.

[8] *Atlantic Refining Co.* v. *Public Service Commission*, *supra*, decided June 22, 1959.

the prices which must be taken into consideration in the proceeding at bar, and is therefore worth quoting at length (19 FPC at 421)—

> On the same day that Signal was decided, November 23, 1955, this Commission had before it another certificate proceeding,[6] in which, as in the Signal proceeding, the Commission was requested to condition the issuance of the certificates as to price. The Commission refused to so condition the certificates and called attention to the fact that while it frequently had imposed such conditions in pipeline certificate cases, that:
>
> > Because the economic and other conditions presented in certificate applications filed by independent producers are substantially different from those presented in certificate applications filed by interstate pipeline companies, the Commission has not deemed it prudent to expend the time required to resolve rate issues at this stage, nor has it found it practical to inquire into the reasonableness of producer rates in all producer certificate proceedings.
>
> Time and experience have attested to the soundness of our position in the Tamborello case and have forcibly demonstrated at least in the great majority of independent producer certificate cases coming before us, where the price for the proposed sale has been arrived at on an arm's length basis, that the imposition of a rate condition under Section 7(e) reducing the price proposed by the applicant for its sale of gas is neither a proper nor practicable means for protecting the consumer against prices which may not have been shown to be just and reasonable; and that the primary instrument for the protection of the consumer against excessive rates is and must continue to be the means afforded by the rate provisions of the Act.
>
> Mature consideration of the various factors involved had led inescapably to this conclusion. * * *

[6] See our Opinion No. 287, In the matter of Anthony J. Tamborello, *et al.*, Docket No. G–3045, et al., 14 FPC 123.

This being the basic philosophy of initial price regulation at the outset, it is not surprising that many specific cases decided by the Commission resulted in the issuance of certificates at price levels far exceeding previous price levels, reflecting pipeline competition for new supply from the Southern Louisiana area.

A–1. *Unreversed Commission cases.* The principal decisions of the Commission during the period now under discussion not reversed by the courts on appeal, resulting in the certification of new high prices in the Southern Louisiana area, and resulting in the important question, whether these prices are to be weighed in the determination of the appropriate price-line to be used in this proceeding, are as follows:

1. *Gulf Interstate Gas Co.*, 12 FPC 116, issued May 20, 1953 (before the *Phillips decision*). Here, a new pipeline was certificated to pick up Southern Louisiana gas for United Fuel Gas Company (Columbia System). Prices paid by this new line far exceeded the pre-existing market prices as shown in Exhibit 1–B herein. The highest price reached 21 cents per Mcf, including tax reimbursement, for gas from several major producer sales in the Erath field. Exh. 1–B, pp. 8, 10, 13.[8]

[8] The Commission describes this price as one at 20 cents per Mcf in the cited decision, 12 FPC at 123, being the price before tax reimbursement. The certificates were issued to Humble Oil & Refining Company, The Texas Company, and Tide Water Oil Company on November 2, 1954 under the Commission's abbreviated procedure. See 14 FPC 1238 and 1247. On February 29, 1956, Phillips Petroleum Company applied for, and later received, separate certification of its interest in the gas theretofore certified to The Texas Company, with an indicated price of 21.2 cents per Mcf by reason of an intervening escalation. Exh. 1–B, p. 13 shows the escalated price.

2. *American Louisiana Pipe Line Co.*, 13 FPC 380, issued October 1, 1954 (after the June 7, 1954 *Phillips* decision). Following the new price-line established in *Gulf Interstate*, nine sales of gas at 19.25 cents per Mcf, three sales at 21 cents, and one sale at 17 cents were approved,[10] on a conclusion by the majority that the Commission should not "adopt any procedure for enforcing the mandate of the *Phillips* decision, which might result in a collapse of the American Louisiana project to the detriment of the public welfare." (13 FPC at 391.) Chairman Kuykendall and Commissioner Digby, dissenting, stated their concern "about the producers' prices as shown in their contracts, which are among the highest, if not the highest, known to this Commission." The dissenters were of the opinion that the reasonableness of the producers' rates "in this first, precedent setting, certificate case since the *Phillips* decision, deserves consideration which is not being given here, under the present state of the record." (13 FPC at 397.)

The concern of a gas distributor about the new high range of prices paid to producers first clearly appears in this proceeding. Thus, the Memphis distribution system, supplied by Texas Gas Transmission Company, had been allowed "limited participation" in the Commission proceedings, and sought review of the certification on the basis that prices paid by American Louisiana would trigger prices under the contracts of *Texas Gas* with various producers in the area. On review, the court dismissed the Memphis petition for want of a showing of aggrievement or abuse of discretion. *Memphis Light, Gas & Water Div.* v. *F.P.C.*, 243 F. 2d 628 (CADC).

3. *Anthony J. Tamborello, et al.*, 14 FPC 123, issued November 28, 1955. Again following the precedent of allowing new high prices for Southern Louisiana gas, the Commission authorized eight producers to sell new gas from the area to Transcontinental Gas Pipe Line Corp., at a new high to this pipeline of 17 cents per Mcf, including 1 cent of tax reimbursement. The Commission significantly observed that it "has not deemed it prudent to expend the time required to resolve rate issues at this stage [*i.e.*, at the stage of the issuance of certificates for new sales], nor has it found it practical to inquire into the reasonableness of producer rates in all producer certificate proceedings." Citing its reservation of the rights "to inquire later into the reasonableness of the rates," the Commission concluded that distribution company and consumer interests were "protected" while processing of certificate cases was expedited "without the complicating consideration of the producer rates." (14 FPC at 126.)[11]

The growing concern of gas distributors and the public was indicated by the interventions of five of Transco's customers and of the New York Public Service Commission (hereafter NYPSC).

4. *The Atlantic Refining Company*, 14 FPC 480, 490, decided December 30, 1955, rehearing denied 15 FPC 1121. Here, the Commission authorized an initial price of 21 cents per Mcf (including one cent of tax reimbursement) pursuant to Texas Gas Transmission Corporation's contracts for offshore Louisiana deliveries from The California Company, Union Oil Company of California, and the captioned producer company.[12]

---

[10] Provided that the producers apply for certificates to sell the gas, pursuant to the then new Commission Order 174–A. Certificates were applied for, and granted in an uncontested proceeding, *The Superior Oil Co.*, Docket No. G–6067 *et al.*, unreported.

[11] See, however, *Cities Service Gas Co.*, 14 FPC 134, issued on the same day as *Tamborello*, conditioning the proposed new high in prices for south-central Oklahoma gas of 12 cents per Mcf to the prior high of 10 cents per Mcf; affirmed *sub nom. Signal Oil & Gas Co.* v. *F.P.C.*, 238 F. 2d 771, *supra*.

[12] See lines 4 and 6, p. 3, and line 15, p. 4, of Schedule 2B of Exhibit 1, showing higher total price currently being paid because of current tax reimbursement levels.

The importance of this decision extended beyond its effect on Texas Gas. Taken in conjunction with sales to two other transmission companies, this 21-cent price triggered increases to 14 other producers for gas purchased by Tennessee Gas Transmission Company under 18 separate rate schedules. Rates mainly at 10.97633 cents per Mcf went to 22.0833 cents per Mcf, for a total annual increase to this one purchaser of $7,312,643.

5. *Houston Texas Gas & Oil Corp.*, 16 FPC 118, issued December 28, 1956, rehearing denied, 17 FPC 303. Here, a new pipeline to bring gas from fields in Texas and Louisiana to Florida was authorized. The pipeline, now Florida Gas Transmission Company, paid 19.75 cents per Mcf for gas from Southern Louisiana under certificates granted in independent, unconsolidated dockets. (Exh. 1, Schedule 2C, p.8, lines 8, 16, 17.) The Commission reaffirmed its position that, in effect, initial prices were not to be considered in certificate cases, because the matter of rates "is subject to our continuing supervision and control and if sufficient reason appears therefor, can be considered in an appropriate proceeding under the act." (16 FPC at 142.)[13]

The case is noteworthy because the Commission's view of its duties in regard to initial prices was specifically affirmed by the majority of the reviewing court. *Florida Economic Advis. Coun.* v. *F.P.C.*, 251 F. 2d 643 (CADC) (Bazelon, C. J. dissenting), certiorari denied, 356 U.S. 959. The court said (251 F. 2d at 646)—

> Petitioner claims the Commission should have held a rate hearing to determine the lawfulness of the rates to be charged by the gas suppliers. But this inquiry may be resolved in a rate proceeding rather than in a proceeding for a certificate of public convenience and necessity, and the Commission did not abuse its discretion in declining to consider the matter in the instant proceeding. The rates are subject to the Commission's continuing jurisdiction, and, whenever sufficient reason appears, they may be taken up. * * * [Footnote omitted.]

6. *Southern Natural Gas Co.*, 18 FPC 38, issued July 12, 1957, rehearing denied, 18 FPC 179. Here, five producers were issued certificates covering eight separate sales of gas to Southern Natural; six of the sales being from the offshore subarea. Tidewater and Gulf oil companies were allowed 19.75 cents per Mcf in respect of one onshore sale apiece; Kerr-McGee was allowed 21.25 cents for two offshore sales; Phillips Petroleum and Socony-Mobil were allowed 22 cents in respect of three offshore sales by the former and one such sale by the latter.[14] The Commission had before it no evidence upon which a proper price line could be determined; for which reason Commissioner Connole dissented. (18 FPC at 43.) The full opinion (mimeo, copy) reproduced in part in the official reports, did not undertake to justify or explain the allowance of these new highs in prices paid for gas by Southern Natural.[15]

---

[13] See also, the Commission's observations in denying the NYPSC application for rehearing, 17 FPC at 310, and citing the *Memphis* decision, 243 F. 2d 628, *supra*. It is perfectly clear that during the period of non-interference with initial prices, the Commission was acting under color (or more) of justification, derived from *Memphis* and other subsequent court decisions.

[14] Exhibit 1, Schedule 2C, pp. 11 lines 5 and 6, 12 lines 16 and 17, and 14 lines 1, 2, 3 and 4.

[15] Southern Natural, under 1956 contracts, paid 19 cents per Mcf to Secure Trusts and H. L. Hunt, 19.75 cents to five Hunt trusts, and 19 cents to Mississippi River Fuel Corp. Exh. 1, Sch. 2: pp. 8 lines 12 and 18; 9 lines 1, 2, 3, 4, 13 and 16. In 1957, Southern paid 20 cents for new gas from Continental Oil Co., M. P. O'Meara *et al.*, and Shell, prior to the decision under discussion, and prices ranging up to 23.675 cents per Mcf in respect of contracts entered into after the issuance of the July 12, 1957 decision. Exh. 1, Sch. 2; pp. 11 line 17; 12 lines 1, 2, 4; 13 lines 7, 15, 16, 17 and 18; 14 lines 6, 7, 8, 9, 10, 11, 15.

7. *Seaboard Oil Company*, 19 FPC 416, issued March 31, 1958. This decision is of importance because it fully states the Commission's philosophy and approach to initial price issues, during the era of *laissez-faire*, and was therefore, quoted at some length at the outset of this section. Additionally, it is noteworthy that the Commission ruled that "where the issue of the attachment of a rate condition to the certificate was injected into a proceeding by another party to the proceeding [*i.e.*, any participant, including Commission staff, other than applicant] that the burden of going forward with the evidence relating to the issue so injected was on the party raising the issue," for—

> * * * it is inconceivable that we would have required applicants to undertake the burden of going forward with evidence to show that this particular rate, considered in conjunction with others, must be shown to be justified by the public convenience and necessity. If such standards are to be required of applicants, there is no end to what may be required of them. * * * [19 FPC at 420.]

This decision was also the occasion for a full statement of the dissenting views of Commissioner Connole (19 FPC at 427–436), which in general presaged the present policy of firm control of initial prices, *infra*.[16]

Specifically, the Seaboard decision authorized sales of gas by two producers from Vermilion Parish to United Gas Pipe Line Company at 19.5 cents per Mcf,[17] partly on the basis that sales from the nearby Erath field had theretofore been allowed at 21 cents per Mcf in the *Gulf Interstate* decision, *supra*.

8. *Trunkline Gas Company*, 21 FPC 704, issued May 22, 1959. This decision authorized prices of 24.05 cents per Mcf by the captioned pipeline company, in respect of sales within Louisiana's taxing jurisdiction, to producers Nicklos Oil & Gas Company, Pan American Petroleum Corporation and Union Oil Company of California, as well as prices of 22 cents per Mcf to the last-named producer in respect of non-taxable offshore sales. (Exh. 1, Sch. 2, p. 18, lines 8, 9, 10, 11, 13, 14, 15.)

The Commission opinion refers to all prices as being at 22 cents per Mcf, being the price before tax reimbursement, and for explanation of the certifications merely states flatly, without detail, that (1) other sales in Louisiana at prices as high as 22 cents have been certificated; (2) no "party to this proceeding" has objected[18]; (3) there is no evidence of adverse effect on the public interest. (21 FPC at 715.)

9. *South Georgia Natural Gas Co.*, 22 FPC 211, issued August 7, 1959. This was the first Commission decision on initial prices subsequent to the Supreme Court's *Catco* decision of June 22, 1959. The Commission considered sales of gas to Southern Natural Gas Company from fields in Louisiana and Mississippi. The Commission opinion is not clear on the price level of the Louisiana sales, but generally quotes the Presiding Examiner's findings that the initial prices ranged from 19 to 21.5 cents per Mcf. (See 22 FPC at 217, compare 22 FPC at 227.) Exhibit 1 indicates that sales from two fields—Felice Bayou and Coffee Bay—are located in the area covered by the proceeding at bar. Including tax

---

[16] See also *Hope Natural Gas Co.*, 19 FPC 405, involving West Virginia gas, where the Commission reaffirms its intention to issue producer certificates under the abridged procedure whenever possible, without considering the question of price; and see Commissioner Connole's dissent, 19 FPC at 410.

[17] Exh. 1, Sch. 2, p. 11, lines 12 and 16.

[18] NYPSC was denied intervention. Its petition for review of the Commission decision was dismissed for want of timely filing, and therefore the court did not reach or consider the question of substantial error in the Commission decision. *Public Service Com'n of N.Y. v. F.P.C.*, 284 F. 2d 200 (CADC).

reimbursement, the Felice Bayou sales were at a price of 20.75 cents per Mcf, and the Coffee Bay sales were at 23.55 cents per Mcf. Exh. 1, Sch. 2: p. 17 lines 7 and 15; p. 18 lines 7, 12, 16, 17, 18; p. 19 lines 1, 2 and 5. Southern had been previously certificated in respect of two prior contracts at the level of 23.675 cents per Mcf, including tax reimbursement, see note 15 above.

The Commission, after summarizing its view of the *Catco* decision, concluded—

> * * * that the requirements laid down by the Supreme Court in its *Catco* opinion have been met in this case. In our opinion, the evidence in the record before us substantially establishes that the proposed initial prices for the producers' sales are in the public interest, and the proposed sales required by the public convenience and necessity. To us, it is clear that there is no warrant or justification for the attachment of any initial price condition in this case.

The Commission refused to accept Staff's argument that prices like the *Catco* prices should fall within the ambit of the Supreme Court's directions in the *Catco* case; in any event, according to the decision, "the Supreme Court did not hold that a 21.5 cent rate or any other rate could never be substantiated but merely that the price proposed in the *Catco* case had not been." (Citing *United Gas Improvement Co.* v. *F.P.C.*, 269 F. 2d 865 (CA3), considered *infra*.)

A–2. *Commission cases reversed by courts.* On June 22, 1959, the Supreme Court decided *Catco*, and remanded certifications of sales of offshore gas by four producers at 21.4 cents per Mcf.[19] The *Catco* decision is well-known and need not be restated. The Supreme Court, specifically mentioning the interests of gas consumers seven times in three pages of text, in effect directed the Commission to rigorously apply its conditioning powers in respect of prices for new gas, see 23 FPC at 675–676, and thus drastically curtailed the permissible ambit of Commission discretion. This direction and curtailment, however, was not immediately implemented in Commission decisions.

We have seen, *supra* case number nine, the Commission's August 7, 1959 reading of *Catco*. On August 10, 1959, Commissioner Connole not participating, this qualified and restricted reading was reinforced in five decisions involving Southern Louisiana gas, in which a series of producer sales were authorized at the contract prices. *All of these certifications were reversed on appeal.* The Commission's decisions are, however, of present importance because they reveal erroneous policy which must not be perpetuated.

The Commission's 1959 policy is summarized in one of these decisions, *Texas Gas Transmission Corporation*, 22 FPC 378, 387, rehearing denied 22 FPC 657, as follows:

> As we understand the *Catco* decision, the Supreme Court held, in essence, that the producer's proposed initial price must be supported by substantial evidence establishing that the price is required by the public convenience and necessity and is in the public interest; that although the Commission should consider all the factors and has broad discretion in determining whether an initial price is so supported, price is an element of prime importance and the Commission should scrutinize the price closely with a view to protecting the consumer and holding the line against price rises. The Court further held that the Commission can attach such price conditions as it believes necessary when the proposed price is out of line, when it might result in a triggering of general price rises by reason of favored-nation

[19] Plus provision for one cent of Louisiana tax reimbursement. The Louisiana tax appears not to be applicable to these deliveries from Federal lands 20 to 30 miles offshore.

clauses, or when its approval might result in a general increase in applicants existing rates.

* * * * * * *

From our foregoing analysis of the evidence adduced to support the producer prices in this case and the Supreme Court's *Catco* decision, it appears that the producer applicants have sustained their burden of showing that the prices are required by the public convenience and necessity, and there is no adequate basis or reason for denying or conditioning the producer certificates herein sought. As the record shows, the prices are the same or lower than numerous other certificated sales in this area.

Of 25 sales covered by *Texas Gas*, 21 sales were at 23.55 cents per Mcf and four were at 23.05 cents per Mcf. (Exh. 42, Sch. 5.)

In *Superior Oil Company*, 22 FPC 369, rehearing denied, 22 FPC 655, the Commission approved a price of 21.4 cents per Mcf for offshore Louisiana gas, after referring to other sales in the area made at the same or higher prices, as well as competitive considerations and the needs of the pipeline purchaser. (22 FPC at 371.)

In *Sunray Mid-Continent Oil Company*, 22 FPC 361, rehearing denied, 22 FPC 652, a price of 23.55 cents per Mcf was authorized for onshore Southern Louisiana sales, on the basis of other equivalent prices existing in the same field, and the benefits to the purchasing pipeline.

California Company, 22 FPC 252, rehearing denied, 22 FPC 653, involved prices for Terrebonne Parish gas stated in the Commission decision to be "21.5 cents, without tax reimbursement," although the existence of "greater tax reimbursement than some other 21.5 cent sales" is recognized. (22 FPC at 253, 254.) The actual price including tax reimbursement is shown by the Examiner's decision to be 23.8 cents per Mcf. (22 FPC at 257.) The sales were approved on general recitals as to putative benefits and absence of price detriments.

In *Sun Oil Company*, 22 FPC 351, rehearing denied, 22 FPC 654, the price after tax reimbursement for gas from St. Mary Parish was also 23.8 cents per Mcf. (Cf. 22 FPC at 351, 353 and 356.) The Commission held the price "not out of line on a comparative basis." Although, counting tax reimbursement, the price was contended to be "the highest price in the area," the Commission found that "this tax reimbursement resulted from the fact that United [the pipeline purchaser] needed the gas to help meet its system demands and therefore offered the slightly higher tax reimbursement to give Sun an incentive to sell." (22 FPC at 353.)

Seriatim, the above decisions were reversed and remanded as follows:

The *Texas Gas* decision was reversed in *PSC of NY* v. *F.P.C.*, 287 F. 2d 146 (CADC), certiorari denied 365 U.S. 800, 802.

The *Superior Oil* decision was reversed in *United Gas Improvement Co.* v. *F.P.C.*, 290 F. 2d 147 (CA5), certiorari denied, 366 U.S. 965.

The *Sunray Mid-Continent* decision was reversed in *United Gas Improvement Co.* v. *F.P.C.*, 287 F. 2d 159 (CA10).

The *California Company* decision was reversed in *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817 (CA9), certiorari denied, 365 U.S. 879, 881.

The *Sun Oil* decision was reversed in *United Gas Improvement Co.* v. *F.P.C.*, 290 F. 2d 133 (CA5), certiorari denied, 368 U.S. 823.

All of the Commission decisions of August, 1959, had relied heavily on a decision of the Third Circuit in the so-called *Transco-Seaboard* case, titled *United Gas Improvement Co.* v. *F.P.C.*, 269 F. 2d 865, and referred to *supra*. There, a majority of the court upheld Commission action of September 4, 1958, 20 FPC 264, granting certificates in 30 dockets for sales of gas from Southern Louisiana to Transcontinental Gas Pipe Line Corporation at initial prices of 23.55 cents

per Mcf (two at 23.30 cents) onshore, and 21.4 and 22 cents per Mcf offshore. (Exh. 42, Sch. 5.) The Third Circuit's action was taken after, and with full verbal recognition of, the Supreme Court's decision in *Catco*. The action was clearly and expressly pitched on the Third Circuit's understanding as to the ambit of the Commission's discretion in considering and judging all the factors involved in "public convenience and necessity." (See 269 F. 2d at 869.)

In December, 1959, the Supreme Court *per curiam*, in one sentence (a) granted certiorari, (b) vacated the Third Circuit's judgment, and (c) directed that court to remand the case to the Commission for redetermination in the light of *Catco*. *PSC of NY* v. *F.P.C.*, 361 U.S. 195. This summary, drastic action[20] should have made it perfectly clear that in the interest of consumer protection, the Commission had no discretion to approve prices in Southern Louisiana similar to the prices approved in the *Catco* case, and no discretion to follow policies leading to such approvals.

B. *Period of Uncertainty*

After the Supreme Court's action in *Transco-Seaboard*, the Commission decisions became less clear in philosophical outlook and in the results reached. On January 15, 1960, the Commission granted rehearing of an order issued November 17, 1959 (reported at 22 FPC 836), which had, *inter alia*, issued several unconditional certificates for gas from Southern Louisiana at initial base prices of 21.5 cents per Mcf (on shore) and 22 cents per Mcf (offshore), plus applicable taxes up to 2.05 cents per Mcf. *Transcontinental Gas Pipe Line Corporation*, Docket No. G–16603, *et al.*, unreported. Thereafter, on May 19, 1961, the Commission being "convinced that these applications should be redetermined," consolidated these cases into the Southern Louisiana area rate proceeding, cited and considered in pertinent part *infra*,[21] from which the cases were later severed and finally included in the proceeding at bar.

The Commission's rather tentative approach to the initial price issue during 1960 is also illustrated in *Gulf Oil Company*, 23 F.P.C. 664, 666—

> Although the Atlantic Refining decision [*i.e.*, *Catco*] does not, as the examiner stated, instruct the Commission to "freeze" prices at existing levels, it does preclude the issuance of certificates at prices higher than those established in recent proceedings unless the applicants have clearly shown that such higher prices are required by the public convenience and necessity * * * unless the evidence demonstrates the necessity of a high price the issuance of these certificates must be conditioned * * *. [Footnote omitted.]

This approach is in strong contrast to the presently accepted attitudes. In the proceeding at bar, it cannot be doubted that on the evidentiary standards here employed, we will "freeze producers' gas rates for new service at pre-existing area levels, while the standards of 'just and reasonable' rates for producers (Act, Sec. 4(a)) are being evolved." (23 FPC at 677.) The producer briefs do not even argue against "freezing" prices, but against so-called "rollback" to pre-1957 prices.

On September 28, 1960, the Commission issued its Statement of General Policy No. 61–1, 24 FPC 818, 25 F.R. 9578, establishing price levels for geographically defined gas producing areas of the United States. No price was announced for Southern Louisiana. By First Amendment to the Statement, issued October 25, 1960, 24 FPC 902, a price of 21.5 cents per Mcf (at the 15.025 psia base generally

---

[20] Such action is sometimes taken "when the decision below is so clearly erroneous as to make argument before the Court a waste of time." Stern and Gressman, Supreme Court Practice (BNA, Washington, 1954), pp. G–155, 156.

[21] Order of May 19, 1961 in Docket No. AR61–2, unreported.

used in the area, and used in this decision) was set for initial sales from Southern Louisiana, *before allowance for tax reimbursement.*

On November 29, 1960, the Commission issued its decision in *Trunkline Gas Company*, 24 FPC 1020, involving Southern Louisiana gas located within the taxing jurisdiction of the State. The producers claimed 22 cents per Mcf plus 2.05 cents tax reimbursement; the pipeline purchaser contended only that the tax reimbursement should be at 1.8 cents per Mcf. The record contained some evidence of costs of one of the producers involved in the proceeding, as well as price-line evidence. The Commission, without disclosing its subsidiary premises, disposed of the price issue in the following paragraph (24 FPC at 1038)—

> Obviously, under the provisions of the Commission's Policy Statement, as amended, the producers are entitled to no more than 21.5 cents per Mcf, at 15.025 psia, exclusive of tax. We consider it necessary and appropriate to determine at this time what shall be the entire price for these producer sales, including tax. Accordingly, we conclude that, considering all the circumstances of this case, including the evidence adduced by the parties summarized above, the proper initial price for the producers' sales here in issue, including tax, is 23.25 cents per Mcf. [Footnote omitted.]

On May 10, 1961, the Commission instituted the *Area Rate Proceeding*, AR61–2, 25 FPC 942, which was originally intended to settle the matter of proper initial prices (the subject of the present proceedings) as well as Section 4 "just and reasonable" rates, for Southern Louisiana gas. Thereafter, all pending certificate dockets for gas in the area at prices of 19.05 cents per Mcf and above which had not advanced to final certification were consolidated into AR61–2. *Area Rate Proceeding*, Docket No. AR61–2, *et al.*, order of May 19, 1961, unreported.

These dockets included: (a) 17 applications for prices ranging between 19.05 and 23.55 cents per Mcf, as to which certification had been "deferred" by order of May 17, 1961,[22] (b) seven applications which had been the subject of Initial Decisions imposing price conditions:[23] and (c) five applications for prices of 21.5 and 22 cents per Mcf "plus applicable taxes up to 2.05 cents per Mcf" which had been granted by order of November 17, 1959 in *Transcontinental Gas Pipe Line Corp.*, 22 FPC 836, but as to which petition for rehearing had been granted by order of January 15, 1960 (unreported). Such dockets as were still at issue on December 31, 1962 were, by the order instituting the proceeding at bar, consolidated herein.

On August 9, 1961, the Commission issued the first of a series of orders in *Coastal Transmission Corp.*, 26 FPC 318, subsequent to court reversal, *PSC of NY* v. *F.P.C.*, 295 F. 2d 140 (CADC), of its action denying intervention therein to the New York Commission. In this order, the Commission rescinded 51 certifications theretofore issued in abbreviated proceedings, conditioned two 23.55 cent prices to 23.25 cents (citing the Policy Statement and the *Trunkline* case, *supra*), and imposed apparently retroactive floorless refund conditions in permanent certifications issued subject to further hearings on the matter of proper initial price.

On October 31, 1961, the Commission issued the Fourth Amendment to the Statement of General Policy 26 FPC 661, reducing Southern Louisiana ceiling

---

[22] In *Transcontinental Gas Pipe Line Corp.*, 25 FPC 978.

[23] The decisions in question are (1) *Humble Oil & Refining Corp.*, issued January 29, 1960, conditioning prices of 21.2 cents per Mcf plus tax reimbursement to 18.72 cents without taxes; and (2) *Phillips Petroleum Company*, issued June 17, 1960, conditioning prices of 21.3333 cents per Mcf, plus tax reimbursement to 16.4 cents plus tax reimbursement.

prices to 21.25 cents per Mcf for gas sales subject to the 2.3 cents per Mcf State taxes, and 19.5 cents per Mcf for such sales not subject to such taxes (*i.e.*, in the Federal domain offshore.)[24] The Fourth Amendment describes in general terms a broad ex parte Commission review of economic and other considerations, and cites some of the court cases, *supra*, reversing certifications of sales from the area.

In the Fourth Amendment, the Commission also announced its conclusion that the determination of the initial price issue for Southern Louisiana in the Area Rate Proceeding was "not feasible," and that the "contemplated first phase of AR61–2" was therefore to be eliminated. (26 FPC at 661.) This presaged the order of December 31, 1962 instituting the proceedings herein.

On November 2, 1961, the Commission reconsidered *Coastal Transmission Corp.*, 26 FPC 677. The permanent certifications issued August 9, 1961 were rescinded; the two 23.55 cent prices mentioned above and another undisclosed price were conditioned to the new Policy Statement level of 21.25 cents per Mcf; the refund conditions were deleted in toto; and gas deliveries pursuant to temporary authorizations were in effect ordered to continue. The dockets in this case that were still extant at December 31, 1962 were on that date consolidated herein for determination.

The two decisions in *Coastal Transmission Corp.* illustrate the uncertainty of the Commission's pricing policy during 1961 in respect to refund requirements as noted above, and in respect of the effect to be given to the Policy Statement. In the first decision, the Policy Statement seems to be referred to as though it wrought a substantive change in the law of initial pricing, see 25 FPC at 331–332 and footnote 36; compare the language of the *Trunkline* case quoted *supra*. In the second decision, the Commission says that the Policy Statement prices are "ceilings at which a proposed initial sale will, in the absence of otherwise compelling evidence, be certificated." 26 FPC at 682.

Relevance of Statement of General Policy prices. One of the uncertainties which existed during the period under discussion concerned the effect to be given to the prices set forth in the Policy Statement and the amendments thereto. In *Trunkline, supra*, the Commission seemed to adopt a Policy Statement price-line as a substantive determination controlling the result of a formal hearing on initial prices. See also Judge Prettyman's analysis lending color to such a conclusion, in *Wisconsin* v. *F.P.C.*, 303 F. 2d 380, 387 ff., affirmed on May 20, 1963 in *Wisconsin* v. *F.P.C.*, 373 U.S. 294, without specific consideration of the matter.

The Supreme Court, in the last-cited decision, observed that the Statement of General Policy "was issued without notice or hearing," and continued: "the Commission expressly stated that the price levels were 'for the purpose of guidance and initial action by the Commission and their use will not deprive any party of substantive rights or fix the ultimate justness or reasonableness of any rate level.'" 373 U.S. at 299, fnt. 7. At page 313 of the same decision, the Supreme Court observed that "the Statement of General Policy did not purport to establish just and reasonable rates."

The producers in the proceedings at bar, however, claim that substantive effect should be accorded to the Policy Statement prices, in respect of announced levels of prices, after a given producer "has relied thereon to its detriment." Gulf Oil Corp. brief, p. 24. As we have seen, a Policy Statement level of 21.5 cents per Mcf obtained from October 25, 1960, until October 31, 1961. A level of 21.25 cents per Mcf where subject to Louisiana tax and 19.5 cents per Mcf where not taxable, stated on the latter date, still prevails. Are the Policy

[24] The differential of 55 mills in favor of offshore sales "provides producers with an additional incentive to explore for and extract natural gas of great value to the nation's economy in areas beyond the limits of the State's jurisdiction." (26 FPC at 662.)

Statement prices to be given substantive effect, as a "floor" or otherwise, in respect of pre- or post-Policy Statement contract prices? The answers are fairly clear in the text of Commission cases during the current time-period next considered.

C. *Current Period of Well-Defined Principles*

Recent Commission decisions have settled, subject to review in the courts, the main issues on price line briefed by the producers herein.

C–1. ***Effect to be given to Policy Statement prices.*** The Commission has made it entirely clear that Policy Statement prices are to have no weight or effect in the determination of the proper initial price to be applied to contracts entered into before the Policy Statement was issued. This ruling was made in *Texaco Seaboard, Inc.*, 30 FPC 613, Opinion 383–A issued August 27, 1963 (p. 616)—

> * * * The prices in the Commission's Policy Statement are guidelines for future Commission action. They have no retroactive effect. * * * Such guideline prices are at levels at which the Commission will grant permanent certificates in noncontested cases and authorize temporary service in emergencies. By fixing these rates we do not foreclose the possibility that the parties in a contested proceeding may persuade us that the level at which we should certificate a particular new sale should be at either a higher or lower price. Our determination will be based upon the record in each proceeding in accordance with the principles enunciated in *Catco* and *Skelly* and herein.

In *Texaco-Seaboard*, the contracts had been executed on July 1, 1960, prior to the September 28, 1960 issuance of the Policy Statement. The gas came from Texas Railroad Districts 3 and 4, where the Policy Statement "initial service rate" was 18 cents per Mcf. The contract prices, including taxes and other allowances, were 20 cents per Mcf in one instance, and approximately 20 cents per Mcf in the two other instances. The Commission found in-line prices of 15 cents in District 4, and 16 cents in District 3—prices considerably lower than those set originally in the Policy Statement—and observed: "We may add that the issuance of the Policy Statement on September 28, 1960 did not automatically elevate the price line." (Opinion 383–A, p. 617.) The significance of this observation is made plain in the dissenting opinion (p. 620)—

> * * * the majority recognizes that guideline ceilings may be set improperly and that permanent certificates may be issued at a lower level in an appropriate proceeding. The significance of this statement is that guideline ceilings are not a floor. They should not be a floor because experience has repeatedly demonstrated that guideline levels have been overstated, with the result that producers have collected excessive prices under temporaries at such levels.* * *

To the same effect as regards Policy Statement prices in relation to pre-Policy Statement contracts, see also *Skelly Oil Co.*, 28 FPC 401, 407–408; *Coastal Transmission Corp.*, 26 FPC 677, 682; and other cases discussed *infra*, including the Commission action in *Catco* on remand, and the *Placid Oil* decision.

With respect to contracts entered into *after* the Policy Statement was issued, the authority is not entirely clear. In *Skelly*, the majority of the Commission left open, 28 FPC at 418, the question whether "its own ceiling prices are entitled to no weight in determining the initial price under contracts executed after the ceiling prices were put into effect."

However, there are several important indications that the Policy Statement prices are not to be given substantive effect, as evidence or otherwise, in the

determination of proper prices for post-Statement contracts involved in formal proceedings such as those at bar. In such proceedings, all parties are "free to show the proper in-line price, wherever it might happen to fall." Order of February 7, 1963 herein, 29 FPC 274, denying request of seven producers for production of documents and subpoenas, fnt. 5; see also text of Order, p. 275. The Policy Statement prices are "guideline" prices at which the Commission will exercise its "discretion in the absence of protest by intervening parties to certificate sales in a particular area," and do not purport to fix price lines. Order of April 2, 1963 herein, denying rehearing of the February 7, 1963 order.

See also *Amerada Petroleum Corp.*, Docket No. CI62–1544, *et al.*, Presiding Examiner's Initial Decision issued July 23, 1963, 31 FPC 647, giving no effect to Policy Statement prices in determining a post-Policy Statement price line and referring to positions taken in Commission briefs; see also *Southern Natural Gas Co.*, Docket No. CP63–26, *et al.*, Presiding Examiner's Initial Decision issued October 24, 1963, 31 FPC 801 at 852–854, coming to the same conclusion.

When examined in principle it seems clear enough that the Commission could not and does not, by *ex parte* action in issuing and amending Policy Statement prices, finally decide (by way of a floor) proper initial prices which will control the result of open hearings held pursuant to Section 7 of the Act. Discussion of the Policy Statement has been to the opposite effect. *Panhandle Eastern Pipe Line Company*, 27 FPC 35, 42–43, and Initial Decision, pp. 59–60. As the Commission contends in pending litigation—

> Clearly, in issuing the Policy Statement the Commission was only announcing considerations that would guide it in acting without the benefit of a hearing, namely in issuing temporary authorizations and in deciding whether increased rates should be suspended. * * * [Policy Statement] price levels obviously cannot bind the Commission to approve those prices after hearing where competent evidence shows that the Policy Statement price is not in conformity with the price standards announced by *Catco* and the subsequent related judicial decisions. (Brief for Respondent FPC, in *PSC of NY* v. *F.P.C.*, CADC No. 17582 *et al.*, July, 1963, p. 21.)

The Policy Statement does not purport to make final determinations of proper initial prices. It does not purport to settle any substantive matter of public policy and private right that should under Section 7 of the Act be decided after notice and hearing. To give Policy Statement prices any degree of substantive effect, as evidence or otherwise, in the determinations reached herein, would *pro tanto* deprive all parties of their right under the Natural Gas Act and the Administrative Procedure Act to have these proceedings determined on the basis of an open record.

The fact that a producer may have "executed the contracts providing for initial prices at the Policy Statement level in order to secure * * * expeditious approval of its initial prices" (Gulf reply brief, p. 32) is of no consequence, since no basis for estoppel or any other equities is shown.

Consequently, the Policy Statement prices will be given no weight or effect in the derivation of proper prices for post-October 25, 1960 sales considered in this proceeding.

C–2. *Admissible evidence; derivation of price line; other matters.* There remains to be considered certain other principles laid down in five relatively recent Commission opinions which govern the proceedings at bar. The first of these five opinions was issued January 22, 1962 in respect of the remanded *Catco* proceedings, involving 1956 contracts for the sale of gas from offshore Southern Louisiana. *Continental Oil Co.*, 27 FPC 96; see also 27 FPC 498 and 592. In respect of matters of present importance, the Commission there deter-

mined: (a) price evidence relating to onshore sales to be useful in determining the proper offshore price line; (b) a price is "not in line as of a given time if it is the highest price or in the highest group of prices theretofore paid" (27 FPC at 102); (c) it is not appropriate to find the price line by adjusting field prices upward for drilling cost increases; (d) the price line is to be found from "field price evidence" as of the "time of the sale in 1956, and before, which were not affected by initial prices which the courts have called into question." (27 FPC at 100.)

On the basis of a discussion of groups of prices for other gas sales in Southern Louisiana, the Commission concluded that a price of 18.5 cents per Mcf was proper for these offshore sales, and made provision for refunds of all amounts collected in excess of this price. (27 FPC at 102, 108–112.) [25]

The remand, and the *Catco* case in its entirety, was finally disposed of by settlement approved December 21, 1962. 28 FPC 1090. Prices of 18.5 cents (Cameron area), 19.5 cents (West Delta area), 19.0 cents (Grand Isle) and 19.5 cents (Blocks 47 and 48, East Cameron) were established with several important contingencies: the West Delta settlement covered one cent per Mcf of potential tax reimbursement on sales from an area where Louisiana's tax jurisdiction was subject to adjudication, and collection of such reimbursement was to be escrowed; only temporary certificates were issued for the Blocks 47 and 48 sales, which were incorporated into the Docket No. AR61–2 area rate proceeding, and ultimately into the present proceeding in respect of final determination; and in substance, a moratorium on contractual rate increases until July 1, 1967, was agreed to.

The second recent decision of present importance is *Skelly Oil Company*, 28 FPC 401, modified by order of December 18, 1962, 28 FPC 1065.[26] The case involved South Texas gas. The Commission relied exclusively on evidence relating to price line in conditioning sales at 16 cents and above to a 15 cent per Mcf level. The Commission said—

> * * * we do not think it necessary or appropriate in a certificate proceeding to consider evidence of area costs or financial requirements, or of individual company costs or financial requirements. * * *
>
> * * * * * * * *
>
> We therefore hold that cost of service and financial requirements evidence normally is not relevant in producer certificate cases and that the initial price in such proceedings shall be determined by the "in line" price in the area at the time the producer contract in issue was executed and by our guideline ceiling price for the area. * * * (28 FPC at 411.)

We have seen that *Skelly* was cited in the order convening these proceedings, presumably to furnish the dominant key for evidentiary rulings herein. The producer briefs have in this connection stressed the jarring note in *Skelly*: the use of the polar term "normally." The term has no meaning absent specificity

---

[25] See also *Texaco-Seaboard, Inc.*, 27 FPC 15 and 482, involving Southern Louisiana initial price dockets in three categories: (a) the remanded *Transco-Seaboard* dockets, *supra*, 361 U.S. 195; (b) the remanded *PSC of N.Y.* dockets, *supra*, 287 F. 2d 146 (CADC); (c) the dockets as to which on January 15, 1960, the Commission granted rehearing of its November 17, 1959 certifications (22 FPC 836), *supra*. The Commission in *Texaco-Seaboard* (1) made the sales (being effected under temporaries) subject to flooriess refund conditions, (2) referred extensively to errors in earlier derivations of price line, and (3) set the dockets down for prompt hearing. All these dockets, plus dockets remanded in the *UGI* case, *supra*, 283 F. 2d 817 (CA9), were settled by order of July 30, 1962, 28 FPC 247, which provided the settlement pattern described *infra*.

[26] It has been noted in the text *supra* that *Skelly* and the *Placid* case later cited are on appeal.

or at least some indications as to what constitutes abnormality. For present purposes, we may consider all formal proceedings under Section 7 of the Act to be "normal" proceedings.

The third recent decision, *Texaco Seaboard, Inc.*, 29 FPC 593, Opinion 383–A, *supra*, in addition to clarifying the matter of the significance of Policy Statement prices (*supra*), also clarified and confirmed *Skelly*. Initial prices for gas from Texas Railroad Commission Districts 3 and 4 which had been remanded to the Commission for reconsideration, and all prices at the same or higher levels, were disregarded in the Commission's computation of a price line, although the Commission observes that it did not "entirely overlook the economic tendencies which they represent." (P. 599.)

In *Texaco Seaboard*, all evidence of cost of service, trends, and financial requirements was excluded in the derivation of the price line. The Commission affirmed the Examiner's exclusion of evidence which was, *inter alia* (p. 596)—

> designed to show industry and economic trends relating to the production of gas including (1) the decline in the productivity of drilling, (2) the increasing cost per foot drilled, (3) the effect of declining productivity and increased drilling cost on the cost of new supply, and (4) the inadequacy of revenues to induce the necessary drilling effort.

The fourth decision which must be followed herein is *Placid Oil* Company, 30 FPC 283, Opinion 398 issued July 17, 1963; Opinion 398–A, 30 FPC 682, issued September 11, 1963. The Commission there considered 13 dockets remaining from court remands discussed *supra*, which had not been settled under the July 30, 1962 settlement formula discussed *infra*. In *Placid*, the Commission has made determinations, equally applicable here, as follows:

a. With respect to admissible evidence, the Commission affirmed the Examiner's exclusionary rulings, and said (p. 287)—

> In particular, we affirm the decision as to its holding that economic and financial evidence, whether on an individual company or on an area-wide basis and whether of the type characterized as cost-of-service studies, cash flow studies, demand-supply, cost, profit and market price trends, area cost-revenue trends, comparative well cost data and gas replacement costs, plays no part in and is irrelevant to the determination of the initial price question in independent producer certificate cases * * * [footnote omitted].

b. With respect to the elimination of erroneous certifications in the determination of the proper price line for the *Placid* certifications, the Commission applied the "suspect price" observation made by the Ninth Circuit in the *UGI* case, *supra*, 283 F. 2d at 824–825,[37] to eliminate 1957–1958 prices at levels above 18.5 cents per Mcf before tax remibursement, and concluded that "18.5 cents per Mcf, exclusive of tax reimbursement, is the proper public interest initial price applicable to the instant sales." (P. 289.)

c. With respect to tax reimbursement, the Commission refused to allow the full producer outgo, variously computed at 1.69 and 1.85 cents on the weighted average actual payments, and 2.05 and 2.3 cents under contract provisions. The Commission, following its decision in the *Catco* remand, *supra*, allowed a partial tax reimbursement of 1.5 cents per Mcf, as to sales from areas subject to Louisiana taxes.

---

[37] The decision, according to the Commission, "has made it clear that sales which are under Commission or court review are not legally relevant for purposes of determining an in-line price. The same decision also makes plain that like prices in the same area, even though themselves not under review, are equally suspect and 'ought not to be relied upon in fixing a line except upon evidence and findings to the effect that they are not subject to the same infirmities which are under test in the pending proceedings.'" (P. 289; footnote omitted.)

d. In *Placid*, and in the case at bar, periodic fixed escalations in price occur under the terms of the basic contracts. Finding that a triggering of favored nations clauses and price redeterminations will take place at a price in excess of 23.55 cents per Mcf, the Placid certificates were conditioned "to provide for a moratorium on the filing of all price increases in excess of 23.55 cents per Mcf, inclusive of tax reimbursement, pending the issuance of a final decision in the area rate proceeding in Docket No. AR61–2 or until July 1, 1967, whichever is earlier." (P. 300.)

e. The Commission followed and confirmed its ruling in *Skelly* Opinion 362 *supra*, by refusing to require refunds of amounts heretofore collected in excess of the proper price, in instances where the temporary authorization was unconditioned, in respect of the time-between commencement of deliveries until the date when a permanent certificate, later reversed and remanded, was issued. See also, *Placid Oil Co.*, Opinion 398–A issued September 11, 1963 (clarifying prior opinion and denying rehearing), P. 685.

Finally, in this current series of cases, we must take account of *United Gas Pipe Line Company*, 30 FPC 329, Opinion 399 issued July 17, 1963; order rejecting offers of settlement, denying applications for rehearing, and granting stay issued November 5, 1963, 30 FPC 1209.

United Gas involved gas from onshore Louisiana leases contracted in December, 1959, at initial prices of 22.5 cents per Mcf plus 2.3 cents per Mcf tax reimbursement, with fixed escalations of 2.5 cents per Mcf on July 1, 1962 (which have not been made effective), plus future adjustments.

Flow of gas was temporarily authorized May 3, 1961 and commenced June 22, 1962 at a gross initial price of 23.25 cents per Mcf, with provision for the refund of amounts found in formal proceedings to be excessive, down to a 20-cent floor.

The Commission concluded that "the record amply supports an in-line price of 18.5 cents per Mcf plus 1.5 cents tax reimbursement for a total initial price of 20 cents per Mcf," after considering "all applicable contracts not containing suspect prices within the criterion initially spelled out" in the Ninth Circuit's *UGI* case, *supra*, "and implemented by us" in *Skelly* and *Placid*, *supra*. (Opinion 399, pp. 332 and 333.[28])

Confirming and extending *Placid* on the matter of relevant evidence, the Commission says—

> * * * The sterility and inappositeness of cost evidence in certificate proceedings has now been proven to our complete satisfaction, and, we believe, with a certainty beyond reasonable doubt. * * * [We] take no cognizance of the cost, financial and related evidence submitted in this proceeding. (*op. cit.*, pp. 332–333.)

With regard to the contractual price escalations, the Commission concluded that the prices there established "could be used in the redetermination of prices in other contracts, leading thereby to the establishment of a new price plateau in the area far in excess of any existing rate." Therefore, the Commission ordered "that the certificates issued to Gulf and Tidewater include a moratorium on all price increases in excess of 23.55 cents per Mcf, inclusive of tax reimbursement, pending our final decision in the Docket No. AR61–2 area rate proceeding or until July 1, 1967, whichever is earlier." (*op. cit.*, p. 335.)

---

[28] See also, *Medina Gathering Corp.*, 30 FPC 227, Opinion 397 issued July 16, 1963, formulating a "mandate" to the Commission to "impose a suitable condition limiting a producer's initial price to the level of prior certificated sales which are comparable and not 'under a cloud.'" (P. 230.)

D. Present Content and Rationale of Price-Line Concept

It is plain enough that the questions asked at the outset of this section must, on the basis of Commission authority, be answered in the affirmative. Price-line is determined exclusively by reference to existing certificated prices, excluding prices erroneously certificated at high levels without sufficient consideration of consumer protection, and all other certificated prices at the same levels, whether or not error in the certifications has been formally exposed or established.

The authoritarian answer is not, nor should it be, sufficient for the producer litigants herein. They ask for the rationale, and are not satisfied with Staff's analysis, which should now be considered.

Staff and producer contentions. Staff would have it that there exists in the law of initial pricing a "suspect price doctrine," according to which particular prices for gas sales, and like prices in the same area "should be considered suspect and unreliable for the purpose of fixing a price line," if such prices (1) triggered other price increases (2) established new highs for the area ("new price plateaus") (3) established the new high for the particular gas purchaser, or (4) caused the Commission to institute Section 5(a) rate proceedings. (Br. 30.)

The "suspect price doctrine" is open to, and meets strong opposition on considerations of equity and logic. The producers contend that it is an application of "guilt by association." They argue, in effect, that suspect prices, like suspect persons, are not in American jurisprudence to be considered convicted prices or persons. As for the logic of the situation—

> Thus, the logic underlying the investigation of "suspect" prices appears to be that any price paid by a purchaser after June 7, 1954, in excess of the highest initial price previously paid by that purchaser may be "suspect." Inasmuch as all "like" prices are also considered "suspect," the result could be to eliminate from consideration all prices at a level above the June 7, 1954, buying rate of that purchaser which had the lowest price scale at that date. The consequence, logically, could be to eliminate from consideration all prices above 10 or 11 cents and to freeze prices not only at the June 7, 1954, level but at levels in effect four or five years prior to that date. [Tr. 1395.]

Conclusions. We need not resolve the strenuously contended issue between Staff and producers as to whether the "suspect price doctrine" should be applied in this case, because no such doctrine has yet been formulated, and no such doctrine should be formulated.

The "suspect" prices certificated by the erroneous but unreversed Commission orders considered above still exist as valid, lawful FPC tariffs, and prices up to 24.05 cents per Mcf are still being collected thereunder. Prices subject to Section 5(a) rate investigation[29] during the pendency of the investigation are nonetheless the lawful, filed rates until changed by the Commission. See Regulations under the Natural Gas Act, Sec. 154.21, *Montana-Dakota Utilities Co.* v. *Northwestern Pub. Serv. Co.*, 341 U.S. 246, 251–252.

However, the extended analysis of past Commission policy undertaken above discloses *error* in past Commission action on Southern Louisiana prices. The *error* inheres in unreversed, still-effective certifications as well as in certifications reversed and remanded by the courts.

The courts have sent back the following prices in the area: onshore Louisiana—38 at 23.55 cents, 10 at 23.30 cents, and 5 at 23.05 cents; offshore Louisiana—9 at 21.40 cents, 4 at 22.00 cents, and 2 at 21.50 cents.

[29] As well as all other categories mentioned in Staff's contention.

The court decisions are by no means limited to a determination that these particular prices are too high. *Catco* and the subsequent court decisions make evident the general concern "that the Commission was not sufficiently protecting the public interest." J. Skelly Wright, Jr., writing for the court in *Atlantic Refining Co.* v. *F.P.C.*, *supra*, 316 F. 2d at 679. Error and abuse of discretion is apparent from the language of *Catco* and the subsequent court decisions.[20]

The Commission has in effect confessed error in respect of certain prices certificated at higher levels by issuing the Policy Statement October 25, 1960 ceiling of 21.5 cents per Mcf plus taxes, and an October 31, 1961 ceiling of 21.25 cents per Mcf inclusive of taxes where applicable, and 19.5 cents per Mcf where taxes are not applicable (both *supra*).

The analysis undertaken above of Commission principle and policy during the eras of laissez-faire and flux indicates, and a full reading of the cited decisions proves, that the Commission's underlying philosophy and approach towards high initial prices in Southern Louisiana was erroneous: beginning with the Gulf Interstate certification at 21 cents per Mcf; continuing with the intermediate decisions cited; and ended at January 22, 1962, when the certifications on the *Catco* remand were issued, with proper emphasis on consumer protection.

The *rationale* of price-line is, that no account will be taken of past mistaken Commission policy or prior Commission errors in the exercise of discretion to price-condition initial sales. Mistaken policy and error has been, and will be, corrected rather than extended to extant certificate proceedings.[21]

This rule in no way prejudices the producers. Producers seeking high prices for Southern Louisiana gas have no vested interests in or rights arising out of past erroneous Commission certifications. Although some certifications have been issued at improper prices and are no longer subject to review under Section 7 of the Act, there is no basis for claims of either (a) equities or rights in favor of, or (b) discriminations against, producers whose prices are still at issue. The consuming public (the Commission's main interest, under repeatedly stressed court decisions is not to be prejudiced by the perpetuation or cumulation of past improper prices or past error.

It follows that as a matter of the proper exercise of the Commission's discretion, consequently as a matter of law, all specific policy and prices reviewed above, up to the January 22, 1962 decision on the *Catco* remand, are to be disregarded in the determination hereof. On the basis of the specific case analysis heretofore made, high prices of 21 cents per Mcf and above, as allowed in the series of certifications beginning with *Gulf Interstate*, will be given no weight as evidence or otherwise, since all such prices were arrived at on the basis of erroneous policies and principles.[22]

---

[20] Of course, courts do not interfere with decisions within the ambit of Commission discretion, *i.e.*, only pronounce error. See the second Chenery case, *S.E.C.* v. *Chenery Corp.*, 332 U.S. 194, 207, 208. Applications of this principle to Federal Power Commission cases abound. See *e.g.*, Davis, "Administrative Law Treatise," Chapter 29 (Scope of Review of Evidence), pp. 169–171; Chapter 30 (Review of Application of Law), pp. 206, 209, 210, 219, 258.

[21] See *Atlantic Refining Co.* v. *F.P.C.*, *supra*, 316 F. 2d at 680, where the court eliminates as a "mistake" a certificated sale 2.0 cents per Mcf over the price line, and 1.5 cents over the highest price considered in fixing the price line.

[22] The error has of course been established in the court decisions *supra* in variant forms of expression. Judge Washington, speaking of *Catco*, puts it that "• • • the Supreme Court meant to impress upon the Commission an interpretation of the 'public interest' which, in the context of a rising natural gas market, demands a real administrative effort to hold back prices. We find nothing in the record before us which would justify the conclusion that the Commission has adequately performed this duty." *P.S.C. of N.Y.* v. *F.P.C.*, *supra*, 287 F. 2d at 150.

DETERMINATION OF PRICE-LINE

Careful and detailed testimony concerning gas prices in Southern Louisiana was presented by staff witness D'Andrea and producer witness Celia Star Gody. Testimony relating to specific producer companies and their dockets consolidated herein was presented by producer witnesses Waddle, Henry, Conaway, and others. Mr D'Andrea concluded that "the price line for the period 1954 through 1962 should be recognized to be at 20.0 cents per Mcf," and that the price line for "sales in the federal domain, offshore Louisiana, is 18.5 cents per Mcf." (Tr. 354–355.) Mrs. Gody did not present her ultimate conclusion as to price line, but made useful analyses of the raw data collated from the Commission files by Mr. D'Andrea in his Exhibit No. 1, "Certain Contract Provisions of Natural Gas Sales in Southern Louisiana, Years 1954 through 1962."

The ruling heretofore made narrows the scope of our inquiry: we need not consider in any detail statistical data based on erroneous certifications at the highest price level. The statistical issues should be further narrowed by consideration of other broad contentions advanced by producers, Staff, and intervenors.

A. *Relevance of Open-Market Value of Gas*

For reasons of principle, Mrs. Gody as a technician concentrated on the open, unregulated market in presenting her analyses. "It is the prices negotiated in the market which are meaningful for economic analysis." (Tr. 417.) She therefore excluded the results of Commission action from consideration. "For the purpose of analysis of trends in the market, it is not meaningful to look to the results of regulatory action." (Tr. 411.) The Commission's original certification of the 1956 *Catco* contracts at the erroneously high 21.4 cent price did not bring about a change in price levels; "the *Catco* price simply gave concrete expression to what in fact had happened to the value of gas as a commodity." (Tr. 834.)

Mrs. Gody's studies are used to prove, and do prove, that a given producer's "initial contract prices at issue in this proceeding were well within the prevailing South Louisiana market price of natural gas at the time the contracts were executed." (Sun Oil Co., brief, p. 25.) Perhaps unfortunately from her clients' point of view, this fact does not prove that any given producer's prices are required by the public convenience and necessity, because the market price of natural gas in Southern Louisiana has consistently exceeded prices to be set by correct regulatory action from the controlling point of view of the Commission and courts, as we have seen.

It should be made very clear that values of gas in the open market are not a proper basis for determination of a price line; the very purpose of this proceeding is to determine an appropriate *regulated* price. The fact that 41 contracts dated prior to the *Catco* contracts (August 1, 1956) provide for prices of over 20 cents per Mcf as of December 1, 1962 (by reason of fixed escalations) is of no importance. As Mrs. Gody recognizes, the escalations "have generally been suspended by the Federal Power Commission." (Tr. 417.) Our main interest, following the directions of *Catco*, is to halt, rather than follow, the trend of the Southern Louisiana market. In following that interest, as concluded in the prior section hereof, we adopt the method of concentrating on Commission certifications which do not express erroneous principles or pricing policies.

Of course "This method is circular in that present Commission action is judged solely by measuring it against past Commission action." (Continental reply brief, p. 6.) If the method were to be used indefinitely, valid objection would lie. The objection does not, however, apply to a price line which is only a "stop-

gap device" with the "objective of providing simple, direct, and effective stop-gap protection for the consuming public." *U.G.I.* v. *F.P.C.*, *supra*, 283 F. 2d at 822, 823. We are freezing prices until the determination of the Southern Louisiana Area Rate Proceeding,[33] and no longer. We are involved with a temporary expedient which gives no consideration to value of gas service, reasonable return, or other aspects of fair and reasonable rates. The open market's only relevance is, that it "signals the existence of a situation that probably would not be in the public interest." *Catco*, *supra*, 360 U.S. at 391, speaking of any application reflecting the market.

B. *Single Price Line vs. Multiple Price Lines*

The producers which have contracts dated in 1959, 1960, 1961 and 1962 strenuously object to the application to their dockets of a single price ceiling, covering the period June 7, 1954–December 31, 1962. The producers cite rather extensive *dicta* from *U.G.I.* v. *F.P.C.*, *supra*, 283 F. 2d at 823–824, and general observations made by the Commission in its *Catco* Opinion 351, *Skelly* Opinion 362–A, and *Texaco-Seaboard*, Opinion 383–A, *supra*, to the effect that "the price line should be determined as of the time the contracts for the sales in question were executed."

It is clear that most contracts involved in this proceeding are dated in the 1959–1961 period; "the preponderant concentration, both in terms of rate schedules and annual delivery volume, is in contracts dated in 1959, 1960 and 1961." Eastern Seaboard Intervenors' Brief, p. 7. Contract prices negotiated between producers and pipelines during this later period are higher than those which prevailed in earlier years. We must find, as Mrs. Gody testified, that—

> the price under the Catco agreements was a reflection of the underlying market value of gas as a commodity. The change in price levels between 1952 through 1956 and 1957 through 1962 therefore was not simply a result of the fact that a particular sale was made at a particular price, but a reflection of the market value of the gas. * * * [Tr. 834.]

It is also true that consideration of a single time period June 7, 1954–December 31, 1962 gives emphasis to contracts entered into in 1954, 1955 and 1956 in finding the price line for contracts entered into in the later years of the period. There is no doubt that the market value of gas increased during the course of the period. As we have seen, this is not relevant. There is little if any doubt (although, of course, the matter is not in the record) that producer costs likewise increased.

However, these matters need not concern us in the determination of a temporary, stop-gap price line "on the low side"[34] which will afford consumer protection until fair and reasonable rates are determined in Docket AR61–2.

There is no basis in the record for reflecting upward adjustments in price line on considerations of 1962 costs contrasted with 1954 costs and there is no adequate basis for permitting "cost" evidence into the record. There is no suggestion of a method, and no adequate method exists, by which the Commission can make annual or other adjustments in a temporary price line that will reflect adequate consumer protection as well as producer claims. The producer remedy, as suggested in the *Atlantic Refining* decision, *supra*, is to file for a Section 4 rate increase, subject to refund, and subject to the limitation on grossly high increased rates considered *infra*.

---

[33] Under the Commission's order of May 16, 1963 in AR61–2, as amended, the case in chief was presented December 10, 1963, the rebuttal will be presented February 18, 1964, and the hearings will commence March 17, 1964.

[34] *Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d at 679.

C. *Time Period Covered by Relevant Price Statistics*

Mr. D'Andrea's main presentations involve all certificated sales under contracts dated June 7, 1954 through December 31, 1962 except erroneous certifications. Mrs. Gody principally used contracts of 1957–1962 inclusive, except contracts specifically remanded by the courts. Producers argue a point closely related to the point just considered: that since virtually all of the dockets herein derive from contracts dated 1957 or later, there is "no justification for reference to certificated sales under contracts dated as far back as June 7, 1954." (Tr. 1398.)

If the producers could bring forward a substantial number of certificates issued during the later part of the total time period under correct pricing policies and principles, the prices reached in such certificates would form the proper statistical base for the determination herein. However, during 1960, 1961 and 1962 "the Commission has issued permanent certificates for very few sales (aside from sales certificated following settlements) and such sales, in the main, have covered small volumes at low prices certificated in abridged proceedings. Consequently "* * * [Mr. D'Andrea's] price compilation is dominated by the older contracts." (Mrs. Gody, at Tr. 1399.)

We do not have in the evidence a statistical basis for matching correctly decided certifications with applications at issue herein by years, or by any other divisions of the time period used by witness D'Andrea. Later certifications at excessive market prices, issued under erroneous conceptions of pricing policy, are in any event to be excluded from consideration herein, simply because they are erroneous, as heretofore found. The time period for useful statistics, on all considerations, is the period June 7, 1954–December 31, 1962.

D. *Inclusion or Exclusion of Tax Reimbursement*

Most of witness Gody's testimony, charts and schedules involve contract prices *before provision for tax reimbursement;* her stated reason being that there were a "number of changes in Louisiana law affecting the tax reimbursement payable under the contracts over this period of years." (Tr. 413.) In this respect, the evidence ignores the Ninth Circuit's injunction—

> * * * comparative tax reimbursement plans as well as comparative base rates ought to be taken into consideration in determining whether a proposed initial price is out of line. Except where the difference in the tax reimbursement features is relatively insubstantial, it is our opinion that failure to take account of such a difference would be an abuse of discretion. (*U.G.I.* v. *F.P.C., supra*, 283 F. 2d at p. 826; see also note 2, *supra.*)

The absence of consideration of tax reimbursement seriously impairs the validity of some of Mrs. Gody's schedules and charts; *e.g.*, schedules 9 and 10, showing range of initial base prices 1957–1962. The deficiency in this regard is not remedied by derivation of an "average" tax reimbursement in schedule 11, because the average cannot be tied to specific prices.[35]

It should be remembered that in dealing with initial price issues, we are not concerned with net realizations by the producers, which are a factor of just and reasonable rate problems, but with temporary protection to consumers. This is the plain and necessary import of *Catco, Atlantic Refining*, and other decisions *supra*. By definition, we are not here measuring net producer income, but the minimizing of consumer outgo. Evidence of contract prices before taxes is of no value to this proceeding.

[35] Additionally, in this "general summary of recent market prices," Mrs. Gody included the contracts which are the subject of these proceedings. (Tr. 419.)

E. Review of Relevant Statistics; Conclusions Thereon

Mr. D'Andrea's Chart 2 of Exhibit 2 analyzes the composite of contract prices (including taxes) allowed by the Commission during the relevant time period, in relation to 1961 sales volumes. This chart shows that more gas is being sold at 18.5 cents per Mcf (125.98 million Mcf) than at any other single price.

Other price indications from Chart 2 may be summarized as follows:

Price	Volume (Mcf)	Percent total volume [1]	Number of contracts
17.5 or less	80, 560, 000	15. 46	88
17.7–18.3	37, 560, 000	7. 21	44
18.5–19.0	137, 020, 000	26. 30	52
19.1–20.0	48, 150, 000	9. 24	72
20.25–21.9	75, 810, 000	14. 57	61
22.0–23.25	88, 920, 000	17. 07	37
23.425 or more	52, 960, 000	10. 17	23

[1] Due to rounding off the sum of the percentage amounts to 100.02%.

Charts 2–A through 2–G of the same exhibit show contracts, volumes and prices by years, and may be summarized as follows:

Year	Total contracts	Total Mcf volume	Highest single volume and price thereof
1954	16	12. 78	5.68 at 17.5 cents.
1955	31	139. 13	75.94 at 18.5 cents.
1956	89	135. 46	45.70 at 18.5 cents.
1957	56	115. 01	33.22 at 22 cents.
1958	80	75. 32	31.79 at 24.05 cents.
1959	27	15. 34	5.62 at 23.25 cents.
1960	31	23. 17	14.76 at 23.25 cents.
1961	14	3. 06	0.95 at 15.80 cents.
1962	3	1. 71	0.96 at 10.75 cents.

Schedule 6 of Exhibit 2 shows the distribution of prices for sales permanently certificated in Southern Louisiana under contracts dated 1954–1962. Focusing on the number of sales contracts for each year, we find the highest number, and second highest number, to be as follows:

1954—5 sales covering 5.7 million Mcf at 17.5 cents;
2 sales covering 735,000 Mcf at 14.25 cents.

1955—10 sales covering 18.3 million Mcf at 17.5 cents;
5 sales covering 76 million Mcf at 18.5 cents.

1956—20 sales covering 22.2 million Mcf at 17.5 cents;
12 sales covering 38.6 million Mcf at 18.5 cents.

1957—10 sales covering 9.3 million Mcf at 20.25 cents;
10 sales covering 30.2 million Mcf at 22 cents.

1958—8 sales covering 7.2 million Mcf at 23.55 cents; [1]
7 sales covering 3 million Mcf at 20.25 cents.

1959—5 sales covering 2.5 million Mcf at 19.5 cents;
3 sales covering 943,000 Mcf at 19.1 cents.

1960—9 sales covering 1.6 million Mcf at 19.5 cents;
4 sales each at 19.9 and 20.375 cents covering a total of 2.2 million Mcf.

1961—5 sales covering 954,000 Mcf at 15.8 cents;
3 sales covering 622,000 Mcf at 19.75 cents.

1962—1 sale covering 960,000 Mcf at 20.5 cents;
1 sale each at 18 and 19.5 cents covering, respectively, 29,000 and 720,000 Mcf.

[1] Excluding an atypical situation where a 17.9-cent price is subject to upward adjustment for gathering and compressing.

The weighted average price for permanently certificated onshore gas sales under 1954–1962 contracts is 19.7699 cents per Mcf excluding prices derived in settlements, and 19.9161 cents per Mcf including settlement prices. (Exh. 2, Sch. 8.) By years, there is in the first category an upward trend from 15.4526 cents per Mcf in 1954 to 21.8988 cents per Mcf in 1958, and a downward trend thereafter.

Chart 3 and related Schedule 7 of Exhibit 2 give in column form, and in narrative, the "factors causing certain permanently certificated sales to be suspect," and represent Mr. D'Andrea's compilation of instructions received by him from Staff counsel. These instructions concern prices which Mr. D'Andrea was not to take into consideration in arriving at his price line. As we have seen, we arrive at the same result without resorting to the use of labels of questionable content.

Summing up, Mr. D'Andrea "found that the price, not considered suspect or under a cloud [herein, not based on erroneous price policies], representing a preponderance of sales and a substantial amount of gas moving in interstate commerce was 19.75 cents per Mcf. This indicated to me where the in-line price might fall." (Tr. 353.) Supported by his findings of a 19.77 cents per Mcf weighted average price, and considering 23 contracts at 20.25 cents per Mcf involving volumes of a little more than one-half the 19.75 cents per Mcf volumes, Mr. D'Andrea derived the 20-cent price described at the outset of this section.

Mrs. Gody's rebuttal testimony, like her testimony in chief, mainly presents data for certificated sales under contracts dated 1957–1962 and compares this data for the longer period used by Mr. D'Andrea. Chart 1 of Mrs. Gody's Exhibit 42 shows that the price distribution for her period differed widely from the price distribution presented for Mr. D'Andrea because contract prices for the limited period were considerably higher than the prices taken under consideration in the longer period. Chart 2 summarizes information showing that the largest volumes delivered in 1961 were at prices of 22 cents per Mcf and above.

As testified by Mrs. Gody, out of 243 sales made in the period 1957–1962, after excluding settlement prices and court remanded prices, (a) 106 sales were at prices above 20 cents, and (b) 79 per cent of the total volume was certificated at prices higher than 20 cents.

As we have seen, certifications remanded by the courts for Commission redetermination after involving onshore sales were all at prices of 23.05 cents or above. Mrs. Gody's charts and testimony show that if we exclude from consideration only sales at prices equal to or higher than those involved in the court actions, the preponderance of sales within the Louisiana taxing jurisdiction would be at a range of 22 cents to 22.25 cents per Mcf. This preponderance derived from 27 onshore sales accounting for 47 billion cubic feet of gas amounting to 18 per cent of the total volume of permanently certificated onshore contracts.

However, Mrs. Gody's computation only shows the magnitude of Commission error in respect to some past certifications. The court remands cannot properly be used in the restricted fashion proposed by Mrs. Gody; the decisions do not set a 23.05-cent floor—the tenor of the decision is to the contrary. The court decisions do not principally involve particular, identified excessive prices: on the contrary, the decisions speak in terms of an erroneous pricing policy which, as we have seen, permeates all decisions certificating Southern Louisiana gas at prices of 21 cents per Mcf and higher. Mrs. Gody's analysis is well presented and sharply defines the issues. Her presentation, however, is rejected for the reasons heretofore stated. The price line for gas subject to the Louisiana tax jurisdiction is 20 cents per Mcf.

Offshore sales. There are but two sales outside of Louisiana's taxing jurisdiction which have been certificated to date, aside from certifications pursuant to settlement and certificates involved herein. The two certifications in question were issued to Union Oil Company of California at the contract price of 22 cents per Mcf and are listed as items 13 and 14, p. 18, Schedule 2, Exhibit 1. The certifications were issued in the *Trunkline Gas Co.* proceeding, *supra*, 21 FPC 704, on May 22, 1959. This, of course, was before the *Catco* decision of June 22, 1959 remanding off shore certifications at prices of 21.4 cents per Mcf.

As heretofore found, the *Trunkline* decision is erroneous and should be given no consideration herein. This means that there is a complete absence of certificated prices in the offshore area and that it is necessary to turn to certifications in other areas to find an appropriate price line, as was done in *Standard Oil Co. of California, supra*, 27 FPC 1153 and 315 F. 2d 652 (CA10).

The matter of pinpointing the offshore appropriate price has been disposed of by the Commission in *Continental Oil Co.*, 27 FPC 96, *supra*, and needs no independent justification. The price line of 18.5 cents per Mcf established in that decision is, for the reasons therein stated at length, found to be the appropriate price line for offshore gas sales not subject to Louisiana tax.

F. *The Settlements*

Citing the conventional reason for disregarding settlements in arriving at a judgment ("settlements may be a simple desire to end protracted litigation"), Staff and Continental conclude that "no consideration should be given to settlements in determining" the price line at issue herein.

This reasoning is fully applicable to private litigation, but is of doubtful validity when applied to Commission determinations of the public interest. Decisions as to the correct price line for gas sales is, of course, entirely a matter of public interest, as repeatedly stressed in the court decisions *supra*. Although settlements have not been used herein in the derivation of the price line, they should be noticed, both for reasons of candor and principle, as a check on the conclusions derived independently.

The settlement formula was established by order of July 30, 1962 in *Texaco Inc.*, 28 FPC 247. Essentially, the formula is: a price of 20.625 cents per Mcf onshore, 19 cents per Mcf offshore, and a moratorium on rate filings until the earlier of July 1, 1967 or the conclusion of Area Rate Proceeding AR61–2 (*supra*). Refunds are to be made of two-thirds of the difference between collected prices and settlement prices, pursuant to computation procedure, and with 6 percent interest to March 1, 1960 and 7 percent thereafter. Take-or-pay provisions are revised to provide for a four year make-up period, where shorter.

Other cases in the same pattern, prior to the commencement of the proceedings at bar, or not involved herein, include *Sun Oil Co.*, 28 FPC 809; *Mississippi River Fuel Corp.*, 28 FPC 915; *Bel Oil Corp.*, 28 FPC 1006; the remanded *Catco* dockets, *supra*, 28 FPC 1090; *Tennessee Gas Transmission Co.*, 29 FPC 4; *Petroleum Offshore Leaseholds, Inc.*, 29 FPC 453; *Shell Oil Co.*, 29 FPC 472; *Phillips Petroleum Co.*, 29 FPC 581; and see order issued herein April 10, 1963, 29 FPC 734.

A large number of the dockets originally consolidated for hearing herein have been finally settled pursuant to the formula, severed herefrom, and concluded by the issuance of permanent certificates. These dockets are listed in Appendix A of this decision, pursuant to the plan mentioned in footnote 1 above for reducing the size of the caption.

ISSUES ARISING IN PARTICULAR DOCKETS

1. *Right to Decide Certain CATCO Prices Herein*

As we have seen, the Catco remand was settled by order issued December 21, 1962, 28 FPC 1090. However, four dockets [36] involving new supply from the general Catco offshore area under temporary authorizations issued August 29, 1961 at 21.4 cents per Mcf, subject to refund, were not finally disposed of in the settlement, and were consolidated herein. The Commission agreed with the settlement proposal that service in these dockets "be continued under temporary authorizations" at a reduced conditioned price of 19.5 cents per Mcf, subject to later certification at a proper price to be determined after hearing, but not subject to refund. The exact language of the Commission's price condition is as follows:

> The initial price for such service shall be 19.5 cents per Mcf at 15.025 psia, effective September 1, 1962; provided, however, that such price shall be changed to agree prospectively with whatever initial service price is determined by the Commission in an order which becomes final and no longer subject to judicial review in Docket No. AR61-2, *et al.*, or other similar proceeding; and provided, further, that if such price so determined is less than 19.5 cents per Mcf, Applicant shall not be obligated to make refunds. [28 FPC at 1093.]

Cities Service Production Company and others argue that the proceeding at bar is not an "other similar proceeding" to the proceeding in Docket No. AR61-2. "Since this is not the forum provided in the Commission's Settlement Order for changing the settlement rate at Docket No. CI62-135 and since such Settlement Order has become final, neither the Commission nor the Examiner has the authority in these proceedings to change the settlement price." (Cities Service brief, p. 12.)

The producer claims have been considered and denied by the Commission. See order of April 10, 1963 herein, 29 FPC 730. The reasons for denial should be briefly considered.

The construction of the phrase "or similar proceeding" should of course be in accordance with the understanding and contemplation of the parties to the settlement and to the approval thereof.

As is apparent from the text of the order instituting the Area Rate Proceeding, 25 FPC 942, the Commission originally contemplated, and made very clear to all concerned, the joinder in that proceeding of both (a) certificate dockets concerned with the initial price issue, which were to be heard "in the first phase of this hearing" and to be decided by "the issuance of an interim order," and (b) just and reasonable rates under Sections 4 and 5 of the Natural Gas Act.

By the time of the Fourth Amendment to the Statement of General Policy No. 61-1, issued October 31, 1961, the indications were that the contemplated first phase of AR61-2 was "not feasible," and that the Commission would at some time in the future "eliminate the contemplated first phase of AR61-2." Fourth Amendment, *supra*, 26 FPC at 661. All parties presumably knew of these indications at December 21, 1962, which undoubtedly were the very reason for the use of the phrase "or other similar proceeding" in the settlement.

The present proceeding is similar to—indeed, identical with—AR61-2 insofar as the latter proceeding, at the outset, involved South Louisiana initial prices in certificate cases. CATC has no right or privilege to have their initial certificate prices determined in a rate proceeding. The settlement and the Commission order of December 21, 1962 do not contemplate any such strange result.

[36] CI62-135, CI62-137, CI62-146, and CI62-147.

The January 22, 1963 consolidation of the CATC dockets herein was entirely consonant with the terms of the settlement, and the contentions to the contrary are overruled.

2. Liability of Hurley Oil & Gas Co. For Refunds

In Docket No. G–17775, we find that on March 11, 1959, the Commission issued temporary authority to Hurley to sell certain gas at the 23.05 cents per Mcf contract price, conditioned upon Hurley's "refunding to Transcontinental [the pipeline purchaser] any amounts in excess of the amount resulting from the rate finally determined to be proper in Docket No. G–17775." This is, very clearly and definitely, an unlimited ("floorless") refund condition. Hurley accepted the temporary authority and commenced deliveries April 1, 1959.

On April 13, 1960, the New York Public Service Commission filed its Notice of Intervention in the proceeding [37] into which the Hurley case had, on March 29, 1960, been consolidated and which involved, *inter alia*, the matter of Hurley's permanent certification at a proper price line. NYPSC served Hurley with a copy of its intervention notice. The Commission on April 29, 1960 issued and served on Hurley a notice regarding the intervention of the NYPSC and others.

On May 12, 1960, Hurley filed with the Commission a "Motion to Remove Price Refund Condition from Temporary Authority," without serving copies on any party to the consolidated proceeding except Transcontinental. Hurley's motion was based on the fact that several other producers in the South Louisiana area had been granted temporary certificates at prices as high or higher than Hurley's price without refund obligations. On June 29, 1960, the Commission granted Hurley's "unopposed" motion and deleted the refund condition as requested.

On September 18, 1962, NYPSC filed with the Commission a "Motion to Annul Temporary Authorization, to Direct Refunds, and to Terminate Suspension Proceeding." In this motion, NYPSC brought to the Commission's attention the fact that Hurley had not served intervenors with a copy of its motion on May 12, 1960. NYPSC also noted the fact that this temporary authority (like all others) was granted by letter rather than published order, therefore was not a ruling of which NYPSC had knowledge.

In the order instituting the proceeding at bar, the Commission severed Docket No. G–17775 from the *Transcontinental* proceeding, and consolidated it herein.

By order of January 14, 1963, 29 FPC 71, the Commission, *inter alia*, (a) vacated its order of June 29, 1960 which had deleted the refund condition, and reinstated the original letter order of February 4, 1959, with its provision for refund of "any amounts in excess of the amount resulting from the rate finally determined to be proper in Docket No. G–17775;" (b) referred the issue of whether or not Hurley's May 12, 1960 motion to remove the refund condition should be granted or denied, for determination herein. Reconsideration was denied by order of March 4, 1963, 29 FPC 417.

The only basis for Hurley's motion of May 12, 1960 was the existence of a few unconditioned "temporaries" at the same price level in the area of Hurley's sales. We have seen that the authorization of sales and deliveries at the Hurley price level was the result of mistaken Commission pricing policies during the period in question, which policies should not be extended to extant dockets.

In principle, temporary authorizations are issued to help producers meet emergency situations. They are issued without notice or hearing. They are a license to start serving gas, but they are not a license to collect unwarranted prices therefor. The Commission correctly imposed a refund condition in the certificate issued March 11, 1959.

---

[37] *Transcontinental Gas Pipe Line Corp., et al.*, Docket No. G–20107, *et al.*

The subsequent deletion of the refund condition was a nullity, because effected *ex parte* at a time when and in proceedings where all concerned, including NYPSC, were entitled to notice and an opportunity to be heard. This result was occasioned by Hurley's neglect to give notice of its application to other parties to Docket No. G–20107, *et al.* Hurley's prejudice, occasioned by its own fault, is simply that it has lost the possibility that the Commission might have erroneously deleted the refund condition..

In short, Hurley has no right in the premises, nor any visible equities. Hurley's claim for consideration of "evidence" about the issue was rejected at the hearing, because Hurley produced no relevant facts, but attempted to rely on matters of cost, value and return which, as we have seen, are useless in the fixing of a "stop-gap" price line, and which do not speak on Hurley's legal point. The facts relevant to the legal point are contained in Hurley's contract, rate schedule, and applications, which (together with price line determinants) are part of the record.[38]

3. *Prices for Kerr-McGee, Phillips, and Jupiter Corp.*

In a rather complicated situation, Kerr-McGee Oil Industries, Inc. and Phillips Petroleum Company, owners in equal shares of two gas properties, sell therefrom gas ultimately delivered to Tennessee Gas Transmission Company, at initial prices to be determined herein. It will simplify the presentation to consider each sale separately, although they are each part of one transaction.

Sales from Rollover Field. The first property is Rollover Field, located offshore, outside the Louisiana taxing jurisdiction. This sale is made by Kerr-McGee and Phillips from an offshore platform to Jupiter Corporation[39] under a contract dated February 6, 1953. During relevant periods prior to November 5, 1958, Jupiter (after gathering, dehydrating, separating out of liquids, and transportation to the Louisiana shore) resold the gas to Niagara Gas Transmission, Ltd. for export to the Dominion of Canada, and for service to the Toronto market pending deliveries thereto from Trans-Canada's gas sources in western Canada.

The sale was effected by displacement. Jupiter actually delivered the gas to Tennessee onshore in Louisiana. Tennessee applied for and received an export permit and a Presidential permit, and delivered equal quantities of gas to Niagara through facilities crossing the border near Buffalo, New York. See *Tennessee Gas Transmission Co.*, 12 FPC 311, 320, 330–331.

The sales from Rollover and from the field next considered were originally made to Tennessee at interim prices of 3.8 to 9.3 cents per Mcf. After the *Phillips* decision, applications covering the sales were made to the Commission pursuant to Order 174–A, but were withdrawn at Commission request when, in May 1957, the displacement sales actually commenced.

The displacement sales were at a price to Niagara of 16.4 cents per Mcf, which escalated to 21.3333 cents per Mcf on November 1, 1958. Such sales and the price therefor are apparently outside the Commission's jurisdiction. See *Border Pipe Line Co.* v. *F.P.C.*, 171 F. 2d 149 (CADC). The displacement sales continued until November 5, 1958, when Niagara assigned its contract to Tennessee.

Jupiter at all times was a transporter, rather than a producer. Compensation to Jupiter for its services depends on volumes delivered. All parties use

[38] An incidental reference in the Commission order of January 14, 1963 to "appropriate evidence" to be adduced in this hearing, in the context of the whole order and general Commission policy, should not be given controlling weight to the contrary.

[39] Actually, to one of Jupiter's two predecessors, originally. There is no issue about Jupiter's succession or the propriety of treating Jupiter as the real party in interest at all times.

the compensation actually realized, which is taken by all to be at the rate of 2.4 cents per Mcf.

After Niagara's assignment to Tennessee, applications for certificates of public convenience and necessity were duly filed by Kerr-McGee, Phillips and Jupiter. The issues of price level as to such applications were the subject of a Presiding Examiner's decision issued June 17, 1960, finding (1) a price of 16.4 cents per Mcf for the sales from Kerr-McGee and Phillips to Jupiter, *less* 2.4 cents per Mcf compensation to the latter, or a net of 14.0 cents per Mcf; (2) a price of 16.4 cents per Mcf plus tax reimbursement for sales from Jupiter to Tennessee; (3) a price of 16.4 cents per Mcf plus tax for the sales from the field next discussed.[40]

On December 5, 1962, the Commission in Docket No. RI63-212 instituted a Section 5 investigation of Jupiter's rates; the order reciting that "During 1961 it is estimated that Jupiter received an average of 2.3 cents per Mcf for its services to Phillips and Kerr-McGee." [41]

As to these sales from the Rollover Field, Staff recommends (Br. 48) prices of "18.5¢ per Mcf less the charges provided in their contracts with Jupiter" for Phillips and Kerr-McGee, and 18.5 cents per Mcf for Jupiter.

The Eastern Seaboard intervenors recommend that the Jupiter docket be "severed from this proceeding and set for prompt hearing, at which time Jupiter should be afforded an opportunity to submit the data required by the Commission's regulations of transmission companies under Section 7 of the Act"; noting the pendency of Docket No. RI63-212. (Br. 22.) Although the matter is not entirely clear, it seems that the Eastern Seaboard intervenors (except Long Island Lighting Company) would apply the 18.5 cents per Mcf price to the offshore Rollover field sales; Long Island Lighting, however, recommends a realization of 14 cents for such sales to Phillips and Kerr-McGee for no stated reason, but apparently in support of the Examiner's decision, *supra*.

Sales from Hog Bayou Field. This field is within the Louisiana taxing jurisdiction. Phillips and Kerr-McGee each own half of this field, and deliver the gas directly to Tennessee. In the first instance, during the relevant time period, deliveries were by displacement for Niagara, as in the case of sales from Rollover. All material facts, except for direct delivery and location from which the sales are made, are the same in the case of Hog Bayou as in the case of Rollover.

Staff contends for the general 20 cents per Mcf price for sales from Hog Bayou. The Eastern Seaboard intervenors also seem to accept the applicability of the general price line to this sale, except for Long Island Lighting (with NYPSC concurrence), which recommends certification at 17.9 cents per Mcf inclusive of tax reimbursement.

Analysis and Conclusions

We start with the premise that Jupiter is truly an independent gas collecting and transmitting corporation, dealing at arm's length with Tennessee and all other parties involved in the transactions under examination. There is nothing in the record, in the Examiner's decision on the prior hearing, or in the Commission's files indicating anything to the contrary.

As an independent pipe line company, Jupiter should be treated exactly like any other pipe line company with respect to the price which it must pay for offshore gas. This is because the price issue focuses on consumer protection rather

[40] On May 19, 1961, the proceedings were consolidated into AR61-2 for redetermination, see text and note 23, *supra*, from which they were subsequently severed for determination herein.

[41] Other recitals in the order give the impression that the investigation results from differential in charges to these producers from charges to another producer.

than producer realizations, as we have seen in detail with respect to the matter of taxes.[42]

Kerr-McGee and Phillips should be treated exactly the same as any other producers offshore Louisiana, all of whom deliver gas from the field (*i.e.*, at the central gathering point, which is the platform) to the pipe line transmission companies. The price line in every case except the Jupiter case is recognized both by staff and intervenors as the price applicable to the sale at the platform. Jupiter is in form the purchaser of the gas and Jupiter is in substance the purchaser for the purpose of determining the price line for sales to it. It is difficult to understand, and it is not explained, why Long Island Lighting takes an extreme position to the contrary.

The contrary result would discriminate against Phillips and Kerr-McGee without basis. Jupiter, as the transportation company, presumably will be treated like any other transportation company in respect to rate base and rate of return. In the pending Section 5 proceeding Jupiter will presumably receive just and reasonable rates sufficient to cover the investment in its facilities for getting the gas ready for transportation and transporting it to the delivery point onshore. Presumably these just and reasonable rates will be the exact equivalent of the rates which would have been applied to Tennessee in respect of this segment of line if Tennessee had actually built the line.[43] There is no prejudice to consumers in such an arrangement.

Of course, if Phillips and Kerr-McGee are to receive 18.5 cents per Mcf for the gas at the platform, as is here decided, Tennessee will pay 18.5 plus 2.4 cents per Mcf transportation charge in respect of the gas delivered into Tennessee's facilities onshore. For present purposes we must assume that the 2.4 cents per Mcf transportation charge is the proper rate, since the propriety of that rate is not at issue in these proceedings, but is at issue in the Section 5 proceeding instituted December 5, 1962, *supra*.

It should be restated very plainly that the proceeding at Docket No. RI63–212 involving Jupiter Corporation's sales to Tennessee under its Rate Schedule No. 8 are quite different proceedings, and that Jupiter is not subject to question in the proceedings at bar insofar as its rate is concerned. The 2.4 cents per Mcf collected by Jupiter is not an initial price nor any part of an initial price. The 2.4 cents per Mcf is a rate fixed as compensation for transportation charge which may or may not be found just and reasonable in Docket No. RI63–212. This rate is totally dissimilar in character from the initial prices at issue in the other dockets consolidated herein.

The solution of the Jupiter rate suggested by the Eastern Seaboard intervenors should be appealing to the Commission, in that it postpones definitive action in regard to a mattter where the record is somewhat deficient especially in the light of Jupiter's failure to appear in this hearing in support of its application.

On balance, however, Jupiter should be issued a certificate in Docket No. G–16679 in order to clear this docket from the number of cases long pending before the Commission. The application makes out a case for certification. Certification is entirely routine and formalistic. No question or issue is presented and no question or issue exists in this proceeding as to the propriety of Jupiter's rates. In the present proceeding, Jupiter presents itself as a pipe

[42] A full rationale is set out in *Panhandle Eastern Pipe Line Co.*, 27 FPC 35, Examiner's decision, p. 62 *et seq.*, concluding (p. 62) "The consumer is, for the present, adequately protected if 'the price is right' so far as the pipeline is concerned."

[43] In the case of the offshore deliveries from CATC and the MCN producers, Tennessee has built or proposes to build the subsurface laterals itself. These subsurface laterals will of course become part of Tennessee's rate base on which it will be entitled to earn a return.

line company transporting gas in interstate commerce, entitled to a certificate of public convenience and necessity in respect of its operations. The issuance of this certificate will clear the way for the rate determination to be conducted in the separate docket mentioned above.

The reasoning outlined above, relative to the pricing of sales from the Rollover Field, also applies to the onshore sales from the Hog Bayou Field. These sales should be conditioned to the generally applicable 20-cent price for onshore gas.

The lesser price determined by the Examiner's decision of June 17, 1960 has never become permanent and the considerations leading to that decision are outweighed by considerations adduced herein. Contentions advanced to the contrary are overruled.

With regard to return of monies collected as tax reimbursement in respect to Louisiana's invalid gathering tax, Staff brief p. 50, reimbursement will not be required in regard to the sales from Rollover in Docket Nos. G–16718 and G–16611, because no tax reimbursement has been collected in respect of these offshore sales. No return will be required with respect to Jupiter's resale to Tennessee because again, no tax was ever collected. Tax reimbursement collected in respect of sales from the Hog Bayou Field in Docket Nos. G–16612 and G–16719 should be refunded pursuant to the condition contained in the temporary authorization covering these sales.

4. *Abandonment of Two Sales*

Staff moves that the following applicants be authorized to abandon proposed sales, and that their temporary authorizations therefor be cancelled:

Herbert L. Dillon, Jr. (Operator), *et al.*, Docket No. CI61–841.

Midwest Oil Corporation, Docket No. CI60–745.

There is no objection in the case of Dillon, and Staff's motion in this docket will therefore be granted. In the case of Midwest, the application is opposed by the purchasing pipeline, and Staff's motion will therefore be denied.

5. *Termination of Three Dockets*

The property involved in the Irwin & Bess Docket No. G–19297 is now covered by the application of W. L. McKnight d/b/a La Gorce Oil Company in Docket No. CI61–1464. The property involved in the Drew Petroleum, Inc. Docket No. G–18461 is now covered by the application of Socony Mobil Oil Company, Inc. in Docket No. CI61–659. The property involved in the Reese E. Carter Docket No. G–17298 is now covered by the application of Williams Brothers Company in Docket No. CI61–104.

Upon motion of Staff and without objection, the temporary authorization issued to the named predecessors will be cancelled and the dockets will be terminated.

6. *Refund of Tax Reimbursement*

In addition to the tax reimbursement funds disposed of in item 3, *supra*, referring to the invalid Louisiana gathering tax, Marathon Oil Company (Staff Brief, Appendix A, Sheet 22, line 10) is liable for such refunds pursuant to the terms of its temporary authorization, and provision for such refund should be made herein.

7. *Requirement of Rate Filings*

Applicants Superior Oil Company in Docket No. CI61–1481 and Sun Oil Company in Docket No. CI60–490 have not filed their related rate schedules. The order for their certifications will require appropriate filings.

8. *Acceptance of Rate Filings*

The applications of Placid Oil Company in Docket No. CI61–511 (two acreage additions) and Sinclair Oil & Gas Company in Docket No. G–17917 (one acreage addition) involve prospective sales as to which applicants have not made rate filings. Appropriate rate filings at not more than the price line prices should be required by the order herein.

9. *Certain Certificates Subject to Section 4(e) Proceedings*

Applicant Sun Oil Company in Docket Nos. CI60–490 and G–15267 is a signatory co-owner of properties previously covered by certificates issued to the operators of the properties. See Appendix to Staff Brief, sheet 18, lines 2 and 10; footnotes 18 and 29. Rate increases proposed by the operator's covering Sun's interests have been suspended, and are subject to Section 4(e) proceedings. For reasons of consistency, see *Graridge* discussed *infra*, each certificate to Sun should be at the level of the last rate in effect under the operators' rate schedule which is not subject to refund obligation. Sun, like the operators, will then collect amounts over such "last clean rate" subject to future refund obligations as may be decided in the rate proceedings.

10. *Certain Succession Dockets*

We here consider six assignments of parts of given units of productive acreage, which units originally were covered by permanent certificates of public convenience and necessity issued to the assignor. The assigned parts of such acreage are now covered by temporary authorizations issued to the assignees which allow "each assignee to collect the rate in effect under the assignor's related rate schedule even though that rate might have been a rate subject to refund under Section 4 of the Act. The temporary certificates issued to the assignees were therefore subject to the condition that the assignees be under a possible refund obligation down to the level of the assignor's last rate not subject to refund." (Staff brief, pp. 55–56.)

The dockets in question and the price being collected under the temporary authorizations, are as follows:

Docket No.	Applicant	Price
CI61–452	J. C. Trahan Drilling Contractors, Inc. (Operator) *et al*	20.25
CI62–102	Shoreline Exploration, Inc	23.3
CI62–1028	Samedan Oil Corp. (Operator) *et al*	22.25
CI62–73	Shoreline Exploration, Inc	43.3
CI61–1280	General Crude Oil Co. (Operator) *et al*	20.4
CI61–586	Continental Oil Co. (Operator) *et al*	19.9

In each case, the price being collected is exactly the same as the predecessor's rate in effect subject to refund at the time of the assignment. In each case, the temporary authorization issued to the assignee provides that the price to be collected will be subject to refund of amounts in excess of the proper initial price for the given docket, which has been established herein for these onshore sales at 20 cents per Mcf.

Staff recommends certification at the "last rate of the assignor which was not subject to refund at the time the assignee's application was filed," but "conditioned to require that the assignee applicant will nevertheless remain liable to refund amounts collected above the assignor's last rate not subject to refund (assignee's initial rate) depending upon the outcome of the assignor's Section

4 proceeding, or Area Rate proceeding, AR61–2 * * *." See Staff brief, pp. 56–57; cf. Appendix B, column 18.

"Staff's recommended price," according to Appendix B of the Staff brief, "conditioned to refund to the level of rate determined to be proper in the predecessor's suspension docket or Docket No. AR61–2, et al.," is as follows—

Trahan	11.083
Shoreline CI62–102	14.497
Samedan	20.25
Shoreline CI62–73	11.047
General Crude	18.0
Continental	18.7

Examination of the temporary authorizations, however, discloses that the Commission has on the indicated dates issued the temporary authorizations to applicants with refund floors as follows:

		Cents
Trahan	10/6/60	11.047
Shoreline CI62–102	2/16/62	11.047
Samedan	4/19/62	20.25
Shoreline CI62–73	12/ 5/61	11.047
General Crude	5/ 3/61	20.0
Continental	3/28/62	18.2

Analysis and Conclusions. The situation is not entirely settled by *Graridge Corporation*, 30 FPC 1156, Opinion No. 408 issued October 31, 1963. *Graridge* decided the issue as to the proper price for successors who took over "either the initial rate of the predecessor, or a rate which has been increased but is not subject to refund or any longer the subject of any Section 4 rate proceeding." (P. 1159, fnt. 5.) The specific "initial rates" or "rates which have been increased" thus referred to do not appear in the text of *Graridge*, but were evidently at the erroneously high levels discussed under Sections A and B of the second main heading of the present decision.[4] *Graridge* in effect holds that the successor is entitled to an initial price the same as the predecessor's price, even though the predecessor's price was too high, because "* * * by treating the successor like the predecessor we obtain a consistency of administration and treatment. Each successor, by stepping into the shoes of his predecessor, takes the properties and sales subject to any benefits or infirmities inherent therein." (P. 1162.)

Ten of the dockets in *Graridge* were not contested. After one settlement, the nine remaining uncontested dockets were certificated at the "Last Rate Not Subject to Refund." *Cf. Graridge* opinion, footnote 3, and Exhibit 1 in that proceeding. So here, following the *Graridge* approach, the certificates should be issued at the prices listed above as "Staff's recommended price," *i.e.*, the last rate not subject to refund, in order that the applicants "be placed in the same positions occupied by their predecessors." (P. 1164.)

Applicant Samedan's price of 20.25 cents per Mcf is above the 20-cent proper price for this onshore sale. Samedan's predecessor, Tidewater Oil Company, was certificated at 20.25 cents per Mcf in Docket No. G–15103. The only distinction between the Samedan docket and the dockets disposed of in *Graridge* is that Samedan involves only a partial assignment of the particular produc-

[4] Examination of the Stipulation and Exhibit 1 referred to in the *Graridge* decision discloses that the "last rates (of the assignor) not subject to refund" were as follows: three at 23.25 cents per Mcf; two at 22.05; one each at 23.15, 22.8, 21.75 and 20.75.

tive acreage. This distinction is not a basis for differentiating this case from the *Graridge* rule. Under that rule, Samedan must be certificated at 20.25 cents per Mcf.

Staff recommends that conditions be imposed on the certification of these successors, requiring that the successors "remain liable" for the refund of amounts down to the last rate of their assignors which is not subject to refund—the refund being dependent upon the outcome of Section 4 proceedings pending against the assignors or the outcome of AR61–2. The successors contest this recommendation. Examination of the Commission's temporary authorizations does not disclose any such express imposition of liability for refunds on the successors. If the successors are liable for refunds down to the "last clean rate," that liability exists *dehors* the present proceeding, and the present proceeding cannot strengthen or weaken the liability. The matter should be resolved in the rate proceedings, not here.

In the *General Crude* case, the refund floor of 20.0 cents is above the last rate of the assignor not subject to refund of 18.0 cents. Accordingly, the refund ordered herein cannot go below 20.0 cents. As we have seen, the refund ordered herein in the case of Samedan cannot go below 20.25 cents.[45] Accordingly, the certificates will be issued to the assignees at the last rate not subject to refund. Refunds will be ordered herein in accordance with the temporary authorizations. The matter of the assignees' liability for further refunds will depend upon the outcome of rate proceedings with which we are not concerned.

11. *Succession to Temporarily Authorized Sales*

In Docket No. CI60–743, applicant Ocean Drilling and Exploration Co. (Operator) *et al.* is the assignee of a portion of certain acreage from which sales by Phillips Petroleum Company had been temporarily authorized at a price of 23.8 cents per Mcf. On June 23, 1960 Ocean Drilling was temporarily authorized to deliver gas at the same price, without refund condition.

Subsequently, pursuant to settlement, Phillips received a permanent certificate covering its remaining acreage, at a price of 19.0 cents per Mcf.

In accordance with Staff motion, this sale will be treated as a new sale, subject to the price line generally applicable.

12. *Assignments of Non-Productive Acreage*

Seven dockets still involved in these proceedings concern "farmouts." Applicants are the assignees of acreage which at the time of the assignment was non-productive. By like token, at the time of the assignment, no sales had been made from such acreage, and the certificate prices and rate schedules of the assignors are not relevant to such acreage.

After the farmout, the acreage became productive. The situation is the same as any other new production and new certificate application; *i.e.*, certification should be at the proper initial price as herein determined.

One of the farmouts has been abandoned, and there are no refunds involved. Accordingly, this farmout, C. H. Lyons, Sr. in Docket No. CI63–789, should be authorized for abandonment and cancellation of temporary certificate. The six remaining dockets are:

---

[45] In the four other dockets here considered, the refund floors set by the temporaries are below the predecessors' last rate not subject to refund.

Docket No.	Applicant	Temporary authorized price	Price herein
CI61-1325	Earl G. Bateman	22.25	20.0
CI61-1571	N. Central Oil Corp.	23.25	20.0
CI61-1570	do	23.25	20.0
CI61-1708	Ocean Drl. & Exp. Co.	22.2625	18.5
CI61-1469	do	22.2625	18.5
CI61-236	John W. Mecom	20.25	20.0

The temporarily authorized price in the first three dockets is subject to refund down to a floor of 20.0 cents per Mcf, and refunds will be ordered accordingly. The two next dockets are subject to floorless refund, and refund of amounts over 18.5 cents per Mcf will be ordered accordingly. The last docket involves a temporarily authorized price without refund condition, and therefore, under current policy discussed *supra*, no refund will be ordered.

13. *Additions of Acreage*

After deleting three settled dockets,[46] seven dockets herein involve applications to make sales from acreage adjacent to acreage from which permanently certificated sales are being made. These dockets are:

Docket No.	Producer	Temporary authorization price	Price herein
G-3653	Sun Oil Co.	19.5	[1] 19.5
G-10022	Pan Amer. Pet. Co.	20.3	20.0
G-12308	Texas Gulf Prod. Co.	23.25	20.0
G-17657	Beck Oil Co.	16.0	[1] 16.0
G-2804	Forest Oil Corp.	([2])	20.0
G-11116	Sun Oil Co.	20.7	20.0
G-14835	Southwest Gas Prod. Co.	([2])	20.0

[1] Contract price is under price line.
[2] No temporary authorization requested.

These dockets involve new service and new gas from new acreage, and should be authorized on terms similar to those applicable to other new sales.

None of the above temporary authorizations contain refund conditions hinging refunds on the issue of permanently certificated price as determined herein; no refunds will be ordered. The matter of further refund relating to Section 4 proceedings will be left open for resolution in the Section 4 dockets.

In the Forest Oil and Southwest Gas dockets, no temporary authorization has been issued; accordingly, the rate filings related to these dockets reflecting the price determined herein should be accepted effective as of the date service commences under the temporary authorizations.

SUPPLEMENTARY GENERALLY APPLICABLE POINTS AND CONCLUSIONS

1. *Refunds Where No Provision Therefor Has Been Made*

As has been indicated in the foregoing discussion of specific cases, it is the Commission policy to require refunds only in those dockets where the temporary authorizations contain specific refund conditions. The reasons for this rule are fully set forth in the Commission's *Skelly* opinion, *supra*, and in the briefing of

[46] Sohio Petroleum Company and British American Oil Producing Company dockets. We have reflected herein settlements through December 20, 1963, and have deleted text applicable to issues raised in briefs concerning settled dockets.

that case on appeal to the District of Columbia Circuit, No. 17582 *et al.* The reasons need not be restated here.

By parity of reasoning, it necessarily follows that as a general rule applicable to all, producers should not be required to make refunds below the level of the refund floor set out in their temporary authorizations. In cases where the floor is lower than the 20.0-cent price line determined herein refunds will be ordered only down to the 20.0-cent level.

2. *Take-Or-Pay-For Provisions*

In accordance with *Skelly* and all other recent Commission decisions discussed above, a general requirement should be made as to all producer certificates containing take-or-pay-for provisions, subjecting such provisions to the determination to be made in Docket R–199, entitled "Non-Acceptability of Contracts Between Independent Producers and Interstate Natural Gas Companies Containing Certain Provisions in Daily-Contract-Quantity and Take-Or-Pay-For Clauses," as of the effective date of such determination. In accordance with Commission policy discussed in these recent cases, an 80 percent floor should be placed on this limitation.[47]

3. *Moratorium on Rate Filings*

In *Placid* the Commission determined that triggering of favored nations clauses and price redeterminations will take place in Southern Louisiana at prices in excess of 23.55 cents per Mcf. In accordance with Commission policy as set out in *Placid*, "a moratorium will be ordered on all price increases in excess of 23.55 cents per Mcf, inclusive of tax reimbursement, pending our final determination in that proceeding [*i.e.*, in Docket No. AR61–2] or until July 1, 1967, whichever is earlier." (P. 298.)

4. *Interest on Refunds*

In accordance with Order 215–A issued March 1, 1960, 23 FPC 474, interest payable on refunds pursuant to Section 154.102 of the Regulations under the Natural Gas Act, theretofore at the rate of 6 percent per annum, is to be increased March 1, 1960 to 7 percent per annum.

5. *The Hassie Hunt Trust Opinion No. 412*

Since the completion of the foregoing text, the Commission on December 9, 1963 issued its Opinion No. 412 in *Hassie Hunt Trust, Operator, et al.*, severing out for rehearing certain dockets involving the issue of the proper initial price for contracts entered into after the date of the Statement of General Policy No. 61–1, *i.e.*, September 28, 1960. The determination to rehear these dockets was predicated on the inability of the Presiding Examiner—

> to make a firm finding that the evidence shows that the situation after the ceiling prices went into effect, including the impact of the Policy Statement, either made or did not make a difference in determining the initial price under contracts executed after the ceiling prices were put into effect. In so holding, we state again that we do not imply that our announcement of the guideline rates, or other circumstances, necessarily had the effect of changing the "in-line" price level, but only that the evidence before us in the present proceeding does not permit us to make a valid finding as to such effect, if any. (P. 1442.)

---

[47] Contrary to Gulf's claims, brief 28 *et seq.*, the record in these proceedings contains evidence justifying the imposition of this and other conditions, in that the reasons for the conditions are apparent on the face of the applications, contracts and rate schedules filed with the Commission and admitted into evidence as items by reference.

In the area involved in the proceedings at bar, we have seen that the October 25, 1960 Policy Statement price of 21.5 cents per Mcf plus tax reimbursement was on October 31, 1961 reduced to 21.25 cents per Mcf inclusive of tax reimbursement. We have discussed *supra* the issue of the effect of the Policy Statement on post-Policy Statement contracts. Because of the *Hunt* decision, an *addendum* is appropriate.

The case at bar involves many contracts entered into after October 25, 1960. For instance, Gulf on April 4, 1961 executed a contract with Transco at the Policy Statement level of 21.5 per Mcf covering gas produced from the Ship Shoal and South Marsh Island Reserve. The contract was entered into at this price for the specific reason that Gulf thought it could thereby obtain expeditious certification. Transco had actually offered a higher price for the gas (Tr. 629–630).

On September 1, 1962, Gulf executed a contract with Trunkline to sell gas produced from the South Mermentau Field under the terms of a contract theretofore entered into between Trunkline and another producer, California Company. Gulf's contract, however, provided for a price of 21.5 per Mcf plus 1.75-cent tax reimbursement, whereas the California Company contract provided for a price of 22 cents plus 2.05 cents tax reimbursement. Gulf accepted the lower price because it believed that the lower price would be expeditiously certificated (Tr. 638–639).

Gulf and other producers[*] argue that the Policy Statement price should be given weight in the determination of proper prices for contracts executed after the date of the Policy Statement.

Unlike the "situation" in the *Hunt* case, in the case at bar a determination can be made, and is made, that the "situation" after the issuance of the Policy Statement did not, so far as the Commission is concerned, make a difference in the determination of the proper initial price applicable to contracts executed after the ceiling prices were put into effect.

Gulf's personnel engaged in selling gas to pipelines and like personnel of other oil companies, presumably knew about the Policy Statement guideline prices after they were announced. We should be able to assume without specific testimony that the existence of the Policy Statement had some influence on these personnel. We should also know to a certainty that Gulf's legal personnel and like personnel of other producers were aware of the Policy Statement guideline prices, and knew perfectly well that these price determinations, arrived at *ex parte*, without notice, without hearings, without a record, without evidence, by a Commission sitting *in camera*, cannot *as a matter of law* be given substantive effect to control formal proceedings under Section 7 of the Natural Gas Act—either by way of raising prices or lowering prices. The guideline prices, as the Commission has held, are of importance in the Commission's *ex parte* Section 7 work—the determination of price conditions for temporary authorizations. The guideline prices in Southern Louisiana were erroneously high, and temporaries have been issued at erroneously high levels. It is the function of the present formal proceedings to correct such errors in respect of the permanent certifications.

The Policy Statement contains abundant expressions indicating that it is not intended as a substantive determination of prices necessary and convenient to the public. The Commission has in subsequent proceedings reiterated its policy that the guideline rates were not of substantive effect as ceilings or otherwise. This is, of course, the reason that the Policy Statement does not

[*] *E.g.*, Shell Oil Company reply brief, pp. 4 *et seq.*; Union Texas Petroleum brief, pp. 5–6.

aggrieve producers or consumer interests and thus is not appealable. See *Wisconsin* v. *F.P.C.*, 292 F. 2d 753 (CADC).

Section 7 of the Natural Gas Act specifically requires notice, hearings, and findings on matters related to the public convenience and necessity. The requirement is spelled out in three separate parts of Section 7. It should be very plain that as a matter of law the Commission could not by the First Amendment to the Policy Statement and the Fourth Amendment to the Policy Statement establish a substantive determination of the proper price line for South Louisiana gas which would have any effect in the determination of proceedings on the record. Substantive determinations involving the rights, duties, powers and obligations of producer and consumer interests involved in Commission proceedings are made on a record to which such interests are parties. This is the plain requirement of Section 7 of the Act and the plain requirement of procedural due process as it has been understood to date. There is no "in-between." To give Policy Statement prices "some" substantive weight in open hearings would *pro tanto* deprive all interests of their statutory right to have the price issue decided on the open record.

The first hint that substantive effect might be given to the *ex parte* Commission Policy Statement pronouncements came in the *Skelly* decision, issued on August 30, 1962. The order on rehearing in *Skelly* was issued December 18, 1962, 28 FPC 1065. This latter order confirmed the Commission's decision to sever out certain post-Policy prices for rehearing. It is interesting to note that, apparently with the possibility of appeal in mind, the Commission referred to this action as "not a final order" but as a "procedural step." (P. 1069.) Despite these hints there is in the present record, made in 1963, very little evidence backing up the idea that the producers relied on the Policy Statement prices in the negotiation of subsequent contracts. Considering the financial inducements which would motivate strong follow-up of *Skelly* in this respect, it may be that the producers share the understanding expressed herein as to the limited scope of the Policy Statement guideline prices.

FORMAL FINDINGS AND CONCLUSIONS

(1) Each of the applicants listed in the appendices hereto[40] except Appendix E applicants is engaged in the sale of natural gas in interstate commerce for ultimate public consumption and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sale of natural gas of each such applicant, as more fully described in the respective applications, is made in interstate commerce, subject to the jurisdiction of the Commission, and each such sale, together with the construction and operation of facilities necessary therefor, is subject to the requirements of Section 7 of the Natural Gas Act.

(3) The applicants described in the foregoing formal findings, except Appendix E applicants, are each (a) able and willing to perform the service proposed in the respective application, (b) a party to a gas sale contract negotiated at arm's length and in good faith, and (c) willing and able to do the acts and perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder. Appendix E applicants have shown good cause why their service should be abandoned and why their dockets should be terminated.

---

[40] Appendix A, "Dockets Severed for Settlement or Other Disposition," is of course only a listing for purposes of convenient reference, and is not otherwise involved in this decision. In some connections, *e.g.*, arguments of counsel and general price line testimony, the dockets which have been settled are relevant to the dockets under consideration herein, and therefore may be mentioned in the text of this decision.

(4) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission, that:

(A) Permanent certificates of public convenience and necessity are hereby issued, or if already issued are appropriately amended, upon the conditions hereinafter prescribed, to authorize the sales and services, and the operations and construction reasonably necessary to effect such sales and services, proposed by each applicant listed in Appendices B, C and D hereto, as more fully described in the respective applications.

(B) Permission for and approval of the abandonment of the sales and services proposed by certain applicants listed in Appendix E hereto, as described in the respective applications and in the foregoing is hereby granted; and certain other applications listed in Appendix E hereto, as described in Staff motions and in the foregoing text, are hereby cancelled and closed, and the temporary authorizations issued in respect of cancelled and closed dockets are hereby terminated.

(C) Each certificate issued in paragraph (A) above is subject to the condition that the initial price prescribed in the particular rate schedule (contract) related to such certificate shall be not more than (1) 18.5 cents per Mcf if the certificate relates to a sale not subject to the taxing jurisdiction of Louisiana, and (2) 20 cents per Mcf if the certificate relates to a sale subject to Louisiana tax; provided that if it is finally determined that any subdivision (2) sale is not subject to Louisiana tax, refund shall be made of all amounts collected with respect to the 1.5 cents per Mcf differential, with interest. Within 30 days from the date of the final determination of these proceedings, each applicant proposing a rate schedule (contract) expressing an initial price or presently effective rate higher than the applicable price or rate ordered in the first sentence of this paragraph shall file a supplement to such rate schedule (contract) reflecting the applicable price or rate so ordered in substitution for the price or rate now expressed. The notice and detailed submittal provisions of Sections 154.94(b) and (f) of the Regulations under the Natural Gas Act are waived in respect of such supplementary filings.

(D) Each certificate issued in paragraph (A) above is subject to the condition that no change in rate providing for a price in excess of 23.55 cents per Mcf inclusive of tax reimbursement shall be filed prior to (1) the final determination of the Area Rate Proceeding, Docket No. AR61–2 or (2) July 1, 1967, whichever is earlier.

(E) Each certificate issued in paragraph (A) above is subject to the condition that the take-or-pay-for provisions in any related rate schedule (contract) are subject to the determination to be made by the Commission in Docket No. R–199, provided that such provisions shall not be reduced to less than 80 per cent of the annual contract quantities. Upon the determination of Docket No. R–199, each applicant for a certificate subject to the conditions imposed by this paragraph shall within 30 days file an amendment to the rate schedule (contract) reflecting prospectively the condition so imposed.

(F) Each of the applicants listed in Appendix C shall, prior to or within 60 days after the final determination of these proceedings refund to the purchasers the difference between the price charged and collected for gas covered by the respective applications and the price established by paragraph (C) hereof, except as other refund conditions have been established by prior order of the Commission and reflected in the text of this decision or in Appendix C. Interest shall be paid on all such refunds at the rate of 6 per cent per annum for all amounts

collected prior to March 1, 1961, and at the rate of 7 per cent per annum for all amounts collected thereafter.

(G) Within 10 days after the making of the refunds prescribed in paragraph (F), the refunders shall file with the Commission a statement of the refund, the computation thereof and the interest computation thereon, and the acknowledgement of the receipt thereof.

(H) The certificates issued in paragraph (A) above pursuant to applications which are deficient in regard to related rate filings, as specified in the text of this decision or in the appendices hereto, are subject to the further condition that such deficiencies be remedied by proper filings made within 30 days from the date of the final determination of these proceedings.

(I) The certificates herein issued are not transferable and shall be effective only so long as each of the applicants continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or order which has been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contracts here involved.

ROBERT M. WESTON,
Presiding Examiner.

[1] Proposed initial price. No temporary authorization requested.

[2] The price of 20.9 cents per Mcf includes a 2.4 cents transportation charge subject to final determination in Docket RI63-212 or AR61-2.

[3] Prior rate filing is rejected; applicant shall within 30 days from the final determination hereof file the amendatory agreements to the related rate schedule reflecting a 20.0 cents price per Mcf.

[4] Covering deliveries under original contract acreage per order of January 29, 1959.

[5] Applicable to additional acreage covered by amendment to contract dated January 14, 1960, per order of December 20, 1962.

[6] Applicant shall within 30 days from the final determination hereof file the rate schedule (contract) related to this application.

[7] Last rate of assignor not subject to refund.

[8] Applicable to additional acreage covered by Supplement No. 7 to Union Texas' FPC Gas Rate Schedule No. 8 For price certificated under original contract acreage, see Appendix D.

CAROLINA POWER & LIGHT COMPANY, PROJECT NO. 2206

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST, NET CHANGE THEREIN, ACCRUED DEPRECIATION AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 24, 1964)

Carolina Power & Light Company, Licensee for Project No. 2206[1] on May 2, 1960, filed a statement pursuant to Section 4.20 of the Commission's Regulations under the Federal Power Act claiming an actual legitimate original cost of the project as of May 1, 1958, in the amount of $11,489,661.81, accrued depreciation to that date of $3,611,102.02, and a claimed net investment of Licensee in the amount of $7,878,559.79, as of that date, the effective date of the license.

Licensee by supplemental statement filed May 17, 1961, claims for the period May 1, 1958 through December 31, 1960, gross project additions of $2,306,592.28, and gross project retirements of $2,410.00. Included within these amounts is the claimed cost of an additional generating unit installed at the Tillery development.

Licensee's claimed net change in project accrued depreciation for the period May 1, 1958, through December 31, 1960, is $339,833.35.

The Commission's staff made an examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the claimed and recorded project costs and reserves for depreciation, and thereafter proposed certain adjustments with respect thereto. By letter of February 27, 1962, Licensee confirmed its agreement to staff's proposed adjustments and accounting dispositions. Those adjustments would: decrease Licensee's claimed actual legitimate original project cost as of May 1, 1958 in the amount of $264,929.72 (includes the amount of $15,237.44 reclassified within project plant accounts); effect a net increase of $243,166.63 in Licensee's claimed initial project accrued depreciation as of May 1, 1958; all as more fully set forth in attached Schedule III. No adjustments are proposed with respect to Licensee's recorded net changes in actual legitimate original project cost and accrued depreciation for the period from May 1, 1958 to December 31, 1960.

---

[1] The license for Project No. 2206 issued pursuant to order of the Commission issued May 19, 1958 (19 FPC 704), is for a 50-year period. By order of the Commission issued July 7, 1959 (22 FPC 9), the license was amended to include certain transmission lines and appurtenant facilities. The project consists of two developments, Blewett and Tillery. The Blewett development is located on the Yadkin-Pee Dee River approximately 7 miles northwest of Rockingham, North Carolina, and was placed in operation in 1912 by a predecessor of the licensee. The Tillery development is located about 25 miles up-river, and was placed in operation in 1928 by a predecessor of the licensee.

These adjustments and the accounting disposition of all amounts involved therein are summarized in the following composite journal entry:

No.[1]	Account	Debit	Credit
101	Electric Plant in Service-Project No. 2206		$264,929.72
101	Electric Plant in Service-nonproject	$35,574.75	
108	Accumulated Provision for Depreciation of Electric Plant in Service-Project No. 2206		243,166.63
108	Accumulated Provision for Depreciation of Electric Plant in Service-nonproject	295,727.85	
435	Miscellaneous Debits to Surplus	176,793.75	
	Totals	508,096.35	508,096.35

[1] Account references are to account numbers and titles of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, effective January 1, 1961.

Upon application of the proposed adjustments, the resulting actual legitimate original cost of the project as of May 1, 1958 would be $11,224,732.09, the accrued depreciation as of that date would be $3,854,268.65 and the net investment of Licensee in Project No. 2206 as of that date would be $7,370,463.44 ($2,122,360.26 applicable to the Blewett development and $5,248,103.18 applicable to the Tillery development). Since no adjustments are proposed with respect to claimed net changes in project cost and accrued depreciation the resulting actual legitimate original project cost as of December 31, 1960, is $13,528,914.37 and the accrued depreciation applicable to in-service project properties as of that date is $4,194,102.00.

The North Carolina Utilities Commission by letter of July 2, 1963, indicated no objection to the proposed adjustments, accounting disposition and resulting project costs and reserve for accrued depreciation.

The Commission finds:

(1) Licensee by its letter of February 27, 1962, confirming its agreement with staff's proposed adjustments, and the North Carolina Utilities Commission by its letter dated July 2, 1963, have obviated the necessity for notice and opportunity to protest provided by Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The proposed adjustments, including accounting dispositions, are reasonable and appropriate for purposes of the Federal Power Act and therefore should be approved and directed as hereinafter ordered.

(3) The actual legitimate original cost of Project No. 2206 as of May 1, 1958, the effective date of the license, is $11,224,732.09 of which $3,781,884.51 is applicable to the Blewett development and $7,442,847.58 is applicable to the Tillery development, as shown in attached Schedule I.

(4) The reserve for accrued depreciation applicable to in-service project properties of Project No. 2206 as of May 1, 1958, the effective date of the license, is $3,854,268.65, of which $1,659,524.25 is applicable to the Blewett development and $2,194,744.40 is applicable to the Tillery development as shown in attached Schedule II.

(5) The net investment of Licensee in Project No. 2206 as of May 1, 1958, the effective date of the license, is $7,370,463.44, of which $2,122,360.26 is applicable to the Blewett development and $5,248,103.18 is applicable to the Tillery development.

(6) The net increase or change in the actual legitimate original cost of Project No. 2206 for the period from May 1, 1958 through December 31, 1960 is $2,304,182.28 of which $6,752.53 is applicable to the Blewett development and $2,297,429.75 is applicable to the Tillery development; and the resulting actual legitimate original project cost as of December 31, 1960 is $13,528,914.37, of which $3,788,637.04 is applicable to the Blewett development and $9,740,277.33 is applicable to the Tillery development, as shown in the attached Schedule I.

(7) The net increase or change in accrued depreciation for Project No. 2206, for the period from May 1, 1958 through December 31, 1960 is $339,833.35 and the reserve for accrued depreciation applicable to in-service project properties as of December 31, 1960, is $4,194,102.00 of which $1,770,702.89 is applicable to the Blewett development and $2,423,399.11 is applicable to the Tillery development, as shown in the attached Schedule II.

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for purposes of this order.

(B) The adjustments, including the accounting dispositions, as proposed by the staff and agreed to by Licensee are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for Project No. 2206 showing the debit balance of $11,224,732.09, as of May 1, 1958, the debit amount of $7,370,463.44 as net increase in project cost for the period from May 1, 1958 through December 31, 1960 and the debit balance of $13,528,914.37 as the actual legitimate original cost of the project as of December 31, 1960, all classified by development and by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees as shown in the attached Schedule I.

(D) Licensee, to the extent it has not already done so, shall establish and maintain a reserve for project accrued depreciation showing the credit balance of $3,854,268.65, the credit amount of $339,833.35 as the net increase in project depreciation reserve for the period from May 1, 1958 through December 31, 1960, and the credit balance of $4,194,102 as the reserve for project accrued depreciation applicable to in-serve project properties as of December 31, 1960, all classified by developments and by functional classification of the Commission's Uniform System of Accounts as shown in attached Schedule II.

(E) Licensee shall, within 90 days from the issuance of this order, file FPC Form No. 7 and three certified copies of the adjusting journal entries showing compliance with this order.

SCHEDULE I

CAROLINA POWER & LIGHT COMPANY, LICENSEE, PROJECT NO. 2206 (BLEWETT-TILLERY)

Before Commissioners: Joseph C. Swidler; Chairman, L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CENTRAL MAINE POWER COMPANY, PROJECT NO. 2335

ORDER ISSUING LICENSE (MAJOR)

(Issued July 24, 1964)*

Application was filed on January 3, 1963 by Central Maine Power Company (Applicant) of Augusta, Maine, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2335, known as the Williams Project, located on the Kennebec River, in the towns of Embden, Bingham, and Solon, and the Township of Concord, in Somerset County, Maine.

According to the application, the project site was initially developed for power purposes in 1830. A project was intermittently operated on the site until the spring of 1937 when Applicant purchased the site. The existing mill buildings and the dam were in ruins at that time and Applicant began a rehabilitation of the project in the fall of 1937, and the first generator of 7,000 kilowatts went into operation in 1939. The powerhouse was finished and the second generator of 6,000 kilowatts went into operation in 1950. The pond level was raised to the designed elevation in 1961. The power generated by the Williams Project is delivered to Applicant's distribution system for public utility purposes.

Applicant requests a 50 year license effective from the date of its issuance. In its order issued May 21, 1954,[1] the Commission found the Kennebec River to be a navigable water of the United States. In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of January 1, 1938 and a termination date of December 31, 1987, since neither a declaration of intention nor a timely application for license was filed with respect to the aforesaid construction.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that the plans of the project structures affecting navigation have been approved pursuant to Section 4(e) of the Act.

The Department of the Interior recommended for inclusion in any license for the project certain conditions in the interest of fish and wildlife resources.

The Department of Health, Education and Welfare, has advised that: the project does not constitute a source of pollution; removal of the project dam or flow regulation is not warranted at this time; and it is not envisioned that the granting of a license for the project will create or intensify vector problems.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Maine, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

---

*Rehearing denied by order issued September 11, 1964, 32 FPC 733. Affirmed, *Central Maine Power Co.* v. *F.P.C.*, 345 F. 2d 875 (CA1–1965).

[1] Docket No. E–6456 (13 FPC 1076).

(5) Upon the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The substation containing two 3 phase, 6.9/115 kv transformers located adjacent to the powerhouse mentioned in paragraph (B) below, which were included in the application for license, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(7) The 6.9 kv generator leads and the 115 kv transmission line from the 6.9/115 kv substation to the Wyman-Gulf Island 115 kv line, while not included in the application for license, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project as hereinafter provided.

(8) The installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 17,300 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(9) The exhibits designated and described in pargaraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Central Maine Power Company (Licensee) of Augusta, Maine, under Section 4(e) of the Federal Power Act (Act) for a period of 50 years, effective as of January 1, 1938, and terminating December 31, 1987, for the continued operation and maintenance of Project No. 2335 on the Kennebec River, Maine, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2335 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: General Map.

Sheet 1 (FPC No. 2335–1) Flowage, Dam and Power Plant Areas.

Sheet 2 (FPC No. 2335–2) Transmission System.

Exhibit K: Detail Maps.

Sheet 1 (FPC No. 2335–3) Tailrace.

Sheets 2, 3, 4, 5 (FPC Nos. 2335–4, –5, –6 and –7) Reservoir.

(ii) Project works consisting of: *a dam* comprising: (a) a 202 foot concrete core earth dike (crest elevation 325 feet) extending from the eastern shore to the gate section, (b) a concrete gate section, 243 feet 6 inches long and 15 feet high (maximum) composed of one split vertical lift car wheel gate and five tainter gates, each 32 feet 6 inches wide and 20 feet 6 inches high, (c) a 230 foot 4 inch long stanchion section, (d) an angled bulkhead section connecting the stanchion and intake section and containing a deep sluice gate and a log sluice tainter gate 6 feet wide by 12 feet 4 inches high, (e) a steel lined

concrete log sluice 6 feet wide, 8 feet deep and 160 feet long, (f) an intake section 85 feet wide (along dam) and 160 feet long containing four gate openings for two power units (two each) serving as the powerhouse substructure; and (g) a concrete cutoff wall, 48 feet long, extending into the westerly river bank; *a 426 acre reservoir* (pool elevation 320 feet) extending 7.5 miles up-river to the Licensee's Wyman Project No. 2329; *a powerhouse* containing two hydraulic turbines rated at 10,950 hp and 8,800 hp connected, respectively, to two generators rated at 7,000 kw and 6,000 kw; *a substation* containing two 3 phase 6.9/115 kv transformers located adjacent to the powerhouse; *and appurtenant electrical and mechanical facilities*, the location, nature, and character of which are more specifically shown and described by the following described exhibits:

Exhibit L: General Design Drawings.

Sheet 1 (FPC No. 2335–8) Dam and Powerhouse—Plan—Sections

Sheet 2 (FPC No. 2335–9) Dam—Elevations & Sections

Sheet 3 (FPC No. 2335–10) Powerhouse (Plan—Elevation—Sections)

Sheet 6 (FPC No. 2335–13) Substation—General Design

Exhibit M: Nine typewritten pages entitled, "General Description and Specifications of Equipment and Appurtenances".

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States", (30 FPC 1658), which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof; except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall pay to the United States the following annual charges:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with its regulations, in effect from time to time. The authorized installed capacity for such purposes is 17,300 horsepower.

Article 29. The Licensee shall, within six months from the date of this license, file with the Commission an application for amendment of this license to include the following described transmission facilities: the 6.9 kv generator leads and the 115 kv transmission line from the 6.9/115 kv substation to the Wyman-Gulf Island 115 kv line.

Article 30. The Licensee shall, within one year from the date of issuance of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 31. Whenever the Licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest,

maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 32. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any features thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

DUKE POWER COMPANY, PROJECT NO. 2332

ORDER ISSUING LICENSE (MAJOR)

(Issued July 24, 1964)

Application was filed on December 20, 1962, by Duke Power Company, of Charlotte, North Carolina (a New Jersey corporation) for license under Sec-

tion 4(e) of the Federal Power Act (Act) for license for constructed Project No. 2332, known as the Gaston Shoals Station, located on the Broad River in Cherokee County, South Carolina, and Cleveland County, North Carolina. On April 8, 1964, a supplement to the application was filed, being a joint application by Duke Power Company a New Jersey corporation, and Duke Power Company of North Carolina, to substitute the latter company as Applicant for the license.

In a separate order issued May 18, 1964,[1] we approved the disposition by Duke Power Company of the whole of its facilities to Duke Power Company of North Carolina.[2]

The Gaston Shoals development, which is located on the Broad River at river mile 110, was placed in operation in 1908. An additional spillway (middle spillway) was built in 1916 and 1917. There has been no project construction since the latter date. The project has an installed capacity of 15,280 horsepower connected to generators having a total rated capacity of 9,140 kilowatts.

The project develops a gross head of about 51 feet and is a run-of-river plant using the natural flows available for power generation. The hydraulic capacity of the project is about 3,300 cfs. The average flows of the Broad River at the upstream Boiling Springs, gage and the downstream Gaffney gage of the USGS are 1,408 cfs and 2,379 cfs, respectively.

The average flow at the Gaston Shoals project is estimated to be about 2,010 cfs. The usable reservoir capacity is not sufficient to allow the plant to operate with any substantial degree of flexibility.

Studies made by the U.S. Corps of Engineers on the comprehensive development of the Santee-Congaree-Board River[3] include the Greater Gaston Shoals project which, if constructed, would be located at river mile 106 with a maximum power pool at elevation 680 feet, and would completely inundate the subject Gaston Shoals project. While recent consultation between Commission staff and the Corps disclosed that present studies by the Corps of the Santee River Basin do not include the Broad River, provision is hereinafter made in the interest of a more comprehensive plan of development of the Santee-Congaree-Broad River system.

In its order issued November 21, 1963,[4] the Commission found that the Broad River is a navigable waterway of the United States from its mouth at Columbia, South Carolina, at least to a point in the State of North Carolina about 28 miles northerly from the North Carolina-South Carolina boundary, and about 141 miles upstream from Columbia. The Gaston Shoals project, at river mile 110, is within this 141-mile reach.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the plans of the project structures affecting navigation are satisfactory and had been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended, for inclusion in any license for the project, certain conditions in the interest of the conservation and development of fish and wildlife resources.

For the reasons set forth in Opinion No. 357 (27 FPC 830), the license herein granted shall have a termination date of December 31, 1993, and an effective date of April 1, 1962.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of North Carolina, is authorized to do business within the States of North and South

[1] Duke Power Company and Duke Power Company of North Carolina, Docket No. E-7156.

[2] On the effective date of merger, June 15, 1964, Duke Power Company of North Carolina, the surviving corporation became "Duke Power Company."

[3] House Document No. 187, 28th Congress, 2d Session.

[4] South Carolina Electric & Gas Company, project No. 2315 (30 FPC 1346).

Carolina, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received.

(3) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 12,200 horsepower, and the amount of such charges, based upon such capacity, to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) The step-up transformers and appurtenant mechanical and electrical facilities referred to in paragraph (E) below, which were included in the application for license, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project as hereinafter provided.

(7) While not included in the application for license, the 200 foot 2.3 kv generator leads, the 2.3/33 kv step-up substation, and the 5-mile long 33 kv Gaston Shoals to Gaffney transmission line and appurtenant facilities are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project as hereinafter provided.

(8) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Duke Power Company (Licensee), under Section 4(e) of the Federal Power Act (Act), for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2332, located on the Broad River, North and South Carolina, a navigable water of the United States, subject to the terms and conditions of the Federal Power Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2332 consists of:

(1) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J–1: (FPC No. 2332–2) entitled, "Gaston Shoals Station—General Map and Profile."

Exhibit J–2: (FPC No. 2332–3) entitled, "Gaston Shoals Station—Transmission System Map."

Exhibit J–3: (FPC No. 2332–4) entitled, "Gaston Shoals Station—Transmission System Details."

Exhibit K: (FPC No. 2332–5) entitled, "Gaston Shoals—Project Area."

(ii) The project, which is constructed, and known as the Gaston Shoals Station, is located on the Broad River in Cherokee County, South Carolina, about four miles west of Blacksburg, South Carolina, at a point 110 miles above the mouth of the Broad River and consists of the following:

Two gravity type spillway sections, one of rubble masonry 707 feet long with a main overflow section 503.95 feet long, the other being concrete and 363.14 feet in length; a concrete gravity type powerhouse bulkhead section 472.2 feet long of which the powerhouse and intake section is 169.9 feet long and included in the total length of 472.2 feet; a reservoir of undetermined surface area with a normal pool elevation of 605.2 feet (USGS datum); a powerhouse containing eight turbines (two per unit) rated at 2,820 hp per unit connected to four generators having a total capacity of 6,640 kilowatts and one 4,000 hp turbine connected to a 2,500 kw generator, and appurtenant mechanical and electrical facilities: the location, nature and character of which are more particularly shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L–1: (FPC No. 2332–6) entitled, "Gaston Shoals Station—Plan, Profile & Spillway Rating Curve."

Exhibit L–2: (FPC No. 2332–7) entitled, "Gaston Shoals Station—Sections and Details."

Exhibit M: Three typewritten sheets entitled, "General Descriptions of Mechanical, Electrical and Transmission Equipment", filed with the Commission December 20, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States," (30 FPC 1658) which terms and conditions, designated as Articles 1 through 27, are attached and made a part hereof except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative

may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 29. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with its regulations, in effect from time to time. The authorized installed capacity for such purposes is 12,200 horsepower.

Article 30. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 31. The Licensee shall, within one year from the date of issuance of this license, file in conformity with the Commission's rules and regulations an application for amendment of license to include the following transmission facilities: the 200 foot 2.3 kv generator leads, the 2.3/33 kv step-up substation, and the 5-mile-long 33 kv Gaston Shoals to Gaffney transmission line.

Article 32. Whenever the Licensee is directly benefited by the construction work of another Licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 33. The right, power, and authority is reserved to the United States to construct or to the Commission to issue a license authorizing the construction, operation and maintenance of a hydroelectric project which will more completely utilize the water resources of the reach of the Broad River in which the project is located.

Article 34. The acceptance of this license by the Licensee shall constitute its stipulation, consent and agreement made upon its own behalf and upon the behalf of its successors and assigns for the benefit of the United States, or the person or persons hereinafter constructing, operating and maintaining such

more complete hydroelectric project or his or their successors and assigns, that said Licensee, its successors or assigns, shall surrender its license at such time as the project becomes inoperative by reason of inundation by such more complete hydroelectric project; Provided that Licensee shall be paid the net investment in Project No. 2332 upon surrender of its license; and Provided further that Licensee shall not be entitled to any compensation for severance damages sustained by reason of inundation or destruction of the project or project works of Project No. 2332.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER AMENDING LICENSE TO AUTHORIZE TRANSMISSION LINES

(Issued July 24, 1964)*

Idaho Power Company, licensee for Project No. 1971 on the Snake River, Idaho and Oregon, filed an application on September 26, 1963, to amend its license to authorize transmission lines from the Brownlee switchyard to the Boise Bench substation, serving Boise, Idaho, and environs.

The proposed lines, designated Brownlee-Boise Bench Nos. 3 and 4, are 230 kv double-circuit lines with a length of approximately 101.7 miles. They will be carried on newly-constructed galvanized steel towers. They will cross about twenty-seven miles of United States' lands, of which some 1.75 miles are in the Boise and Payette National Forests.

The proposed lines will be fully loaded with project power by about 1967.

Notice was given on November 6, 1963, and no protests or petitions to intervene were received.

The Department of the Interior on February 14, 1964, commented that the lines are "necessary and proper," and the Department of Agriculture on March 26, 1964, reported that they would "not interfere or be inconsistent with the purposes for which the Boise and Payette National Forests were created or acquired * * *."

The Department of the Interior recommended that the Commission, as a condition of authorizing the lines, make wheeling provisions that would enable the United States to utilize excess capacity and increase the capacity in the licensee's main transmission system from La Grande, Oregon, to Goshen, Idaho.

The Department of Agriculture, reciting its interest in having Federal power made available to rural electric cooperative financed by the Department's Rural Electrification Administration, requested that the Commission make "appropriate provisions for wheeling of Federal power over the applicant's transmission system."

The licensee on March 6, 1964, answered the Department of the Interior's proposal: "a wheeling provision attached to the lines involved in the present application could cover only a fraction of the entire transmission system be-

*Rehearing denied, 32 FPC 762. Affirmed, *Idaho Power Co.* v. *F. P. C.*, 346 F. 2d 956 (CA9–1965); cert. denied, 382 U.S. 957 (1965).

tween La Grande and Goshen, and the request does not present a situation upon which the Commission could effectively act." On April 24, 1964, the licensee responded to the Department of Agriculture's remarks that it presently fulfilled and would continue to fulfill the requirements of rural electric preference customers at rates established by the Bonneville Power Administration.

We have provided in the amendment authorizing the proposed lines that the licensee be required to wheel power for use of the United States or for sale to preference customers under Federal power marketing policies on the excess capacity of all transmission lines under license for Project No. 1971 and to increase the capacity of such lines at the expense of the United States. Such lines extend from the Quartz substation, Oregon, through Brownlee and Boise Bench to Brady, Idaho. Thus, to use these lines for wheeling from La Grande to Goshen, the United States has to construct connection lines or make other provisions for transmission for the relatively short distance from La Grande to the Quartz substation and from Brady to Goshen. With minor exceptions, the wheeling provisions set forth below are like those in the license for the company's Bliss project, Project No. 1975.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791–823) that the license for the Idaho Power Company's Project No. 1971 be amended as hereinafter provided.

The Commission orders:

(A) Paragraph (5)(a) of the license is amended by adding thereto the following:

Brownlee-Boise Bench Nos. 3 and 4 Transmission Lines

Exhibit	FPC No.	Showing
J	1971–202	General map.
K	1971–203 and –204	Detail map.

(B) Paragraph (5)(b)(4) of the license is amended by adding thereto the following:

A 230 kv double-circuit transmission line extending from the Brownlee switchyard approximately 101.7 miles in a southeasterly direction to the Boise Bench switchyard.

Exhibit M portion of Exhibit M–N–O in one sheet (dated 8–20–63) General Description and Specifications of Equipment.

(C) Sub-paragraph (b) of Article 44 of the license is further amended to read as follows:

(b) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands used for transmission line right-of-way only $2,208.07 effective November 1, 1960, and $2,417.99 effective the first day of the month in which the Commission acts on the application.

(D) Article 49 of the license is added to read as follows:

Article 49. The construction and operation of the Brownlee-Boise Bench Nos. 3 and 4 transmission lines shall be subject to the following special conditions:

(i) The Licensee shall make surplus transmission capacity on all lines under license for the project available on a reasonable cost basis to the Federal Government.

(ii) The Licensee shall not convert said lines to permit operation at a greater capacity without prior approval of the Commission. Upon the request of the Secretary of the Interior under appropriate authority, the Licensee shall, after

notice of at least one year from the Commission and within the time fixed by the Commission, convert said lines for operation at a greater capacity at the expense of the United States.

(iii) After the initial construction of the lines or upon conversion of the lines to a greater capacity as herein provided, the Licensee shall permit the United States, and the United States shall have the right, to interconnect any of its transmission facilities with said lines in a manner conforming to approved standards of practice for the interconnection of transmission circuits provided there is capacity available in said line or lines in excess of the needs of the Licensee. The expense of such interconnection, including the expense of additional switching, relaying, and other protective devices, shall be borne by the United States, provided, however, that no such interconnection may be made without the prior approval of the Commission.

(iv) Upon completion of any such interconnections, the United States shall have the right to transfer energy over said lines as initially or ultimately constructed in such amounts as will not unreasonably interfere with the Licensee's use of said lines provided that the Licensee shall be obligated to allow the transmission over the said lines by the United States of electric energy only to consuming facilities of the United States and to public bodies and cooperatives entitled to statutory preference in connection with the distribution and sale of electric energy by the United States.

(v) After any such interconnection of the facilities of the United States with said lines, the Licensee shall, except in emergencies, maintain in a closed position all connections under the Licensee's control between the Licensee's lines and the interconnecting facilities provided by the United States.

(vi) Any interconnected power systems of the United States and the Licensee shall be operated in parallel and in such manner as to render good and adequate service. Any inadvertent flow of energy from the lines of the United States into said lines or from said lines into the lines of the United States which may occur while the lines of both the Licensee and the United States are electrically interconnected shall be mutually compensated for by later return in kind. Any scheduled transfer of energy over said lines for the account of the United States shall be settled for, or any investment in said lines made by the United States shall be liquidated, on reasonable terms under agreements which shall be negotiated between the Licensee and the United States, said agreements to the subject to approval by the Commission.

(vii) Until such agreements are completed, settlement for any such scheduled transfers of power shall be made on the following basis: If power and energy from the lines of the United States is transmitted over these lines, the monthly payment for such transmission shall be the amount of dollars representing that part of the monthly cost to the Licensee of the section of the line or lines over which the power and energy is transmitted which the maximum transmission by the United States in kilowatts during the month bears to the kilowatt capacity of such section of line or lines. The monthly cost to the Licensee referred to herein shall be computed in conformity with the uniform system of accounts prescribed by the Commission.

(viii) If, at any time subsequent to the date upon which the Licensee commences the transmission of energy over said lines for the United States, the Licensee notifies the Commission that the Licensee needs for the transmission of electric energy in connection with its operations the whole or any substantial part of the capacity of the said lines, or part thereof, then being utilized by the United States, and the Licensee makes satisfactory provision for reimbursement to the United States of the original cost, or a proportional part of the original cost if only a part of the additional capacity is involved, to the United

States of the facilities desired by the Licensee, less accrued depreciation on the investment of the United States, the Licensee may modify or revoke the then existing agreement to remain interconnected and to transmit energy for the United States by giving to the Commission 36 months' notice, of the Licensee's intention to utilize additional capacity or the entire capacity of the lines, or part thereof, as the case may be.

(ix) If at any time in the future the said lines of the Licensee are proposed for alteration or are altered, the Commission reserves the right, after 30 days' notice and opportunity for hearing, to make a determination as to whether the lines after such alteration, either proposed or actual, will be subject to licensing by the Federal Power Commission under the then existing laws and regulations, and in the event that the Commission finds that the said alteration in the lines, either proposed or actual, so changes the functions served by said lines and the source of energy transmitted over said lines as to make them, or any part of them, not subject to the licensing authority of the Commission under the then existing laws and regulations, the Licensee hereby agrees to secure authority for the continued operation and maintenance of the lines, or such part of the lines, from the appropriate agency of the United States then having jurisdiction over the lands of the United States occupied by the lines, or part thereof, and upon securing said authority the Licensee hereby agrees to surrender the license insofar as it authorizes operation and maintenance of the lines, or such parts thereof, which are found to be no longer subject to the Commission jurisdiction. In the event that the Licensee should fail to surrender the license insofar as it is applicable to the lines, or parts thereof, which may then be found by the Commission not to be subject to its jurisdiction, the Commission reserves the right to take appropriate action to have the license terminated with respect to said lines, or parts thereof, as provided in the then existing laws and regulations.

(x) Any agreement between the Licensee and the United States in connection with said transmission lines or related facilities shall be effective only upon approval by the Commission. In the event the Licensee and any agent of the United States are unable to agree with respect to any matter arising in connection with said transmission lines or related facilities, the question thereby raised shall be submitted to the Commission for determination after notice and opportunity for hearing.

(E) This order is effective from the first day of the month in which it is issued.

(F) In acknowledgment of the acceptance of this amendment of license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

IOWA POWER AND LIGHT COMPANY, DOCKET NO. E-7169

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued July 24, 1964)

Iowa Power and Light Company (Applicant) organized under the laws of the State of Iowa and doing business in that State with its principal office at Des Moines, Iowa, filed an application on June 8, 1964, as supplemented on July 2 and 10, 1964, requesting authorization, pursuant to Section 203 of the Federal

Power Act to acquire the electric facilities of the Incorporated Town of Grimes, Iowa (Town). Applicant is engaged in the generation, transmission, distribution and sale of electric energy in the central and southwest sections of Iowa in an area having an estimated aggregate population, as of December 31, 1963, of 520,000. Both electric and natural gas service is furnished in and around Des Moines and in 44 other municipalities (estimated 1963 population 300,000); electric service only is furnished in Council Bluffs, 66 other municipalities, 75 unincorporated communities and rural territory (estimated 1963 population 200,000); and natural gas service only is furnished in 12 municipalities (estimated 1963 population 20,000).

Town maintains its own electric light plant and distribution system used to supply electric energy to consumers in and adjacent to the Town which includes a street lighting system. According to the application, Town's generating plant is inadequate to supply the needs of the Town and its customers and is operated only as standby. At the present time, Applicant has two contracts to supply the total eletcric requirements to the Town Municipal System.

Pursuant to a contract of sale between the Town of Grimes and Applicant, entered into on May 11, 1964, Applicant proposes to acquire from the Town and merge or consolidate with its own facilities the entire municipal light plant (production plant) and distribution system used and useful in supplying electric energy to consumers in and adjacent to the Town, including the street lighting system, but excluding the lot or lots on which the electric light plant is located and the building housing such plant and the oil tank located on the premises.

Applicant plans to operate and maintain the existing distribution and street lighting system as an integral part of its facilities. After the installation of a second feed line to serve the Town, the production plant will be dismantled and removed from the plant building.

Applicant proposes to acquire the facilities for a cash payment of $190,000. The Town does not have any property records and Applicant has made the following estimate of cost based on its records for the cost of similar plant:

	Original cost	Accumulated depreciation	Original cost less depreciation
Production plant	$51,536	$23,722	$27,814
Distribution plant	86,657	21,842	64,815
Materials and supplies	1,880	457	1,423
Total	140,073	46,021	94,052

The acquisition of the facilities will be recorded by a debit of $190,000 to Account 102, Electric Plant Purchased or Sold, and a credit of the same amount to Account 131, Cash.

To clear Account 102, Electric Plant Purchased or Sold, and also to provide for the retirement of the production plant in the immediate future, Applicant has agreed to make the following entry:

Account 101, Electric Plant in Service (Production Plant, $51,536; and Distribution Plant, $86,657)	$138,193
Account 154, Plant Materials and Operating Supplies (net amount)	1,423
Account 114, Electric Plant Acquisition Adjustments	123,762
Account 108, Accumulated Provision for Depreciation of Electric Plant in Service (applicable to Production Plant and to Distribution Plant)	73,378
Account 102, Electric Plant Purchased or Sold	190,000

The credit of $73,378 to Account 108, Accumulated Provision for Depreciation of Electric Plant in Service, will include $51,536 for complete depreciation of the production plant to be acquired and then retired and $21,842 for depreciation applicable to the distribution plant to be acquired.

Applicant proposes to eliminate the acquisition adjustment of $123,762 by a debit to Account 435, Miscellaneous Debits to Surplus.

According to the application, after the acquisition, Applicant will charge rates in the Town of Grimes in accordance with its standard residential, commercial and industrial rates now on file with the Iowa State Commerce Commission that will be the same as its rates generally applicable throughout its system for towns of comparable size, area and utilization as the Town of Grimes. According to the application, this will result in an overall reduction of about 12 percent in the cost of electric energy to the Town customers with all classes of customers benefiting.

Applicant has also agreed to provide street lighting service and provide electric service for water and sewage pumping on terms agreeable to the Town. In an election held on June 23, 1964, a majority of the electors in the Town of Grimes approved the contract of sale and authorized a 25-year franchise for the Applicant in the Town area.

Written notice of the application has been given to the Iowa Commerce Commission and to the Governor of that State. Notice of the application also was published in the Federal Register on June 23, 1964 (29 F.R. 7950), stating that any person desiring to be heard or to make any protest with reference to said application should on or before July 6, 1964, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued October 9, 1958, *Iowa Power and Light Company*, Docket No. E-6841 (20 FPC 473).

(2) By the proposed transaction, Iowa Power and Light Company will acquire and merge or consolidate with its facilities subject to the jurisdiction of the Commission, all of the facilities of the Town of Grimes, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of the Town of Grimes' facilities by Iowa Power and Light Company as described above, upon the terms and conditions specified in the application, and subject to the provisions of this order, will be consistent with the public interest, as expressed in Section 203 of the Act, for the reasons set forth in the recital above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of the Town of Grimes by Iowa Power and Light Company, all as described above, is hereby authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) Iowa Power and Light shall record the transaction herein authorized and the facilities and properties referred to above, as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees. Iowa Power and Light shall dispose of the Electric Plant Acquisition Adjustment from the proposed transaction by a debit to Account 435, Miscellaneous Debits to Surplus.

(C) The authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MERCED IRRIGATION DISTRICT, PROJECT NO. 2179

ORDER PRESCRIBING CLEARING PLAN OF PROJECT RESERVOIR AREAS

(Issued July 24, 1964)

Article 46 of Merced Irrigation District's license for Project No. 2179 reads as follows:

> *Article 46.* The Licensee shall, prior to impounding water, dispose of all temporary structures, unused timber, brush, refuse, or other inflammable material resulting from the clearing of the land or from the construction and maintenance of the project works, and shall clear all lands in the reservoir areas up to normal water levels; except that all lands in the reservoir areas shall be cleared according to a plan to be prescribed by the Commission upon the recommendation of the California Department of Fish and Game and the Bureau of Sport Fisheries and Wildlife. The clearing of the lands and the disposal of the material shall be done with due diligence by Licensee and to the satisfaction of the authorized representative of the Commission.

By letter of May 26, 1964, as supplemented by letter of June 4, 1964, the California Department of Fish and Game has advised us that through the cooperative efforts of the Merced Irrigation District, the Bureau of Sport Fisheries and Wildlife, and the Department, recommendations have been developed by the Department for retention of vegetative cover in enlarged Exchequer Reservoir and McSwain Afterbay Reservoir in conjunction with Project No. 2179.

By letter dated June 17, 1964, Merced Irrigation District advises us of its concurrence with the above-mentioned recommendations.

By letter dated July 9, 1964, the Department of the Interior recommended, in the interest of fish and wildlife resources and related public recreational use benefits, that clearing of vegetative cover within and contingent to the project reservoirs be executed as hereinafter set forth which is identical with the recommendations of the California Department of Fish and Game.

The Commission finds:

The reservoir clearing plan recommended by the California Department of Fish and Game and concurred in by the Bureau of Sport Fisheries and Wildlife and Merced Irrigation District is consistent with the purposes of Article 46 of the license for Project No. 2179.

The Commission orders:

The clearing plan for the enlarged Exchequer Reservoir and the McSwain Afterbay Reservoir of Project No. 2179, as set forth in *Appendix A*, which is attached hereto and made a part hereof, is hereby approved.

APPENDIX A

(1) *New Exchequer Reservoir*

Vegetative cover shall be retained in the following areas:

(a) T. 4 S., R. 16 E., MDM,
Sec. 6, NW¼SE¼SW¼, NE¼SW¼;

Sec. 7, E½;
Sec. 8, all;
Sec. 16, all;
Sec. 17, all;
Sec. 18, SE¼NW¼, E½SW¼, and E½;
Sec. 19, all;
Sec. 20, all;
Sec. 21, all.

(b) T. 4 S., R. 15 E., MDM,
Sec. 1, SW¼NW¼, W½NW¼NW¼, and NE¼NE¼;
Sec. 2, NE¼.

(c) T. 3 S., R. 15 E., MDM,
Sec. 9, all;
Sec. 10, all;
Sec. 15, all;
Sec. 22, all;
Sec. 23, N½, NW¼SW¼;
Sec. 24, SE¼SE¼;
Sec. 25, SE¼SW¼;
Sec. 35, W½NE¼, NW¼SE¼, NW¼;
Sec. 36, NE¼NE¼NW¼, SE¼SE¼SE¼.

(d) T. 3 S., R. 16 E., MDM,
Sec. 19, NE¼NW¼, NW¼NE¼;
Sec. 21, All areas upstream from NW¼NW¼ (vegetation shall be retained in the remainder of the reservoir upstream from section 21).

(2) *McSwain Afterbay Reservoir*

A zone 20 feet below maximum normal water surface elevation shall be cleared with the following exception, where vegetation should be retained to the water surface:

T. 5 S., R. 16 E., MDM,
Sec. 2, NE¼SE¼.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP64-18

ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER

(Issued July 24, 1964)*

Syllabus

1. Contention that applicant could more economically render proposed service by extending existing storage *rejected*. PP. 350; 355.
2. Arguments relating to pending St. Louis area case do not go beyond scope of instant proceeding. P. 351.
3. Record does not support contention that Panhandle will be unable to make both deliveries proposed here and those to St. Louis Area. P. 351.
4. Even if claims of incompatibility were correct, Mississippi would not be aggrieved by certification of instant project– –its competitive position in St. Louis market would be enhanced, not impaired, should Panhandle be unable to compete there as result of making sales herein proposed. P. 351.
5. Commission *issues* certificate of public convenience and necessity under Section 7 of the Natural Gas Act.

---

*Initial decision appears on p. 351.

Raymond N. Shibley and *William J. LeBuhn* for Panhandle Eastern Pipe Line Company.

Cleon L. Burt and *Gaylord C. Burke* for Mississippi River Fuel Corporation.

Joseph T. Morrow for Northern Indiana Public Service Company.

Patrick J. Smith and *John M. Pratt* for City of Indianapolis (Citizens Gas & Coke Utility).

Sherman S. Poland for Central Illinois Electric and Gas Company.

Lewis Carroll for City of Montgomery, Missouri.

C. V. O'Hern, Jr. for Central Illinois Light Company.

J. Phillip Bahn, Thomas P. Peacock, and *James B. Falahee* for Michigan Gas Storage Company.

Q. P. Dorschel and *Robert S. Hunt* for Illinois Power Company.

David B. Ward and *Charles Brown* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

This proceeding is before us by virtue of a brief on exceptions to the presiding examiner's initial decision in the above-captioned proceeding filed by Mississippi River Fuel Corporation (Mississippi) on June 19, 1964.[1] On May 20, 1964, the presiding examiner issued his initial decision which would grant, pursuant to Section 7(c) of the Natural Gas Act, a certificate of public convenience and necessity to Panhandle Eastern Pipe Line Company (Panhandle) and authorize Panhandle to construct and operate facilities and to increase sales to some fifty of its presently existing customers. The amount of increased sales to these customers is based upon a total increase in winter contract demands of 130,748 Mcf and lesser increases in contract demands for other seasons.

The sole contested issue at the hearing was whether Panhandle could render the proposed additional service at a lower cost by expanding the capacity of Howell Storage Field rather than constructing much of the compressor and loop line facilities originally proposed by Panhandle. In rebuttal, Panhandle introduced evidence purporting to show that Panhandle would be unable to meet the requirements on its system during the "fringe" months of April, May, September and October if it adopted the Mississippi proposal and, further, that it would be unable to meet its annual requirements.

Mississippi's principal contention, both in its brief to the presiding examiner[2] and in its brief on exceptions, is that Panhandle's rebuttal evidence clearly demonstrates that Panhandle will be unable to make both the deliveries proposed herein and the deliveries to the St. Louis market proposed in another currently pending case, *Natural Gas Pipeline Company of America, et al.*, Docket No. CP62-243, *et al.*

---

[1] Briefs opposing the exceptions of Mississippi were filed by the following parties on the dates indicated.

Party filing	*Date filed*
Panhandle Eastern Pipe Line Co	June 25, 1964
Illinois Power Co	June 29, 1964
Illinois Light Co	June 29, 1964
Central Illinois Light Co	June 29, 1964
Central Indiana Gas Co	June 29, 1964
Indiana Gas & Water Company, Inc	July 1, 1964

[2] Filed on April 20, 1964.

The examiner held that "Mississippi's arguments about the 'St. Louis case' go beyond the scope of this proceeding." We do not agree, but this does not affect the validity of the examiner's ultimate conclusion because Mississippi's contentions are not supported by the evidence of record. Mississippi did not present any evidence attempting to prove the alleged incompatibility of the two projects and its arguments in its brief on exceptions do not successfully refute the expert testimony presented by Panhandle with respect to this issue. Furthermore, even if Mississippi's contentions concerning incompatibility were correct, it would not be aggrieved by the issuance of a certificate to Panhandle in the instant case. Its competitive position in the St. Louis market would not be impaired but enhanced should Panhandle undertake to make the sales proposed herein and then be unable to compete with Mississippi in the St. Louis area.

Mississippi's brief on exceptions to the examiner's initial decision essentially restates the arguments contained in its initial brief to the examiner. All of the other arguments presented by Mississippi in its brief on exceptions were fully considered by the examiner in his initial decision.

The Commission finds:

Upon consideration of the entire record in this matter including the oral and documentary evidence adduced and the decision of the presiding examiner such decision should be adopted as modified above.

The Commission orders:

The initial decision of the presiding examiner issued herein is modified as hereinabove set forth and as so modified is adopted as the decision of the Commission in these proceedings.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AN APPLICATION TO CONSTRUCT FACILITIES AND TO DELIVER ADDITIONAL GAS

(Issued May 20, 1964)

LANDE, *Presiding Examiner:* This proceeding deals with an application filed by Panhandle Eastern Pipe Line Company (Panhandle) on July 23, 1963, seeking authorization to construct and operate additional facilities costing some $23,133,000 and to increase its sales to some 50 resale customers. The amount of increased sales to these customers is based upon a total increase in winter contract demand of 130,748 Mcf and lesser increases in contract demands for other seasons. Under subsection (e) of Section 7 of the Act a certificate shall be issued to an applicant authorizing the whole or any part of its proposal provided that it is found that applicant is able and willing to properly proceed with its proposal and that such proposal is required by the present or future public convenience and necessity.

Petitions to intervene were filed by 16 of Panhandle's resale customers. The Michigan Public Service Commission filed a notice of intervention and the Public Service Commission of Indiana filed a petition to intervene. Mississippi River Fuel Corporation (Mississippi) filed a petition to intervene. Fuels Research Council, Inc., National Coal Association, United Mine Workers of America and Mid-West Coal Producers Institute, Inc. (Coal Interests), filed a joint petition to intervene. However, on January 20, 1964, the Coal Interests filed a notice of withdrawal of the joint petition. By order of February 26, 1964, the Commission allowed the withdrawal of the Coal Interests' petition to inter-

vene and allowed the intervention of all other petitioners. The hearing commenced March 17, 1964, when Panhandle presented the prepared testimony and exhibits of six witnesses. Northern Indiana Public Service Company also presented one witness. Cross-examination of the applicant's witnesses commenced on March 24, 1964. During that session Mississippi also presented a witness, and Panhandle presented two rebuttal witnesses, after which the hearing concluded on March 26, 1964. In all, 49 exhibits and 6 items by reference were offered and received in evidence. Applicant's brief was due on April 6, 1964, answers—on April 20, 1964, and the reply brief on April 27, 1964.

THE CONTESTED ISSUE

In this proceeding it is incontroverted: (1) that Panhandle has a market for the proposed sales, (2) that public convenience and necessity require the market to be served, (3) that the original proposal presented by Panhandle is engineeringly and economically feasible, (4) that the proposed expansion is adequately financed, and (5) that Panhandle has sufficient supply of gas to support the proposed additional service. The only contested issue herein is whether Panhandle can render the proposed additional service at a lower cost by expanding the capacity of its Howell Storage Field and using it for the additional gas sales. Mississippi claims that utilization of the Howell Storage Field would reduce the cost of Panhandle's construction from $23,133,000 to $13,903,000, while Panhandle alleges that the total cost of the alternative facilities suggested by Mississippi would be $24,321,000, and it would produce a decidedly inferior project. The staff favors utilization of the Howell Storage Field. It is necessary to discuss specifically Panhandle's application, Mississippi's alternative proposal, staff's position and finally applicant's reply.

PANHANDLE'S APPLICATION

Applicant seeks certification to construct and operate facilities costing $23,133,000 which would increase the winter peak day capacity of its system by approximately 130,000 Mcf per day.

The proposal contemplates the construction and operation of the following facilities:

(a) Approximately 92 miles of 30'' main line loop, representing a continuation of Panhandle's fourth main transmission pipeline.

(b) A total of 24,500 additional horsepower to be installed at various locations in Panhandle's system.

(c) Lateral line facilities to be installed at various points along Panhandle's main line.

(d) Additional storage facilities, including production and gathering facilities and 2,000 horsepower of compression at Panhandle's Waverly Storage Field to increase the capacity of this field to 100,000 Mcf per day.

(e) Certain appurtenances in conjunction with the increased capacity of its main line system.

Panhandle estimates that the proposed main line facilities will expand the peak day capacity of its system by approximately 56,000 Mcf per day. The balance of the expanded capacity (or 75,000 Mcf) would be provided by the proposed storage facilities. In addition, Panhandle seeks authorization to increase the annual sales to 50 of its existing resale customers by approximately 15,851,000 Mcf in the first year. These increased sales volumes are based on the contract demands. The daily increase in contract demand during the five winter months amounts to 130,748 Mcf.

MISSISSIPPI'S POSITION

Mississippi submits that in another currently pending case, namely the *Natural Gas Pipeline Company of America, et al.*, Docket No. CP62-243, *et al.* in which it is attempting to enter the Greater St. Louis market, Panhandle claims that its Howell Storage Field can be expanded to 130,000 Mcfd at a modest cost. Without conceding the validity of this claim, Mississippi argues that the alleged savings from Howell should be used to lower the cost of the expansion proposed in this proceeding. Accordingly, Mississippi suggests an alternative project which would require Panhandle to construct facilities costing only $13,908,000 instead of the $23,133,000 estimated by the applicant. More specifically, this plan calls for the construction of 19.8 miles of 30" main line loop; 3,400 horsepower compression at Pleasant Hill; 4,000 horsepower compression at Glenarm; 1,000 horsepower compression at Bartonville, the necessary lateral line facilities and additional storage at Howell Field as well as the storage facilities proposed by Panhandle for the expansion of Waverly Field. It is noted that Mississippi's alternative plan would eliminate much of the compressor and pipeline facilities originally proposed by Panhandle. Specifically it would omit the pipeline additions that Panhandle proposes between: Liberal and Greensburg, Greensburg and Haven, Haven and Olpe, Olpe and Louisburg, Houstonia and Centralia, Centralia and Pleasant Hill, and Pleasant Hill and Glenarm. The compressor additions at the McAtee, Ulysses, Liberal, Greensburg, and Houstonia Stations would similarly be omitted. Mississippi contends that the capacity of Howell could be increased to 130,000 Mcf per day if Panhandle constructed facilities costing approximately $2,769,000. The Mississippi plan assumes that most of the expanded capacity would be obtained from storage. This plan anticipates that Panhandle's annual west end requirements will total 397,000,000 Mcf. To meet these requirements the Mississippi plan assumes that Panhandle will maintain the inputs on the western end of its system at a level of 1,174,000 Mcf during the 150-day winter season, 1,029,000 Mcf per day during the 90-day summer season and 1,097,000 Mcf per day during the remainder of the year. Further, this plan assumes that the transmission capacity of Panhandle's system will be sufficient to transport the aforementioned volumes on each day of the appropriate seasons mentioned above.

STAFF POSITION

The Staff concurs in the conclusion that under Mississippi's plan Panhandle would have enough gas available from the west end sources to enable it to meet its annual requirements of up to 405,000,000 Mcf, assuming it continued to take 160,000,000 Mcf annually from Trunkline. The Staff, submits that even if Panhandle might have to curtail its interruptible customers on a few days during March and April, the over-all economy aspects of the alternative plan make it worth adoption. Staff states, and with that contention the Presiding Examiner concurs, that in determining whether the public convenience and necessity require the Commission to certificate Panhandle's application, the Commission must consider reasonable alternatives irrespective of its power to order Panhandle to implement the alternative proposal. *City of Pittsburgh* v. *Federal Power Commission*, 237 F. 2d 741 (1956). However, as detailed in the next chapters, the reasonableness of Mississippi's alternative plan is effectively rebutted by the applicant. It is concluded that the Staff's premise has not been adequately supported by the evidence.

THE REBUTTAL TESTIMONY

Panhandle's witness testified that Mississippi's plan is deficient.

> Yes, there is a very serious error in Mr. Shattuck's presentation with respect to facilities required on the system west of Liberal. He has eliminated completely the McAtee station and the Ulysses station. Without these stations we would be unable to move the gas from the western part of Kansas which we are required to take into our system. Mr. Shattuck testified at transcript 317 that his examination of the conditions west of Liberal was limited to a peak day study, and that he had made no annual study of this part of our system. Regardless of the peak day situation, these facilities are badly needed for annual supply purposes, as I have testified both in my direct examination and under cross-examination. This would be equally true under the program suggested by Mr. Shattuck because he undertook to schedule the same annual volumes from the West end sources as those required under Panhandle's program. [4: 336, 337.]

On recall Panhandle's engineer Schomaker enumerated deficiencies in Mississippi's plan.

> Q. Now, will you please state the horsepower deficiencies at each of Panhandle's main line stations as shown by Exhibit 47 if Panhandle were to attempt to meet its requirements with the facilities proposed by Mr. Shattuck?
>
> A. Yes. At the Liberal station, on line 300, we would be deficient 2,780 horsepower. At the Greensburg station, on line 300, we would be deficient 4,110 horsepower. At Haven station, on line 300, we would be deficient 2,150 horsepower. At Olpe station, on line 300, we would be deficient 2,070 horsepower. At Louisburg station, on line 300, we would be deficient 1,640 horsepower. At Houstonia station, on line 300, we would be deficient 1,600 horsepower. At Centralia station, on line 300, we would be deficient 1,750 horsepower. At Pleasant Hill station, on line 300, we would be deficient 6,930 horsepower. At Glenarm station, on line 300, we would be deficient 3,280 horsepower, and also at Glenarm station, on the line 300 to 200 service, we would be deficient 770 horsepower. [4: 343, 344.]

Mississippi argues that if Panhandle's rebuttal testimony about the gas deficiencies under the alternative plan is accepted as correct, a finding must be made that Panhandle will not have the required ability to render the service it here proposes if its St. Louis application should be granted; and its application herein should either be denied or conditioned upon the denial or withdrawal of its St. Louis proposal. To this Panhandle replies that but for the now pending "St. Louis case" neither Mississippi nor the staff would have opposed the expansion proposed in this proceeding. Panhandle urges, and properly so, that the decision in this case be based entirely on the evidence presented herein, and that conjectural consideration of the St. Louis case have no place in this proceeding.

The staff and Panhandle agree in principle that it is inequitable to hold out "cheap expansibility" for specific areas (*cf. Battle Creek Gas Company* v. *F.P.C.*, 281 F. 2d 42) and that rates should not be based on specific use of utility property by specific customers. However, the parties differ with respect to the treatment of Howell Field. The staff says that Panhandle's existing customers have shared the cost of initial development of Howell Field and they should also get the benefits of its cheaper incremental expansibility. Panhandle replies that the company as a whole rather than some particular customers paid for Howell

Field. Moreover, the storage facility is neither suitable nor economical for the expansion under consideration herein.

> Q. Mr. Schomaker, what is your estimate of the total cost of additional facilities, including those proposed by Mr. Shattuck and the compressors which would be needed to cure the deficiency in capacity applicable to Exhibit No. 48?
>
> A. The total cost is $24,321,000.
>
> Q. Does Exhibit 48 reflect your judgment as to the proper method for providing capacity to deliver the volumes involved in the expansion program?
>
> A. No, this exhibit is simply a summary of the facilities and costs which would be necessary to make Mr. Shattuck's program even workable. We would not conduct an expansion program on the basis of Mr. Shattuck's proposal or on the basis of Exhibit 48. The proper facilities for meeting Panhandle's requirements are shown in the exhibits and testimony which Panhandle presented on the first day of this hearing. Our proposed facilities will enable us to meet the contract requirements of our customers in a sound economic manner through a balanced utilization of storage and pipeline facilities (4: 346, 347).

Mississippi argues that if this is so there would be a horsepower deficiency at every station from Liberal through Centralia if Panhandle were granted a certificate herein and also permitted to make its proposed St. Louis deliveries. The Staff also remains dubious about Panhandle's claim that the Mississippi plan is the less economical one. Nevertheless, neither Mississippi nor the staff presented specific evidence to refute Panhandle's rebuttal testimony. Similarly, no adequate answer was given to Panhandle's argument that according to the ruling of the Court of Appeals in the *Michigan Consolidated Gas Co.* v. *F.P.C.*, 246 F. 2d 904, the burden of "ascertaining the feasibility of an alternative proposal offered by an opposing party in a proceeding before the Commission" must be met by that party. The staff properly points out that according to that same ruling "* * * the burden of proving the feasibility of an alternative proposal offered by an opposing party is not upon the Commission". However, the fact remains that Mississippi's proposal does not stand up against Panhandle's rebuttal testimony. While Mississippi did manage to cast doubt on the composition of some of the cost estimates contained in applicant's rebuttal testimony the defects are minimal. The Presiding Examiner finds that all told Panhandle did adequately meet the burden of proof to support its proposal, while Mississippi failed to make a convincing showing that its alternative proposal is either practical or economical. Mississippi's arguments about the "St. Louis case" go beyond the scope of this proceeding. Accordingly, it is concluded that a certificate for the facilities and service herein applied for should be issued to Panhandle.

FURTHER FINDINGS AND CONCLUSIONS

Upon consideration of the application filed herein, the evidence of record and the briefs filed, it is found and concluded, in addition to the findings and conclusions hereinbefore stated, that:

(1) Panhandle Eastern Pipe Line Company, a Delaware Corporation, having its principal offices in New York, New York, and Kansas City, Missouri, is engaged in the transportation of natural gas in interstate commerce for resale for ultimate public consumption and is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) That the service proposed to be rendered by Panhandle, *i.e.*, the transportation and sale of up to 130,748 Mcf per day of gas for delivery to its existing resale customers as set forth in the application as amended herein is required by the public convenience and necessity.

(3) The facilities which Panhandle proposes to construct and operate as described in its application are adequate and appropriate to render this service which Panhandle proposes and which Panhandle is hereby authorized to provide.

(4) Panhandle is willing and able to finance the construction of the facilities herein authorized in the manner set forth in its application.

(5) Panhandle is able and willing properly to do the acts and to make the sale and to perform the services proposed by it in this proceeding and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission, that:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Panhandle to construct with reasonable dispatch the proposed facilities hereinbefore described, and as more fully described in the application in this proceeding and to operate such facilities for the transportation and sale of natural gas in interstate commerce for resale, all as more fully described in said application subject to the jurisdiction of the Commission and upon the terms and conditions of this Order.

(B) The certificate issued in paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in pararaphs (a), (b), (c)(3) and (e) of Section 157.20 of the Regulations.

(C) The certificate issued in paragraph (A) shall be deemed accepted and of full force and effect, unless refused in writing and under oath by Panhandle.

(D) Panhandle shall report to the Commission in writing, under oath, the date of commencement of service to be rendered to the various customers herein named.

ALLEN C. LANDE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

PORTLAND GENERAL ELECTRIC COMPANY, CROWN ZELLERBACH CORPORATION, AND PUBLISHERS' PAPER COMPANY, PROJECT NO. 2233

ORDER MODIFYING ORDER ON REHEARING

(Issued July 24, 1964)

This order amends our license order issued June 21, 1960,[1] under Part I of the Federal Power Act[2] to the Portland General Electric Company, Crown Zellerbach Corporation, and Publishers' Paper Company, joint applicants for the constructed Willamette Falls hydroelectric project, Project No. 2233, in and along the Willamette River, Oregon. In their petitions for rehearing, the joint applicants

[1] 23 FPC 831.
[2] 16 U.S.C. 791–823.

requested the deletion from the tendered license of Articles 9 and 10,[3] concerning navigation facilities. The Commission, on December 3, 1962, denied this request.[4] On appeal, the joint applicants objected also to Article 20, respecting facilities for the protection of fish.[5]

The United States Court of Appeals for the Ninth Circuit on February 7, 1964, remanded the cause to the Commission for further proceedings.[6] The joint applicants subsequently offered to accept the tendered license if the Commission would give certain assurances in connection with Articles 9 and 10 and make certain modifications in Article 20.[7]

The assurances sought with respect to Articles 9 and 10 were that if at some future time the United States should desire to improve navigation facilities at the project, the joint licensees would be entitled to a hearing and the Commission would be required to find that the navigation improvements would be reasonably necessary to promote the present and future needs of navigation and that the cost to the joint licensees would be reasonably consistent with their investment in the project.

These assurances, of course, are not germane to Article 10 insofar as it relates to the United States' existing navigational facilities at the Willamette Falls project. However, these assurances, we believe, are inherent with respect to obligations under Article 9 and are given with respect thereto and in connection with any obligations under Article 10 attributable to additional United States navigational facilities.[8]

In addition, the Crown Zellerbach Corporation in its letter received on May 15, 1964, requested assurance that its acceptance of the license would not be deemed a waiver of its right to a court determination as to whether the United States must pay compensation in the event it takes any of Crown's property above the

---

[3] These articles read:

Article 9. Whenever the United States shall desire to construct, complete, or improve navigation facilities in connection with the project, the Licensee shall convey to the United States, free of costs, such of its lands and its rights-of-way and such right of passage through its dams or other structures, and permit such control of pools as may be required to complete and maintain such navigation facilities.

Article 10. The Licensee shall furnish free of cost to the United States power for the operation and maintenance of navigation facilities at the voltage and frequency required by such facilities and at a point adjacent thereto whether said facilities are constructed by the Licensee or by the United States.

[4] 28 FPC 924.

[5] As it appeared in the initially-tendered license, this Article read:

Article 20. Until further order of the Commission, the Licensees shall so operate the project as to continue the operating practices now in effect in the interest of fish resources at Willamette Falls, and shall cooperate with interested Federal and State fishery agencies in making studies for enhancement of the fish resources at the project. The Licensees shall construct, maintain, and operate or shall arrange for the construction, maintenance and operation of such fish ladders, fish screens, or other fish protective devices for the purpose of conserving the fishery resources and comply with such reasonable modifications of the project structures and operation in the interest of fish life as may hereafter be prescribed by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Fish Commission of Oregon or the Oregon State Game Commission, after notice and opportunity for hearing.

[6] *Portland General Electric Company* v. *F.P.C.*, 328 F. 2d 165 (9th Cir. 1964).

[7] The offers of settlement were filed on the following dates: Portland General Electric Company, May 15, 1964; Crown Zellerbach Corporation, May 15, 1964; Publishers' Paper Company, May 19, 1964.

[8] On May 11, 1964, Lt. Colonel Joseph F. Garbacz, Assistant Director of Civil Works for Pacific Divisions of the United States Army Corps of Engineers, wrote:

No change has been made in plans to improve the navigation facilities on Willamette River at Willamette Falls, Oregon, nor have any plans been prepared since the plans described in the Corps' letter of 19 August 1960.

highwater mark of the river for navigation pursuant to Article 9 of the license. Without comment on the substantive questions involved, Crown's acceptance of the license, as the Ninth Circuit indicated, will not prejudice Crown's right to raise later the question of compensation for fast lands if the occasion should ever require.[9]

Portland General Electric Company on February 28, 1964, proposed certain revisions in Article 20. The Fish Commission of Oregon, the Oregon State Game Commission, and the Secretary of the Interior [10] accepted the company's proposals subject to various changes. On May 15, 1964, the company submitted its second proposal, incorporating virtually all of the recommended changes and making certain further changes.[11]

It appears that the interested parties are in substantial agreement on the content of Article 20. By letter dated May 20, 1964, the Oregon State Game Commission concurred in the language proposed by Portland General Electric Company on May 15, 1964, and reported that early action by the Commission will expedite the solution of the upstream fish passage problem at Willamette Falls.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act that the following modifications be made in Article 20 of the license tendered on June 21, 1960, to the Portland General Electric Company, Crown Zellerbach Corporation, and Publishers' Paper Company as joint licensees for the constructed Willamette Falls project on the Willamette River, Oregon.

The Commission orders:

(A) Article 20 of the license tendered on June 21, 1960, for the constructed Willamette Falls Project on the Willamette River, Oregon, is modified to read:

Article 20. Until further order of the Commission, the Licensees shall so operate the project as to continue the operating practices now in effect in the interest of fish resources at Willamette Falls, and shall cooperate with interested Federal and State fishery agencies in making studies for protection, perpetuation, and enhancement of the fish resources at the project. Whenever the United States or the State of Oregon shall decide to construct facilities for the upstream passage of fish over Willamette Falls, the Licensees shall pay 16.3 percent of the cost thereof, and shall permit the United States or its designated agency or the State of Oregon to use, free of cost, such of Licensees' lands and interests in lands and structures as may be reasonably required for such upstream fish passage facilities, upon a finding based on substantial evidence that such facilities and modifications should be made or installed under applicable laws and regulations. With respect to downstream fish passage, the Licensees shall continue to consult and cooperate with the fishery agencies in studies looking to the improvement of downstream fish passage. If the Licensees and fishery agencies are unable to agree upon the methods to be used to improve downstream fish passage, the Commission may on its own motion or upon recommendation of the fishery agencies direct the construction, maintenance, and operation of such facilities within the project boundaries and such modifications of project structures as may be reasonably necessary after notice and an opportunity for hearing and upon a finding based on substantial evidence

[9] 328 F. 2d 176.

[10] These parties submitted their comments on April 3, 1964, April 13, 1964, and April 6, 1964, respectively.

[11] A further change in proposed Article 20 was agreed to by the applicants by letter dated July 22, 1964.

that such facilities and modifications should be made or installed under applicable laws and regulations.

(B) The afore-mentioned Commission order issued on June 21, 1960, as modified by this order, shall be accepted by each of the joint Licensees and returned to the Commission within 60 days from the date of issuance of this order, and the order issued on June 21, 1960, shall not become effective without such acceptance of the provisions of that order as modified by the provisions of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64-193

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 24, 1964)

On March 2, 1964, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP64-193 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to sell and deliver natural gas to Viginia Pipe Line Company (Virginia Pipe), formerly Lynchburg Pipe Line Company and a subsidiary of Lynchburg Gas Company, to alleviate an estimated peak day deficiency on Virginia Pipe's system and the system of its parent, Lynchburg Gas Company, all as more fully set forth in the application.

Lynchburg Gas Company (Lynchburg), an existing customer of Applicant, has a current allocation of 4500 Mcf of natural gas daily, substantially all of which is required by that company. Deliveries are made into the facilities of Virginia Pipe for the account of Lynchburg at Altavista-Hurt Meter Station in Pittsylvania County, Virginia, at Lynchburg Meter Station in Appomattox County, Virginia, at Scottsville Meter Station in Fluvana County, Virginia, and at Gordonsville Meter Station in Louisa County, Virginia, which deliveries, with the exception of deliveries made at Lynchburg Meter Station, are purchased by Virginia Pipe from its parent and sold to local communities and nearby industrial customers. Under proposed arrangements Virginia Pipe will purchase gas directly from Applicant while continuing to purchase small volumes from Lynchburg and transporting Lynchburg's allocation of gas from Applicant at the named delivery points.

Virginia Pipe has requested and applicant proposes to sell and deliver up to 2500 Mcf daily of firm gas under Applicant's CD-2 Rate Schedule and to render 50-day storage service of 500 Mcf daily under Rate Schedule GSS, to alleviate an estimated peak day deficiency of 2125 Mcf for the winter of 1964-65, increasing to 5225 Mcf for the winter of 1967-68 on its system and the system of its parent, Lynchburg Gas Company. Virginia Pipe estimates peak day requirements of 3900 Mcf for the winter of 1964-65, which can only partially be supplied by Lynchburg Gas Company. No additional facilities will be required of Applicant to render the proposed service.

Due notice of the subject application was published in the Federal Register on June 9, 1964 (29 F.R. 7442). On June 25, 1964, Virginia Pipe Line Company filed a petition to intervene in this proceeding consenting to the use of the shortened procedure in the disposition of the application but preserving its rights in the event of formal hearing in the matter. Since the shortened

procedure is being used, no further action on said petition to intervene appears necessary. No other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 23, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued May 29, 1948, in Docket No. G–704 (7 FPC 24).

(2) The proposed transportation and sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed transportation and sale of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Transcontinental Gas Pipe Line Corporation, authorizing the transportation and sale of up to 2500 Mcf daily of firm gas and the rendition of 50-day storage service of 500 Mcf daily of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above, and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

FIRST UTILITY DISTRICT OF TIPTON COUNTY, TENNESSEE, DOCKET NO. CP64–212

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued July 27, 1964)

First Utility District of Tipton County, Tennessee, (Applicant) filed an application on March 23, 1964, and a supplement thereto on May 4, 1964, in

Docket No. CP64-212, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Gas Transmission Corporation (Texas Gas) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for distribution and resale in the communities of Burlison, Gilt Edge and Garland, and their respective environs, in Tipton County, Tennessee, all as more fully set forth in the application and supplement thereto.

Applicant proposes to construct and operate distribution systems within the borders of the three communities, transmission lines connecting the communities and approximately 7.5 miles of 4-inch lateral line extending from Applicant's proposed master regulator station to the transmission lines connecting the communities. The proposed interconnection with the system of Texas Gas will be located east of Covington, Tennessee, adjacent to Applicant's proposed master regulator station.

Applicant has received the necessary authorizations and franchises from state and local authorities.

Applicant estimates the third-year annual and peak day requirements for the communities it proposes to serve to be 36,529 Mcf and 489 Mcf, respectively, which will be purchased from Texas Gas under Texas Gas' Rate Schedule SG-1.

The estimated total over-all cost of constructing the proposed distribution system and the transmission and lateral lines is $209,750, which Applicant proposes to finance from the issuance and sale of 30-year revenue bonds in the amount of $125,000 bearing interest at the rate of 5½-per cent per annum. The Housing and Home Finance Agency has authorized a public works grant of $84,750 to Applicant.

Texas Gas filed an answer to the application on April 23, 1964, stating it has no objection to the rendering of the requested service provided Applicant's third year peak day requirement for the communities does not exceed 489 Mcf and the necessity for the service is established to the satisfaction of the Commission.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 20, 1964 (29 F.R. 7898). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated March 30, 1948, in Docket No. G-855 (7 FPC 213).

(2) Applicant, First Utility District of Tipton County, Tennessee, is a legal entity duly authorized to sell and distribute natural gas in the State of Tennessee, and has received the necessary local franchises to render the services proposed.

(3) It is necessary and desirable in the public interest to direct Texas Gas to establish physical connection of its transmission facilities with those proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under its appropriate rate schedule and a service agreement to be executed by Applicant with Texas Gas in accordance with the Commission's Regulations, up to 489 Mcf of natural gas per day and 36,529 Mcf annually for distribution and resale as hereinbefore described.

(4) The requirement that Texas Gas serve Applicant, as hereinafter ordered, will not (a) place an undue burden upon Texas Gas, (b) require Texas Gas to

enlarge its transportation facilities or (c) impair Texas Gas' ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Texas Gas for distribution in the communities of Burlison, Gilt Edge and Garland and their respective environs in Tipton County, Tennessee, within one year from the date of the issuance of this order.

The Commission orders:

(A) Texas Gas Transmission Corporation be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell and deliver up to 489 Mcf of natural gas per day and 36,529 Mcf annually to Applicant under a service agreement to be executed by Applicant with Texas Gas in accordance with the Commission's Regulations, for the transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Texas Gas' presently filed appropriate rate schedule.

(B) Texas Gas shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service from Texas Gas as directed herein within one year from the date of issuance of this order.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

GEORGE MITCHELL & ASSOCIATES, INC.,[1] DOCKET NO. G-17728, ET AL.[2]

ORDER ACCEPTING OFFERS OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE AND CONTRACT AMENDMENTS, AND TERMINATING PROCEEDINGS

(Issued July 27, 1964)

On May 11, 1964, George Mitchell & Associates, Inc. (Mitchell), submitted offers of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offers involve proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Mitchell. The offer relates to sales made under Mitchell's FPC Gas Rate Schedule Nos. 3, 4, 5, 6, 14, 26, 27, and 28 in Texas R.R. Com. Districts Nos. 2 and 3. Each of the proposed increased rates were suspended by order of the Commission for the statutory period, and were made effective by Mitchell by appropriate motion.

Under the terms of the offers, Mitchell proposes to eliminate the favored-nation, price redetermination and the periodic escalation provisions from its rate schedules and to establish 15 cents per Mcf rates for the subject sales. Mitchell's annual revenues will be decreased about $101,851 from the presently effective rates. No protests or objections have been filed to the offers.

Mitchell, in its offers, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedules in

---

[1] Agent for Oil Drilling Inc., *et al.*, formerly Christie, Mitchell & Mitchell Company, Agent for Oil Drilling Inc., *et al.*

[2] The additional dockets involved herein are set forth in the Appendix hereto.

excess of the settlement rates.[3] The estimated total dollars to be refunded approximates $191,800, exclusive of interest.

The proposed settlements are consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and their acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Mitchell's offers of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Mitchell's rates and rate schedules.

The Commission finds:

The proposed settlements of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offers of settlement filed with the Commission by Mitchell on May 11, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offers of settlement filed with the Commission by Mitchell on May 11, 1964, are hereby approved in accordance with the provisions of this order.

(B) Mitchell shall file, within 30 days from the date of issuance of this order, notices of changes in rates providing for the 15 cents per Mcf rates specified in its offers of settlement, and executed contractual amendments to its FPC Gas Rate Schedule Nos. 3, 4, 5, 6, 14, 26, 27 and 28, eliminating the favored-nation price redetermination, and the periodic escalation provisions therefrom. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Mitchell shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedules herein and the settlement rates, making account for proper charges, with simple interest at the applicable percentage, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases for determination, together with a copy of a release from TGT with respect to such refunds.

(D) Upon notification by the Secretary of the Commission that Mitchell has complied with the terms and conditions of the order, the rate and charge of 15 cents per Mcf at 14.65 psia, specified in its offers of settlement, subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and Docket Nos. G–17080, G–17081, G–17082, G–17592, G–17718, and G–17728 shall be deemed severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64–2 without further order of the Commission.

(E) The acceptance by the Commission of Mitchell's offers of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Mitchell, including area rate or other similar proceedings.

[3] Mitchell's FPC Gas Rate Schedules 3, 5, 14, 26 and 27 are subject to a dehydration charge by TGT, for which allowance must be made in computing the refunds thereunder.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP64-210

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, AND DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued July 27, 1964)

On March 23, 1964, Kansas-Nebraska Natural Gas Company, Inc. (Applicant, filed in Docket No. CP64-210 an application pursuant to Sections 7 (a) and (c) of the Natural Gas Act for (1) an order directing Northern Natural Gas Company (Northern) to establish physical connection of its transmission facilities with the proposed facilities of, and to sell natural gas to Applicant, for distribution and resale in the town of Western, Nebraska, and (2) a certificate of public convenience and necessity authorizing the construction and operation of facilities to serve two small communities in Nebraska, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate (a) a distribution system in the community of Milligan, Nebraska, and to install a town border metering and regulating station together with 1.3 miles of 2-inch connecting lateral extending from Milligan to Applicant's transmission line, and (b) a distribution system in the community of Western, Nebraska, and approximately 0.5-mile of 2-inch connecting lateral extending to the measuring station of Northern on Northern's 10-inch transmission line.

Applicant estimates that the number of customer connections for Milligan and Western will increase from 64 for 1964 to 169 at the end of three years, and will reach 182 in 1968, requiring an estimated peak day demand of 135 Mcf for the winter season of 1964–65, 205 Mcf for the winter of 1965–66, and 255 Mcf for the winter of 1966–67. The annual requirements are estimated to be 4720 Mcf for 1964 and 16,850 Mcf for 1965, reaching 22,915 Mcf in 1966. Third year rate of return is estimated to be 3 percent for Milligan, reaching 4.9 percent in the fifth year, and 5.1 percent for Western, reaching 7.5 percent in the fifth year. The required volumes will be within the present total contract demand of 15,250 Mcf daily supplied by Northern.

The estimated cost of jurisdictional facilities is $9,000 for the Milligan lateral and border station, and $2,250 for the Western lateral.

Northern filed an answer to the application on May 1, 1964, and stated therein it has no objection to the granting of the application.

Since the requested service will require an additional delivery point Northern should file a superseding service agreement reflecting the additional delivery point for service to Applicant.

After due notice, no petition or notice to intervene or protest to the granting of the application has been filed.

At a hearing held on July 23, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Kansas, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Northern to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Northern in accordance with the Commission's Regulations, natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Northern serve Applicant, as hereinafter ordered, will not (a) place an undue burden upon Northern (b) require Northern to enlarge its transportation facilities, or (c) impair Northern's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Northern for distribution in the towns of Milligan and Western, Nebraska, and environs within one year from the date of the issuance of this order.

(6) The proposed construction and operation of facilities and transportation of natural gas in interstate commerce by Applicant as hereinbefore described. and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(7) The aforesaid construction and operation of facilities and transportation of natural gas in interstate commerce by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(8) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Northern Natural Gas Company, be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Kansas-Nebraska Natural Gas Company, Inc., as herein described, and to sell and deliver natural gas to Applicant under a service agreement to be executed by Applicant with Northern in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Northern's presently filed appropriate rate schedule.

(B) Northern shall report to the Commission, in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

(D) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Kansas-Nebraska Natural Gas Company, Inc., authorizing the construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(E) The certificate issued by paragraph (D) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(F) The facilities hereby authorized shall be constructed and placed in actual operation, as provided in paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

LOWER VALLEY POWER AND LIGHT, INC., PROJECT NO. 1198

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued July 27, 1964)

Application was filed on August 12, 1960 by Lower Valley Power and Light, Inc., (Licensee) under Section 6 of the Federal Power Act (Act) for surrender of its license for major Project No. 1198 located on Flat Creek, a tributary of the Snake River, in Teton County, Wyoming, and affecting lands of the United States within the Teton National Forest and lands of the United States reserved for Elk Refuge.

The license was issued on October 19, 1932 for a period of 50 years.

The application states that due to the high cost of operation, the project has not been in operation since November 1956, and no plans are being considered by the Licensee to rehabilitate the project.

The Forest Service has reported that restoration of the National Forest lands occupied by the project was completed on October 3, 1963.

Annual charges under the license for the project have been paid through December 31, 1962, and the license instrument has been returned.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) Acceptance of surrender of the license for the project is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the license for Project No. 1198 is hereby accepted, effective as of October 3, 1963, subject to the payment of annual charges through said date in the amount of $76.44.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP64-277

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 27, 1964)

On May 18, 1964, Michigan Gas Storage Company (Applicant) filed in Docket No. CP64-277 an application pursuant to Section 7(c) of the Natural Gas Act

for a certificate of public convenience and necessity authorizing Applicant to establish and operate a new interchange and delivery point with Consumers Power Company (Consumers) at the Mount Clemens regulator station, Clinton Township, Macomb County, Michigan, and to operate Applicant's existing facilities to transport natural gas for and in behalf of Consumers, all as more fully set forth in the application.

The purpose of the proposed project is to connect Consumers' St. Clair gas supply to the integrated gas transmission system of Applicant, resulting in a wider distribution of said St. Clair gas supply and facilitating delivery of natural gas by Applicant to Consumers' storage facilities and market area in St. Clair County, Michigan, and vicinity.

The proposed interchange will eliminate the necessity for Consumers to construct new pipelines to carry on functions that could be performed with Applicant's existing facilities.

Applicant will not be required to construct any new facilities for the proposal. Consumers will pay the entire cost of making the proposed interconnection.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 23, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 3, 1946, in Docket No. G–731 (5 FPC 965).

(2) The proposed new interchange and delivery point and the existing facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed new interchange and delivery point, the operation of existing facilities and the transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Gas Storage Company, to establish and operate a new interchange and delivery point, to operate existing facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3) and (e) of Section 157.20 of such Regulations.

(C) The transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. CP63-149

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 27, 1964)

On November 29, 1962, as supplemented on July 22, 1963, and September 18, 1963, Midwestern Gas Transmission Company (Applicant) filed in Docket No. CP63-149 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to sell and deliver an additional 25,000 Mcf daily, or a total of 100,000 Mcf per day, of contract demand natural gas to Northern Illinois Gas Company (Northern Illinois), an existing customer on Applicant's southern system, all as more fully set forth in the application and supplement thereto.

The additional deliveries requested of Applicant by Northern Illinois will be made pursuant to the terms of Applicant's effective CD-1 Rate Schedule. No additional facilities will be required for the sale and delivery of the requested additional volumes.

The Commission granted the Applicant a temporary certificate on October 11, 1963, and authorized the sale and delivery to Northern Illinois a total of 100,000 Mcf daily contract demand. Deliveries were commenced pursuant to the temporary certificate on November 1, 1963.

Due notice of the subject application was published in the Federal Register on January 21, 1964 (29 F.R. 513). On January 31, 1964, Northern Illinois Gas Company filed a petition to intervene in this proceeding in support of the application and consenting to the use of the shortened procedure in the disposition of the application but preserving its rights in the event of a formal hearing in the matter. Since the shortened procedure is being used, no further action on the petition to intervene appears necessary. No other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 23, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits, submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Midwestern Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by

the Commission in its order of May 12, 1959, in Docket No. G–16841 (21 FPC 653, 663).

(2) The proposed sale and delivery of natural gas by Applicant to Northern Illinois Gas Company, as hereinbefore described, and as more fully described in the application, as supplemented, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Midwestern Gas Transmission Company, authorizing the sale and delivery of natural gas to Northern Illinois Gas Company, as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64–162

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 27, 1964)

On January 22, 1964, as supplemented on April 7, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64–162 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities necessary to increase the daily design sales capacity of Applicant's pipeline system by 70,000 Mcf and to sell and deliver additional volumes of natural gas to existing customers, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct the following facilities concurrently with or subsequent to the facilities for which Applicant seeks authorization in Docket Nos. CP62–243 and CP63–99:

Approximately 96.64 miles of 30-inch pipeline partially looping Applicant's existing Gulf Coast Line between existing Compressor Station No. 300 and Joliet, Illinois, and approximately 17.77 miles of 24-inch pipeline partially

looping that part of Applicant's Amarillo Line which terminates at Volo, Illinois. The estimated cost of these proposed facilities is $13,713,000.

Alternatively, Applicant proposes, in the event authorization is not granted in Docket Nos. CP62-243 and CP63-99[1] in time to permit such subsequent or contemporaneous construction, to construct the following facilities:

(a) Approximately 107.27 miles of 30-inch pipeline partially looping Applicant's Gulf Coast Line between Compressor Station No. 300 and Joliet, Illinois, including a single 30-inch submerged pipeline river crossing of the Arkansas River;

(b) Approximately 17.77 miles of 24-inch pipeline partially looping that portion of Applicant's Amarillo Line in northern Illinois which terminates at Volo, Illinois;

(c) 3,000 compressor horsepower at Applicant's existing Compressor Station No. 300;

(d) A new compressor station with 4,000 horsepower at the junction of Applicant's existing 26-inch and 20-inch pipelines in Nueces County, Texas, and

(e) Miscellaneous facilities necessary or convenient to the operations herein proposed.

The estimated cost of the facilities described immediately above is $16,111,000.

The additional volumes of gas Applicant proposed to sell to existing customers are:

Rate Schedule CD-1 customers:	*Additional daily contract quantity (Mcf)*
Central Illinois Electric & Gas Company	6,982
Interstate Power Company	600
Iowa Electric Light & Power Company	2,516
Iowa-Illinois Gas & Electric Company	3,767
Iowa Southern Utilities Company	442
North Shore Gas Company	10,000
Northern Indiana Public Service Company	17,907
The Peoples Gas Light & Coke Company	25,000
Wisconsin Southern Gas Company, Inc.	1,812
Total CD-1	69,026

Rate Schedule G-1 customers:	*Additional daily contract quantity (Mcf)*
American Gas Company	534
Village of Bethany, Illinois	116
Monarch Gas Company	160
City of Perryville, Missouri	204
City of Pinckneyville, Illinois	52
City of Salem, Illinois	300
United Cities Gas Company	100
Total G-1	1,466
Unallocated	1,815
Total	72,307

[1] Docket Nos. CP62-243 and CP63-99 are presently before the presiding examiner awaiting his decision.

Applicant will finance the cost of its proposals initially with funds obtained from its parent company, The Peoples Gas Light & Coke Company. Permanent financing will be by the sale and issuance of first mortgage pipeline bonds.

A number of petitions to intervene have been filed herein by various interested companies. In all cases, the burden of such filings has been that the petitioners do not request formal hearing in this proceeding and do not object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules, but that each petitioner desires to preserve its rights to appear and participate fully in the event that this matter should be set for formal hearing. Inasmuch as the shortened procedure is being used herein, no further action on the various intervention petitions appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on July 23, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The alternative facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed alternative facilities and the proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed alternative facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

OPINION NO. 438

SHREWSBURY MUNICIPAL LIGHT DEPARTMENT v. NEW ENGLAND POWER COMPANY, DOCKET NO. E-7021

OPINION AND ORDER REQUIRING THE SALE OF ELECTRIC ENERGY

(Issued July 27, 1964)*

Syllabus

1. Section 202(b) of the Federal Power Act provides Commission with ample authority to order requested interconnection. P. 376.
2. There is no merit to suggestion that Commission cannot order public utility to sell directly to Shrewsbury [Municipality] because latter already receives adequate "service" and interconnection powers under Section 202(b) are not applicable where issue is solely one of rate for service. P. 376.
3. Under Section 202(b) Commission is empowered to order interconnection whenever it determines that for any reason "such action is necessary or appropriate in the public interest." P. 376.
4. Direct sales by New England Power will be of benefit to Municipality and its consumers and will not burden NEPCO or its affiliate Massachusetts Electric. P. 377.
5. Record supports Shrewsbury's contention that direct service will benefit it and its customers; Municipality pays additional amount for electric energy because it is carried by middleman- -no reason exists why middleman should not be eliminated. P. 377.
6. Interconnection which is in the public interest should not be denied because it will result in loss of income to middleman. P. 377.
7. Direct sale by NEPCO to Shrewsbury would benefit latter by reducing energy costs to consumers and in encouragement to industrial expansion and greater use of electric service; Massachusetts Electric would not be injured appreciably and NEPCO would be slightly benefited. P. 377.
8. Public interest dictates that NEPCO be required to serve Municipality directly under authority of Section 202(b). P. 377.
9. It is desirable for achievement of most efficient system of power supply at wholesale that wholesaler maintain control over equipment such as transformers here in question which are integrally related to rendering reliable and adequate service. P. 380.
10. In instant circumstances, where there is no present or clearly contemplated need for power at 69 Kv for distribution, Commission *holds* that order requiring duplication of wholesaler's facilities has not been shown to be in the public interest. P. 380.
11. On this record NEPCO is not required to relinquish its transformation function in favor of Shrewsbury; it is required to be responsible for providing firm 13.8 Kv service under its W-3 rate. P. 380.

---

*Initial Decision appears on p. 383. Opinion No. 438-A and order denying rehearing and stay issued September 25, 1964, 32 FPC 846. Affirmed, *New England Power Co. v. F.P.C.*, 349 F. 2d 258 (CA1-1965).

12. In view of history of previous negotiations, Commission retains jurisdiction herein; should Shrewsbury experience delay in obtaining necessary increments of power or higher voltage, appropriate action will be taken to assure adequate service to Shrewsbury. P. 381.
13. In proceeding arising under Section 202(b) of the Federal Power Act, Commission *requires* direct sale of electric energy.

Commissioners Ross and O'Connor *concurring.*

Reuben Goldberg and *George Spiegel* for Shrewsbury Municipal Light Department

D. G. Allen, P. H. R. Cahill, and *Joel R. Kaswell* for New England Power Company and Massachusetts Electric Company

Daniel Goldstein and *Sandra J. Strebel* for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SWIDLER, *Chairman:*

This is a proceeding arising from a complaint by the Municipal Light Department of the Town of Shrewsbury under Section 202(b) of the Federal Power Act requesting that New England Power Company (NEPCO) be required to connect its facilities with those of Shrewsbury and sell the city power directly. Shrewsbury presently receives its requirements from NEPCO's affiliate, Massachusetts Electric Company (Mass. Electric), which does not originate the power supply but merely transmits to Shrewsbury the power it obtains from NEPCO. Shrewsbury seeks to eliminate the middleman.

There is a secondary question whether, if direct service is ordered, NEPCO should be required to deliver energy at 69 kv or continue service at 13.8 kv.

The Town of Shrewsbury with a population of over 17,000 is located in Massachusetts just east of the City of Worcester. Since 1908 it has owned and operated an electric system. From the beginning it has purchased all of its power requirements from Mass. Electric or its predecessor companies and has never generated its own power supply. In 1962 its peak demand amounted to 10,800 kw, and it purchased 42,028,800 kwh of electrical energy.

NEPCO and Mass. Electric are both subsidiaries of the New England Electric System (NEES), a holding company. NEPCO operates in Vermont, New Hampshire and Massachusetts. It sells 82 percent of its power to Mass. Electric and also supplies the distributing companies of NEES, two non-affiliated resale customers (the Fitchburg Gas and Electric Light Company and the Town of Littleton, New Hampshire), and 22 industrial customers.

Mass. Electric sells energy at wholesale and retail wholly within Massachusetts. Resale customers include Shrewsbury and 23 other small utilities serving Massachusetts towns and cities. All of the resale customers are municipal light departments with the exception of the Manchester Electric Company.

NEPCO makes deliveries to Mass. Electric in Shrewsbury over 69 kv lines that run from Millbury to Pratt's Junction at its 69/13.8 kv substation. NEPCO has three 69/13.8 kv transformers in its substation which have a combined nameplate rating of 22,500 kv. Mass. Electric receives delivery at the low voltage terminals of these transformers and transmits the power to its adjacent switching station at which delivery is made to Shrewsbury all within the same substation area. Shrewsbury then transmits the 13.8 kv power across an alley to its new Worthington Avenue substation. Underground cables also extend to Mass. Electric's Grafton Street Substation and can be used to provide backup service to Shrewsbury and other portions of the Worcester District during outages.

Mass. Electric purchases nearly all of its energy requirements under NEPCO's W-3 rate, on file with the Commission. Mass. Electric's present contract with Shrewsbury, executed July 5, 1955, is also on file with the Commission. The original term of the contract was for five years (February 15, 1956 through February 14, 1961), and it was renewed for a subsequent five-year term to terminate on February 14, 1966.

Shrewsbury had been seeking to improve its power supply long before February 5, 1962, when it filed with the Commission the complaint which initiated this proceeding. Shrewsbury first requested direct service from NEPCO in 1957. In response to that request NEPCO in 1958 offered to sell power directly to Shrewsbury at the uniform wholesale rate but demanded an additional surcharge of $43,000 a year based upon 22 percent of the $195,000 of additional facilities claimed to be necessary. The total cost to Shrewsbury under this arrangement would have been greater than what it was paying Mass. Electric. The city then offered instead to build the additional facilities itself, but NEPCO did not reply to Shrewsbury's offer. In 1961 NEPCO again agreed to sell electric energy to Shrewsbury at its filed wholesale rate subject to payment of an unspecified surcharge but no specific offer was made. Subsequently NEPCO has refused to serve Shrewsbury directly.

Shrewsbury's complaint requested relief under Section 202(b) of the Act, and also an investigation under Sections 205(a), 206(a) and 207. On April 2, 1962, NEPCO filed an answer and a motion to dismiss in which it contended that Shrewsbury was not a proper party. By order of May 2, 1963, we denied NEPCO's motion to dismiss for the reasons set forth therein. The Massachusetts Department of Public Utilities filed a notice of intervention but was not represented at the hearing and took no part in the proceeding. Mass. Electric was permitted to intervene and has combined its presentation with NEPCO's in opposing the relief sought by Shrewsbury, and where convenient we shall refer to the arguments of NEPCO and Mass. Electric as those of NEES. Hearings were held in July of 1963; the examiner's decision was issued on February 13, 1964; and the proceedings are before us upon the exceptions filed by NEPCO and Mass. Electric and by our staff.

Should NEPCO Be Required To Serve Shrewsbury Directly?

The basic issue in this proceeding is whether Shrewsbury is entitled to direct service from NEPCO under Section 202(b) of the Federal Power Act, which provides:

> Whenever the Commission, upon application of any State commission or of any person engaged in the transmission or sale of electric energy, and after notice to each State commission and public utility affected and after opportunity for hearing, finds such action necessary or appropriate in the public interest it may by order direct a public utility (if the Commission finds that no undue burden will be placed upon such public utility thereby) to establish physical connection of its transmission facilities with the facilities of one or more other persons engaged in the transmission or sale of electric energy, to sell energy to or exchange energy with such persons * * *

Our staff and, of course, Shrewsbury, urge that the Commission require direct service, and the examiner so held. The examiner finds that direct service would result in a reduction in Shrewsbury's wholesale power costs which would be in the public interest because it would stimulate expanded use of electricity in Shrewsbury with resulting industrial expansion and benefits to residential consumers. Shrewsbury points out that although NEPCO's 69 kv lines run through the town, it must now receive service at substantially greater cost through the

middleman, Mass. Electric, which receives the energy in Shrewsbury and transmits it only a few feet before delivery to Shrewsbury.

Our staff concluded that in considering whether to order an interconnection under Section 202(b) we should weigh the resulting benefit to the purchaser against the cost to the wholesaler of making the interconnection and that we should also consider the effect on the overall rate of return of the company losing the customer as well as the company gaining a new customer. On this basis the staff could see very little engineering or economic justification for the interposition of Mass. Electric between Shrewsbury and NEPCO.

NEES stresses the importance of Mass. Electric in power pooling and in the distribution and sale of electric energy by NEES. Under Section 202(b), it says the Commission can order an interconnection or a second interconnection between two companies where the service is not adequate, but since the service is adequate here, the Commission should not take action. It also argues that to supply Shrewsbury through a direct connection with NEPCO would give it an advantage over other distributors served by Mass. Electric because of its geographical situation and that it would be a deeply unsettling precedent for the Commission to set aside a wholesale purchase contract at the instance of a distributor who wants to obtain cheaper service elsewhere.

Section 202(b), while it has been rarely referred to in past proceedings,[1] provides us with ample authority to order the interconnection here requested. Admittedly NEPCO and Mass. Electric are "public utilities" subject to the Federal Power Act, and both NEPCO's sale to Mass. Electric at Shrewsbury and Mass. Electric's sale to Shrewsbury are subject to our jurisdiction. *F.P.C.* v. *Southern California Edison Co.*, 376 U.S. 205, March 2, 1964, October Term 1963, Nos. 71 and 73.

There is no merit in the suggestion that we cannot order NEPCO to sell directly to Shrewsbury because Shrewsbury is already receiving adequate "service" and our interconnection powers under Section 202(b) are not applicable where the issue is solely one of the rate for the service. Section 202(b) does not speak in terms of any one aspect of electric power service and certainly does not limit the Commission's interconnection powers to situations in which the quality of electric service, as contrasted with the rates therefor, are inadequate; instead, the Commission is empowered to order an interconnection whenever it determines that for any reason "such action is necessary or appropriate in the public interest."

The issue here, as we see it, is not one of our jurisdiction, which is clear, but rather of applying the public interest standard of Section 202(b) of the Federal Power Act to the facts of this case. The problem comes down to whether Mass. Electric constitutes a useless middleman with respect to electric service to Shrewsbury, or a reasonable means by which NEES serves Shrewsbury as it does other New England areas.

In reaching a judgment in this initial proceeding under Section 202(b) it is useful to re-examine our experience in the cases involving the related question of wholesale service under the Natural Gas Act. The desirability of direct sales is illustrated in *Kentucky Natural Gas Corp.* v. *F.P.C.*, 159 F. 2d 215 (CA6), where the Commission was upheld in granting a certificate to the resale distributor to take gas directly from Panhandle rather than through an intervening pipeline. The court pointed out that the elimination of an unnecessary middleman is of material benefit to the ultimate consumer. The benefit to the consumer of a direct purchase was also noted in *Home Gas Co.* v. *F.P.C.*, 231 F. 2d 253 (CADC).

[1] See *Pennsylvania Water & Power Co.*, 8 FPC 170, 177.

We are of the opinion that direct sales by NEPCO will be of benefit to Shrewsbury and its consumers and will not burden either NEPCO or Mass. Electric. The rate saving to Shrewsbury will be large and of growing importance. In 1962 Shrewsbury paid Mass. Electric $620,508 for electric energy at rates averaging 1.476 cents per kilowatt hour. Under NEPCO's W–3 rate to its direct wholesale customers the total charge would have been $577,897 or an average price of 1.375 cents per kilowatt hour. Thus the savings to Shrewsbury would have been $42,611. The saving would increase in subsequent years, and even more so if Shrewsbury's load factor improves.

With the lower rates that direct service from NEPCO would make available, Shrewsbury will be able to compete with surrounding areas for industrial loads. Mass. Electric's industrial customers in the area can now purchase under the same G–11 rate that Shrewsbury must pay at wholesale. It is thus extremely difficult for Shrewsbury to compete for industry loads. Both Mass. Electric and NEPCO have special contract rates for industrials in and about Worcester County which Shrewsbury cannot match under existing circumstances. Under the W–3 rate Shrewsbury would be able to offer rates to industry comparable to the rates in nearby areas served by NEPCO.

The record thus supports Shrewsbury's contention that direct service to it will benefit it and its customers. Shrewsbury must pay an additional amount for electric energy because it is carried by a middleman. We see no reason why the middleman should not be eliminated here.

The impact of our action on Mass. Electric must of course be considered. We do not believe, however, that an interconnection which is in the public interest should be denied because it will result in a loss of income to a middleman. In any case there is no reason why Mass. Electric should not enter into an arrangement with NEPCO to receive compensation for the use of any Mass. Electric facilities used to serve Shrewsbury. Moreover, the amount of loss here is very small.

In 1962 Mass. Electric's actual bill to Shrewsbury was $620,508. If Shrewsbury had not been a customer Mass. Electric's purchase power expense would be reduced by $540,830. The income lost in the amount of $79,678 would be reduced by taxes to about $37,000 or about ¼ of one percent of the company's net operating income. On the other hand, NEPCO would benefit financially from making a direct sale to Shrewsbury rather than through a middleman. Based upon sales for 1962 NEPCO's revenues would be decreased by $540,830 for sales to Mass. Electric, but because of treating Shrewsbury's demand separately, revenues would be increased $577,897 or a net gain of $37,067, amounting to $17,792 after tax.

In considering this question we take note of the prevailing industry practice whereby generating utilities prohibit resale of power by distributors to other utilities which they could serve directly. One of the supporting reasons for such provisions is that it eliminates the possibility of a distributor becoming an unnecessary intermediary between the generating utility and the ultimate distributor of the electricity. The same considerations are important to our determination here.

A direct sale by NEPCO to Shrewsbury would benefit Shrewsbury by reducing energy costs to consumers and in the encouragement to industrial expansion and greater use of electric service; Mass. Electric would not be injured appreciably and NEPCO would be benefited to a slight degree. Under these circumstances the public interest dictates that NEPCO be required to serve Shrewsbury directly under the authority of Section 202(b).

In reaching this result we are not determining whether the other Mass. Electric customers are entitled to direct service should they desire it because any such request would have to be considered on its merits with particular reference to the functions of NEPCO and Mass. Electric in NEES. NEPCO already sells power directly to the Fitchburg Gas and Electric Light Company and the Town of Littleton, New Hampshire and in the past it also sold power directly to Central Vermont Public Service Corporation and Green Mountain Power Corporation. It might well be that other wholesale customers of Mass. Electric could show that they were likewise entitled to purchase electric energy directly from NEPCO but that would depend upon a record that is not before us now. Here we are ordering NEPCO to connect its facilities with those of Shrewsbury and meet its growing demands for electricity directly, based on what we believe to be the public interest under Section 202(b) as applied to the facts of this case.

Should NEPCO Serve Shrewsbury at 69 kv?

The remaining question is whether NEPCO should be required to serve Shrewsbury at the transmission line voltage of 69 kv instead of the present stepped-down voltage of 13.8 kv. Shrewsbury claims the higher voltage connection is necessary to enable it to plan for the future without such frequent and protracted negotiations with NEPCO as have occurrred in the past, and the resulting uncertainty as to the circumstances of future power deliveries.

The examiner agreed with Shrewsbury, emphasizing that Shrewsbury needs an assured source of supply that will permit the expansion of its system and convince industry that adequate electric service at reasonable cost is available in the town. The examiner thereupon ordered a 69-kv interconnection, providing in his order that NEPCO would pay for the necessary looped tap to its 69-kv lines, but requiring Shrewsbury to pay for the transformers and other necessary facilities. Shrewsbury, in fact, has said that it is willing to pay the full cost of the connection as well as termination charges with respect to facilities of NEPCO and Mass. Electric that would be left partly unused.

NEES excepts to the examiner's finding, contending that Shrewsbury uses no voltage in excess of 13.8 kv, that the lower voltage would provide Shrewsbury with substantially the same firm capacity, that 69 kv would be required only if there were large industrial development, and that the 69-kv interconnection would not add to the capacity available to Shrewsbury but rather involves an obvious duplication of facilities representing unnecessary investments by both NEPCO and Shrewsbury. Contrary to the examiner, NEES submits that the wholesale supplier, rather than his numerous distribution customers, is best equipped to engineer its system to meet expected demands.

The staff contends that Shrewsbury has not demonstrated its present need for a 69-kv source of supply although a higher voltage interconnection might be needed in the future. Staff suggests that 69-kv service would leave NEPCO's present Shrewsbury substation operating at much less than full capacity. The staff therefore recommends that NEPCO be required to serve Shrewsbury at the present 13.8 kv. This plan would involve an additional investment by Shrewsbury and the payment by Shrewsbury to Mass. Electric of a charge for the proportionate use of its intervening facilities.

Stripped to its essentials, the question here is whether NEPCO or Shrewsbury should perform the function of transforming the electric energy at transmission voltage of 69 kv down to a lower level. The record shows that Shrewsbury would be able to receive approximately as much capacity at 13.8 kv as it would under the 69-kv interconnection it proposes. The present 13.8 kv interconnection would provide firm capacity of 26,400 kva at the time of the winter

peak and 22,600 kva under summer conditions, representing as a limiting factor the capacity of Mass. Electric's cables to Grafton Street. The 69-kv interconnection proposed by Shrewsbury, while rated at 30,000 kw, is limited to less than 25,000 kva of transformer capacity.

Either of the two methods of interconnection would provide reasonably reliable service to Shrewsbury. The proposed 69-kv interconnection would require a looped tap so that power could be received from the 69-kv line even if there were an outage to the north or south of the interconnection. At 13.8 kv the normal power supply received from NEPCO's 69/13.8 kv transformers is supported by the cables extending to Mass Electric's Grafton Street Substation. While, as Shrewsbury shows, there has been a history of outages of the cables and of the transmission lines during the previous ten-year period, Shrewsbury's manager testified that during the previous five years that he was in office, there had been no outages caused by NEPCO or Mass. Electric. The outages that had occurred were caused by squirrels on Shrewsbury's transformers. Shrewsbury did, however, allege an outage of about an hour occurring in September of 1963 after the close of the record as a result of the failure of Mass. Electric's equipment, seemingly also caused by squirrels.

We do not think that the record shows that the risk of outages with the present equipment is unreasonable. Furthermore, the record shows that the NEES system will install an additional circuit breaker and associated equipment, costing $58,000, in its Shrewsbury substation so that service to Shrewsbury may be extended on a firm basis.

In determining Shrewsbury's needs its load growth is an important factor. Thus, between 1950 and 1962 the maximum demand tripled from 3,334 kw to 10,800 kw while the energy purchases quadrupled from 10,500,000 kwh to 42,000,000 kwh. This reflected an increase from 3,303 residential customers in 1950 to 5,055 in 1962 and a corresponding increase in commercial and industrial customers from 288 to 394. The maximum demand was estimated by NEPCO to increase from 12,000 kw in 1963 to 14,500 kw in 1965 and 19,100 kw in 1968. Shrewsbury's engineering witness testified that a load of 30,000 kva could develop by 1973. It may be observed that even with this growth it would not be until the 1970's that the capacity made available by the present 13.8 kv interconnection would be exceeded.

The significant point is that even under Shrewsbury's proposal additional transformation equipment would be required when the load reaches 30,000 kva and the basic issue remains the same—whether Shrewsbury or NEPCO the wholesale supplier will furnish the additional capacity.

An important consideration is the fact that if we require NEPCO to serve Shrewsbury at 69 kv, NEPCO's transformers and other equipment in its Shrewsbury substations as well as Mass. Electric's adjacent switching facilities will be left largely unused. As of January 1, 1963, NEPCO's net investment in its Shrewsbury substation facilities, including transformers, amounted to $86,164 while Mass. Electric's net investment amounted to $82,950. Although there is some controversy on the point, we think that the greater part of this investment is allocable to the service to Shrewsbury and would be rendered idle. Shrewsbury states that it is prepared to pay to Mass. Electric and NEPCO whatever termination charges the Commission considers equitable, but this does not solve the problem, for whichever party pays for these unused facilities the burden will inevitably fall upon consumers.

Furthermore, the record shows that, regardless of who meets it, the investment cost of the duplicating transformation equipment and other expenses of a 69-kv interconnection would be substantially higher than continuing the present interconnection as a firm basis. The 69-kv interconnection would cost at least $235,-

000 (NEPCO estimates $340,000) while firming the existing arrangements would cost $138,000 at the most and probably less. In any event additional expenditures of upwards of $100,000 would be required with no appreciable increase in the capacity of the interconnection.

Shrewsbury's own engineering witness did not testify unambiguously in favor of the delivery of power at 69 kv, and Shrewsbury makes it perfectly clear that the prospects of industries needing large blocks of power are not the chief reasons for requesting 69 kv service. What Shrewsbury seeks is to get clear of entanglement with Mass. Electric's 13.8 kv facilities, and free of the prospect of lengthy negotiations with NEPCO in a few years when additional capacity may be needed.

The record supports Shrewsbury's contention that obtaining additional power or power at higher voltage could be delayed by negotiations. Seven years of such negotiations elapsed before Shrewsbury could replace its 2.4-kv service with service at 4.16 kv and four years (running concurrently) were required to obtain 13.8-kv service needed for a new substation and load center within the town limits. We do not ascribe the delay to either party, but merely recognize the reasonableness of Shrewsbury's apprehensions that the need for frequent negotiations in order to obtain an expansion of power deliveries could result in a serious handicap to Shrewsbury's plans to promote a greater use of electricity and to encourage industrial growth.

We do not think that the immediate solution to burdensome and time-consuming negotiations is a requirement that delivery be made at 69 kv, for Shrewsbury would have to enter into agreements with NEPCO with respect to increases in deliveries even at 69 kv. Furthermore, there are very real disadvantages to ordering 69 kv service at this time.

NEPCO is now using its 69 kv system to move power between communities and is stepping down the voltage to 13.8 kv to make deliveries, but it contends that in the future it may supply the Worcester-Shrewsbury area at 115 kv. While the examiner excluded the evidence relating to this plan on the ground that it was not adequately supported, we can take notice that the trend in the electric industry is toward higher voltages. If NEPCO should desire to change to 115 kv or to some other voltage, it should be free to do so. We believe it is desirable for the achievement of the most efficient system of power supply at wholesale that the wholesaler maintain control over equipment such as the transformers here in question which are integrally related to rendering reliable and adequate service. We do not mean to suggest that wholesale service must invariably be at the low tension side of the transformer in question or that in many cases it may not be mutually advantageous for the distributor to own the transformation equipment associated with the interconnection with its wholesale supplier. We merely hold that in all the circumstances of this case where there is no present or even clearly contemplated need for power at 69 kv for distribution that a Commission order requiring the duplication of the wholesaler's existing facilities has not been shown to be in the public interest.

Based on this record we shall not require that NEPCO relinquish its transformation function in favor of Shrewsbury, but shall require that it be responsible for providing firm 13.8 kv service under its W-3 rate. Whether it purchases or leases Mass. Electric's intervening facilities, we shall not specify, nor shall we specify which of these companies shall purchase the additional circuit breaker which the record shows to be necessary. The responsibility for providing firm service to Shrewsbury rests with NEPCO. Shrewsbury on its part must expend any amounts required to increase the capacity of its facilities interconnecting with those of Mass. Electric or NEPCO so that service may continue on a firm basis, and the annual costs of these facilities would, of course,

have to be met by Shrewsbury. However, we do not think that Shrewsbury should meet the annual costs of the Mass. Electric facilities used by NEPCO to effect its deliveries to Shrewsbury although the staff brief contemplated such a payment. The responsibility here is NEPCO's to provide this direct service and the cost of the facilities become a cost of NEPCO's system.

While denying Shrewsbury its request that NEPCO be ordered to deliver power at 69 kv, we are of the opinion that Shrewsbury should have every opportunity to obtain the power that it needs for expanding loads and promoting industrial development. We expect that in the light of this decision NEPCO will provide adequate facilities in the future to encourage a rapid growth in the sale of electricity by Shrewsbury. However, in view of the history of previous negotiations to which we have referred we shall retain jurisdiction in this docket, and if Shrewsbury experiences delays in obtaining any necessary increments of power or a higher voltage when necessary, we will entertain an application to modify our order herein or for further relief, and will take appropriate action promptly to assure adequate service to Shrewsbury.

The Commission further finds:

(1) NEPCO and Mass. Electric are public utilities within the meaning of Section 201(e) of the Federal Power Act.

(2) Shrewsbury is a "person" within the meaning of Section 202(b) of the Federal Power Act.

(3) NEPCO's sales of electric energy to Mass. Electric at the Shrewsbury substation and Mass. Electric's sales of electric energy to the Town of Shrewsbury are, and NEPCO's sales of electric energy to the Town of Shrewsbury would be, sales of electric energy at wholesale in interstate commerce within the meaning of Section 201 of the Federal Power Act and subject to the jurisdiction of the Commission.

(4) Upon application by Shrewsbury it is necessary or appropriate within the meaning of Section 202(b) of the Federal Power Act that the Commission direct NEPCO to sell energy direct to Shrewsbury as ordered in paragraph (A) below. Such sale will not place any undue burden upon NEPCO nor require NEPCO to enlarge its generating facilities for such purpose, nor impair its ability to render adequate service to its customers.

The Commission orders:

(A) Within two months of the issuance of this order NEPCO is ordered to sell electric energy to Shrewsbury under its standard wholesale rate, W-3, at 13.8 kv. In effecting such sale NEPCO may employ the present facilities of Mass. Electric but shall be responsible for providing firm service in accordance with good utility practice and shall meet any costs necessary to do so. Shrewsbury shall meet any costs necessary to increase the capacity of its facilities on a firm basis needed to effect the sale here ordered.

(B) Before commencing the service required in paragraph (A) NEPCO and Shrewsbury shall enter into NEPCO's standard form of contract for the service to be provided pursuant to this order, and NEPCO shall file the executed agreement with the Commission before commencing services.

(C) The contract under which Shrewsbury has been receiving service from Mass. Electric is hereby cancelled immediately upon commencement of service by NEPCO to Shrewsbury, and Shrewsbury, from and after that time, is freed from any further obligations or service thereunder.

(D) NEPCO shall report to the Commission the date of commencement of service provided for herein within thirty days following the commencement of such service.

(E) The present record shall remain open in case Shrewsbury at a future time should apply for modification of this opinion and order or further relief on the ground that it is not receiving reliable service or sufficient capacity at the necessary voltage from NEPCO.

(F) The examiner's decision to the extent not inconsistent herewith is hereby adopted as part of this opinion.

(G) Exceptions not expressly granted are hereby denied.

Ross and O'Connor, *Commissioners, concurring:*

We agree with the majority's decision affording Shrewsbury the benefit of NEPCO's W–3 rate, but disagree with the reasoning.

NEPCO is a wholly owned subsidiary of the NEES system which generates, distributes and sells electric energy at wholesale and retail. It makes wholesale sales under its W–3 rate schedule, the availability provision of which reads as follows:

> Service under this rate is available to any wholesale customer which purchases primary electricity for resale and which has entered into a contract with the company.

At the present time, NEPCO makes sales under the W–3 tariff to the town of Littleton, N.H. and to Fitchburg Gas & Electric Co. in Massachusetts. NEPCO also makes sales under the W–3 tariff to three other wholly owned subsidiaries of NEES.[1] One of these affiliates, Massachusetts Electric Co., which like NEPCO owns generating facilities and distributes and sells at wholesale and retail, has a general service rate schedule, G–11, under which it makes sales to 23 other Massachusetts municipalities and to large industrial users. Shrewsbury, the complainant in this proceeding, is one of the 23 Massachusetts municipalities served under the G–11 rate, and happens to be located very close to the NEPCO line. Most of the other 22 municipalities are not so located. Service under the G–11 rate schedule is more costly to Shrewsbury than would prevail under the W–3 rate schedule.

Shrewsbury contends that it qualifies for the W–3 rate under the terms of that tariff and that the multiple wholesale rate structure employed by the NEES system violates Section 205(b) of the Federal Power Act which forbids the maintenance of any "unreasonable difference in rates, charges, services, facilities, or in any other respect, either as between localities or as between classes of service." It asks for an order, under Section 202(b), directing NEPCO to provide Shrewsbury with electric service at the lower W–3 rate.

In essence, Shrewsbury wants a cheaper rate. Section 202(b) is involved in this case only to the extent that it forms the legal basis for obtaining service under the W–3 rate schedule. As its counsel argued: "All Shrewsbury is saying is, 'We would like to buy in the most economic way available.'" (Tr. 705)

The majority resolves this proceeding with a "value-of-the-middleman" test. They reason that since the middleman, Mass. Elec., performs no service which could not be performed in its absence, the middleman must be eliminated. In so holding, the majority conveniently overlooks the valuable functions which Mass. Elec. performs. (NEPCO ex. 24) The elimination of a useless middleman is an appealing rationale but its application in this case creates more difficulties than it resolves. Clearly, the authorization of a new service arrangement for any one customer, involving a lower rate, cannot be rendered in a vacuum, particularly where, as here, the rationale appears to exclude other customers of the same class from the arrangement.

---

[1] In the past, W–3 sales were also made to New Hampshire Electric Co., Green Mountain Power Corp., and Central Vermont Power Corp.

The majority's reasoning squarely raises the issue of the fate of the other 22 municipalities served by Mass. Elec. which, it states, will be determined by the respective functions performed by NEPCO and Mass. Elec.: "It might well be that other wholesale customers of Mass. Elec. could show that they were likewise entitled to purchase electric energy directly from NEPCO but that would depend upon a record that is not before us now." (*Supra*, p. 378.) What kind of record would the other 22 communities have to make? What are the applicable standards? Answers to these questions must be clear, not for the purpose of making a *res adjudicata* determination of the rights of the other municipalities which are not parties to this case, but in order to evaluate the appropriateness of the majority's rationale.

The point is that Mass. Elec. provides an essential and critical function in furnishing electrical service to several of these communities, a fact the majority must know. Since the alleged absence of any function by Mass. Elec. constitutes the principal basis for the majority conclusion respecting Shrewsbury, this means that those communities which are served by necessary Mass. Elec. transmission lines will be denied service at NEPCO's W–3 rate since the middleman, Mass. Elec., in that instance, provides a valuable service. Thus, location will in essence be the determining factor with respect to the rates of each municipality.

The majority is thus veering from the "rolled-in" or "postage stamp" theory of rate making which is the hallmark of this Commission's past decisions. In addition, the majority, by emphasizing the details of the physical connection with NEPCO, is encouraging the other 22 Massachusetts municipalities to construct such facilities as may be required in order to effect a similar connection. In many of those situations, however, the connection may involve the unnecessary and wasteful duplication of existing Mass. Elec. facilities, a situation much to be deplored.

In our opinion, the disposition of this case depends upon the terms of NEPCO's W–3 tariff, recited above. Shrewsbury is a "wholesale customer" which "purchases primary electricity for resale" and is obviously willing to enter into a contract with NEPCO, a matter we can insure under Section 202(b). On the face of this tariff, Shrewsbury, no less than Mass. Elec., is entitled to the NEPCO W–3 rate.

While it would appear that the maintenance of multiple wholesale rates by the NEES companies constitutes discrimination prohibited by Section 205(b) of the Act, evidence directed to this issue was excluded on Shrewsbury's motion. The NEES companies recognize the impossibility of the existing situation and suggest that the only solution to this problem lies in the development of a uniform wholesale rate. They assert:

> that the proper course * * * is to proceed with the design of a *uniform system rate* applicable to *all* resale customers who purchase their requirements from system sources, and to put it into effect upon the earliest termination date of the present contracts. P. 8, Exceptions of NEES Cos., NEPCO and Mass. Elec.; [Emphasis added.]

While the suggested solution is meritorious and should be developed, the discrimination exists today, Shrewsbury's complaint is before us today, and we can and should, remedy the situation today.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON FORMAL COMPLAINT SEEKING AN ORDER REQUIRING DIRECT ELECTRIC POWER SERVICE

(Issued February 13, 1964)

HALL, *Presiding Examiner:* This proceeding, the first of its kind to arise under the Federal Power Act (Act), involves a formal complaint, filed under provisions

of Part II of the Act, by the Municipal Light Department of the Town of Shrewsbury, Massachusetts (Shrewsbury) against New England Power Company (NEPCO).

Shrewsbury complains that NEPCO misused its privileged position as a public utility, in conjunction with Shrewsbury's request for direct electric wholesale service, to compel Shrewsbury to (1) continue taking its requirements from NEPCO's affiliate, Massachusetts Electric Company (Mass. Electric), and (2) pay the latter's higher rate. The remedy sought is the issuance of an order directing NEPCO to render direct lower cost service to Shrewsbury under NEPCO's filed uniform rate of general applicability covering sales to Mass. Electric and others of Shrewsbury's customer class.

There appears to be no better way to comprehend and deal with this case than to approach it with knowledge of the fact that the Act indicates no intention to put a retailer into a straight-jacket insofar as its wholesale purchases of electric energy are concerned. Retailers are permitted freedom of choice where, as here, alternatives are available for choice, and such choice may be governed by price, service available, or other considerations bringing benefits to them and those they serve. Retailers have their own first-hand knowledge, experience and ideas as to what constitutes adequate and proper arrangements and services to meet their needs, present and anticipated, and in circumstances such as exist here should be permitted to exercise uncontrolled judgment in selecting their wholesaler, this being a right regularly exercised by them, where choices are available, in undertaking initial public service. Absent a showing to the contrary, the management of retailers must be presumed to be competent, to say nothing of having the responsibility, to make elections best suited to needs.[1] They are, in short, the preferred authority on electricity-at-work in their service areas.

NEPCO, in providing direct service to Shrewsbury, will be protected against any present loss of business—indeed its revenues will be increased (see *infra*, p. 412)—and, on the basis of the uptrend of Shrewsbury's requirements, it may expect continually increasing sales to Shrewsbury. In fact, because the savings under NEPCO's rate will be immediately passed on to ultimate consumers, the lower rate should cause a stronger upsurge in Shrewsbury's requirements, the end result being that the wider and greater services Shrewsbury seeks to provide its customers would increase NEPCO's sales to Shrewsbury over what they would otherwise be. Prosperity would breed prosperity.

NEPCO could have voluntarily and lawfully complied with Shrewsbury's request for direct service and uniform treatment had it wanted to upon (1) completion of the minimum five-year term, namely, February 14, 1961, of Shrewsbury's contract with Mass. Electric, or (2) at any time upon mutual agreement. NEPCO, however, discriminated against Shrewsbury and ignored

---

[1] Shrewsbury's management would be remiss in its duties if it did not seek the lowest cost wholesale service available in its area. As stated in *El Paso Natural Gas Co.* v. *Federal Power Commission*, 281 F. 2d 567, 573, cert. den., 366 U.S. 912:

> • • • It is the obligation of all regulated public utilities to operate with all reasonable economies. This applies to • • • economies of management. The net result of this, of course, is that such savings as are effected are passed on to the consuming public. This we consider to be the natural and necessary consequence of rate regulation.

Presumably NEPCO acquires its electric energy needs from the lowest cost sources available to it and it is to be commended for doing so. To be consistent, it cannot properly object to Shrewsbury following the same course to advance the public interest.

its public utility responsibility.[2] None of the claims advanced by NEPCO to avoid selling electric energy to Shrewsbury are sufficient to justify denial of direct service to the latter.

Shrewsbury's complaint is bottomed upon the correct premise that NEPCO's refusal of wholesale service, under and in accordance with NEPCO's filed FPC tariff, is not final and conclusive of Shrewsbury's rights and may be nullified or set aside by the Commission when such action is shown, as it is, to be at variance with (1) primary purposes of the Act, and (2) NEPCO's voluntarily assumed public utility obligations as a wholesaler. Stated differently, the complaint brings the functions of the Commission into play for the purpose of having the Commission administer the provisions of the Act applicable to NEPCO's filed tariff and activities in a manner necessary to the proper and complete exercise of its jurisdiction.

The Town of Shrewsbury is traversed by NEPCO's 69 kv transmission lines and Shrewsbury is already interconnected indirectly with NEPCO's generation and transmission facilities through NEPCO's connecting link with Mass. Electric's equipment in NEPCO's 69/13.8 kv substation located within the Town limits of Shrewsbury. At that substation, which is one of NEPCO's ten delivery points in Mass. Electric's Worcester District, NEPCO transforms the power from 69 to 13.8 kv and then delivers it to Mass. Electric.

The electric energy Mass. Electric sells to Shrewsbury is normally delivered at the 69/13.8 kv substation, but only part of NEPCO's delivery at that point is needed to meet Shrewsbury's requirements. The balance is transmitted and sold by Mass. Electric to others located outside the Town limits. Shrewsbury asks the Commission to order NEPCO to comply with Shrewsbury's request to connect its transmission facilities directly with and to sell electric energy directly to Shrewsbury without discrimination, and at 69 kv, in lieu of the higher cost service being furnished through Mass. Electric's intervening facilities at 13.8 kv. The granting of the relief sought herein will divorce Shrewsbury from its interconnection with Mass. Electric's facilities.

NEPCO and Mass. Electric are subsidiaries of the New England Electric System (NEES), a holding company.[3] NEPCO is a wholesale electric generating and transmitting company which, *inter alia*, supplies Mass. Electric with most of its power requirements. Mass. Electric sells power at wholesale for resale and at retail in Massachusetts.

NEPCO and Mass. Electric could by choice have been, or they can now be, made one. But since by design they are two, for the purposes of this case they

---

[2] While Shrewsbury has purchased its requirements from Mass. Electric and its predecessors for more than 50 years, it has, since 1957, been seeking to buy its requirement directly from NEPCO and under the same uniform wholesale rate and terms as NEPCO applies to sales made by it to other resale customers. NEPCO's jurisdictional business is not limited to its affiliates in NEES but also includes Fitchburg Gas and Electric Light Company and the Town of Littleton, New Hampshire. It also serves a number of large industrial customers.

[3] NEES controls four electric and eight gas operating subsidiaries and a system service company. The four electric utility subsidiaries are (1) Granite State Electric Company, which operates in parts of New Hampshire; (2) The Narragansett Electric Company, which operates in parts of Rhode Island; (3) Mass. Electric, which operates in parts of Massachusetts; and (4) NEPCO, a wholesaler of electric energy, which operates a bulk supply generation and transmission system in Vermont, New Hampshire and Massachusetts having an installed capacity of 1,118,000 kw (of which 250,000 kw has just gone on the line), shortly to be increased by an additional 250,000 kw. In 1962 NEPCO's total sales were 5.6 billion kwh, of which 82 percent was supplied to Mass. Electric. NEPCO's sales for resale to 41 resale customers were 5.3 billion kwh, or 93.7 percent, and its direct sales to 22 industrial customers were 353 million kwh, or 6.3 percent.

must be regulated for what they are—separated and affiliated companies (*Cf. Cincinnati Gas & Electric Co.* v. *Federal Power Commission*, 246 F. 2d 688, 692–693). They were purposely incorporated as, and exist as, separate corporations, have separate corporate contracts, buy and sell under separate rate schedules, keep separate books, and report separately to regulatory commissions. The fact that they are controlled by a common parent does not license NEPCO to discriminate against nonaffiliates and prefer its affiliates. Rather it signals the existence of a situation requiring the Commission to give the most careful scrutiny and responsible reaction to protect the public interest (*Cf. Mississippi River Fuel Corp.* v. *Federal Power Commission*, 252 F. 2d 619, 621–623).

While the Commission may consider, as the Examiner has, the functional alignment of the NEES companies, it "must also, and always, relate its action to the primary aim of the Act to guard consumers against excessive rates" (*City of Detroit* v. *Federal Power Commission*, 230 F. 2d 810, 817, cert. den. 352 U.S. 829; see also *Pennsylvania Water and Power Co.* v. *Federal Power Commission*, 343 U.S. 414, 418). As an agency of Congress, the Commission is "charged with the enforcement of no policy except the policy of the law" (*Humphrey's Executor* v. *United States*, 295 U.S. 602, 624). As the Commission put it in *Treatment of Federal Income Taxes, Etc.*, 12 FPC 869, 872:

> This Commission is an agency of Congress created to perform certain legislative functions which Congress has delegated to us. We have a legal and moral obligation to abide by and execute the laws of Congress. This obligation does not permit us to substitute our judgment for that of the Congress or nullify the clear Congressional intent by administrative action.

The public interest in the present case lies largely in the maintenance of the statutory standard of just, reasonable, and not unduly discriminatory or preferential wholesale rates for electric energy in interstate commerce, and in the enforcement of that standard by the effective administration of the statutory provisions for adherence to filed rates of general applicability such as NEPCO's W-3 rate under which Shrewsbury desires to purchase its requirements. For adherence to filed rates of this type is essential to assure (1) that the benefits of rate regulation provided by the Act are passed along to ultimate consumers, and (2) that the wholesale rates resulting from federal regulation are uniformly available to other retailing electric utilities desiring to purchase thereunder.

This proceeding could be treated as a "discrimination case"[4] founded upon Sections 205 and 206 of the Act, with the broad authority conferred by Section 309 being utilized, as it often is, to carry out the provisions of the Act. The relief requested by Shrewsbury, however, is sought primarily under Section 202(b). But it recognizes that this section, in the circumstances of this case, must be construed to give effect to the rate standard[5] banning preferential discrimination if the Commission's authority to enforce that standard and promote the purposes of the Act is to be effective at all.

---

[4] *Cf. Willmut Gas & Oil Co., et al.* v. *United Gas Pipe Line Co.*, 12 FPC 132, 144–146, affirming Examiner's decision, 12 FPC 399, 401; *Otter Tail Power Co.*, 2 FPC 134.

[5] The rate standard is prescribed in Part II of the Act in Sections 205(a), 205(b) and 206(a). In Section 205(a):

> All rates and charges * * * shall be just and reasonable, and any * * * that is not just and reasonable is hereby declared to be unlawful.

In Section 205(b):

> No public utility shall * * * (1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage, or (2)

Footnotes continued on following page.

Generally speaking, and insofar as the sale or exchange of electric energy is concerned, the provisions of Section 202(b) (*infra*, p. 401) empower the Commission, upon a finding that such action is necessary and appropriate in the public interest, to compel public utilities to advance the public interest by providing the services they are capable of providing with existing facilities but which they, for reasons of their own, fail or refuse to provide voluntarily. In short, Section 202(b) enables the Commission, after inquiry into the activities and methods of public utilities in carrying on their businesses in their private interests, to give relief to those whose interests coincide with the public interest. Comparable power relating to natural gas companies is contained in, and in a variety of circumstances is regularly exercised by the Commission under, Section 7(a) of the Natural Gas Act. That Act, enacted in 1938, is largely patterned after Parts II and III of the Federal Power Act which became law in 1935.

As is apparent from what has been said, the controversy herein was precipitated by NEPCO's refusal to sell power to Shrewsbury on the same terms and conditions it sells to other customers for resale under its filed FPC rate schedule of general applicability. Such refusal forced Shrewsbury to continue receiving service through Mass. Electric's facilities and to pay Mass. Electric's higher rate, that is until Shrewsbury's rights can be enforced and protected by the Commission.

Under NEPCO's rate (now designated its W-3 rate[6]) Shrewsbury would realize savings estimated by it, on the basis of 1962 takings, at about $45,000

---

maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.

In Section 206(a):

Whenever the Commission * * * shall find that any rate, charge * * * is unjust, unreasonable, unduly discriminatory or preferential, the Commission shall determine the just and reasonable rate, charge * * * and fix the same by order.

That the purpose of power given the Commission by § 206(a) is the protection of the public interest, as distinguished from the private interests of the utilities, is evidenced by the recital in § 201 of the Act that the scheme of regulation imposed "is necessary in the public interest."

[*Federal Power Commission* v. *Sierra Pacific Power Co.*, 350 U.S. 348, 355.] And as pointed out in *Mississippi River Fuel Corp.* v. *Federal Power Commission*, 252 F. 2d 619, 626, cert. den. 355 U.S. 904, with reference to Section 5(a) of the Natural Gas Act—the equivalent of Section 206(a) of the Federal Power Act: The Commission has "a positive duty under the basic provisions of Section 5(a) to eliminate preferential discrimination."

Accordingly, the only lawful rates under the statute are those meeting the standard of just, reasonable or not unduly discriminatory or preferential. Plainly, Section 202(b), upon which Shrewsbury is placing primary reliance, must be construed, and for the purposes of this decision is construed, in the light of the protection the Act provides from unjust and unreasonable treatment. This serves the "major purpose of the whole Act * * * to protect consumers against excessive prices" (*Pennsylvania Water and Power Co.* v. *Federal Power Commission*, 343 U.S. 414, 418).

In order to serve the public interest best Congress adopted a policy of consumer protection under the Act. This policy is the same under the Natural Gas Act. In discussing this policy in *Atlantic Refining Co.* v. *P.S.C. of the State of New York*, 360 U.S. 378, 388, the Supreme Court said:

The purpose of the Natural Gas Act was to underwrite just and reasonable rates to consumers * * *. The Act was so framed as to afford consumers a complete, permanent and effective bond of protection from excessive rates and charges.

[6] NEPCO's uniform rate has been successively denoted as follows:

Rate W-1, effective August 1, 1953;
Rate W-2, effective November 1, 1962; superseding Rate W-1;
Rate W-3, effective March 1, 1962; superseding Rate W-2.

per year as compared with Mass. Electric's rate.[7] As Shrewsbury's load increases so will its savings.

Shrewsbury's purchased power costs were 73 percent of total operating expenses in 1962, and 61 percent of total revenues.[8] Accordingly, Shrewsbury's target for cost reductions must be primarily in its power costs. However, its decision to obtain its future requirements directly from NEPCO rests on a much broader base.

Among the purposes Shrewsbury seeks to accomplish with direct service from NEPCO is improvement of its position to attract additional industrial customers, there being areas available for development and an effort is being made to catch the interested eye of more industry willing to locate in the Town.[9] Shrewsbury is not overlooking the distinct possibility that the availability of rates more favorable than those it is presently charging could be the decisive factor for success in this regard. The distance it would have to transmit power to serve the remotest industrial area would be only three to four miles.

The connection which Shrewsbury seeks would provide it with an independent bulk power supply at 69 kv which NEPCO can readily furnish. This, Shrewsbury contends, would enable it "to plan and engineer its future growth flexibility, and would free it to promote increased customer utilization of electricity and to attract desirable industrial customers." Shrewsbury's manager does not consider that Shrewsbury is obtaining "maximum utilization" of electricity by its customers because it is "not now able to charge rates low enough to promote expanded customer usage."

Shrewsbury intends to initiate a load promotion program to increase its load factor which would further reduce Shrewsbury's average cost of power. This is possible because of the design of NEPCO's wholesale rate, which has a high demand charge relative to the energy charge.[10] The high demand charge impels, and the low energy charge facilitates, the design of promotional rates for off-peak service such as air-conditioning and water heating.

For the same reason, under NEPCO's wholesale rate, Shrewsbury hopes to be able to further reduce its power cost by using packaged diesel, peaksaving generating units.

Commission counsel correctly point out that "Mass. Electric's present service to Shrewsbury is inadequate because of the artificial market arrangement which arbitrarily assigns Shrewsbury to Mass. Electric. The existing arrangement prevents the Town from offering promotional rates for house heating and all electric living which access to NEPCO's rates permits Mass. Electric to offer to its retail customers."

Shrewsbury has done everything possible to locate its facilities convenient to NEPCO's established delivery point within the Town limits. NEPCO's uniform policy is to require a customer "to build to the nearest established delivery point" on its "high tension" system, and at that point to pay Rate W–3 for delivery after a "single transformation" performed by NEPCO.

Mass. Electric's deliveries to Shrewsbury are currently made to Shrewsbury's new Worthington Avenue substation, recently completed by Shrewsbury at a

---

[7] Because Mass. Electric buys most of its power from NEPCO, NEPCO's rates are necessarily lower than Mass. Electric's rates.

[8] 1962:

Purchased power costs	$620,508
Total operating expenses (including purchased power costs)	847,756
Total operating revenue	1,020,888

[9] Shrewsbury has several industrial customers, the largest having a present load of 750 kw. One such customer expects to triple in size in the near future.

[10] NEPCO Rate W–3: Demand, $2.95/kw; Energy, 0.64¢/kwh. Mass. Electric G–11: Demand, $1.25/kw; Energy, 1.10¢/kwh.

cost of approximately $400,000, from which substation Shrewsbury distributes energy at 4.16 kv to its retail customers located within the Town limits. The Worthington Avenue substation, designed for an ultimate load of 30,000 kw and located beneath NEPCO's 69 kv lines with the concurrence of NEPCO, adjoins the NEPCO's 69/13.8 kv substation in the Town and constitutes a major step in Shrewsbury's "program for giving * * * Shrewsbury the best possible service at economical rates." [11] Formerly, Mass. Electric made deliveries to Shrewsbury within the same substation in which it received deliveries from NEPCO.

Shrewsbury is striving to make the industry's slogan "Live Better Electrically" more of a reality than it is in its service area.[12] It is dedicated to improved customer services and a carefully planned expansion program to carry the economy of the area forward. Its continuing perseverance in this proceeding in the pursuit of reduced power costs reflects its awareness of the fact, already proven in other areas, that low cost power works magic in terms of social and economic progress.

The motivation of Shrewsbury being plainly visible, the Commission in this proceeding must do what the Act contemplates—cause NEPCO to live up to its share of its public service responsibility by providing Shrewsbury and its customers the help they need to help themselves. It is to their credit that they are not content to be anywhere but in the forefront insofar as the sale and use of electric energy is concerned.

In the Examiner's view, to deny Shrewsbury's request for direct service from NEPCO would be to reward NEPCO's efforts which tend to control Shrewsbury's growth and deny to its customers benefits to which they are entitled and which they would otherwise receive. Such denial would constitute a death in the family of retailers—the death of the efforts of a retailer designed to materially assist in carrying it and those it serves to their loftiest heights. On the other hand, to grant the request will reflect the Commission's true concern about those in need of its help and will provide another outstanding example to retailers to have the courage to push on, despite discouragement, and prove that "it can be done."

---

[11] Part of the energy delivered to Shrewsbury is carried out of the Worthington Avenue substation over two 13.8 kv distribution lines to Shrewsbury's Hilltop substation a modern structure constructed in 1956. At Hilltop the energy is transformed to 4.16 kv and fed into distribution circuits.

[12] Counsel for Shrewsbury point out that—

The load on Shrewsbury's electric system has been growing rapidly as follows * * *:

	Number of customers	Demand (kw)	Energy purchases (kwh)
1950	3,591	3,334	10,500,000
1962	5,449	10,800	42,000,000

Shrewsbury's rate of growth is 10% compounded annually as compared with the national average of 7% * * *. It is growing 1.6 times as fast as Mass. Electric's growth in the neighboring Worcester market * * *. This growth is expected to continue in the future as follows * * *:

	Demand (kw)	Energy purchases (kwh)
1963	12,000	47,304,000
1965	14,500	59,699,000
1968	19,100	[1] 78,600,000

[1] These are Nepco's estimates except that Nepco furnished no kwh estimate for 1968 so we computed this by using the load factor of Nepco's 1965 estimate. They cover only normal growth.

The fact that NEPCO's affiliate, Mass. Electric, has served Shrewsbury in the past, and desires to continue serving it in the future, is of no determinative force or effect in the ascertainment of where the public interest—as contrasted with the private interest—lies in this case. The right of free choice (such as Shrewsbury seeks to exercise in the selection of NEPCO as its direct supplier), as well as the freedom of competition, have been and will continue to be the strength of the Nation. This truth was stated most effectively by President Lyndon B. Johnson in his special message to Congress on February 5, 1964, when he urged support for an intensified campaign to move interests of American consumers out of "the back seat." As the President stated: "America's economy centers on the consumer." "Freedom of choice for consumers from our storehouse of goods, at the lowest possible prices, is the very cornerstone of American consumer policy. I believe strongly in this principle."

Competition of utilities with each other and with others engaged in the fuel business by lawful methods is clearly unrestricted. Normal rate regulation by the Commission merely enforces the policies of the Act to provide those engaged in the power business with the tools they must work with. It is up to them to make the most of what they have through aggressive and enthusiastic effort.

PROCEEDINGS BEFORE THE COMMISSION

Shrewsbury's complaint was filed on February 5, 1962. It requests a full investigation of the facts concerning NEPCO's refusal to supply power directly to Shrewsbury at the legally established rate for Shrewsbury's customer class. It also requests appropriate remedial action against NEPCO and under Sections 202(b), 205(a), 206(a) and 207 [12] of the Act.

The complaint asks the Commission to order NEPCO to serve Shrewsbury directly at NEPCO's standard wholesale (W-3) rate, without discrimination.

On April 2, 1962, NEPCO filed a combined answer and motion to dismiss, to which Shrewsbury responded on May 7, 1962.

After informal conference held by representatives of Shrewsbury, NEPCO and the Commission Staff, the Commission set the case for hearing by an order issued May 2, 1963. That order also prescribed the prehearing procedure followed by the parties with reference to the service of testimony, exhibits and motions.

As part of its order setting the case for hearing, the Commission denied NEPCO's motion to dismiss which, *inter alia*, raised the issues whether Shrewsbury, being a municipal corporation, and engaged solely in local distribution, was eligible for relief under Section 202(b) and was a "person" "engaged in the transmission and sale of electric energy" within the meaning of that section.

On May 16, 1963, the Commission issued its order granting Mass. Electric's petition to intervene.

Following the four-day hearing held July 16–19, 1963, main and reply briefs were filed on September 16 and October 7, 1963, respectively, by counsel for NEPCO and Mass. Electric, Shrewsbury and the Commission Staff.

In this proceeding Mass. Electric associated itself with NEPCO in making a combined presentation of evidence; filing joint briefs; and in opposing the relief sought by Shrewsbury.

The Massachusetts Department of Public Utilities filed a notice of intervention but was not represented at the hearing and took no part in the proceeding.

[12] Section 207 is confined to proceedings initiated "upon complaint of a State commission." Accordingly, it will suffice to point out here that Shrewbury's reliance thereon is in connection with its contention that "neither the existing nor proposed service [through Mass. Electric's facilities] to Shrewbury has the reliability required by the standards of Section 207 of the Act."

JURISDICTION

No jurisdictional questions are presented in the present posture of this case. Both NEPCO and Mass. Electric are admittedly "public utilities" subject to the Commission's jurisdiction. Both, in fact, make jurisdictional sales within the Town limits of Shrewsbury—NEPCO's sale being made to Mass. Electric and the latter's sale being made to Shrewsbury. And in view of the Commission's prior denial of NEPCO's motion to dismiss Shrewsbury's complaint, there is no issue presently outstanding regarding Shrewsbury's right to apply for an interconnection under Section 202(b).

Shrewsbury Seeks Equal Treatment From NEPCO Rather Than Preferred Treatment From Mass. Electric

Counsel for NEPCO and Mass. Electric contend "that what Shrewsbury is asking for is preferential rate treatment based solely on its proximity to certain of the high tension facilities by which NEPCO carries out its responsibilities as bulk supplier for the entire area served by the NEES companies. To avoid discrimination against other resale customers [of Mass. Electric] similar in character to Shrewsbury, the NEES companies urge that Shrewsbury should continue to be served by Mass. Electric over the existing interconnection; and that any rate complaint Shrewsbury may wish to bring before the Commission should properly be heard under section 206, and not under section 202(b)." It is therefore the suggestion of counsel that the complaint be dismissed without prejudice to commencement of a rate proceeding under Section 206(a). But such a disposition misses the point of Shrewsbury's complaint.

Shrewsbury makes no claim that discrimination or preferential treatment exists among Mass. Electric's customers or that Mass. Electric's rates are unjust and unreasonable. Rather it contends that since NEPCO's W-3 rate is an existing filed rate of general applicability, Shrewsbury must be treated on a parity with other resale customers purchasing thereunder. That is, its position is based upon the fundamental regulatory principle that all customers falling into the same class are entitled to receive the same kind of service under the same or similar conditions, and are entitled to the same rate.

When a public utility such as NEPCO operates under a rate of general applicability, it has no justifiable reason for demanding or accepting surcharges in addition to the filed rate, nor for refusing service. Of course, if the filed rate should become inadequate for any reason there is nothing to prevent public utilities from requesting an increase. If the Commission, after hearing, determines the filed rate to be so low as to conflict with the public interest, it may increase the rate.

NEPCO's filed W-3 rate reflects the "rolled-in" concept of rate making discussed in *Battle Creek Gas Co.* v. *Federal Power Commission*, 281 F. 2d 42, 46. As the Court pointed out, the rolled-in rate recognizes that a company's transmission system—

> * * * is not just a collection of discrete pieces and parts, but an integrated system serving all of its customers. Applying this approach the cost of the various assets of the system are collected or "rolled in" to arrive at cost of the entire system which is then pro-rated among all of the customers * * *.
>
> This method has many apparent advantages and the Commission has repeatedly stated a general preference for it whenever it may equitably be used. It avoids the onerous administrative burden of having to assign a different portion of the cost to each of a large number of customers. It results, if all other factors be equal, in all customers paying the same

price for [electric energy] taken from the [transmission system] at the same point, and recognizes that all customers enjoy the benefits of having the whole * * * system.

* * * [U]se of the rolled-in approach ensures that two otherwise similar customers will not pay radically different prices for commingled [electric energy] coming from the same [transmission system], merely because one happens to have been receiving the service longer than the other. Use of the rolled-in method thus serves the interest of equal treatment for customers receiving equal service.[14]

And as the Examiner stated in *Willmut*, 12 FPC 399, 410, aff'd 12 FPC 132:

* * * United's rate expert (Zinder) testified, in determining the town border customers to be included in a uniform rate area the customers need not "have exactly the same load factor, exactly the same volume, exactly the same distance from supply to get the same rate. In the averaging process * * * there may be differences. The purpose of averaging is to remove such differences within a reasonable range." Thus where, as here, uniform rate zones are established and maintained within a reasonable range so that the public interest, *i.e.*, that of investors and consumers, is protected, there can be no objection to the zone method of operation and regulation. Certainly it would not appear to be of any moment to a * * * company, so long as it earns a fair return, if all of its customers within an established zone pay a uniform rate rather than different rates producing the same aggregate revenue.

The subject under consideration can best be rounded out by pointing to the fact that in *United Gas Pipe Line Co.* v. *Memphis Light, Gas and Water Division, et al.*, 358 U.S. 103, at page 115, note 8 (which note can be read in connection with note 1, page 117, of Mr. Justice Douglas' dissenting opinion) the Supreme Court looked approvingly upon the Commission's tariff-and-service agreement system promulgated for pipelines, which is the same type of system prescribed for public utilities. That system provides for rate schedules of general applicability, making it possible for customers to pay the "going" rates, as established from time to time in accordance with the procedures prescribed by the Natural Gas Act. The Court observed that until promulgation of that system, "it was most difficult for customers, competitors, and the Commission itself to ascertain whether rates to various customers were unduly discriminatory or otherwise unreasonable."

Mass. Electric's Contract With Shrewsbury Set Forth in Mass. Electric's FPC Tariff Does Not Constitute a Bar to Service by NEPCO

Counsel for NEPCO and Mass. Electric argue that the Commission has no authority to abrogate the contract between Shrewsbury and Mass. Electric prior to February 14, 1966, that being the end of the second five-year period to which it is contended the contract was, by its terms, automatically extended.

The Examiner does not agree that NEPCO's actions in leaving Shrewsbury with no choice but to continue paying the Mass. Electric higher rate was effective to renew the Mass. Electric contract for the second five-year period. In any event, nothing done by the parties in any way impairs the regulatory power of the Commission, for the contract remains "fully subject to the paramount power

[14] In the quoted excerpt from the *Battle Creek* case the Examiner has omitted footnotes and, by the use of the words in brackets in the excerpt, has applied the Court's remarks to an electric system, such as operated by NEPCO, rather than a natural gas system, that being the subject of the Court's remarks.

of the Commission to modify * * * when necessary in the public interest" (*United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332, 344).[18]

Shrewsbury's contract with Mass. Electric, as well as the Examiner's views, can best be understood in the light of the principles set forth in the following excerpts from decided cases: *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp., et al.*, 350 U.S. 332, 344–345:

> * * * [C]ompanies are understandably not given the same explicit standing to complain of their own contracts as are those who represent the public interest or those who might be discriminated against * * *.

Michigan Consolidated Gas Co. v. *Panhandle Eastern Pipe Line Co.*, 173 F. 2d 784, 789:

> * * * We do hold that adequacy and impartiality of service, in the light of existing circumstances, is within Commission control. This must be so if control over rates means anything, since adequate service is a necessary concomitant in the fixing of reasonable rates. If this is so in respect to private utilities it must be even more important in the case of utilities which are affected with a public interest. If the Commission has no authority to order adequate service to customers, in view of all the conditions and circumstances involved, the basic purpose of the Natural Gas Act fails of realization. We can attribute to the Congress no purpose to withhold from the Commission control over services. The power to prevent preferences and discrimination both as between individuals and classes carried with it by necessary and inescapable implication, authority to regulate service.

Re Village of Fox Point, 28 PUR 3d 168, 170 (Wisconsin Public Service Commission):

> * * * There appears to be a widespread disposition to refuse to face up to the fact that from the very beginning of the concept of public utility service the obligations of the utility to serve and of the customers to take service have not been commensurate with each other. Any customer lying within a utility's profession of service has a continuing right to receive service, and the utility a corresponding continuing duty to furnish such service under reasonable terms and conditions. However, the ties that bind the customer to the utility are much less secure. Lacking contract obligations, any customer, be he small residential, large industrial, or a public or private utility resale customer, is free to discontinue service at will.
>
> Ordinarily, the freedom of customers to discontinue utility service at will is not a matter of serious consequence to the utility. The great mass of customers individually require only limited utility facilities and usually represent service locations which at one time or another will require utility service. However, in the case of large industrial and resale customers, it is customary for the utility to require term contracts to insure at least a minimum period of service. Both the commission and the statutes recognize the reasonableness of minimum contract terms for customers whose use of service is such that other customers would be adversely affected by a premature termination of service.

---

[18] Where, as here, the term of the contract is deemed part of the definition of the service or consideration and therefore part of "the rate", it yields to regulation. It has long been held that private contract rights must yield to public authority and such rights may be abrogated when in conflict with the proper exercise of a commission's regulation in the public interest. *Sutter Butte Canal Co.* v. *Railroad Commission of California*, 279 U.S. 125, 137–138; *Midland Realty Co.* v. *Kansas City P. & L. Co.*, 300 U.S. 109, 113–114; *Union Dry Goods Co.* v. *Georgia Public Service Corp.*, 248 U.S. 372, 375–377.

Service to Shrewsbury has been rendered under a series of contracts or service agreements, the present one, originally entered into by Shrewsbury with Worcester County Electric Company on July 5, 1955, was filed with the Commission as Mass. Electric's FPC Rate Schedule No. 26,[16] but such filing (as well as others by Mass. Electric) was not made until after the filing of Shrewsbury's complaint. The filing of Schedule No. 26 was also made subsequent to the Commission's written inquiry directing Mass. Electric's attention to various instances in which its Form 1 reports for 1961 showed jurisdictional sales to private utilities and municipalities for which no rate schedules had theretofore been filed with the Commission.[17] The Commission's requirement that Mass. Electric file all of its contracts and rates for jurisdictional sales caused it to comply with applicable provisions of the Commission's published rules and regulations, and, of course, was essential to the Commission's discharge of the responsibilities Congress required it to discharge in regulation of interstate

---

[16] An understanding of the filing and notice requirements of the Act will facilitate consideration and disposition of this case. It may first be noted in this connection that the principles set forth in *Mobile* (350 U.S. 332) were followed in *Sierra* (350 U.S. 348). In these decisions the Supreme Court made it clear that the Natural Gas Act and the Federal Power Act recognize the need "for individualized arrangements between natural gas [and public utility] companies and distributors," the Acts permitting "the relations between the parties to be established initially by contract, the protection of the public interest being afforded by supervision of the individual contracts, which to that end must be filed with the Commission and made public" (332 U.S. at p. 339).

The Act requires public utilities to file all rates and contracts with the Commission (Section 205(c)) and authorizes the Commission to modify any rate or contract which it determines to be "unjust, unreasonable, unduly discriminatory, or preferential" (Section 206(a)). Changes to previously filed rates or contracts must be filed with the Commission at least 30 days before they are to go into effect (Section 205(d)), and the Commission may suspend the operation of the new rate pending a determination of its reasonableness (Section 205(e)).

The Act's filed rate procedure is particularly adapted to enforcing the nondiscriminatory and nonpreferential part of the rate standard. For the public filing and adherence to a rate of general applicability, such as NEPCO's W-3 rate, protects the interests of other wholesale purchasers, or potential purchasers, and the ultimate consumers served by them. Thus where, as here, a local distributor in an area desires service at the rate reflected in a public utility's filed uniform rate schedule it may, if refused service by the public utility from which service is sought, apply to the Commission for an order compelling service under Section 202(b), just as Shrewsbury has done here. The Commission in enforcing the statutory rate standard, and others interested in having it do so, could not rely upon the filed rate if changes in the legal rate could be demanded or effectuated piecemeal, case by case, ignoring the filed rate.

[17] On October 11, 1962, Mass. Electric responded to the Commission's inquiry. It pointed out, *inter alia*, that its sales to Shrewsbury and others had been regarded as second-level sales—

> * * * made in Massachusetts to other utilities or municipal light departments, for resale to ultimate consumers in Massachusetts. Rate schedules for these sales have not heretofore been filed with your Commision * * *.
>
> * * * * * * *
>
> *Second-level sales.* In the case of an integrated electric system such as ours, the division of regulatory jurisdiction between the Federal Power Commission and the utilities commissions of the several states has been a matter of importance and concern for many years. In the case of sales for resale, we have heretofore disguished between first-level sales, which we have regarded as subject to the jurisdiction of the Federal Power Commission, and second-level sales, which we have assumed to be subject to the jurisdiction of the state commission.

That there was no justification for the distinction made between first- and second-level sales is clearly established by an unbroken line of decisions too numerous and well known to require citation. The Courts have uniformly held that it is immaterial whether the sale takes place before a state boundary is reached, or at the state boundary, or afterward at any point short of the last sale at retail to the ultimate consumer.

The Shrewsbury-Mass. Electric contract was, from its inception, covered by the Act (*Cities Service Gas Producing Co.* v. *Federal Power Commission*, 283 F. 2d 726, 730).

wholesale electric rates in the public interest. Then, too, it had long been established by judicial decision that all interstate wholesale sales for resale made by public utilities such as NEPCO and Mass. Electric, regardless of whether made to private utilities or public bodies, are jurisdictional sales (*United States of America* v. *Public Utilities Commission of California*, 345 U.S. 295 (1953); *Wisconsin-Michigan Power Co.* v. *Federal Power Commission*, 197 F. 2d 472 (1952), cert. den. 345 U.S. 934; *State of Wisconsin* v. *Federal Power Commission*, 201 F. 2d 183, cert. den. 345 U.S. 934; *California Electric Power Co.* v. *Federal Power Commission*, 199 F. 2d 206 (1952), cert. den. 345 U.S. 934). Insofar as the Section 201(f) exemption of public agencies is concerned, these cases hold that this section of the Act does not deprive municipalities or other public agencies distributing electricity of the benefits of the Act, but exempts them only from its burdens. As the Court stated in the *California Electric* case, for example (199 F. 2d at pp. 208–209):

> Nor is Section 201(f) of help to the petitioner. This section states that "No provision in this Part shall apply to, or be deemed to include, the United States, a State or any political subdivision of a State * * *." It is clear that the intended exclusion or exemption is from the regulatory burdens of the statute. For the purposes of the Act these public bodies are simply not deemed to be public utilities. But it would be inconsistent with the policy of the legislation, as well as with certain of its provisions already mentioned, to hold that, as wholesale purchasers of power, they are excluded from the benefits of the regulation of the utilities from which they buy. The entire thrust of Part II is toward the seller at wholesale, not the buyer.

Following its usual practice relating to tardy filings, the Commission expressly protected the contractual rights of Shrewsbury and other retailers by accepting the contracts for filing effective October 27, 1962, upon the express condition that—

> This acceptance for filing does not constitute approval of any service, rate, charge, classification, or any rule, regulation, contract, or practice affecting such rate or service provided for in the above-designated rate schedules; nor shall such acceptance be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate; and such acceptance is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against your company.

By the insertion of this condition in its acceptance letter dated February 18, 1963, the Commission made certain that disposition of Shrewsbury's complaint would in no way be hampered.

The Mass. Electric-Shrewsbury contract (Schedule No. 26) entitled Shrewsbury to purchase its requirements under Mass. Electric's General Service Rate G and obligated Shrewsbury to pay the construction cost of installations, originally estimated at $57,000, to be incurred by the seller to provide delivery to Shrewsbury. The contract was for an initial period of five years and was subject to automatic renewal for successive five year periods, unless six months prior to expiration, written notice is given by either party "that it does not care to have the contract continue after expiration date."

Shrewsbury having discharged its contractual obligations by the end of the minimum five-year term, February 14, 1961, was then fully paid up and free to seek out and switch to another supplier (NEPCO being an established wholesaler at its doorstep wasn't hard to find). In fact, when the contract was originally drawn the parties, having all the pertinent facts fresh in their minds,

were satisfied that there were then no outstanding obligations which either had to satisfy, or if there were any they were to be then satisfied. The contract expressly states in this regard:

> All existing agreements, written and oral, for the furnishing of electric service by the COMPANY to the CUSTOMER are hereby superseded and terminated as of the date of commencement of the term hereof and each party agrees to and does hereby release the other from all claims arising out of or in connection with said agreements except for any amounts unpaid for or in connection with electric service furnished thereunder prior to said date and except for any other claims arising subsequently to the date of execution hereof, of which the party claiming shall have given written notice to the other party prior to said date of commencement.

The agreement contains no indication that Shrewsbury's exercise of its right to terminate service after five years would (1) impair the financial ability of the seller to continue its service to other customers, (2) cast upon other customers an excessive burden; or (3) be unduly discriminatory to other customers. To the contrary, the only inference permitted by the terms of the contract is that Shrewsbury's termination of service on February 14, 1961, would not produce a serious situation for the seller and its remaining customers, Shrewsbury having already paid the cost of the installations required to provide the service it agreed to pay for. The contract was drafted by the parties with their eyes wide open and it is to be presumed that they protected themselves to the extent they deemed necessary. The terms of the contract are standard for all customers. As the Supreme Court's decisions in the *Mobile* and *Sierra* cases make clear, even assuming, *arguendo*, that Mass. Electric's obligation under the contract is to be regarded as an improvident bargain, it is not entitled at this late date to be relieved therefrom. As stated in *Sierra* (350 U.S. at p. 355):

> * * * But, while it may be that the Commission may not normally *impose* upon a public utility a rate which would produce less than a fair return, it does not follow that the public utility may not itself agree by contract to a rate affording less than a fair return or that, if it does so, it is entitled to be relieved of its improvident bargain. * * *

The agreed upon consideration having been met by Shrewsbury, there was and is no obligation, contractually or otherwise, upon Shrewsbury to pay severance damages in any form at or after the end of the minimum five-year contract term. The only outstanding obligation not met at the end of the five-year minimum term was NEPCO's public utility obligation to serve Shrewsbury when the latter made known its desire to purchase directly from NEPCO. Accordingly, NEPCO and Mass. Electric cannot now be heard to claim that direct service by NEPCO to Shrewsbury will inflict harm upon Mass. Electric and its remaining customers.[19] Moreover, nothing in the record suggests that Mass. Electric's overall business will not continue to grow. This means that because of the necessity to provide adequate lead time, Mass. Electric must always have excess capacity in its substations and other parts of its system to handle growth. Its sales have been steadily increasing and a continuation of the steady increase is clearly in prospect. As its counsel put it in their brief, "Although Shrewsbury's expert

[19] The Examiner excluded from the record NEPCO's proffered testimony regarding the terms and conditions for Mass. Electric sales to other municipalities. No one of them has intervened in this case, nor offered any objection to the proposed NEPCO service to Shrewsbury as preferential. The only discrimination in issue is whether NEPCO is discriminating against Shrewsbury by selling to affiliated and non-affiliated customers under terms and conditions which it refuses to extend to Shrewsbury. Counsel for both Shrewsbury and the Commission Staff agree that this case can be disposed of without a study of Mass. Electric's cost of service for its resale customers.

formulated his opinions and issued his recommendations without consideration of anybody's load growth but Shrewsbury's * * *, there is no escaping the fact that if Shrewsbury's load is growing, so is everybody else's including the other municipals in the Worcester District."

It thus appears that even if Mass. Electric's revenues are temporarily reduced by Shrewsbury's shift to NEPCO—which would mean no loss of business to the NEES system as a whole—Mass. Electric's additional sales to others should more than take up the slack in a relatively short period of time. Neither Mass. Electric, nor the NEES system, intend to stand still, nor have they in the past. This is corroborated, among other things, by the fact that the installed capacity of the NEPCO system is soon to be increased by an additional 250,000 kw (see ftn. 3, *supra*). In any event, every public utility, like every business and individual, "assumes the risk of loss in the hope of profit" (*Puget Sound P. & L. Co.* v. *Federal Power Commission*, 137 F. 2d 701, 702).[28a]

The Commission, of course, cannot look at the situation as a one-way street. The record clearly indicates that if by any chance Mass. Electric suffers any temporary loss by Shrewbury's shift to NEPCO it would only be a loss of future profits in an amount that, in the Examiner's view, is by no means commensurate with the prospective benefits to Shrewsbury and its customers. As the record amply demonstrates, Shrewsbury has adhered to sound and proven principles and is staying within safe bounds. Its policies have made it debt-free and strong and will continue to guarantee this strength. In this connection, it goes without saying that no wholesaler can be stronger than the market it serves. So the stronger the retailer the more healthy will be the wholesaler.

While no provision in the contract could have been effective to bar Shrewsbury from obtaining service from any other source available at the end of the minimum five-year contract term, it is significant that nothing in the contract even purports to bar Shrewsbury from obtaining service from a wholesaler of its choice, whether or not affiliated with the seller. Nor do the provisions of the contract purport to bar Shrewsbury from generating its own requirements with facilities it had a right to construct should its interests so dictate. In this regard it seems obvious that, because of the economics involved, the parties were cognizant of the fact that any other wholesaler selected by Shrewsbury would necessarily have to be an established wholesaler serving the area, or as indicated, Shrewsbury could have built and operated its own generating plant. Recognizing that NEPCO was the cheapest alternative source available, Shrewsbury naturally turned to NEPCO for its future requirements. But NEPCO presented an unexpected problem, for instead of standing by Shrewsbury's side at the critical time, NEPCO stood in its way (see *infra*, pp. 399–401). It did this with knowledge of (1) Shrewsbury's intention to terminate its contract with Mass. Electric, and (2) its duty to serve those in its service area who desire the wholesale service it renders.

Normally, of course, it is the custom of public utilities to take the high road of public service and make it easy for those desiring its service to deal with them by putting the facilities they have, or can install, to use in the service of their customers—it often being as easy to consult and do business with them as a single telephone call or written request. They welcome the opportunity to serve more customers and make the contribution they are capable of making to overall progress. But where affiliated companies are involved the situation may

[28a] No regulatory Commission should ever attempt to take the "loss" out of the profit and loss system. The principle has long been established (*Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U.S. 575, 590; *Regan* v. *Farmers' Loan & Trust Co.*, 154 U.S. 362, 409; *Covington and Lexington Turnpike Road Co.* v. *Sanford*, 164 U.S. 578, 596–597; *Los Angeles Gas Co.* v. *Railroad Comm.*, 289 U.S. 287, 313). *Hope Natural Gas Co.* v. *Federal Power Commission*, 196 F. 2d 803, 808–809.

sometimes be, and in this instance was, different. It was different here because of the private interests of the NEES system, as distinguished from the public interest sought to be served by Shrewsbury.

Under no circumstances can NEPCO's relationship to Mass. Electric be regarded as a means of insulating NEPCO from its statutory responsibility to serve all within its service area on a nondiscriminatory and nonpreferential basis. Nor may it, as it has attempted, "pick and choose" its customers. As the Supreme Court recognized in *United Fuel Co.* v. *Railroad Commission*, 278 U.S. 300, 309: "The primary duty of a public utility is to serve on reasonable terms all those who desire the service it renders. This does not permit it to pick and choose."

In addition to the other authority which may be invoked in this proceeding, Section 307(a) authorizes the Commission to investigate "whether any person has violated or is about to violate any provision of the Act." This provision applies disjunctively to past violations. Furthermore, the Act, in vesting the administration of its provisions in the Commission expressly confers upon the Commission broad power "to perform any and all acts * * * it may find necessary or appropriate to carry out the provisions of this Act." (Section 309) This section by itself is sufficient to enable the Commission to accord Shrewsbury the relief it seeks, but since the Commission may also invoke its authority under other provisions of the Act, it need not rely solely upon the provisions of Section 309.

Cases abound in which the Commission has utilized, and in which the courts have reminded the Commission that it could utilize, its general powers under Section 309 and the identical provisions of Section 16 of the Natural Gas Act, to protect its jurisdiction and enforce the purposes of the Act. The citation of one decision, the most recent, will suffice for present purposes. In *Public Service Commission of The State of New York* v. *Federal Power Commission*, 327 F. 2d 893 (CADC, No. 17673, January 2, 1964), the Court said with reference to the authority of the Commission under Section 16 of the Natural Gas Act:

> * * * Section 16 * * * empowers the Commission to perform any and all acts and to prescribe, issue, make, amend or rescind such orders or regulations as it may find necessary or appropriate to carry out the provisions of the Act.
>
> * * * * * * * *
>
> While the * * * Act is a statute and is not to be construed as a "constitution," nevertheless the problems placed under Commission administration, with consequent Commission responsibilities, call upon the courts to give the Act a scope reasonably necessary to permit the agency to perform its tasks consistently with the provisions and purposes of the legislation. The broad grant of implementing authority conferred by Section 16 is not confined to procedural regulations * * *. * * *
>
> All authority of the Commission need not be found in explicit language. Section 16 demonstrates a realization by Congress that the Commission would be confronted with unforeseen problems of administration in regulating this huge industry and should have a basis for coping with such confrontation. While the action of the Commission must conform with the terms, policies and purposes of the Act, it may use means which are not in all respects spelled out in detail. * * *

In view of the authority vested in the Commission by the applicable provisions of the Act, including its authority to "carry out the provisions" of the Act as

contemplated by Section 309, and also the fundamental principles of regulation hereinabove set forth which may not be scuttled, the order accompanying this decision does not exceed the power, but makes effective the duty, of the Commission in the circumstances of this case. The order abrogates Shrewsbury's contract with Mass. Electric, assuming it still to be effective, and requires NEPCO to enter into a contract for, and to commence direct service to Shrewsbury, with all deliberate speed, such service to be provided on the same terms and conditions as NEPCO applies to its other resale customers of Shrewsbury's classification. The well-timed and easy means employed by NEPCO in its negotiations with Shrewsbury to avoid its responsibilities of public service may not be tolerated, no just cause appearing for the discrimination it has practiced.

NEPCO's Refusal To Serve Shrewsbury

NEPCO's sale to Mass. Electric and other customers for resale is made at NEPCO's uniform wholesale rate set forth in NEPCO's FPC Electric Rate Schedule No. 118, filed pursuant to Section 205(c) of the Act, which is now designated its W–3 rate (see ftn. 6, *supra*).

Rate W–3 states:

> Service under this rate is available to any wholesale customer which purchases primary electricity for resale and which has entered into a contract with the company.

Shrewsbury is a "wholesale customer" which purchases "primary electricity for resale", and the characteristics of Shrewsbury's purchases are comparable to those of the customers served by NEPCO under the W–3 rate. It therefore qualifies for service under that rate. Indeed, NEPCO offered to serve Shrewsbury under this wholesale rate both in 1958 and 1961, but such offers were coupled with unacceptable and unlawful demands for surcharges. Shrewsbury could not lawfully have paid the surcharges had it wanted to. Had it agreed to pay them the Commission, in the exercise of its review function and when it caught up with their imposition, would have declared the payment thereof unlawful, with NEPCO being ordered to cease and desist from charging any rate other than its filed (W–3) rate (*California Electric Power Co.*, 10 FPC 152, 167, aff'd *California Electric Power Co.* v. *Federal Power Commission*, 199 F. 2d 206, cert. den. 345 U.S. 924).

NEPCO, having on file the W–3 rate of general applicability, could not legally impose the burden of surcharges upon Shrewsbury for it could charge the latter no rate other than its last legally filed, uncancelled, and unchanged rate. That is, NEPCO could "claim no rate as a legal right other than the filed rate, whether fixed or merely accepted by the Commission." *Montana-Dakota U. Co.* v. *Northwestern P. S. Co.*, 341 U.S. 246, 251. To use the words of the Fourth Circuit in the *Hope* case, 134 F. 2d 287, 311: "When rates were filed * * * they became the only lawful rates which the utility could charge or accept * * * and * * * there could be no occasion for a determination of their reasonableness except as reason for changing them in an order prescribing rates for the future."

In 1958 NEPCO offered to sell directly to Shrewsbury at the uniform wholesale rate but demanded an additional surcharge of $43,000 a year, based upon 22 percent of the $195,000 of additional facilities claimed to be necessary to make the service connection, such surcharge, as Staff counsel point out, was "not consistent with NEPCO's practices under its [then] W–1 rate schedule." Payment of the surcharge would have caused the cost of power from NEPCO to be in excess of the cost of the same power when purchased from Mass. Electric's

predecessor.[19] Shrewsbury submitted a counter offer proposing to pay the cost of the additional facilities as an outright connection charge, or itself build all the facilities on its land. NEPCO never replied to Shrewsbury's letter.

In 1961 NEPCO agreed to sell electric energy to Shrewsbury at its filed wholesale rate, but subject to Shrewsbury's payment of an unspecified surcharge based on NEPCO's claim that an additional investment would be required.

Since 1961 NEPCO has refused to serve Shrewsbury under any circumstances. Shrewsbury has submitted to NEPCO a contract, in NEPCO's standard form, fully executed by Shrewsbury, but NEPCO has returned it unsigned.

It is important to again call attention to the fact that Shrewsbury's contract with Mass. Electric, executed in 1955, was for an original five-year term beginning February 15, 1956 and ending February 14, 1961, subject to automatic renewal for an additional five years, unless six months prior to expiration, written notice was given by either party "that it does not care to have the contract continue after expiration date." Shrewsbury's unsuccessful efforts to purchase its power requirements directly from NEPCO began in 1957 and continued until after the end of the minimum five-year term of Shrewsbury's contract with Mass. Electric.[20]

Shrewsbury's counsel express the view, in which the Examiner concurs, that "it is difficult to conclude from [Shrewsbury's negotiations with NEPCO] that NEPCO was negotiating in good faith."

---

[19] As counsel for Shrewsbury point out in their brief, "No other customer receiving delivery at 13.8 kv from the low side of NEPCO's transformers was compelled to pay any surcharge. No other customer was compelled to pay a surcharge related to facilities between the high side of NEPCO's transformers and its so-called 'high tension' transmission lines. Meanwhile NEPCO was delivering energy to other customers at 2.4 kv at the wholesale rate, not only without exacting a surcharge, but actually allowing them to deduct from Rate W–1 the standard transformation discount."

[20] In contending that the Mass. Electric contract is no bar to the Commission's ordering NEPCO to serve Shrewsbury, counsel for Shrewsbury state, *inter alia:*

In 1958, negotiations were had with officers of the New England Power Service Company, which is responsible for rate and contract matters for both Mass. Electric and NEPCO (1 R. 52–3; 3 R. 453). In the course of these negotiations Shrewsbury made clear in writing that it did not care to continue contractual relations with Mass. Electric, and the Service Company officials offered to arrange for NEPCO to sell to Shrewsbury irrespective of the contract, albeit subject to an unacceptable surcharge (1 R. 30, 150; Exs. 44, 55).

In 1961, the parties again negotiated, and the Company officials again agreed that NEPCO would sell to Shrewsbury, irrespective of the contract, although likewise subject to an unacceptable surcharge (1 R. 151, Exs. 46, 47).

It has always been the understanding of the parties that any contract with Mass. Electric was no bar to Shrewsbury's receiving service from NEPCO. This is in accordance with the customary practice under which contracts with customers are assigned and reassigned between NEPCO and Mass. Electric as the need appears (1 R. 68, 2 R. 465–6; 3 R. 486–7). Indeed, Shrewsbury's 1929 contract with NEPCO was assigned to Mass. Electric's predecessor when it became an affiliate (1 R. 68).

Similarly, the notice provisions in contracts between NEPCO and Mass. Electric are not enforced. For example, Mass. Electric accepted a rate increase from NEPCO in 1953 without invoking the two-year prior notice provision of the contract (2 R. 437–8).

As Mr. Crabtree's testimony shows, if there were an automatic renewal of the Mass. Electric contract, it happened in the course of the negotiations in which the actions of the Service Company's representatives obviously indicated that any renewal of the contract would not bar Shrewsbury from obtaining service from NEPCO (1 R. 56).

The course which NEPCO followed from 1957 to 1961 in refusing service to Shrewsbury except on its own terms, and thereafter on any terms, protected the business of its affiliate-wholesale purchaser, Mass. Electric, by denying Shrewsbury the advantage it has by virtue of its location and its right to purchase under NEPCO's filed rate of general applicability.[11] NEPCO, by such refusal, discriminated against Shrewsbury by giving preferential treatment to Mass. Electric and other customers purchasing under the W–3 rate. An important part of Commission supervision of NEPCO's activities is to prevent such unlawful discrimination and preferential treatment.

By the initiation of interstate wholesale service and the filing of a rate of general applicability, NEPCO undertook the duty of serving the public within its service area. It cannot lay aside that obligation so voluntarily assumed. Accordingly, that duty must be discharged (*Willmut Gas & Oil Co., et al.* v. *United Gas Pipe Line Co.*, 12 FPC 132, 143).

Section 202(b)

In the passage of the Act Congress recognized that there is a field, namely, that covered by Section 202(b), in which the Government rightly intervenes to advance the public interest. This section enables the Commission to exert its authority to assure that available opportunities for more appropriate service will not be missed by those constantly looking for means of improvement and lower cost. By authorizing the Commission to diagnose operationally-correctible situations and apply remedies in the interests of fair play and the greatest possible efficiency and economy, Section 202(b) furnishes relief to those persons whose interests coincide with the public interest. It provides:

> Whenever the Commission, upon application of * * * any person engaged in the transmission or sale of electric energy, * * * finds such action necessary or appropriate in the public interest it may by order direct a public utility (if the Commission finds that no undue burden will be placed upon such public utility thereby) to establish physical connection of its transmission facilities with the facilities of one or more other persons engaged in the transmission or sale of electric energy, to sell energy to or exchange energy with such persons: *Provided*, That the Commission shall have no authority to compel the enlargement of generating facilities for such purposes, nor to compel such public utility to sell or exchange energy when to

[11] During the period 1957 through 1961, Shrewsbury purchased all its power from Mass. Electric at 13.8 kv As shown by the following tabulation, if it had purchased this power from NEPCO at the same voltage it would have saved $210,006:

Supplier	Total energy, (kwh) (1957–61)	Total bill (1957–61)	Average rate per kwh (1957–61) (cents)
Mass. Electric	161,414,400	$2,448,853	1.516
NEPCO	161,414,400	2,238,297	1.382
Difference		210,556	0.134

As has already been pointed out, during 1962 Shrewsbury similarly would have saved approximately $45,000 if it had purchased its energy from NEPCO rather than Mass. Electric.

do so would impair its ability to render adequate service to its customers. The Commission may prescribe the terms and conditions of the arrangement to be made between the persons affected by any such order, including the apportionment of cost between them and the compensation or reimbursement reasonably due to any of them.

Under Section 202(b) the fundamental issue in this proceeding is whether, in the circumstances of this case, it is "necessary or appropriate in the public interest" that the Commission direct NEPCO "to establish physical connection of its transmission facilities" with Shrewsbury's facilities and "to sell energy" direct to Shrewsbury. As counsel for Shrewsbury point out, "All other criteria of Section 202(b) are met * * *. That is, under the Commission's order, NEPCO would be required to sell to Shrewsbury the same energy it would otherwise sell to Mass. Electric for redelivery to Shrewsbury, and at the same location on its transmission line, and accordingly, this could neither place an 'undue burden' on NEPCO nor 'compel the enlargement of generating facilities' nor 'impair' NEPCO's 'ability to render adequate service' to its other customers."

It is necessary and appropriate in the public interest to order NEPCO to provide direct service to Shrewsbury for the two principal reasons now to be discussed.

(1) Direct service by NEPCO will, at the same time it is increasing NEPCO's revenues, reduce the cost of electricity to Shrewsbury and its customers and help them help themselves in achieving savings which reasonably may be expected to give the economy of the area—which may be further diversified when the climate is right—a stimulating shot in the arm by fostering the conditions in which greater prosperity may thrive and in which consumers are likely to enjoy the benefits of more comfort, convenience and better living. These are ends favored by, and which promote the interest of, the public.

Shrewsbury, in facing and solving the problems of its area, aims to exploit fully the advantages that lower cost power will offer and it is probable that no other single factor or accomplishment could be anticipated to further area progress faster. Shrewsbury wants to move ahead for it knows that any business that doesn't go ahead goes back. The day should never arrive when a public utility says: "What I Have Is Good Enough For Those I Serve." There is, therefore, a real need for NEPCO's energy to arrive in Shrewsbury's system on the most direct route and under the uniform W–3 rate.

Pertinent here is the decision in *Kentucky Natural Gas Corp.* v. *Federal Power Commission*, 159 F. 2d 215, 218–219, in which the Court, in reviewing the action of the Commission in a case arising under Section 7(a) of the Natural Gas Act (that being the equivalent of Section 202(b) of the Federal Power Act) said: [22]

> * * * We believe that the fact that the construction of the proposed new facilities at an estimated cost of $182,900 would eliminate the necessity of the expenditure of at least $350,000 by Central Illinois for otherwise necessary improvements and additions to its present facilities, and the fact that the proposed new facilities will enable it to obtain its gas requirements for the Mattoon area direct from Panhandle instead of indirectly from Pan-

[22] See also *Home Gas Co.* v. *Federal Power Commission*, 231 F. 2d 253, 256, and the Examiner's subsequent but related decision, 21 FPC 85, 113–119, aff'd 21 FPC 70, 82, 84–85.

handle through Kentucky Natural are by themselves of sufficient controlling importance to justify the ruling of the Commission in granting the certificate of public convenience and necessity to Central Illinois instead of Kentucky Natural, both being otherwise qualified applicants. The elimination of an unnecessary middleman between the wholesaler and the retailer is a material benefit to the ultimate consumer at retail. The basic purposes of the Natural Gas Act is protection of the public interest. * * * While the Commission has no jurisdiction to fix or regulate rates in local or intrastate sales, yet it is obvious that the cost to the ultimate consumer at retail is materially affected by the sales price of the gas from the wholesaler to the retailer, and that a factor materially affecting the cost is entitled to considerable weight by the Commission in choosing between two competing applicants. * * *

(2) The second primary reason why it is necessary and appropriate in the public interest to direct NEPCO to provide direct service to Shrewsbury is that it will eliminate NEPCO's unlawful discrimination against Shrewsbury which is within the ban of Section 205(b) of the Act. Equally applicable here is the Court's assertion in *Michigan Consolidated Gas Co.* v. *Panhandle Eastern Pipe Line Co.*, 173 F. 2d 784, 787, that "Whatever may be the limits placed by the [Natural Gas] Act upon the authority of the Commission in other respects, it is clear that * * * the authority of the Commission, in respect to undue preferences or advantages, is without limitation." The Commission cannot properly perform its duty in this proceeding unless it takes this factor into account and removes the unlawful discrimination. Unless corrected, the treatment Shrewsbury has received at the hands of NEPCO would enable the latter to circumvent the statutory scheme of regulation so that, to borrow the words of the Court in the *Michigan Consolidated* case (173 F. 2d at 789), "the basic purpose of the * * * Act fails of realization." It must be recognized here, as it was in the situation involved in *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission*, 232 F. 2d 467, 472, that if the Commission fails to direct NEPCO to provide the service requested by Shrewsbury it would be unable to enforce the mandate of Section 205(b), and NEPCO, contrary to the there declared principles, could "(1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage, or (2) maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service."

While the contention that Shrewsbury purchases its requirements from Mass. Electric under a contract which is not terminable until 1966 has been shown to be untenable, there are additional considerations which ought to be mentioned at this point.

Counsel for NEPCO and Mass. Electric assert that the contract "provides for successive five-year terms, subject to cancellation by either party on six months' notice at the end of each period. The first five-year term began on February 15, 1956, and no advance notice of cancellation being given at the end of the first five-year period, on February 15, 1961 its earliest termination date was extended to February 15, 1966."

This statement of the situation seems to infer that if Shrewsbury hereafter gave timely notice of cancellation it would, on February 15, 1966, be able to begin purchasing its requirements from NEPCO or anyone else of its choice. But no expertise is needed to recognize the obvious, namely, that should Shrews-

bury's request here be denied there is nothing to prevent NEPCO (or other wholesalers attempting to protect private interests of affiliates) from carrying out a repeat performance in 1966. If that happened Shrewsbury would be no better off—without Commission intervention—in 1966 than it was in 1961. Therefore, the Commission may not now ignore, or treat as of little or no significance, the fact that when the critical date of February 15, 1961, rolled around NEPCO failed to step up to and meet its public utility responsibility as a wholesaler.

On February 15, 1961, NEPCO had Shrewsbury at its mercy. For Shrewsbury, on NEPCO's terms, either had to continuing paying Mass. Electric for NEPCO's indirect service or cease its retailing business if it gave the notice of cancellation said to be required. Had Shrewsbury ceased its retailing business it could have been that Mass. Electric would have succeeded to such business. There is, of course, no indication in the record that the inhabitants of the Town desired that to happen. Accordingly, NEPCO's failure of duty left Shrewsbury with no choice but to continue receiving service from Mass. Electric until the Commission applies the correcting remedy.

While counsel for NEPCO and Mass. Electric stress their view that the Shrewsbury-Mass. Electric contract constitutes "a long-term" obligation, it is clear that it was never intended to be such unless the minimum five-year term permitted thereunder, which the Commission is here in a position to enforce, be regarded as "long-term."

One further point of interest here is that while Shrewsbury wants a connection at 69 kv for a number of solid, practical reasons, counsel for NEPCO and Mass. Electric argue that Shrewsbury is "distinguishable" from other municipal lighting department customers of the NEES companies "In just one particular. It is closer to NEPCO's transmission lines." Assuming, *arguendo*, counsel to be correct, it must be remembered that any individual, business or public agency en route to maximum success can reach their destinations quicker and with greater certainty if they make the most of their opportunities. As the Examiner had occasion to state in his decision issued June 4, 1963, and now pending before the Commission in *Turlock Irrigation District and Modesto Irrigation District, Project No. 2299*, 31 FPC 510, "The Districts, which now look to even greater usefulness in the future, have expanded their usefulness over the years by taking advantage of water and power opportunities. In so doing they have followed the fruitful path of raising the horizons of individual and collective progress, playing a full part in the ever-increasing requirements of the area's growing population, expanding economic activity, and rising standard of living" (at p. 544).

Contract To Be Entered Into Between NEPCO And Shrewsbury

While the relations between a public utility (such as NEPCO) and a distributor (such as Shrewsbury) are normally established initially by contract between the parties, with protection of the public interest being provided by Commission supervision of individual contracts, which to that end must be filed with the Commission and made public, it is to be observed that under Section 202(b) the Commission, in directing a public utility such as NEPCO to establish physical connection of its transmission facilities wth a distributor and to sell energy to the latter—

> * * * may prescribe the terms and conditions of the arrangement to be made between the persons affected by any such order, including the appor-

tionment of cost between them and the compensation or reimbursement reasonably due any of them.

Accordingly, under Section 202(b), it is the Commission which possesses the initial rate-setting power, as well as the power to "prescribe the terms and conditions of the arrangement". But since NEPCO is already rendering service to customers of Shrewsbury's classification under a standard form contract and a single tariff filed with the Commission, and in order to avoid discriminatory rates being charged to Shrewsbury, the only reasonable course for the Commission to pursue here is to require NEPCO to render direct service to Shrewsbury at its published W–3 rate now in effect and on the same terms it serves other customers similarly situated. NEPCO therefore may not be permitted to avoid, enlarge or vary either the standard form contract or the W–3 rate.

The connection sought by Shrewsbury is hereinafter discussed (*infra*, pp. 409–412). The Examiner finds that Shrewsbury has fully justified its need and design for a power supply at 69 kv. NEPCO is therefore required to establish a direct interconnection between its 69 kv transmission line A1–B2 and the facilities to be constructed by Shrewsbury, all in accordance with Shrewsbury's proposed Case IA.

Delivery is to be made by NEPCO to Shrewsbury near or at the 69 kv terminal of Shrewsbury's transformers within Shrewsbury's new Worthington Avenue Substation, NEPCO to construct, own and operate all facilities on its side of the delivery point at its expense, and Shrewsbury to construct, own and operate all facilities located beyond the delivery point at its expense. This is consistent with NEPCO's practice of making delivery into its customer's substations even where, in many cases, it is necessary for NEPCO to use the facilities of intervening retail distributors.

It is appropriate that NEPCO construct its portion of the interconnection facilities with a capacity of 30,000 kw. Shrewsbury designed its new Worthington Avenue Substation for an ultimate load of 30,000 kw and located it beneath NEPCO's lines with the concurrence of the latter.

It should be pointed out in passing that Shrewsbury is so anxious to obtain direct service at 69 kv that it is willing, as well as able, to pay the full cost of all facilities. The Examiner, however, determines such payment to be inconsistent with the terms and conditions for sales by NEPCO to other retail distributors.

Shrewsbury should pay for its energy under NEPCO's Rate W–3 with a transformation discount of 12 cents per kw by virtue of the fact that NEPCO will not be required to construct any transformation facilities, but will be making delivery at the voltage of its high-tension line.

Shrewsbury requests that NEPCO be directed to enter into a contract with it for loads up to 30,000 kw from lines A1–B2 to meet Shrewsbury's ten-year requirements. However, its counsel point out that "Shrewsbury is willing to accept a 25,000 kw limitation on its 69 kv capacity if the Commission finds it necessary. The proposed 69 kv connection is economically feasible at 12,000 kw, so obviously, it is feasible up to 25,000 kw, as well as up to 30,000 kw. At 25,000 kw Shrewsbury's eight to ten-year requirements are satisfied."

But as counsel for NEPCO state, "Shrewsbury's request is, in effect, that NEPCO be ordered to earmark or 'dedicate' 30,000 kw of capacity on its A–1 and B–2 lines for the next ten years * * *. Such a 'dedication' is certainly not a feature of the service which NEPCO supplies to any other customer, affiliated

or not". They further point out that for its other customers "NEPCO agrees 'to use all due diligence in maintaining an aggregate capacity of connecting facilities * * * sufficiently in excess of the current demand * * * to allow for normal load growth and the CUSTOMER shall give to the COMPANY (NEPCO) as much notice as possible of any anticipated changes likely to cause the load growth * * * to depart from normal * * *'".

While it appears that NEPCO's present planning now assigns 25,000 kw capacity to the Shrewsbury service at the existing delivery point off the 69 kv transmission line A1–B2, it is clear that the Commission should not require NEPCO to presently guarantee Shrewsbury up to 25,000 or 30,000 kw of capacity. Rather Shrewsbury should go through the normal process required of others in notifying NEPCO of its requirements on a more or less current basis and obtain increases in the usual and accepted manner.

In two-part rate making stability begins at the bottom, namely, with the retailer, not at the top or some point in between. Such rate making is geared to capacity which customers predetermine will be required and available for their immediate future use, the conditions created resulting in the most intensive use of constructed facilities of a supplier so that every segment depending thereon will be benefitted through the elimination of the waste of idleness. The objective is year-to-year financial stability in meeting the supplier's operating necessities in a financially sound and orderly manner (see Examiner's decision, 15 FPC 700, 713–726, aff'd on review by the Commission, 15 FPC 730, and by the Court, *Cincinnati Gas & Electric Co., et al.* v. *Federal Power Commission*, 246 F. 2d 688). If Shrewsbury paid only the W–3 rate while having idle capacity held in reserve for its future use it would be paying NEPCO less than the cost incurred by the latter and attributable to Shrewsbury. In these circumstances, the only way NEPCO could be made whole would be for its other customers to pay more than the cost of service attributable to them. Within reasonable limits, the cost of service should be assessed on the basis of customer-responsibility therefor.

While the Examiner disagrees with Shrewsbury's request that the Commission direct NEPCO to enter into a contract with Shrewsbury for loads up to 30,000 kw from lines A1–B2, this does not mean that when Shrewsbury has a demonstrated need for 30,000 kw or any lesser amount that it will not be made available to it by NEPCO. Any further plans NEPCO makes will necessarily have to be related to Shrewsbury's requirements regardless of their magnitude, just as they would be related to the existing arrangement if it was continued. It is the generally acknowledged obligation of a wholesaler, of course, to make provision for increased needs of its resale customers prior to the time those needs are anticipated to arise. This is clearly recognized by NEPCO for in providing service to its W–3 customers, it agrees "to use all due diligence in maintaining an aggregate capacity of connecting facilities * * * sufficiently in excess of current demand * * * to allow for normal growth." The Examiner assumes that the fact that NEPCO has excess capacity on its A1–B2 kv line (which Shrewsbury seeks to have reserved for its future use), and the further fact that NEPCO will soon have coming on its system still another 250,000 kw generating unit (*supra*, ftn. 3), are both related to the contract obligation referred to. But such excess capacity as NEPCO has and will have is related to its total service obligations, not just Shrewsbury's load. Should NEPCO's

obligation be breached or dilatory tactics be employed as Shrewsbury thinks might happen (see *supra*, pp. 399, 400; *infra*, ftn. 30) prompt relief should be sought from the Commission and the Massachusetts Department of Public Utilities.[29]

Facilities Now Used And To Be Used To Serve Shrewsbury

The Town of Shrewsbury is situated midway between two important junctions on NEPCO's transmission network, the Pratts Junction switching station to the north and Millbury dispatching station and switching station to the south. This line can be fed from both ends. The tap at NEPCO's Shrewsbury substation as now constructed is such that a fault in the transmission line, either north or south of Shrewsbury, will interrupt the flow of 69 kv current. For a cost of about $100,000 a looped tap can be installed so that the flow of 69 kv current would not be interrupted in such case. The looped tap, proposed herein for future direct service by NEPCO to Shrewsbury, accords with modern engineering practices of backing up transmission with transmission. That is, if the sector of the transmission line feeding Shrewsbury at any given moment goes out, the other sector of the line is automatically switched in to take over the load. In effect, there are two separately fed transmission lines terminating at the looped tap on the 69 kv line.

Before proceeding further it may be pointed out that in power system operations there is nothing unusual about tapping a high tension system to serve an individual customer, including a municipality. Numerous instances of this occur on systems of the NEES companies. There are, of course, literally thousands of individual tap-offs on other systems located throughout the Nation. Accordingly, the individual tap-off of NEPCO's A1–B2 lines sought by Shrewsbury is well within generally accepted practice and the record amply demonstrates that, insofar as NEPCO's direct delivery to Shrewsbury is concerned, it is economically feasible and physically practicable.

Under the arrangement now in effect, taps from NEPCO's two 69 kv lines running between Pratts Junction and Millbury lead to a bank of three 69/13.8 kv transformers owned by NEPCO. The delivery point to Mass. Electric is at the low voltage terminals of these transformers, which are operated in parallel and lead to a 13.8 kv bus from which delivery is made into Shrewsbury's feeder lines. This bus is also connected to Mass. Electric's 13.8 kv cables which carry energy into Worcester, a major industrial city, for sale to Mass. Electric's retail customers. The 13.8 kv cables terminate at Mass. Electric's Grafton Street Substation in Worcester where they interconnect with Mass. Electric's Worcester system.

The normal flow of current is into Shrewsbury's system and separately into Mass. Electric's Worcester system. However, the circuits may be switched so that the 69 kv transformation line A1–B2 is disconnected and the flow of current is out of Worcester and into Shrewsbury's system, all at 13.8 kv. NEPCO claims that these cables provide back-up for the Shrewsbury service. Shrews-

[29] As staff counsel further point out: "Indeed, the Town might obtain relief by an application to the Massachusetts Department of Public Utilities under section 92A of chapter 164 of the Laws of Massachusetts. *Boston Real Estate Board* v. *Department of Public Utilities*, 334 Mass. 477, 136 N.E. 2d 243 (1956); and *Kargman* v. *Department of Public Utilities*, 334 Mass. 497, 136 N.E. 2d 255 (1956)."

bury considers them wholly inadequate for this purpose.[24] The Staff does not appear to be fully satisfied that the 13.8 kv lines provide secure back up since, at one point in their brief, it refers to the claimed "back up" in quotes.

Both the 69 kv transmission line of NEPCO and the underground 13.8 kv distribution lines of Mass. Electric are in an unimpressive condition. The record shows that unscheduled outages due to faults on these lines during the last ten years (1953–1962) total as follows:

	Number of outages	Duration of outages (total)
Mass. Electric's underground 13.8 kv	12	220 hrs. 32 min.
NEPCO's 69 kv transmission line A1–B2	89	12 hrs. 52 min.

However, as the Examiner has noted, because the 69 kv line is fed with power from both ends, a looped tap sectionalizes it into two lines and thus firms up

[24] Shrewsbury argues that the existing cables, which range in age from 30 to 60 years, from Grafton Street to Shrewsbury substation do not have sufficient capacity or reliability to make the firming capacity in Mass. Electric's Worcester district available to Shrewsbury in the event of an outage of NEPCO's 69 kv lines. It is pointed out that these cables are not firm in themselves.

NEPCO and Mass. Electric make no claim that the cables are firm in themselves. Their Senior engineer explained that a "firm" interconnection exists where a load is fed from a combination of independent sources, and there is a high probability against simultaneous outage of all sources. Mass. Electric's 13.8 kv cables are but one of the independent sources of supply to the Shrewsbury substation, and therefore it is urged that there is a high probability against a simultaneous outage of these cables and NEPCO's 69 kv lines. The carrying capacity of the Mass. Electric cables were estimated by Mass. Electric's witness as 12,300 kv for each cable under the winter conditions that prevail at the time of Shrewsbury's peak, and 11,300 kv under summer conditions when, as Shrewsbury indicates, its requirements are less. The combined capacity of the two cables are, therefore, said to be 26,400 kv at the time of peak demands, and 22,600 kv during the summer.

Thus NEPCO and Mass. Electric urge that they be permitted to serve Shrewsbury's growing load from a combination of the 69 kv and 13.8 kv sources. They count on the probability that both unfirm sources will not fail at the same time. Their engineering witness predicted the probabilities would carry Shrewsbury for six more years. Counsel for Shrewsbury, in their reply brief, state this prediction "was wrong" because the probabilities "held up for less than two months. On September 9, 1963, both sources were cut off and Shrewsbury was without service for one hour." "Although power was restored after one hour, the so-called 13.8 kv 'back-up' was out for 55 hours." Supporting correspondence as to the outage is appended to the reply brief of counsel, but because the outage referred to occurred after the record was closed it does not constitute part of the evidence. The Examiner decides this case in Shrewsbury's favor on the basis of the record and without regard to the outage that occurred after the record was closed. However, should the Commission desire the correspondence to be made a part of the record it could be accomplished by simply reopening the record for this limited purpose.

The dependence upon a combination of the 69 kv and 13.8 kv sources will be avoided by NEPCO's expenditure of approximately $100,000 for the looped circuit breaker tap on the 69 kv lines, which would isolate Shrewsbury from Mass. Electric's underground cables. It would seem that Shrewsbury's independent 69 kv supply would be of some advantage to Mass. Electric, for it would free the existing NEPCO/Mass. Electric facilities for full use by Mass. Electric if it continues to regard the 13.8 cables as providing a satisfactory link to the Worcester retail area. Moreover, Case IA has been designed so that the existing Mass. Electric station receives the benefit of the looped tap.

Counsel for Shrewsbury assert that "Shrewsbury does not want to gamble on weak probabilities; it is ready to spend whatever is necessary in order to secure firm operating conditions, and Shrewsbury believes that, in the long run, this is the more economical policy." There can be no question but that Shrewsbury operates economically and efficiently, with a debt-free plant. It appears that it does not hesitate to make capital expenditures when added efficiency and reliability of service are involved.

the supply, so that the 13.8 kv underground connection can be severed. This is precisely what NEPCO proposed when it offered to serve Shrewsbury in 1958 at 13.8 kv if Shrewsbury would pay not only the uniform rate but also an unlawful surcharge. The old 13.8 kv underground cables have now aged six more years.

As far back as 1958 Shrewsbury's position has been that the physical connection between NEPCO's facilities and those of Shrewsbury include the affirmative step of terminating connections with facilities of Mass. Electric. The method now proposed by Shrewsbury for the establishment of the desired connection and the elimination of the connections with Mass. Electric are embodied in the testimony of William E. Trommershausen of R. W. Beck & Associates, who appeared as expert witness for Shrewsbury.

Witness Trommershausen set 30,000 kw at 69 kv as representing the load condition which could reasonably develop within the next ten years. He designed a connection capable of receiving that volume from NEPCO's A1–B2 lines and recommends transformer facilities capable of providing 20,000 to 25,000 kva firm capacity.[25] The two plans presented by the witness for making the connection are for convenience labeled Cases IA and IIA [26] and are identical as to major electrical features. The total capital cost of making these connections is: Case IA, $235,000; Case IIA, $267,000.

The significant difference between the two plans is that under Case IA the looped tap would be placed in Shrewsbury's substation, while under Case IIA the loop would be placed in NEPCO's substation.

The tap to be made on NEPCO's 69 kv line is at the point where it crosses over Shrewsbury's new $400,000 Worthington Avenue Substation. The plan utilizes 3-winding transformers (69 kv/13.8kv/4.16 kv) to be located in Shrewsbury's Substation to enable Shrewsbury to draw both of its distribution voltages from the same transformer bank.

Case IA, which is approved by the Examiner, leaves the existing NEPCO/Mass. Electric facilities undisturbed so that Mass. Electric can continue to take power into Worcester to the full capacity of those existing facilities if and when needed.

Although Shrewsbury recommended Case IIA as the preferred solution in its opening brief, this assumed that NEPCO would prefer to locate the looped tap

[25] As Staff counsel point out, "NEPCO, although it took the position that service direct to Shrewsbury would be uneconomic * * *, did outline briefly in its direct testimony the installation of facilities that would be required to supply Shrewsbury from the existing 69 kv source as an isolated New England Power Company load. * * *. This installation would involve two 25,000 kva three-phase, two-winding, 69/13.8 kv transformers and three oil circuit breakers. The present tap of 69 kv lines A–1 and B–2 would be retained * * *. Under this plan, service to Shrewsbury would be isolated from Mass. Electric facilities. The company estimates that the total investment required for this installation would be $340,000". As they further point out, "NEPCO's $340,000 plan would be disadvantageous to both NEPCO and Shrewsbury. This is the most costly of the plans proposed on the record. Moreover, it would simply continue service to Shrewsbury at 13.8 kv * * *. The installation would require Shrewsbury to invest $80,000 in facilities to connect its new substation with the installation of NEPCO * * *. It is obvious that this installation would not provide the capabilities of service at 69 kv, and would provide no greater reliability than the present service arrangements."

[26] The witness actually described four proposals labeled Cases I, II, IA and IIA, but in his rebuttal testimony he substituted plans IA and IIA for those contained in plans I and II in order to meet criteria for a firm source of power set forth in the direct testimony of NEPCO's Senior Engineer who had testified: If NEPCO "were required to supply Shrewsbury * * * from the 69 kv source as an isolated (NEPCO) load entirely independent of the existing Massachusetts Electric 13.8 kv facilities, not not only would two separate transformers be required for the Shrewsbury load, but in addition, one of the 69 kv lines would need to be looped with 69 kv oil circuit breaker switching in the same manner as at Glendale."

in its substation. Shrewsbury now says it "will be satisfied with and will accept either Case IA or IIA." Shrewsbury's payment for its portion of the facilities will be made out of current assets.

The Examiner's approval of Case IA is based upon the fact that it is cheaper; will do the job; and coincides with Shrewsbury's present desire. But although Shrewsbury will place this plan into effect initially, it need not seek further Commission authorization for any future adjustment of its substation equipment to meet situations encountered in connection with its retail business.

The $235,000 cost of Case IA includes everything necessary to get the power down to both of Shrewsbury's distribution voltages of 13.8 kv and 4.16 kv. It provides energy to the Worthington Avenue Substation and gives Shrewsbury a new, modern supply to take care of ten years of estimated growth. It also allows for flexibility in the event it becomes desirable for Shrewsbury to transmit power at 69 kv within the Town limits. In this regard, the Manager of Shrewsbury, in explaining continuing efforts to improve efficiency, reduce costs, and share fairly in the economies of low cost power sources, testified:

> We anticipate a continuing load growth for Shrewsbury for the foreseeable future. * * * While it is difficult to determine the exact percentage of future growth, it is clear that such growth will occur. The larger our future load, the greater will be Shrewsbury's savings from its direct Nepco connection. The proposed 69 kv connection is designed to accommodate an ultimate load of 30,000 kw. Thus, Shrewsbury can more than double its purchases of electricity, without any substantial increase in its facilities expense. Therefore, it is my opinion that in the years ahead, the annual savings to Shrewsbury will well exceed the $53,000 of indicated 1964 savings.

Stated differently, NEPCO's lower cost service at 69 kv, coupled with Shrewsbury's surplus capacity, will transform Shrewsbury's business into a bargain basement for its customers, for the greater their use of energy the less will be the unit cost thereof. This result will undoubtedly be looked upon by Shrewsbury's customers with avid interest because it is to their benefit and arises out of changes of the type going on throughout the country as localized areas with economic bottlenecks press their efforts to achieve economic growth, higher standards of living, and make needed contributions to the Nation's economy. Larger percentage gains in the use of electricity are, of course, most easily gained in areas where prior use has been depressed by high cost (see *infra*, p. 416, note 31).

The Commission's Staff accepts the connection embodied in Case IA which it finds engineeringly adequate and economically feasible, although it recommends it only as a second alternative because, basically, it assumes that the capital cost of this 69 kv connection will exceed those involved in continuing the existing 13.8 kv. connection. The Staff's position is erroneous[37] and its position in support of continuing the 13.8 kv connection is hereinafter further considered and rejected (*infra*, pp. 412–414).

Not only can the proposed Case IA facilities be constructed for $235,000, but their construction will obviate the need for Shrewsbury to invest at least $54,000

[37] The Staff prefers to continue the existing 13.8 kv connection which it recognizes will, at best, take care of Shrewsbury's growth only until 1968. It bases this recommendation on the erroneous assumption that 13.8 kv service involves an additional capital cost of only $138,000 and considers that an immediate savings of $97,000 is sufficient to decide the question. In their reply brief, counsel for Shrewsbury make a showing to the effect that the additional capital cost of providing adequate service at 13.8 kv with the existing facilities may reasonably be expected to be at least $250,000, which is greater than the $235,000 cost of the new 69 kv connection.

in a new 13.8/4.16 kv transformer, which it must do soon if it continues to receive 13.8 kv service.

Moreover, in considering the feasibility of the net $181,000 ($235,000–$54,000) investment required under Shrewsbury's Case IA, it is significant to point out that it could cost NEPCO and Mass. Electric about $158,000 in the coming years to continue service through the existing NEPCO/Mass. Electric 13.8 kv facilities. All parties agree that the continued 13.8 kv service requires installation, in about two years, of an additional 13.8 station at an estimated cost of $58,000. This would be required in order to handle the increased Shrewsbury loads through two separate 13.8 kv sources or feeders, and it is contended that this would make Mass. Electric's underground cables available to back-up Shrewsbury's increasing load. NEPCO and Mass. Electric believe that the facility would then be adequate until 1968. Under this plan NEPCO's 69 kv line would not have to have a looped tap. This would leave Mass. Electric's underground 13.8 connection to provide back-up for Shrewsbury's service. If the cables comprising the underground connection were later found to be unsatisfactory, it appears that NEPCO would then have no choice but to loop the existing 69 kv connection to make it firm, in order to provide a dependable source of power to Shrewsbury. This would cost an estimated $100,000 and is the loop proposed in Case IA approved by the Examiner.

So in evaluating the relative merits of the plan discussed in the preceding paragraph with Shrewsbury's proposals, one should take into consideration the possible expenditure of $158,000 as against spending $181,000 for a new, modern installation, with capacity to take care of Shrewsbury's reasonably foreseeable needs for some ten years.

Counsel for NEPCO and Mass. Electric make the unwarranted claim that neither of Shrewsbury's interconnection plans "are supported by substantial evidence on the record adequate to justify the Commission in adopting and ordering the establishment of" either. Having so contended, they then proceed to assert that "The record contains no other proposals at all for the establishment of any engineeringly sound and economically feasible interconnection between Shrewsbury and NEPCO which meets the objectives for which Shrewsbury has petitioned."

Assuming, *arguendo*, that Shrewsbury's proposals were not part of the record, and assuming further that no other proposals were set forth therein, NEPCO and Mass. Electric still would be unable to clamp the lid on the merits of this case at a time when Shrewsbury is going down the home stretch. The reason for this is that this is a discrimination case (*supra*, p. 386), concerning which the Commission's power is without limitation (*supra*, p. 403). Accordingly, all the Commission need do is simply direct NEPCO to take whatever actions are necessary to remove the discrimination being practiced against Shrewsbury. It would seem abundantly clear that such a directive would not tax NEPCO's ingenuity because the type of interconnection Shrewsbury seeks is comparable to that proposed by NEPCO in 1958 when it coupled its proposal with an unlawful surcharge. As counsel for Shrewsbury explain: Because "the 69 kv line is fed with power from both ends, a looped tap sectionalizes it into two lines and thus firms up the supply, so that the 13.8 kv connection can be severed. This is precisely what NEPCO proposed when it offered to serve Shrewsbury in 1958 at 13.8 kv". What NEPCO conceded it was able to do in 1958 with a surcharge it should now be able to do pursuant to a general directive of the Commission.

In the view of NEPCO's Senior Engineer, a proposal like Shrewsbury's recommended interconnection is "physically, or electrically * * * possible" but he considers it "uneconomic". His position, however, rests upon an engineering evaluation which fails to give effect to the full size of the public interest involved.

This case demonstrates that there is more than one type of good engineering, the one approved herein representing the broader view that the Commission must take if rights are to be protected and the greatest use of electric energy is to be encouraged.

Shrewsbury's investment, like the $100,000 NEPCO will incur, will be recovered through rates charged to uncomplaining customers. On the basis of Shrewsbury's 1962 sales alone, NEPCO's revenues will be increased by some $44,000 annually, so that within two years or less it should recover not less than the total of its additional investment and make possible a more intense use of its facilities through Shrewsbury's increasing sales. Shrewsbury, on the other hand, will not only save some $45,000 annually on the basis of its 1962 takings, but will be in a much improved position to better the economy and conditions in its service area, it having been removed from Mass. Electric's restrictive zone of influence.

Moreover, to contend that Shrewsbury's proposal is "uneconomic" overemphasizes the value of one or a limited number of outlets, or tap-offs, as contrasted with the benefits inevitably flowing from the greatest possible number contributing to increased business and sales. Many imposing midtown bank structures today are something of status symbols which probably cannot be afforded without the large and ever increasing number of branches which make the status symbols possible. The experience of our most flourishing institutions, chain stores, etc., tells the consistent story that the larger the number of outlets the greater is likely to be the overall success of the enterprise and the more satisfied the consuming public which gives its patronage when what is sold is placed within their financial reach. Such businesses seek the largest possible number of outlets even though the cost of many structures far exceeds the cost of a few. The reason for this is that the increased business and revenues generated by the many more than justify their cost. The Examiner believes that NEPCO's direct service to Shrewsbury will serve as another outstanding case in point.

There are some actions that have to be taken by a regulatory agency for the good of a community, area or the country as a whole regardless of how it may affect private interests. In the instant proceeding it is necessary for the NEES companies to pay the "price" (of direct service by NEPCO) for the sake of the future as well as the present. This does not, however, represent Commission management of the NEES companies; rather "it is regulation by the Commission contemplated by the Act" (*Northern States Power Co.* v. *Federal Power Commission*, 118 F. 2d 141).

Position of Commission Counsel

The position of Commission counsel, first announced in their brief, represents a proposed solution not contemplated by the direct case presented by Shrewsbury nor the defense presented by NEPCO and Mass. Electric. Nor does it accord with the Examiner's disposition herein.

Notwithstanding the lack of Commission authority over Shrewsbury (*supra*, p. 395), and the further fact that those constituting the management of Shrews-

bury are the directors of their own destiny, having already made a rather enviable record (*supra*, p. 389 note 12), the Staff constitutes itself as Shrewsbury's planning agency and, although realizing that the existing situation "is inimical to the public interest", make an oblique turn and conclude that the 69 kv service flowing through NEPCO's high tension lines is not the "preferable" service for Shrewsbury.[28] They further conclude that the existing 13.8 interconnection, which brings about a transformation from 69 to 13.8 kv, is adequate for service through 1968. Counsel therefore recommend that NEPCO be ordered to provide service to Shrewsbury over the existing facilities owned by Mass. Electric; that the Shrewsbury-Mass. Electric contract should be superseded; and that Mass. Electric should be compensated for the use of its facilities by an annual payment of $11,620, such payment being based on an allocation of Mass. Electric's investment in substation equipment between the Shrewsbury load and the load represented by Mass. Electric's ultimate customers.[29]

The Staff's recommendation breeds rigidity and inflexibility which have a tendency to lead to stagnation. It is therefore rejected.

---

[28] Counsel reach their conclusion in the face of their expressly stated views (1) that the proper disposition of this case requires the use of traditional regulatory concepts; (2) that there is "very little engineering or economic justification for the interposition of Mass. Electric between Shrewsbury and NEPCO"; (3) that the public interest will be served by a reduction in Shrewsbury's purchased power costs; (4) that "where management's conscious design [of NEPCO and Mass. Electric] creates hardships on some consumers and favors others that management has created a situation which is inimical to the public interest"; (5) that any increased costs to be absorbed by other Mass. Electric resale customers, in the event Shrewsbury purchases its requirement from NEPCO, will be *de minimis*; and (6) that "Mass. Electric's present service to Shrewsbury is inadequate because of the artificial market arrangement which arbitrarily assigns Shrewsbury to Mass. Electric. The existing arrangement prevents the Town from offering promotional rates for househeating and all electric living which access to NEPCO's rates permits Mass. Electric to offer to its retail customers."

The Staff believes that the public interest will be served by a reduction in Shrewsbury's purchased power costs, provided no offsetting harm will accrue to the NEES companies and their customers.

[29] Commission counsel attempt to justify the annual facility payment of $11,620 on the theory that it would represent a "payment to Mass. Electric for the use of its intervening facilities" and that such a "facility charge is consistent with Mass. Electric's present practices in dealing with NEPCO's resale customers." In this connection they point out that "NEPCO provides deliveries to both Mass. Electric and the Narragansett Electric Co. at the low voltage terminal of NEPCO's Mink Street substation, Seakonk, Massachusetts (NEPCO Rate Schedule FPC No. 118, Exhibit 27 and NEPCO Rate Schedule FPC No. 106, Item H) Narragansett pays Mass. Electric an annual facility charge of $12,012 (Mass. Electric Rate Schedule FPC No. 30) for the use of the Mass. Electric facilities in transmitting NEPCO's deliveries to Narragansett from the Mink Street substation to the Rhode Island/Massachusetts boundary."

A reading of pages 12 and 13 of the Staff's main brief indicates that their recommendation may be controlled to some extent by failure to recognize an important difference—particularly insofar as this case is concerned—between the authority of the Commission under Section 202(b) of the Federal Power Act and that which it may exercise under Section 7(a) of the Natural Gas Act. Whereas Section 7(a) prohibits the Commission from compelling the enlargement of a natural gas company's "transportation facilities", Section 202(b) places no restriction upon the Commission as to a public utility's transmission facilities. It only withholds "authority to compel the enlargement of generating facilities" (see *supra*, p. 401).

Concerning the Commission authority under Section 7(a) the Examiner invites attention to *Michigan Consolidated Gas Co.* v. *Federal Power Commission*, 283 F. 2d 204, 221, footnote 46; *Michigan Consolidated Gas Co.* v. *Panhandle Eastern Pipe Line Co.*, 173 F. 2d 784, 788; *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission*, 204 F. 2d 675, 683.

What Shrewsbury is trying to do is to prepare for the future with the best available tools—which are readily at hand. The free responsible individuals comprising its management desire to make the most of their opportunities. They believe that direct service by NEPCO at 69 kv is the mainspring of their future progress and that it will lead them to their goal sooner and with greater certainty.

In Shrewsbury's view the Staff's proposal can in no sense be a cure but only a frustrating palliative which fails to have the outlook of those having the responsibility and wanting to do the job. While it is one thing for the Staff to conclude that Shrewsbury can get along a while longer with 13.8 kv service, coupled with an annual facilities payment not contemplated by NEPCO's W-3 rate, it is quite another for Shrewsbury's management to convince additional industry to locate in the Town. Conviction in this connection is best likely to succeed by taking firm and positive direction behind adequate lead time and assured resources which induce and control decision-making.

Shrewsbury has progressed to the point where it is better able than ever to meet customer needs. There is, however, still much it can do to expand its services which are far too valuable to its area for it to let up on anything. It wants the elbow room 69 kv service provides, it having good reason to believe that direct 69 kv instead of indirect 13.8 kv indirect service will give it a running start by helping to create the climate in which it can move resolutely and quickly with a "bird in hand". It does not care to become entangled, as it might under the Staff's recommendation, in further and prolonged proceedings and delays in which opportunities are likely to vanish forever.[20]

As the Examiner has already pointed out (*supra*, p. 384), the preferred authority on electricity-at-work in Shrewsbury's service area is its management. That management knows that adequate electric service, like gold, is where you find it. Not doing as well as it believes it can, it sought, as anyone would, an established wholesaler transmitting and selling 69 kv electric energy. NEPCO, a wholesaler with 69 kv service staring Shrewsbury in its face, has such service arriving in Shrewsbury. The only difficulty—which the accompanying order removes—is that it is now arriving at the wrong place to meet what Shrewsbury wants and is willing to pay for. To borrow the language in *Village District of Belmont* v. *Laconia Gas and Electric Co.*, 1925C PUR 349, 351 (N.H.P.S.C. 1924), "The utility cannot question the motive which prompts a consumer to desire service of it in preference to obtaining it from some other source. The point is that the one desiring service is willing to meet the reasonable terms of the utility and that, therefore, it is the duty of the utility to furnish it."

---

[20] Staff counsel, in discussing prior relations of Shrewsbury with NEPCO and Mass. Electric, point out that "in the past, in negotiating for improvements in service, Shrewsbury has met unfavorable responses from Mass. Electric and NEPCO. In this connection Shrewsbury states that it tried unsuccessfully for seven years, from 1952 to 1959, to obtain conversion of Mass. Electric's service from 2.4 to 4.16 kv. It obtained this necessary conversion only by purchasing the 13.8/2.4 kv transformers in the substation from Mass. Electric for $47,000 and by making the conversion itself at a cost of less than $500 * * *. In the same way Shrewsbury tried for four years, from 1952 to 1956, to obtain service at 13.8 kv and succeeded only by signing a new contract that included a surcharge of $712.50 a month * * *. More recently, in 1958 and again in 1961, NEPCO agreed to provide service direct to Shrewsbury at the "W-rate", then in effect, but these negotiations broke down because of the delaying tactics on the part of NEPCO."

Additional Contentions of NEPCO And Mass. Electric

Counsel for NEPCO and Mass. Electric make several contentions not considered and disposed of hereinabove, but which will now be considered.

(1) The first contention reflects the bankruptcy in an appropriate basis for the denial of Shrewsbury's request. The contention made is that Shrewsbury is not concerned with "the probable impact of the present case as a precedent for Mass. Electric's other resale customers." This contention, while lacking the support of any evidence indicating that other municipalities are similarly situated to Shrewsbury and intend to seek comparable relief, clearly recognizes Shrewsbury's right to direct service from NEPCO but seeks to have it denied because the Commission, in the performance of its positive duties, might cause others to gain or perfect their legal rights and thereby provide wider and greater benefits in the use of electric energy.

The consideration suggested by counsel is nowhere in the Act made a standard for granting relief under Section 202(b). Indeed, if followed it would defeat, in the most effective manner, the whole purpose of the Act to provide equal and just treatment to all. Shrewsbury's rights, therefore, are not made to depend upon the probable impact of this decision upon others.

The Commission's jurisdictional orbit is delineated by what is necessary and appropriate in the public interest. When those needing assistance give the Commission better reasons for what ought to be done, than public utilities give for what is being done, the requested improvement in service should be ordered. Accordingly, contrary to the views of counsel, the granting of relief herein, rather than being viewed as a cause for alarm, should be regarded as an opportunity for achievement. Prosperity at the consumer level gives impetus to prosperity at all other levels (see *supra*, pp. 389, 390–397).

The lack of merit to the contention made will be readily recognized by anyone familiar, as the management of Shrewsbury is, with what has transpired in the South's TVA area and the seven-state Pacific Northwest power pool area. There retailers, as well as many wholesalers, having a choice, when their contract terms with old suppliers ran out, switched to new and cheaper sources of supply. They did this in the exercise of their free choice and without severance damage payment. They also did it without permanent damage to their old wholesalers who simply rearranged and improved their operations in a manner suitable to care for the steadily increasing requirements of their remaining customers and the many new customers gained, particularly large industrials, who were induced to locate in the booming areas. The end result has been that the old wholesalers, together with the customers they lost in the process to modern, better equipped new wholesalers, are now all more prosperous than at any time in their history. Thus when NEPCO and Mass. Electric make many of the contentions they have made in this proceeding, such contentions, while they may appear "potent from the standpoint of [those companies], they do not avail too much from the standpoint of general regulation and the public interest" (*Mississippi River Fuel Corp. v. Federal Power Commission*, 232 F. 2d 619, 624).

It is not amiss to point out here that some of the public utilities in the New England area have lagged behind the truly outstanding accomplishments of

the power industry as a whole."[21] Perhaps the situation in New England has resulted in large measure from a philosophy, expressed by counsel for NEPCO and Mass. Electric at the hearing, of getting "in Yankee Land, the last penny of our investment out before you give [what you have] up." In any event, the industry as a whole has historically doubled—its capacity, its production, and its sales—every ten years, this being a record of which it is justly proud. There is, however, no apparent reason why, because of the exploding population, rising economy, more efficient capacity, possibilities for further interconnections, and the ever present need for strong defense readiness, it cannot and will not be accelerated even more. Another factor having a prodding effect is that other fuels are reaching out to challenge. For these and other reasons, the top position that was not easily won by the industry may not, in any section of the country, be calmly enjoyed.

(2) As has been pointed out (*supra*, fitn. 2), NEPCO now makes wholesale sales for resale to two non-affiliated customers, the Fitchburg Gas and Electric Light Company and the Town of Littleton, New Hampshire. Counsel for NEPCO and Mass. Electric seek to have such sales treated as of no significance by urging that "Littleton simply has no other source of supply (aside from its own small hydro plant) and for Fitchburg the same is true as a practical matter * * *. However, the fact that these peculiar situations have become embedded in NEPCO's scheme of operations is no basis for the addition of another exception".

NEPCO can no more be permitted to refuse service to Shrewsbury than the latter could be permitted to refuse reasonable service to any person demanding it in its service area. Both occupy privileged positions as utilities and the public has need of the service they render. The contention of counsel therefore lacks merit because it amounts to no more than a claim that NEPCO, contrary to a principle adhered to by the Supreme Court (*supra*, p. 398), should be permitted to "pick and choose" its customers.

If NEPCO can sell, as it does, to Littleton at Rate W–3, with a transformation discount, and operate some ten miles of 34.5 kv line for the sole use of this customer one-fourth the size of Shrewsbury, it should be directed to sell to

---

[21] Chairman Joseph C. Swidler of the Federal Power Commission, in an address to the Electric Council of New England entitled "Goals For The Electric Power Industry" (Boston, October 10, 1962), noted that "New England is still an underdeveloped power market", and the "pace of growth in this region has not matched the national average" although per capita income is higher (mimeo p. 8). He noted also that "The low level of use in New England is accompanied by a relatively high level of rates" with Massachusetts residential rates being second highest in Continental United States (mimeo p. 9). If New England fuel prices were brought down to the national average, New England rates would nevertheless be "well above the national average" (mimeo p. 10). He further stated:

> * * * New England in the past has built and still relies on too many small and inefficient generating units and on too few of the large, low cost units (mimeo. p. 12).
>
> * * * * * * *
>
> The evidence suggests that New England's electrical progress is restrained by the chain of high costs, which in turn leads to high rates, which delays growth of energy use and thus tends to keep costs high. The challenge to New England power leadership is to break away from this chain to what I might call the wheel of progress—low costs which make possible low rates and high use and thus contribute to further cost reductions (mimeo pp. 14–15).

Among the remedies he recommended were:

> * * * every stimulus should be given to load development now by all known promotional means. For example, it costs very little to offer substantial rate inducements for usages which are still largely nonexistent. Any increment above out-of-pocket costs for these new loads will make some contribution to net income, and as more efficient capacity is added to the system, these loads will become increasingly profitable (mimeo p. 17).

Shrewsbury (which with NEPCO's concurrence has constructed its new $400,000 substation directly under NEPCO's transmission lines) at Rate W–3 without any additional charges.

The Examiner observes in passing that there is no indication that NEPCO's service to Littleton and Fitchburg has generated any alarm of the kind NEPCO and Mass. Electric speculate might occur if the relief requested by Shrewsbury is granted (see *supra*, p. 415). Nor does it appear NEPCO's service to its many large industrial customers have been the cause for any such alarm.

(3) Counsel for NEPCO and Mass. Electric point out that this "case involves two of the major companies of an integrated holding company system." This, they say, "raises the further question whether the functional simplification achieved by the NEES companies under the Public Utility Holding Company Act will be taken into consideration in the Commission's administration of the Federal Power Act." The Examiner, having considered this matter, finds that nothing heretofore done by the Securities and Exchange Commission can be regarded as conclusive and binding upon the Federal Power Commission insofar as the issues in the instant proceeding are concerned. Each Commission carries out its duties under different statutes for different purposes. The actions of neither suspend the performance of duties with which the other is charged.

In this proceeding the Federal Power Commission has no alternative but to carry out the primary aim of the Federal Power Act to eliminate discrimination and guard consumers against excessive rates (*supra*, p. 386). In short, the Commission's disposition of Shrewsbury's request must be viewed in the perspective of the Federal Power Act, not statutes administered by, nor the actions of, the Securities and Exchange Commission.

(4) The next contention, likewise of no controlling significance, is that "The Shrewsbury substations of NEPCO and Mass. Electric [located in the Town of Shrewsbury] were originally established to take care of both the loads of Worcester and the Shrewsbury load, and the successive additions to substation capacity have been engineered with the objective of serving the total requirements of the area in the most economical manner."

To protect consumers, the Act subjects any company rendering a jurisdictional service to Commission regulation and control. The choice of whether to initiate jurisdictional services lies, of course, with the public utility, but once it dedicates its property to such service it submits irrevocably to the jurisdiction of the Commission and commits itself to abiding by the statutory standards. Thus while public utilities are free to construct whatever transmission lines, and establish whatever interconnections, they deem desirable for the purpose of securing and conducting business in their private interests, such freedom in no way impairs the jurisdiction of the Commission to inquire into and correct situations which have been created, or which result in, violations of the Act.

In this proceeding Shrewsbury is seeking enforcement of its legal rights. It is not quarreling with the manner in which the existing substations were originally constructed, nor with the manner in which subsequent additions to capacity have been engineered. It paid the contract price demanded for their use in its service. Neither NEPCO nor Mass. Electric can make any further legal demand upon Shrewsbury on this account, nor can NEPCO be allowed to fail in its public utility responsibility to serve Shrewsbury upon request. Even if some temporary economic detriment might result to NEPCO and Mass. Electric from granting Shrewsbury's request, such detriment could not be said to constitute detriment to the public interest, or even show where the public interest lies.

Inequities growing out of past planning and development of the NEES system companies must be eliminated rather than accentuated by the denial of relief

such as sought by Shrewsbury herein. No adequate reason appears why NEPCO's future planning and operations cannot and should not enable it to provide direct service to Shrewsbury under its uniform rate. In any instance in which a public utility's method of operation fails to produce answers in the public interest it will invite resistance on the part of those affected and remedial action by regulatory commissions.

The wholly untenable position of NEPCO and Mass. Electric in this proceeding amounts to plea for self-regulation of their wholesale business. But in this area of the electric business the essential role of the Commission is to assure adequate service to the public at reasonable rates, not regulate the general public into using high cost service to protect private interests.

FINDINGS

(1) On February 5, 1962, the Municipal Light Department of the Town of Shrewsbury, Massachusetts (Shrewsbury), filed a formal complaint against NEPCO requesting a full investigation of the facts concerning NEPCO's refusal to supply power directly to Shrewsbury at the legally established rate for Shrewsbury's customer class.

(2) Shrewsbury's complaint asks the Commission to order NEPCO to serve Shrewsbury directly at NEPCO's standard wholesale rate, without discrimination, and seeks such further relief as may be appropriate in the circumstances of this case.

(3) The hearing on Shrewsbury's complaint was held pursuant to the Commission's order issued May 2, 1963.

(4) Mass. Electric, NEPCO's affiliate and present supplier of Shrewsbury's electric energy requirements, intervened in this proceeding and joined NEPCO in opposing the relief sought by Shrewsbury.

(5) NEPCO and Mass. Electric are admittedly public utilities within the meaning of the Federal Power Act and are subject thereunder to regulation by the Commission.

(6) Shrewsbury is a retail distributor of electric energy within the Town of Shrewsbury, Massachusetts, which has a population of about 17,000.

(7) NEPCO, under its existing W–3 rate, sells and delivers electric energy to others of Shrewsbury's customer class.

(8) Rates and charges demanded, charged and collected by NEPCO from others of Shrewsbury's customer class were voluntarily established by NEPCO.

(9) The lowest rate voluntarily made available by NEPCO to any customer of Shrewsbury's customer class, namely, its existing W–3 rate, is the rate available to Shrewsbury.

(10) Although Shrewsbury is in the same class or classification as others served by NEPCO, NEPCO (a) has failed without lawful justification to make electric energy available to Shrewsbury at the same rates or charges voluntarily established and made available to others of Shrewsbury's class; (b) is unlawfully subjecting Shrewsbury to undue prejudice and disadvantage; and (c) is unlawfully granting undue preference and advantage to others of Shrewsbury's class; and such practices by NEPCO are unjust, unreasonable, unduly discriminatory and preferential, and unlawful, in violation of the provisions of the Federal Power Act.

(11) Section 202(b) of the Federal Power Act is designed, *inter alia*, to enable the Commission to exert its authority to assure that available opportunities for more appropriate service will not be missed by those constantly looking for means of improvement and lower cost.

(12) By the provisions of Section 202(b) the Commission is authorized to diagnose operationally-correctible situations and apply remedies giving relief to those persons whose interests coincide with the public interest.

(13) Under Section 202(b) it is necessary or appropriate in the public interest that the Commission direct NEPCO to establish physical connection of its transmission facilities with Shrewsbury's facilities and to sell energy direct to Shrewsbury under NEPCO's filed W–3 rate for two principal reasons: First, for the reasons set forth in paragraph (10) above. Second, direct service by NEPCO will, at the same time it is increasing NEPCO's revenues, reduce the cost of electric energy to Shrewsbury and its customers and help them help themselves in achieving savings which reasonably may be expected to give the economy of Shrewsbury's service area a stimulating effect by fostering the conditions in which greater prosperity may thrive and in which consumers are likely to enjoy the benefits of more comfort, convenience and better living, all these being ends favored by, and which promote the interest of, the public.

(14) The requirement that NEPCO serve Shrewsbury directly, instead of indirectly through Mass. Electric, will not place any undue burden upon NEPCO nor require NEPCO to enlarge its generating facilities for such purpose, nor impair its ability to render adequate service to its customers.

(15) Shrewsbury has fully justified its need and design for a direct power supply from NEPCO at 69 kv and the connection should be constructed in accordance with the design embodied in Shrewsbury's Case 1A in this proceeding.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission:

(A) NEPCO be, and it is hereby directed, to establish and maintain physical interconnection between its 69 kv transmission lines A1–B2 and the facilities to be constructed by Shrewsbury, all in accordance with Shrewsbury's proposed Case 1A.

(B) NEPCO will pay the cost of the looped tap and make delivery at 69 kv at or near the high side of Shrewsbury's proposed 3-winding 69/13.8/4.16 kv transformers.

(C) NEPCO will charge Shrewsbury its standard wholesale rate, Rate W–3, less the transformation discount of 12 cents per kw, for all power delivered.

(D) NEPCO will construct its portion of the interconnecting facilities with a capacity of 30,000 kw.

(E) NEPCO and Shrewsbury shall, within thirty days of the date this order becomes the final order of the Commission, enter into NEPCO's standard form of contract for the service to be provided pursuant to this order and NEPCO shall file the executed agreement with the Commission within the thirty-day period.

(F) NEPCO and Shrewsbury shall proceed with all deliberate speed to construct the required facilities and carry out the provisions of this order.

(G) Within sixty days after this order becomes the final order of the Commission the parties shall inform the Commission in writing and under oath the progress that has been made in carrying out the provisions of this order and when commencement of service by NEPCO and Shrewsbury is contemplated.

(H) The contract under which Shrewsbury has been receiving service from Mass. Electric be, and it is hereby cancelled, immediately upon commencement

of service by NEPCO to Shrewsbury and Shrewsbury, from and after that time, is freed from any further obligations or service thereunder.[32]

(I) NEPCO shall report to the Commission the date of commencement of service provided for herein within thirty days following the commencement of such service.

FRANCIS L. HALL,
Presiding Examiner

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. Charles R. Ross, Harold C. Woodward and David S. Black.

TRUNKLINE GAS COMPANY, DOCKET NO. CP64-114

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 27, 1964)

On May 25, 1964, Trunkline Gas Company (Applicant) filed an application to amend the Commission's order issued March 20, 1964, in Docket No. CP64-114 by authorizing an increase in the contract demands of eight existing customers in the aggregate amount of 5,810 Mcf, all as more fully set forth in the application to amend.

The order of March 20, 1964, 31 FPC 621, authorized Applicant to construct and operate facilities to increase its system design capacity and to sell and deliver additional contract demands totaling 50,961 Mcf to four existing customers.

Applicant states that eight other existing customers* have now requested increased contract demands in order to meet their natural gas requirements commencing with the 1964-65 heating season. Applicant states that no additional facilities will be required to provide the herein proposed increase since the order of March 20, 1964, gave Applicant 9,039 Mcf per day of unallocated capacity.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 1, 1964 (29 F.R. 8283). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued March 20, 1964, in Docket No. CP64-114 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued March 20, 1964, in Docket No. CP64-114 be and the same is hereby amended by authorizing an increase in the contract

---

[32] See *Mississippi River Fuel Corp.* v. *Federal Power Commission*, 252 F. 2d 619, cert. den., 355 U.S. 904, and *Michigan Consolidated Gas Co.* v. *Panhandle Eastern Pipe Line Co.*, 226 F. 2d 60, cert. den., 350 U.S. 978. In *Mississippi* the court sustained a Commission order requiring United Gas Pipe Line Company to disregard a contractual obligation to provide Mississippi with all of its natural gas requirements. In *Michigan Consolidated* the court recognized the Commission's authority to free Panhandle of a contractual duty to supply Michigan Consolidated with a specified amount of gas.

*Somerville, Tennessee; Bardwell, Kentucky; Fairfield, Illinois; Flora, Illinois; Louisville, Illinois; Citizens Gas Company, Arcola, Illinois; Illinois Power Company, Ogden, Illinois; and North Indiana Public Service Company.

demands of eight existing customers of Applicant in the aggregate amount of 5,810 Mcf, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

KASKASKIA GAS COMPANY, DOCKET NO. CP64-230

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 28, 1964)

On April 9, 1964, Kaskaskia Gas Company (Applicant) filed in Docket No. CP64-230 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Company of America (Natural) to establish physical connection of its natural gas pipeline system with facilities to be constructed by Applicant in the communities of Cowden and Alma, Illinois, and to sell and deliver natural gas to Applicant for resale and distribution in those communities, all as more fully set forth in the application on file with the Commission and open to public inspection.

The proposed distribution system in Alma to be constructed by Applicant will be connected with the pipeline now owned and operated by Applicant in the City of Kinmundy, Illinois, which receives gas from Natural at a connection point in Marion County, Illinois. A new tap connection will be required for the service of the community of Cowden.

The estimated cost to Natural of this connection facility is $18,010, and the estimated cost of all facilities proposed by the Applicant is $226,000, which cost to Applicant will be financed by the sale of common stock, mortgage notes, and use of company earnings.

The respective volumes of gas for Cowden and Alma upon the peak-day and annual basis at pressures of 14.73 psia are as follows:

	First year	Second year	Third year
For Cowden:			
Peak day Mcf	247	316	418
Annual Mcf	23,909	29,837	37,794
For Alma:			
Peak day Mcf	123	184	249
Annual Mcf	11,139	16,211	21,582

Applicant has obtained appopriate authorizations from the communities of Cowden, Alma and Xenia and from the Illinois Commerce Commission to construct, operate and maintain a natural gas transmission and distribution system and to engage in the business of gas distribution and service in the villages of Cowden and Alma, Illinois.

On May 7, 1964, Natural filed its answer to the subject application stating that it has no objection to the granting thereof.

Due notice of the filing of the application and opportunity for hearing thereon have been given by publication in the Federal Register on July 7, 1964 (29 F.R. 8502). No protest, petition to intervene or notice of intervention in opposition to the granting of the application has been filed.

The Commission finds:

(1) Natural Gas Pipeline Company of America is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) Applicant, Kaskaskia Gas Company, is a public utility duly organized and existing under the laws of the State of Illinois and is duly authorized by the Illinois Commerce Commission and by the villages of Cowden and Alma, Illinois, to construct, operate and maintain distribution pipeline systems in said communities and to engage in the business of distributing and selling natural gas in the respective service areas.

(3) It is necessary and desirable in the public interest that Natural be directed to establish a physical connection of its natural gas transmission system with the proposed facilities of the Applicant which are to serve the village of Cowden and that area and to sell and deliver to Applicant up to 667 Mcf of natural gas per day, as set forth in the application in this proceeding, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Natural within one year from the date of issuance of this order.

(5) The requirement that Natural serve Applicant, as proposed, will not place any undue burden upon Natural nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Natural Gas Pipeline Company of America be and is hereby directed to establish physical connection of its transmission system with the proposed facilities of Applicant, for service to Cowden, Illinois, and to sell and deliver up to 667 Mcf of natural gas to Applicant, for sale and distribution in the areas of Cowden and Alma, all as hereinbefore described and as more fully set forth in this proceeding.

(B) Applicant shall be prepared to receive natural gas from Natural within one year from date of issuance of this order.

(C) Natural shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

AREA PRICE LEVELS FOR SALES OF NATURAL GAS BY PRODUCERS-AMENDMENT, DOCKET NO. R–265

ORDER NO. 284

NINTH AMENDMENT TO STATEMENT OF GENERAL POLICY NO. 61–1

(Issued July 28, 1964)[1]

The Commission has given further consideration to its Statement of General Policy (18 CFR 2.56) and particularly the Second and Seventh Amendments relating thereto (Second Amendment was issued December 20, 1960, 24 FPC 1107; 25 F.R. 13799; as amended by Order No. 264 issued March 27, 1963, 29 FPC 589; 28 F.R. 3203; and the Seventh Amendment was made by Order No. 273 issued November 27, 1963, 30 FPC 1370; 28 F.R. 12865) which pertain to offers of settlement in certain areas. We have determined that it is not appropriate to approve settlement offers under the Second and Seventh Amendments

[1] Published in the Federal Register on August 1, 1964 (29 F.R. 11154).

unless at least five years remain of the term of the contract comprising the rate schedule involved in a proposed settlement. The life of the remaining contract term will be measured from the date the settlement offer is filed. We are, therefore, revising the Statement of Policy in accordance with the views expressed above.

The Commission finds:

(1) No notice or hearing is necessary under section 4(a) of the Administrative Procedure Act.

(2) In view of the purpose, intent and effect of the amendment herein ordered, good cause exists for making it effective forthwith.

The Commission, acting pursuant to authority granted by the Natural Gas Act, as amended, particularly Sections 4, 5, 16 thereof (52 Stat. 822, 823, 830, 15 U.S.C. 717c, 717d, 717o, *orders:*

(A) Effective upon the issuance of this order, paragraphs (b) and (c) of § 2.56, Part 2, Statements of General Policy and Interpretations, Chapter I of Title 18 of the Code of Federal Regulations are amended by adding a subparagraph (3) to each as follows:

Section 2.56 Area price levels for natural gas sales by independent producers.

OPINION NO. 439

EL PASO NATURAL GAS COMPANY, ET AL., DOCKET NO. CP63-296 (PHASE II)

MEMORANDUM OPINION AND ORDER MODIFYING AND ADOPTING PRESIDING EXAMINER'S INITIAL DECISION ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 29, 1964)*

Syllabus

1. Evidence of record supports conclusion that additional gas supply is and will be needed in Southern California during interim period to November 1, 1965, and that El Paso cannot reasonably undertake obligation to deliver required quantities without addition of subject facilities. P. 426.
2. Issue of air pollution in Los Angeles Basin should not be determined in absence of full exposition of factual situation; since matter will be covered extensively in current long-term service-to-California proceeding, no weight is accorded such issue in instant determination. P. 426.

---

*Initial decision appears on p. 429.

3. Motion to reopen record for introduction of additional evidence properly denied as concerning matters which either can be officially noticed or are immaterial to resolution of any contested issue in proceeding. Pp. 426, 427.
4. Determination of need for facilities should not be based on all-out capability of El Paso's system, which is subject to force majeure restrictions, operating temperatures and other conditions over which it has no control; no sufficient basis is shown for overruling management's decision as to need of facilities, particularly since they are minimal and could not be achieved at lesser cost later. P. 427.
5. Other considerations beyond simple comparison of incremental revenues and costs are relevant in determining economic feasibility– –of significance is condition applied here providing for exclusion from cost of service of any deficiency resulting from construction and operation of facilities in period through 1967. P. 427.
6. Certification in instant situation, where probability of harm to jurisdictional customers has been rendered remote, is in accord with certification of pipeline facilities in *Medina* and *Western Transmission*. P. 427.
7. No prejudice to or prejudgment of applications in pending service-to-California proceeding is intended or should be inferred from instant certification; no contentions of increased "impact" of idle capacity will be accepted in that case as result of action here. P. 427.
8. In proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificate of public convenience and necessity authorizing construction and operation of facilities for interim service to Southern California companies. P. 428.

George D. Horning, Jr., C. Frank Reifsnyder, Malcolm T. Dungan, Gordon Davis, and *E. G. Najaiko* for El Paso Natural Gas Company

John S. Battle, Jr., Raybourne Thompson, and *James W. McCartney* for Transwestern Pipeline Company

Richard W. Sabin for Public Utility Commissioner of Oregon

John S. Cooper, Frederick T. Searls, and *Malcolm H. Furbush* for Pacific Gas and Electric Company

Richard Richards, W. C. Braden, Jr., John A. Ferguson, Jr., L. R. Pankonien, R. C. Alletag, Robert E. Shaw, Harry S. Littman, Jack Werner, and *Richard Littell* for Gulf Pacific Pipeline Company

R. C. Woodbury, William E. Marx, and *William R. Connole* for Southern California Edison Company

David D. Mix for Air Pollution Control District of Los Angeles County

R. Clyde Hargrove, Jesse H. Foster, Jr., and *William H. Holloway* for Humble Oil & Refining Company

Sherman Chickering, C. Hayden Ames, and *Stanley Jewell* for San Diego Gas & Electric Company

Sheldon Rosenthal for the People of the State of California and The Public Utilities Commission of the State of California

Robert M. Olson, O. C. Sattinger, John Egan, K. R. Edsall, and *John Oromosa* for Pacific Lighting Gas Supply Company, Southern California Gas Company and Southern Counties Gas Company of California

Harry A. Potts, Jr., Richard M. Merriman, Peyton G. Bowman, III, and *N. H. Powell* for Arizona Public Service Company

James N. Horwood, Robert L. Woods, and *Charles E. Brown* for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

This proceeding involves an application by El Paso Natural Gas Company under Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction and operation of certain additional compressor stations and appurtenant facilities totaling 13,690 horsepower, at an estimated cost of $3,481,000, for the purpose of increasing the capacity of its San Juan (southern division) mainline by 40,000 Mcf per day;[1] (2) sale of the 40,000 Mcf per day made available by the installation of the facilities to Southern California Gas Company and Southern Counties Gas Company of California (jointly referred to as Southern Companies), with a firm obligation on El Paso to deliver but no obligation on Southern Companies to take, at a price equal to the commodity charge in effect from time to time under Rate Schedule "G" as contained in El Paso's FPC Gas Tariff Original Volume No. 1, currently 22.48 cents per Mcf, such sales to be made for a period ending November 1, 1965, or upon commencement of such new service as results from any Commission order issued in the *Transwestern Pipeline Company, et al.*, Docket No. CP63-204, *et al.*, proceeding, whichever is earlier, and (3) use of such facilities after November 1, 1965, for the delivery and sale of additional quantities of gas to purchasers east of California so as to minimize expected curtailments of firm industrial customers of El Paso in Arizona and New Mexico.

The current proceeding in this docket is denominated Phase II. The original application as filed by El Paso and later supplemented requested authorization for delivery and sale of up to 100,000 Mcf per day to Southern Companies for a period ending December 31, 1966, of which 60,000 Mcf per day could be accomplished through the diversion of facilities previously authorized in Docket No. CP63-207 and the remaining 40,000 Mcf per day by construction of the subject facilities. After revision of the maximum interim service termination date to November 1, 1965, and consolidation with a similar limited term service application by Transwestern Pipeline Company, the Commission, by order issued December 16, 1963: (1) severed the present case into Phase I (relating to the interim deliveries of 60,000 Mcf per day without additional facilities) and Phase II (delivery of 40,000 Mcf per day necessitating new construction); (2) granted authority, subject to certain specified conditions, for the Phase I deliveries, as well as Transwestern's application for an approximately equivalent increase; and (3) set the present Phase II down for hearing before an examiner. Certification in this proceeding has been supported actively by the Southern Companies, the California Public Utilities Commission, the Los Angeles County Air Pollution Control District and the applicant; it has been opposed, on various grounds, by Southern California Edison Company, Gulf Pacific Pipeline Company, Humble Oil & Refining Company, Transwestern, California Gas Producers Association and the Commission Staff.

On May 4, 1964, the presiding examiner issued an initial decision which would grant the certificate sought by El Paso on condition that the sales authorization to the Southern Companies end November 1, 1965, that the facilities thereafter be used for deliveries to customers east of California, that no prejudice be occasioned by certification of these facilities to the applications of any of the parties to the pending major service-to-California case, Docket No. CP63-204, *et al.*, and that if, in the future, all or any part of the years 1964 through 1967 are used as a test period in a El Paso rate proceeding, any deficiency resulting from the 40,000 Mcf per day sale is not to be used as support for a rate increase.

[1] All volumes herein are at 14.9 psia at a temperature of 60° F.

El Paso has filed no exceptions to the initial decision. In its brief in reply to the exceptions by other parties it states that it will accept a certificate containing the conditions specified by the examiner. Of the six parties named as actively opposing certification four, Gulf Pacific, Transwestern, California Gas Producers and staff, have filed exceptions. Two, Southern California Edison and Humble, do not except to the decision. Standard Oil Company of California, an intervener, excepts only to the examiner's treatment of air pollution considerations as affecting the need and market for the gas which would be supplied for use in California.

Upon consideration of the evidence of record, the parties' briefs, the examiner's decision, and the exceptions and replies thereto, we are of the opinion that the examiner's decision should be adopted as the decision of the Commission, subject, however, to the modifications noted below.

The evidence of record supports the examiner's conclusion that the additional gas supply is and will be needed in southern California during the interim period to November 1, 1965, and that El Paso cannot reasonably undertake a firm obligation to deliver the quantities of gas here involved without the addition of the subject facilities. The examiner found that the incremental gas to be supplied under the limited term sales authorization, while destined to be utilized primarily to serve the Southern Companies' interruptible market, will not result in a higher level of service to this market but, instead, will replace volumes presently allocated to firm resale customers as a result of the growth of that priority market. The evidence shows that the Southern Companies have been able since 1960 to obtain increasing amounts of interruptible gas, and thus serve a greater share of the interruptible market, due mainly to the certification of Transwestern and the authorization of a high level of such deliveries during the early years of the pipeline's existence. Thus, while the market exhibits indicate that the percentage of the interruptible market served by the Southern Companies in 1965 if this project is denied will not be significantly lower than that served in 1960, it will be substantially lower than that which it estimates it will be able to serve in 1964. As stated by the examiner, the volume herein sought to be authorized for delivery in the period to November 1, 1965, "represents less than one year's growth of Pacific Lighting's [Southern Companies'] firm requirements."

The presiding examiner indicated that air pollution considerations in the Los Angeles Basin, including the recent extension by the Air Pollution Control District of the prohibition against the use of high sulfur content fuels to a year-round basis (Rule 62.1) "suggest that the availability of additional gas for southern California is in the public interest." This finding, however, is unsupported by any substantial evidence of record in this proceeding. In fact, a review of the evidence shows that no testimony or evidence, other than the mere text of the rules, regarding this subject was submitted or adduced herein. Since this issue is one which should not be determined in the absence of a full exposition of the factual situation, and since this matter will be covered extensively in the major, long-term service-to-California proceeding, it is preferable in our opinion that nothing be done herein which in any way affects or tends to affect the resolution of the issue in that case. Accordingly, no weight has been given by us to air pollution considerations in determining that the additional gas is needed to meet the market requirements of southern California customers during the interim period and the discussion of this element in the examiner's decision expressly is disavowed.

The arguments against certification advanced by the California Gas Producers Association have been answered adequately by the examiner. For the reasons therein stated, the exceptions filed by this intervener are similarly without

merit. The motion to reopen the record filed on April 21, 1964, for the introduction of additional evidence properly was denied in the ruling issued concurrently with the initial decision as concerning matters which either can be officially noticed or are immaterial to the resolution of any contested issue in this proceeding.

Insofar as the need for these facilities to provide service to El Paso's east of California customers is concerned, the opponents argue primarily that with the availability of the Phase I facilities, the level of curtailments expected by El Paso will be reduced and that such curtailments will not occur on more than a few days a year. They acknowledge, however, that in order to hold these curtailments to the lowest level El Paso will be required to strain its facilities to their utmost in periods of peak demand. We agree with the examiner that the determination of the need for these facilities should not be based on all-out capability of El Paso's system, which is itself subject to force majeure restrictions, operating temperatures and other conditions over which applicant has no control and, further, that no sufficient basis has been shown for overruling the presumably well-considered decision by the company's management as to the need for these facilities, particularly since the additional capacity is relatively minimal and could not be achieved at lesser cost on a later date.

Although staff concedes that the incremental revenues to El Paso will exceed the incremental cost of service during the interim service-to-California period, the contention is made that the facilities will not be economically feasible for the two years after their release to east of California service. As noted by the examiner, other considerations beyond a simple comparison of incremental revenues and costs are relevant in determining economic feasibility herein. Of further significance is the condition applied by the examiner providing for the exclusion from the cost of service of any deficiency resulting from the sale through 1967. Certification in this situation, where the probability of harm to jurisdictional customers has been rendered remote, is in accord with our certification of pipeline facilities in *Medina Gathering Corporation, et al.*, Docket No. CP62–194, *et al.*,[2] and *Western Transmission Corporation, et al.*, Docket No. CP63–329, *et al.*[3]

We believe, however, that the condition requires clarification in one respect. As expressed in the initial decision, the deficiency in revenues which is guarded against is framed in terms of that occurring "from the sale of this 40,000 Mcf of natural gas per day * * *" To this extent the language of the condition is identical, except for the volume specification, with that provided in ordering paragraph (C) of the order authorizing the Phase I deliveries. Under the circumstances involved in this Phase II proceeding, however, the 40,000 Mcf per day sale is scheduled to terminate on November 1, 1965, and the facilities will thereafter be used on an intermittent basis to meet peak day demands in the remainder of the southern division market area. Accordingly, to insure that no misunderstanding will occur as to the intent and effect of the restriction, the condition will be revised to provide for the exclusion from the cost of service of any deficiency resulting from construction and operation of the facilities in the period through 1967, rather than in terms of whatever additional sales are made thereby.

Finally, we agree with the examiner and with all parties to this proceeding that no prejudice to or prejudgment of the applications in the pending Docket No. CP63–204, *et al.*, proceeding is intended or should be inferred from the grant of the certificate herein and that no contentions of increased "impact" or idle capacity will be accepted in that case as a result of our action here.

[2] Opinion No. 397, issued July 16, 1963, 30 FPC 227, 234.
[3] Opinion No. 429, issued May 26, 1964, 31 FPC 1295, pp. 1299–1301.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware Corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sales and deliveries of natural gas proposed by El Paso, as hereinabove referred to and as more fully described in its application, are subject to the jurisdiction of the Commission and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Subject to the requirements of our order herein and the conditions attached to the certificate herein issued, El Paso is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales and deliveries proposed by El Paso, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity upon the conditions hereinafter set forth, and a certificate should be issued as hereinafter ordered.

(5) The conditions attached to the certificate hereinafter issued are required by the public convenience and necessity.

(6) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to El Paso, upon the conditions hereinafter set forth, for the transportation and sale of natural gas in interstate commerce as proposed, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described above and in the application and amendments thereto.

(B) The certificate issued in paragraph (A) above is hereby conditioned to provide that the delivery and sale of the additional 40,000 Mcf per day of natural gas to Southern California Gas Company and Southern Counties Gas Company of California shall be made for a limited period ending November 1, 1965, or upon commencement of any new service which results from any order issued by the Commission in *Transwestern Pipeline Company, et al.*, Docket No. CP63–204, *et al.*, whichever is earlier.

(C) El Paso shall have a firm obligation to deliver, upon advance operating arrangements, any portion of such volumes as are required by Southern California Gas Company and Southern Counties Gas Company of California, but such companies shall have no obligation to take such gas.

(D) The rate for all gas so delivered by El Paso shall be the commodity charge in effect from time to time under Rate Schedule G contained in El Paso's FPC Gas Tariff Original Volume No. 1.

(E) After November 1, 1965, El Paso is to use the facilities hereby authorized exclusively to deliver gas to customers on its San Juan mainline located east of California.

(F) If, in the future, all or any portion of the years 1964 through 1967 are included in any test year in a future rate proceeding involving El Paso, any deficiency in revenues resulting from or occasioned by the construction and operation of the facilities herein authorized shall not be taken into account in

computing the cost of service and shall not be used as support for increased rates.

(G) The certificate issued in paragraph (A) above shall be without prejudice to the applications in the proceeding in *Transwestern Pipeline Company, et al.*, Docket No. CP63-204, *et al.*

(H) The certificate issued in paragraph (A) above and the rights granted thereunder are conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3) and (e) of Section 157.20 of the Regulations; the facilities hereby authorized shall be constructed and placed in actual operation within three months from the date of issuance of this order.

(I) The certificate herein issued is conditioned upon its acceptance in writing by El Paso within 30 days of the issuance of this order.

(J) El Paso shall report to the Commission in writing, under oath, the date of commencement of service to be rendered to the various customers named herein.

(K) The presiding examiner's decision issued herein on May 4, 1964, is hereby modified consistent with the foregoing decision and order and, as so modified, is, together with the ruling issued concurrently therewith, hereby adopted as the decision of the Commission as of the date of issuance of this order.

(L) Except as herein granted, the exceptions to the examiner's decision are denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION TO CONSTRUCT FACILITIES AND TO DELIVER AN ADDITIONAL 40,000 MCF OF GAS PER DAY TO SOUTHERN CALIFORNIA

(Issued May 4, 1964)

LANDE, *Presiding Examiner:* In this second phase of the proceeding El Paso Natural Gas Company (El Paso) seeks authorization to sell and deliver on a firm basis up to 40,000 Mcf per day at 14.9 psia to Pacific Lighting Corporation and it subsidiaries, Southern California Gas Company and Southern Counties Gas Company of California (Pacific Lighting) for a period not to exceed November 1, 1965. In addition to the requested authorization to sell and deliver the 40,000 Mcf per day, El Paso has requested authorization to construct certain field and mainline compressor stations totaling 13,690 horsepower at an estimated cost of $3,481,000. El Paso submits that these facilities will be utilized after November 1, 1965 in conjunction with existing and presently certificated southern division facilities to affect increased deliveries east of California and to minimize curtailments which might otherwise occur in El Paso's over-all requirements other than California.

PROCEDURAL BACKGROUND

El Paso's initial application herein requested a certificate of public convenience and necessity authorizing El Paso to sell and deliver to Pacific Lighting up to 100,000 Mcfd of natural gas for a period terminating on December 31, 1966, together with authorization for El Paso to construct certain facilities which would increase its system design capability for deliveries to Pacific Lighting by 40,000 Mcfd. Subsequently, El Paso amended its initial application to change the termination date on the interim period during which the proposed deliveries were to be made, to November 1, 1965. The first 60,000 Mcfd deliveries were to be made, commencing January 1, 1964, the remaining 40,000 Mcfd deliveries

to be made, commencing November 1, 1964, by means of increased capacity on El Paso's system resulting from the addition of facilities sought to be certificated herein. All such deliveries were proposed to be made on a firm basis at the El Paso commodity rate for gas sold there at 22.48¢ per Mcf. By Commission Order dated October 21, 1963, the application as amended was consolidated for purposes of hearing and decision with the application of Transwestern Pipeline Company ("Transwestern") in Docket No. CP64–34, the latter application seeking certificate authorization for increasing Transwestern's contract daily quantity from 300,000 Mcfd to 350,000 Mcfd and maximum daily demand quantity from 345,000 Mcfd to 410,000 Mcfd.

Early in 1963, Gulf Pacific Pipeline Company (Gulf Pacific) filed an application in Docket No. CP63–223, requesting authorization to construct and operate a pipeline system extending from Katy Field near Houston, Texas, to the metropolitan area of Los Angeles. Gulf Pacific proposed in that application to transport natural gas which Southern California Edison Company (Edison) and The Department of Water and Power of the City of Los Angeles, California (Department) have agreed to purchase from producers in the State of Texas to nine steam electric generating stations owned and operated by Edison and the Department in the metropolitan area of Los Angeles. El Paso and Transwestern have also filed major applications seeking authorization to supply additional large quantities of natural gas to the southern California market (Docket Nos. CP63–204, CP64–76 and CP64–91). These applications, along with the application of Gulf Pacific, have been consolidated for hearing and are now pending in another proceeding under Docket No. CP63–204, et al.

Hearing in this proceeding commenced on November 18, 1963, and on December 4, 1963, two separate proposed stipulations and agreements entered into by the parties to the proceeding were received into evidence without objection. On December 6, 1963, the presiding examiner certified these two stipulations and agreements to the Commission. On December 16, 1963, the Commission issued certificates of Public Convenience and Necessity to El Paso and Transwestern pursuant to the terms of the two separate stipulations and agreements entered into by the parties to the proceeding. Both El Paso and Transwestern were authorized to sell and deliver additional volumes of natural gas to their southern California customers through existing facilities for a limited period ending November 1, 1965, or upon commencement of any new service which may result from any authorization of the Commission in the Gulf Pacific Docket No. CP63–204, *et al.*, certificate proceeding for major service to southern California.

The certificate granted to El Paso in the December 16, 1963, order was for only part of the authorization requested by El Paso in its initial application in Docket No. CP63–296. The Commission remanded the case with respect to the controversial authorization of the remaining 40,000 Mcf per day, and ordered a hearing on said Phase II of El Paso's application. In its order the Commission required that all testimony and exhibits in support of Phase II be served on all parties by January 3, 1964, and scheduled a hearing on Phase II to commence January 8, 1964.

In the instant Phase II of the proceeding El Paso presented four witnesses and Pacific Lighting presented one witness in support of the application. Interveners who actively participated at the Phase II hearing were Pacific Lighting, California Gas Producers Association, Gulf Pacific, Humble Oil & Refining Company (Humble), Edison and Transwestern. In addition, the following parties were permitted to intervene in the proceeding: Air Pollution Control District of Los Angeles County, Arizona Corporation Commission, Arizona Public Service Company, Continental Oil Company, Monsanto Chemical Company, Pacific Gas & Electric Company, The People of The State of California

and The California Public Utility Commission, The Public Utility Commissioner of Oregon, San Diego Gas & Electric Company, and Standard Oil Company of California. Witnesses were cross-examined by the staff and by several of the interveners at the session of the hearing held from January 8, 1964, through January 16, 1964. Thereafter, the hearing recessed until February 11, 1964, at which time Pacific Lighting's witness presented supplemental testimony and Transwestern and the California Gas Producers Association each presented one witness in rebuttal to portions of El Paso's presentation. Those witnesses were cross-examined by the staff, El Paso, and several interveners at the session of the hearing held from February 11, 1964, through February 13, 1964. The record consists of 1,667 pages of transcript, 23 exhibits, and certain items by reference. Simultaneous opening briefs were to be filed [3] by March 5, 1964, and reply briefs by March 20, 1964. Briefs supporting the application were filed by El Paso, Pacific Lighting, The People of the State of California and The Public Utilities Commission of The State of California and The Air Pollution Control District of Los Angeles County. In addition, a brief was filed by Gulf Pacific stating that it would not oppose certification if conditions were attached to any authorization granted herein to provide against the contingencies in order that Gulf Pacific's application to serve Southern California will not be prejudged in any form. Briefs or replies in opposition to the application herein were filed by the staff, the California Gas Producers Association, Edison, Transwestern and Humble. The opposing briefs urge that the project should be denied because El Paso allegedly failed to establish either that the market needs of Pacific Lighting required that El Paso make additional deliveries until November 1, 1965, or that the market needs required that El Paso's existing Southern Division Customers located east of California receive additional gas after that date.

THE CONTROVERSY

El Paso submits that the expansion authority applied for herein is required by the present and future public convenience and necessity. Its contention being that the system expansion proposed is necessary for flexibility in operation, is minimal in amount, is attainable at virtually negligible cost, and could not be effected at a later date at less cost. El Paso urges that it be given an opportunity to keep pace with the growth in its firm, non-curtailable resale requirements and thus to prevent excessive curtailments of El Paso's firm industrial customers resulting not from increased requirements of such customers, but rather from increased requirements of El Paso's absolutely non-curtailable, total requirements resale customers. Upon termination of the interim California deliveries, the deliveries here proposed, together with the 60,000 Mcf per day heretofore certificated and which will then become available to the customers east of California, would only enable El Paso to stay abreast of the growth in its firm resale load and maintain a proper level of future curtailments of its firm industrial customers. Too frequent interruptions of these customers can result in the loss of their business. Without installation of these facilities, El Paso claims that it might be required to curtail about half of its firm industrial load. Such excessive curtailments would seriously jeopardize the revenues from this business to the alleged detriment of all of El Paso's customers. Construction of the facilities when proposed would enable El Paso to sell and deliver more of its short-term excess gas supply and minimize prepayments to its producer-suppliers. There allegedly is an interim need of Pacific Lighting for

[3] Several parties filed their briefs belatedly. Air Pollution Control District on March 12, 1964; Transwestern, Pacific Lighting and California Gas Producers on March 9, 1964.

the firm deliveries proposed. The customers east of California supposedly also need the minimal system expansion.

Edison contends that substantial amounts of excess gas can be made available to Pacific Lighting without the proposed expansion. Edison argues that during December 1963 daily volumes available ranged as high as 156,000 Mcf. On 24 days in that month there was at least 40,000 Mcf per day available. El Paso's market Exhibit 28 shows a decline in total market requirements for east of California customers through 1965. During 1966 and subsequent years these requirements are expected to increase. However, this means that for the interim period, El Paso will have more available capacity for sales to Pacific Lighting. Edison points out that excess gas service has historically been made available to Pacific Lighting by El Paso on an interim basis. Transwestern contends that El Paso's failure or unwillingness to pursue the course which it has historically followed in furnishing interim supplies of gas does not establish a "necessity" and cannot be used as a justification for the proposed additional facilities.[2] Transwestern argues that the 40,000 Mcfd involved in these proceedings could be made available to Pacific Lighting on a firm basis without the installation of any additional facilities. The only question is to what extent El Paso would be required to curtail its industrial customers during this period. Transwestern further contends that El Paso's capacity is shown on the basis of certain design conditions which its witness Hunsaker stated were conditions close to an annual average basis. That design was based upon flowing and suction temperatures of 65° F in the San Juan line. In addition, actual horsepower which El Paso's compressors could develop on a sustained basis was ignored by witness Hunsaker and manufacturer's nameplate rating was employed except where a different rating had been specifically approved by the Commission. Mr. Hunsaker conceded that at a lower ambient temperature the Dilkon Station, which Exhibit 25 reflects at 10,500 horsepower, could develop an additional 1,500 to 2,000 horsepower. Furthermore, additional peaking capacity can also be made available by installing facilities authorized in Docket No. CP62-294, where El Paso requested and obtained authorization to install 28 "uprating kits" to be utilized in its turbine compressors. At this date only six of the kits have been installed. In summary, Transwestern submits that with its presently authorized facilities, El Paso can deliver to Pacific Lighting more gas than its maximum daily design capacity of 756,000 Mcf per day during the 1965-66 and subsequent heating seasons because of the lower operating temperatures, the installation of the authorized uprating kits and the additional horsepower available from its Dilkon Compressor Station.

El Paso, its present customer Pacific Lighting as well as the interveners went to great length attributing ulterior motives to each other. Is El Paso's requests herein to expand its facilities based entirely on the desire to keep up with anticipated normal growth, or may there be inferred an additional motive, namely to improve El Paso's role in the other now pending proceeding for substantial additional gas service to southern California? Are the interveners herein appearing primarily on behalf of the gas customers? What are the additional motives of Transwestern—a present competitor, Gulf Pacific—a new applicant for the large additional gas market in California, Humble—a prospective supplier of Gulf Pacific and Edison—a substantial customer bound to benefit from an abundant supply of gas in that region. The decision in this case must rest primarily on the true public convenience and necessity considerations. It is

[2] *Cf. City of Pittsburgh* v. *F.P.C.* (CADC—1956) 237 F. 2d 741: "The existence of a more desirable alternative is one of the factors which enters into a determination of whether a particular proposal would serve the public convenience and necessity. That the Commission has no authority to command the alternative does not mean that it cannot reject the proposal." (Fn. 28, p. 751).

necessary to ascertain how badly El Paso and its customers do or will need the additional gas. It is also important to determine whether authorization of said facilities will truly prejudge any of the interveners. We shall detail most of the opposing presentations and attempt to evaluate the rather precarious balance of divergent interests of the applicant, competitors, interveners and customers.

Interim Need of Southern California

An issue in the case is whether El Paso requires the proposed additional capacity in order to make firm deliveries of the 40,000 Mcf per day to Pacific Lighting during the "interim period."

Interveners Humble, Edison, and Transwestern do not question El Paso's contention that additional deliveries are required to be made to Pacific Lighting in the interim period but, rather, argue that these additional deliveries could be, and should be, made through existing facilities under El Paso's Rate Schedule GX–2 by an extension of the authorization granted to El Paso in Docket No. CP62–154. Staff Counsel state that, if this application is granted, El Paso can deliver and Pacific Lighting can resell the gas proposed to be delivered to southern California. However, in Staff's opinion the evidence shows that this gas will be used for the sole purpose of reducing curtailments of deliveries to *interruptible* industrial customers who use gas for boiler fuel, with slight exception, but contend that it does not demonstrate that the reduction in curtailments is required by the present or future public convenience and necessity.

Staff Counsel contend, too, that neither El Paso nor Pacific Lighting has made a "positive showing" to overcome the presumption against the use of natural gas for boiler fuel as required by the Commission's decision in *Mississippi River Fuel Corp.*, 12 FPC 109. The application in that proceeding, to build a lateral to serve a new steam electric generating plant, was denied but was subsequently granted after rehearing. Staff Counsel point out that while in several subsequent cases certificating applications involving sales for boiler fuel usage, the Commission balanced the negative factor of the end uses against other factors and circumstances in deciding whether or not certification was required by the public convenience and necessity.[1] Staff Counsel have taken a position that in this case the Applicant has failed to make a "positive showing" under the doctrine of *Mississippi River Fuel Corp.* On the other hand the Examiner finds that Pacific Lighting is correct in its contention that the facts of the *Mississippi River Fuel Corp.* case are clearly distinguishable from the case at hand. *Mississippi* was an application for the construction of facilities for the direct sale of natural gas by an interstate gas pipeline company to a steam electric generating plant for boiler fuel exclusively, at a time when a retail distribution customer of the interstate seller could not obtain enough natural gas to meet its requirements. The project proposed here stands on other grounds. It is not a direct sale for boiler fuel usage. It is a sale for resale to natural gas distribution companies to enable them to continue to provide adequate service to their rapidly growing utility service area. Even though the volumes sought here may help serve Pacific Lighting's interruptible market, such service will not be at new higher levels, but rather will simply replace volumes now necessarily allocated to firm customers because of the growth of that priority market. Growth of the non-steam electric plant market requirements in southern California is shown by Exhibits 30 and 40. From 1962 to 1965 the non-"boiler

[1] *Southern Natural Gas Co.*, 14 FPC 243, *aff'd sub nom. Charleston & W. C. Ry.* v. *F.P.C.*, 234 F. 2d 62 (CADC), (a new sales lateral will permit more off-peak sales and enable the pipeline to improve its load factor); *Houston Texas Gas & Oil Corp., et al.*, 16 FPC 118, aff'd *sub nom. Florida Economic Advisory Council* v. *F.P.C.*, 251 F. 2d 643 (CADC), cert. denied, 356 U.S. 959.

fuel" market of Pacific Lighting will have increased 66 billion cubic feet, or an equivalent increase of 60,000 Mcf per day per year. The growth of Pacific Lighting's firm requirements is equally dynamic. As shown on Exhibits 30 and 40, an increase of 51 billion cubic feet during the three-year period indicates an annual growth of firm requirements of about 47,000 Mcf per day. Therefore, the 40,000 Mcf for which certification sought in this application is less than one year's growth of Pacific Lighting's firm requirements. As the firm load increases year by year, the historical balance between firm and interruptible loads suffers and the associated benefits vanish unless additional increments of gas are obtained. The Examiner finds that with certification of the El Paso project, no additional gas volumes will be used for interruptible sales above historical levels in southern California, but the volumes already certificated by FPC will be partially restored to render the same certificated pattern of service.

El Paso presented evidence of its system capacity using design criteria assuming flow and suction temperatures of 65° F, while Transwestern's witness Blundell challenged it with evidence showing the probability of actual capacity greater than "design" on some days because of the effect of generally lower ambient temperatures. However, despite this, witness Blundell conceded that El Paso would have to curtail at least 10 to 15 days during the "interim" period. In other words, he conceded that El Paso does not quite have sufficient capacity to deliver the proposed 40,000 Mcf per day upon a firm basis on each day of the interim period without the additional facilities. Accordingly, this additional gas supply is needed in Southern California during the interim period.

Air Pollution

A primary factor in the fuel market in southern California is the restrictions against the burning of fuels with high sulfur content. When this proceeding started, the principal restriction was Rule 62 of the Air Pollution Control District of Los Angeles County which prohibited in the Los Angeles Basin the burning of liquid or solid fuel containing more than 0.5 percent sulfur by weight during the period of April 15 through November 15, provided that low sulfur content fuels are available. On January 14, 1964, while the instant proceeding was in progress, the Board of Supervisors of Los Angeles County enacted Rule 62.1 which extends the ban on burning high sulfur content fuels to a full year basis, again provided that low sulfur content fuels are available. Since only a limited amount of low sulfur oil is available in southern California Rules 62 and 62.1 have the effect of assuring that, except for that limited supply, all fossil fuel demand in the Los Angeles Basin will be demand for natural gas regardless of price or availability of residual fuel oil. The Air Pollution Control District, County of Los Angeles, State of California, is very much in favor of the allocation to southern California of as much natural gas as it is possible to obtain. There is, however, one major condition to the District's support of this application. That condition is that the certification will not jeopardize the approval of the now pending other applications by Gulf Pacific, Transwestern and El Paso seeking to bring substantial additional volumes of natural gas to southern California. Staff Counsel properly point out that since only about half of Pacific Lighting's market is located in the Los Angeles Basin and is subject to Rules 62 and 62.1, the question of competitive fuel price and availability on Southern's system deserves only limited consideration in evaluating the market for natural gas. Nevertheless, the air pollution aspects do suggest that the availability of additional gas for southern California is in the public interest.

It is also noted that the People of the State of California and the Public Utilities Commission of the State of California urge that the certificate re-

quested herein by El Paso be granted. They submit that the proposed price of 22.48¢ per Mcf and the lack of take or pay provisions make this project commensurate with the public interest of that State.

The California Gas Producers

The California Gas Producers Association (Producers) presented testimony that Occidental Petroleum Corporation has substantial reserves in the Lathrop Field in northern California which are dedicated to Pacific Gas & Electric Company (PG&E), and that Occidental is capable of, and is desirous of, making additional deliveries of gas to PG&E at levels higher than at present. Producers suggest that PG&E take this additional gas from the Lathrop Field and amend its present service agreement with El Paso in order to take less gas at the California border under El Paso's Rate Schedule G, and thereby enable El Paso to deliver more gas to Pacific Lighting without constructing any new facilities.

It is found that the evidence of record warrant a finding that PG&E would not be willing to displace any El Paso gas with Producers gas. The gas under contract to PG&E in the Lathrop Field is produced jointly by Occidental and numerous other producers under a contract that provides that the producers must maintain, over a five day period, an ability to deliver at least three times the annual average obligation of PG&E to take the gas. There is no requirement that PG&E purchase a particular volume of gas on any one day. Under the contractual arrangement, it is possible for PG&E to take gas for only one-third of the days during the year and still satisfy its minimum purchase obligation. The gas from the Lathrop Field can be used as peaking gas and, in fact, is being used for peaking purposes by PG&E. Ever since PG&E began taking from the Lathrop Field, it has averaged only approximately its minimum obligation. Furthermore, the price of Lathrop Field gas is greater than that for the El Paso gas. The basic charge for Lathrop Field gas is 26.5 cents per Mcf for gas with a heating value between 850 Btu and 900 Btu per cubic foot. El Paso sells gas to PG&E under Rate Schedule G which provides for a commodity rate of 22.48 cents per Mcf and a 100 percent load factor rate of 29.74 cents per Mcf. El Paso is obligated to deliver gas with a heating content of 1,000 Btu per cubic foot from the San Juan Basin and 950 Btu per cubic foot from other areas. Taking into consideration the Btu content of the respective gas, it is obvious that El Paso gas is less expensive than Lathrop Field gas. The increased price will have to be passed on to PG&E's customers. Thus, it is patent that PG&E will not voluntarily increase its takes of gas from the Lathrop Field in order to reduce its takes of gas from El Paso. Producers' brief suggests that contracts be entered into by El Paso, Pacific Lighting, and PG&E to provide that PG&E take 40,000 Mcf of gas per day less from El Paso so that the volumes can be delivered to Pacific Lighting. However, there is no evidence that PG&E would be amenable to such an agreement. Absent such willingness on the part of PG&E and El Paso, it would be useless to order an amendment of the present El Paso service to PG&E which is rendered under an approved and properly filed service agreement.

One month after the due date for filing reply briefs, Producers filed a motion to re-open the record for the purpose of receiving in evidence a contract between Pacific Lighting and PG&E as well as the request of El Paso and the authorization by the Federal Power Commission of an amendment to a temporary certificate. Producers allege that these matters, having occurred after closing of the hearing on February 13, 1964, should be given proper weight in the decision. Having given due consideration to this motion and the proposed exhibits, the Examiner concludes that the newly offered evidence does not warrant changing the findings herein or delaying the issuance of the initial decision.

However, Producers' motion will be acted upon separately as soon as the other parties had an opportunity to reply thereto. The specific ruling on the motion and the decision will be released simultaneously.

Need East of California

Transwestern and Edison allege that El Paso does not need additional capacity for service east of California because (a) it will not experience serious difficulty in meeting firm resale obligations in the foreseeable future, and (b) it will not experience an unsatisfactory level of curtailment of industrial customers.

El Paso concedes that it can meet its resale obligations east of California, for a few years, if it disregards its obligations to firm industrial customers. However, El Paso seeks here to meet the growing requirements of its resale customers and at the same time maintain the historical and expected level of service to its firm industrial customers.[4] El Paso's witnesses testified that the east-of-California industrials made possible the original extension of its system to the area west of its original terminus in West Texas, with accompanying service to domestic users, through resale distributors, which they could not otherwise have obtained. The entire history of service to these customers—the basis on which they have contracted, the rates they have paid and are paying, the type of service they are accustomed to and require—as well as the Natural Gas Act itself, all indicate that their curtailments should be held to a much lower level than those predicted for the future without the proposed facilities, if El Paso's resale customers are not to suffer.

Edison argues that since 6,240,000 Mcf curtailment for customers east of California during 1966 was apparently acceptable to El Paso under its original proposal to deliver interim gas through 1966, 6,270,000 Mcf for 1965 with the sale of 40,000 Mcf per day through November 1, 1965 as now proposed, and without the additional facilities must also be acceptable and, therefore, the facilities are not required until after 1967. El Paso contends that curtailments of these customers, who pay the highest rates on the system, would be in violation of their contracts and the bases on which they have been and expect to be served. If curtailments were at a level of 6,240,000 Mcf and half of such curtailments were made of power plant loads, the average penalty of 26¢ per Mcf differential for use of alternate fuels is equivalent to an annual cost to El Paso of $811,200, a figure closely approximating the total cost of service attributable to the facilities proposed (Ex. 29). Obviously, such curtailments are not acceptable to El Paso.

A major basis of Transwestern's opposition is the claim that El Paso already possesses a "maximum capability" or "all-out" capability exceeding both design and best-efforts capacity. This claim is based on the testimony of Transwestern's witness Blundell, the only engineering witness called by any opponent of the certificate. Under his assumption of a flowing temperature of 50° and maximum "all-out" winter capability operations, Mr. Blundell admitted that the additional compression facilities would be required for ten to fifteen days, perhaps more, during the 1964–65 heating season. El Paso convincingly pleads that "all-out capability," should not be used as the measure of system capacity. El Paso insists that every pipeline possesses, under some conditions, a capability above best efforts capacity; but that is not to say that its application for a modest system expansion should be denied for that reason, and that it should be prevented from making proper provision for emergency and unanticipated operating conditions. A system of the size of El Paso's needs this minimum capacity increase to provide the service contemplated. The additional capacity approxi-

[4] *Cf. Granite City Steel Co. v. F.P.C.*, 320 F. 2d 711.

mates only 1¼ percent of daily winter deliveries and is truly minimum. El Paso contends that a pipeline should not be required to plan on the basis of operating in excess of best efforts capacity under design conditions, which are representative of conditions reasonably attainable. There must be some reasonable capability above best efforts for meeting unanticipated and emergency conditions. El Paso does not possess any significant capability above best efforts capacity. It has been unable, in the past since 1960, even when operating at maximum "all out" winter capability, to avoid substantial and frequent curtailments of its firm industrial customers. Without installation of the facilities proposed, these curtailments will increase in frequency and severity. Even with the installation proposed, it must, nevertheless, curtail. It cannot, therefore, be concluded that the maximum "all out" winter capability above best efforts capacity is unreasonable or excessive.

It is also found that certification will assist El Paso in its prepayment problems. The record shows that El Paso has a temporary oversupply of gas which should be sold, and the more it can sell the better so far as its prepayment problem is concerned. More can be sold by this project than can be sold if the project is denied.

Prejudgement Aspects

Transwestern and Gulf Pacific assert that certification of the additional facilities proposed herein by El Paso could prejudge their applications in Docket No. CP63–204, *et al.*, because any increase in El Paso's system capacity at this time, while the Gulf Pacific application is pending, might be utilized as the basis for argument of "impact" of increased magnitude by El Paso and others opposing the Gulf Pacific Project. Humble wants to preserve the status quo as to firm commitments and facilities.

Edison submits that if El Paso's system capacity is increased at this time, it is likely that any such argument by the Gulf Pacific opponents would reflect assertions of "idle" capacity resulting from approval of the Gulf Pacific Project in increased amounts corresponding to whatever additional capacity is certificated herein and constructed.

Transwestern, a potential competitor with El Paso for sales to markets east of California, argues that if El Paso is permitted to obtain authorization in this proceeding through this device of providing "interim" service to California through additional facilities which it contends will be required at some later date for other markets, it can perpetuate an advantage over Transwestern in competition for those markets. Any attempt to sell gas to El Paso's existing customers, or new customers along its system, would undoubtedly be met with the claim that the facilities required for such sales had already been authorized and installed and would be available upon expiration of the "interim" period. Potential competition should not be curtailed by this proceeding.

Gulf Pacific submits that the only effective safeguard against prejudgement is a specific finding by the Examiner and the Commission that El Paso's requested new facilities are in fact needed, and must be used, for service to El Paso's east of California customers after the interim period. If such a finding is made on the basis of the record, Gulf Pacific does not object to issuance of the requested authority to El Paso. Gulf Pacific contends that an ample market exists in California for additional volumes of gas and, if it is properly protected against prejudice, it has no opposition to the proposed additional service by El Paso during the period up to November 1, 1965.

There is a certain amount of validity in the opposing contentions of Edison, Humble, Transwestern and Gulf Pacific. Their interest would be better protected if El Paso's application herein were denied. On the other hand, the

alleged prejudice is not of such magnitude that this aspect in itself would warrant denial of certification of a slight expansion of El Paso's facilities, which management deems essential to meet normal growth. Moreover, the possible, though not necessarily probable prejudgment to opponent's interest can be reduced to a minimum with an appropriate condition in the proposed certicate to El Paso. While such a condition may not be a panacea it will, nevertheless, serve as proof that the decision herein is not intended to impair any of the rights of the parties in the now pending Gulf Pacific Project, Docket No. CP63–204, *et al.* Accordingly, an appropriate condition will be included in the ordering part of this initial decision.

Economic Feasibility

Neither Transwestern or Edison seriously doubts that El Paso's incremental revenues will recover the incremental cost of service during the first year of this project when deliveries would be made to Southern. Similarly, it appears that the same will hold true after 1967, when the needs of the east of California customers reach higher levels. The economic feasibility of East California during the first two years after November 1, 1965 is less certain.

Edison and the Staff argue that a comparison of the incremental revenues with the incremental cost of service discloses that the project is economically not feasible. After July 31, 1964, the highest rate that El Paso will charge any of its customers east of California will be 35.7 cents per Mcf. Deducting El Paso's systemwide average cost of gas of 15 cents per Mcf shows that the revenues exceed this variable cost by 20.7 cents per Mcf. Even assuming that all of the incremental sales will be made at its highest rate, El Paso would have to sell approximately 4,270,000 Mcf of gas in the second year of the project and approximately 4,221,000 Mcf in the third year in order to recover its incremental costs in those years. To recover those costs El Paso would have to make additional sales equal to the full utilization of the additional capacity requested on more than 105 days during both the 1965–66 and the 1966–67 heating seasons. The record shows that El Paso is not likely to curtail its east of California customers on anywhere near 105 days in the near future if the instant application is denied. Hence, the Staff submits that the project is economically not feasible.

However, El Paso does not attempt to relate the loss in revenues due to curtailments to the cost of providing additional capacity and draw any conclusion from it. El Paso contends that incremental revenues do not approach incremental cost only if one considers the curtailment revenues loss to be prevented as "incremental" revenues, which applicant refuses to do. El Paso makes a convincing argument that this project is unusual, in that it is designed not only to produce revenues for El Paso but also to save revenues which might otherwise be lost. These facilities, after the interim utilization thereof, will be employed for the indefinite future in serving the needs of the east of California customers. El Paso contends that the project is a provision of facilities to maintain service to the firm industrial customers at acceptable and appropriate levels so as not to jeopardize the revenues from these customers which approximate $35,000,000.00 annually. El Paso is not here proposing an increase in volumes to a new service area but proposes the maintenance of a former level of service to an existing market, its firm industrial customers. The project is also economically feasible from the viewpoint of service to the resale customers to keep pace with the growth in this load. Applicant argues that denial of certification will prevent

El Paso from maintenance of prior levels of service to its firm industrial customers because of the continuing growth in the full requirements resale load. On that basis, El Paso could not expect to indefinitely retain its firm industrial load and certainly not at present firm industrial rates.

It is held that consideration must be given to the cost responsibility El Paso would incur if certification of the proposed facilities is denied. The evidence clearly shows that absent the proposed facilities El Paso deliveries to "firm" industrial customers cost of California will be further curtailed, resulting not only in decreased revenues from the "firm" customers but also requiring payments to certain of these customers by El Paso for the difference between the customers' actual costs of alternate fuels (oil) and what the costs would have been had equivalent volumes of gas been delivered by El Paso. Thus, viewing incremental costs and revenues solely on the basis of what would result if the proposed facilities are certificated would be falacious to the extent that costs and revenues are not weighed in the alternate situation.

It is further held that Edison and the Staff have shown no valid precedent to support their position that a complete market and supply showing is required when a major pipeline seeks to attach relatively minor additional supplies on terms favorable to its customers (*cf.* Medina Gathering Corp., Opinion No. 397, issued July 16, 1963). Even assuming marginal economic feasibility while serving east of California during the 1966 and 1967 winter season, there is no evidence that any of El Paso's other customers will actually be prejudiced from it. Stringent application of economic feasibility requirements are not warranted in this proceeding. However, as an extra precaution the certificate should contain a special provision that if, in the future, all or any portions of the years 1964 through 1967 are included in any test year in a future rate proceeding involving El Paso, then any deficiency accruing from the sale of this 40,000 Mcf of natural gas per day during such period will not be used as support for increased rates. Normally this type of a condition may be out of step with effective certification procedures. However, since we are dealing with such a small fragment of applicant's operations this provision appears warranted and will serve a useful purpose. Accordingly, an appropriate condition will be included in the ordering part of this tentative decision.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the record in these proceedings, it is specifically found and concluded, in addition to the findings and conclusions heretofore stated that:

(1) Applicant, El Paso Natural Gas Company, a Delaware Corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(3) The sales and deliveries of natural gas as proposed by Applicant, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(4) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder should be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3) and (e) of Section 157.20 of such Regulations.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission, that:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing El Paso to construct with reasonable dispatch the proposed facilities hereinbefore described, and as more fully described in the application in this proceeding and to operate such facilities for the transportation and sale of natural gas in interstate commerce for resale, all as more fully described in said application subject to the jurisdiction of the Commission and upon the terms and conditions of this Order. Such certification pursuant to Section 7(c) of the Natural Gas Act authorizes El Paso Natural Gas Company to construct and operate various compression and metering facilities and to deliver an additional 40,000 Mcf per day of natural gas to Southern California Gas Company and Southern Counties Gas Company of California under El Paso's Rate Schedule G–1 for a limited period ending November 1, 1965. Deliveries are to be made at El Paso's existing points of delivery to Pacific Lighting near Blythe, California, and Topock, Arizona. After November 1, 1965, El Paso is to use these facilities to deliver natural gas to customers on its Southern Division located east of California.

(B) The certificates issued in paragraph (A) above shall be without prejudice to the applications in Docket Nos. CP63–204, CP63–223, CP64–76 and CP64–91.

(C) If, in the future, all or any portions of the years 1964 through 1967 are included in any test year in a future rate proceeding involving El Paso, then any deficiency accruing from the sale of this 40,000 Mcf of natural gas per day during such period is not to be used as support for increased rates.

(D) The certificates issued in paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3) and (e) of Section 157.20 of the Regulations.

(E) The certificate issued in paragraph (A) shall be deemed accepted and of full force and effect, unless refused in writing and under oath by El Paso.

(F) El Paso shall report to the Commission in writing, under oath, the date of commencement of service to be rendered to the various customers named herein.

ALLEN C. LANDE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

INDIANA NATURAL GAS CORPORATION, DOCKET NO. CP63–292

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 29, 1964)

Indiana Natural Gas Corporation, (Applicant), an Indiana Corporation having its principal place of business in Paoli, Indiana, filed on April 29, 1963, an application herein, and on May 16, 1963, June 27, 1963 and May 25, 1964, supplements thereto, and on February 28, 1964 an amendment thereto, pursuant to Section 7(a) of the Natural Gas Act, for an order directing Texas Eastern Transmission Corporation (Texas Eastern) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by

Applicant, and to sell and deliver to Applicant its natural gas requirements for resale to the public in the towns of French Lick and West Baden Springs, Indiana, and vicinity, as hereinafter described.

Applicant proposes to construct and operate distribution systems in said towns, which are contiguous, at an initial cost of $106,612 and amounting to $125,776 in the fifth year of construction. Applicant does not propose construction of any transmission facilities, since it shows that Texas Eastern's pipeline is located within the corporate limits of French Lick and also within Applicant's service area. Applicant shows that it will finance said construction by the sale of 6¼ percent first mortgage sinking fund notes in the amount of $70,000 which it will sell to Northwestern National Life Insurance Company, which will be secured by a first lien upon the property and franchises held by Applicant in the towns of Paoli, Orleans, French Lick and West Baden Springs, Indiana. The financing will also include the sale and issuance of 10,000 shares of Applicant's common stock in the amount of $55,000.

Applicant estimates its natural gas requirements for French Lick and West Baden Springs as follows:

Year	Peak day (Mcf)	Annual (Mcf)
1	1994	152,460
2	2098	160,301
3	2173	168,646

Applicant shows that it holds a franchise from both French Lick and West Baden Springs. Applicant also shows that it was by order of the Indiana Public Service Commission dated February 28, 1963, granted a necessity certificate authorizing Applicant to render gas distribution service within the rural areas in Orange County, Indiana, adjacent to the towns of French Lick and West Baden Springs.'

Applicant shows that its largest consumer will be the French Lick Sheraton Hotel, which now uses coal and propane as fuel.

Pursuant to due notice, a public hearing was held in Washington, D.C. on July 20, 1964, respecting the matters involved in and the issues presented by the application herein. On June 6, 1963, Texas Eastern Transmission Corporation filed an answer herein stating that it has no objection to the granting of the application. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Indiana Natural Gas Corporation, an Indiana corporation having its principal place of business in Paoli, Indiana, is engaged in the local distribution of natural gas in the state of Indiana.

(2) Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G–880 (6 FPC 148).

(3) It is necessary and desirable in the public interest that the Commission, by order, direct Texas Eastern Transmission Corporation to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant a maximum vol-

ume of 2173 Mcf of natural gas per day for resale and distribution in the towns of French Lick and West Baden Springs, Indiana, and vicinity, provided Applicant file a contract between it and the French Lick Sheraton Hotel to render natural gas service to said hotel upon such terms as will not vary appreciably the economic feasibility of its project as shown by the exhibits attached to the application herein.

(4) The requirement that Texas Eastern Transmission Corporation serve Applicant as above set forth will not place any undue burden upon it nor require it to enlarge its facilities, nor impair its ability to render adequate service to its existing customers.

(5) A request having been made by staff counsel for omission of the intermediate decision procedure and all requirements of the provisions of Section 1.30(c)(1) [18 CFR 1.30(c)(1)] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission forthwith to render its final decision in the instant proceeding.

The Commission orders:

(A) Texas Eastern Transmission Corporation be and the same is hereby directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant a maximum volume of 2,173 Mcf of natural gas per day for resale and distribtuion in the towns of French Lick and West Baden Springs, Indiana, and vicinity, upon the condition that Applicant file with the Commission a contract between it and the French Lick Sheraton Hotel to render natural gas service to said hotel upon such terms as will not vary appreciably the economic feasibility of its project as shown by the exhibits attached to the application herein.

(B) Applicant shall be prepared to receive natural gas from Texas Eastern within one year from the date of issuance of this order.

(C) Texas Eastern shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

KASKASKIA GAS COMPANY, DOCKET NO. CP64-231

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 29, 1964)

On April 9, 1964, as supplemented on May 26, 1964, Kaskaskia Gas Company (Applicant) filed in Docket No. CP64-231 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Trunkline Gas Company (Trunkline) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in the community of Xenia, Illinois, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct and operate 4.2 miles of 2-inch lateral transmission line extending from a point of connection with Trunkline's facilities in Clay County, Illinois, to the city gate of Xenia. Applicant will also construct and operate distribution facilities to provide the proposed natural gas service to Xenia. The estimated cost of Applicant's proposed facilities is $106,000, which cost will be financed by the issuance of common stock and the sale of mortgage notes.

The estimated third-year peak day and annual natural gas requirements for Xenia are 295 Mcf and 26,300 Mcf, respectively.

It appears that Applicant has received appropriate authorization from Xenia and the Illinois Commerce Commission.

On May 15, 1964, Trunkline filed an answer to the subject application stating that it has no objection to providing natural gas service to Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on July 1, 1964 (29 F.R. 8282). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) Applicant, Kaskaskia Gas Company, is a public utility duly organized and existing under the laws of the State of Illinois and is authorized to engage in business as a public utility in said State of Illinois.

(3) It is necessary and desirable in the public interest that Trunkline be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 295 Mcf of natural gas per day to Applicant, as set forth in the application, as supplemented, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Trunkline within 9 months from the date of issuance of this order.

(5) The requirement that Trunkline serve Applicant, as proposed, will not place any undue burden upon Trunkline nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Trunkline Gas Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 295 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application, as supplemented.

(B) Applicant shall be prepared to receive natural gas from Trunkline within 9 months from the date of issuance of this order.

(C) Trunkline shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64–96

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 29, 1964)

On April 29, 1964, Transcontinental Gas Pipe Line Corporation (Applicant) filed an application to amend the Commission's order issued April 17, 1964, 31 FPC 957, in Docket No. CP64–96 by authorizing Applicant to construct and

operate approximately 15.5 miles of 16-inch lateral pipeline in lieu of the 15.5 miles of 10-inch pipeline lateral heretofore authorized in this proceeding, all as more fully set forth in the application to amend.

The order of April 17, 1964, authorized Applicant to construct and operate, among other facilities, 15.5 miles of 10-inch pipeline extending from a point on Applicant's main transmission line near Coatesville, Pennsylvania, to the Pennsylvania-Delaware Border. The subject line was for service to Applicant's existing customers, Philadelphia Electric Company and Delaware Power & Light Company. Subsequent studies by Applicant indicate that a looping of the 10-inch line would have to be undertaken within a short period of years and that by installing a 16-inch line at the present time at relatively little additional cost, such a looping program at a substantially greater cost will be avoided.

The estimated cost of the 16-inch lateral is shown to be $1,480,481; the 10-inch lateral was estimated to cost $1,185,822.

Due notice of the filing of the application to amend and opportunity for hearing thereon have been given by publication in the Federal Register on July 3, 1964 (29 F.R. 8443). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 17, 1964, in Docket No. CP64-96 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 17, 1964, in Docket No. CP64-96 be and the same is hereby amended by authorizing Applicant to construct and and operate approximately 15.5 miles of 16-inch lateral pipeline in lieu of the 15.5 miles of 10-inch lateral pipeline heretofore authorized in this proceeding, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

OPINION NO. 440

PUBLIC UTILITY DISTRICT NO. 1 OF SKAMANIA COUNTY, WASHINGTON, PROJECT NO. 2199

OPINION AND ORDER ADOPTING EXAMINER'S ORDER

(Issued July 30, 1964) *

Syllabus

1. Only purpose for which Commission may license use of waterpower resources is to serve public interest. P. 446.
2. No private individual, private company, municipality or state, no one other than people of United States has any right or claim to use or benefit of water power resources. P. 446.
3. License under Federal Power Act is a privilege conferred, not for benefit of licensee, but for benefit of the public– –before any license can issue, benefit to public must be shown. P. 446.

---

*Initial decision appears on p. 456. Order denying rehearing and motion to reopen issued September 25, 1964, 32 FPC 844.

4. In licensing hydroelectric projects Commission has not gone so far as to require firm contracts [as occasionally done in gas cases], nor does it here– –however, a stronger showing is required than applicant has so far been able to make. P. 447.
5. It is Commission policy to encourage extension of natural gas and electric power into new areas whenever possible—both to bring their benefits to additional customers and to further development of these areas. P. 447.
6. Commission *finds* cost of project would be such as to increase rather than reduce cost of power in comparison with Bonneville's present rates. P. 448.
7. Creation of reservoir, diversion of river flow, and fluctuating flow, would introduce chemical changes adversely affecting program of U.S. Fish and Wildlife Service fish installations on the Little White Salmon. P. 449.
8. Evidence on danger to fish is not susceptible of demonstration with mathematical precision, but it clearly reflects substantial hazards. P. 450.
9. Upon instant record, possible benefits to public are small, problematical and unlikely to be realized– –Commission is persuaded that, on balance, applicant has failed to make case for project and application should be denied at this time. P. 450.
10. Commission *denies* application for license in proceeding arising under Section 4(e) of the Federal Power Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

WOODWARD, *Commissioner:*

This case involves an application filed by Public Utility District No. 1 of Skamania County, Washington (Applicant), for a license to construct a hydroelectric project on the Little White Salmon River and its Rock Creek tributary, which are part of the Columbia River System. The application for license was opposed by the State of Washington through its Department of Fisheries and Game, by the Secretary of the Interior through the U.S. Fish and Wildlife Service, and by staff counsel. In addition, letters of protest against the proposed project have been received by the Commission from some 24 Skamania County residents.

A hearing was held in Portland, Oregon, in March 1963. In a decision issued August 8, 1963, the presiding examiner denied the application on the grounds that the proposed project represented a hazard to two fish hatcheries and a fish laboratory operated by the U.S. Fish and Wildlife Service; that measures needed to protect fish, wildlife, and recreational aspects would raise already precarious costs above estimates; that the financial feasibility of the project was not shown; and that the application came too soon for accurate prediction to be made as to whether the project power would be needed in the general development of the Pacific Northwest. The case is before us following oral argument upon Applicant's exceptions to the examiner's decision.

We are satisfied that the examiner in this case, ably assisted by our staff and the Department of the Interior, properly evaluated the pertinent evidence; and we adopt his decision as our own, with the following additional observations.

The Basic Principle Involved

The only purpose for which we may license the use of waterpower resources is to serve the public interest.[1] No private individual, no private company, no municipality or State, no one other than the people of the United States has any right or claim to the use or benefit of these resources. A license under the Federal Power Act is a privilege conferred, not for the benefit of the licensee, but for the benefit of the public. Before any license can issue, the benefit to the public must be shown.

The Benefit to the Public

The benefit which Applicant contends will result from this project is that power will be made available to the people of Skamania County and to other customers at slightly lower rates than they will be able to buy power provided by Bonneville Power Administration. To the extent to which the project is successful in providing cheaper power than is now available, the potential customers will benefit. To the extent that the project may prove unprofitable, either the customers or the investors—or both—will suffer.

We are faced, at the outset, with the fact that only about 20 percent of the power which the project is expected to produce could be used by the people of Skamania County. There were 2,206 customers in Applicant's entire area as of December 31, 1961. Since 85 percent of the county is a national forest, it does not appear likely that major growth will occur which will enable the county to make use of the entire power output of this project in the foreseeable future. The testimony before us is that all power needs within the general area can be met for many years to come, whether this project is built or not. The sole benefits to the public which this project might confer, on the record presented, is the possibility of a small reduction in price to a small number of customers and the possibility that others beyond the county may share in the reduction. Power produced by Bonneville Power Administration is low-priced power, however, and on the most favorable assumptions any saving to the public from lower rates as a result of this project will not be great.

Applicant, however, bearing the burden of proof, has not been able to satisfy us that even these small benefits can be delivered. It is not uncommon for a hydroelectric project to cost more than is expected. The Commission staff places the annual costs higher than does Applicant. Increases in expense would be required by precautions necessary to protect fish and wildlife. Possible reductions in the power output of the project may result from the need to release water for the benefit of fish operations. There is a difference of opinion as to the amount of power that would be generated by the project, and there is at least the possibility that the expectations of Applicant in this regard are overoptimistic. The examiner found that the annual costs may exceed annual benefits by about $118,000; and we are in accord with this finding.

If the hopes for the project prove overoptimistic by reason of underestimates of costs, accidents, or other unforeseen events in the course of construction, decreases in revenue resulting from the need to supply water to sustain the fishing operations, or inability to locate customers who will take the power on the terms offered, then this project will confer no benefit at all upon the public.

---

[1] "The grant of a license, being a privilege from the sovereign, can be justified only on the basis of benefit to the public." *Northern States Power Co.* v. *F.P.C.*, 118 F. 2d 141, 144 (CA7, 1941), quoted in *Alabama Power Co.* v. *F.P.C.*, 128 F. 2d 280, 288–9 (CADC, 1942).

Financing

Applicant proposes to raise $11,909,000 by a bond issue. Underwriters have indicated that $9,000,000 in bonds could be sold if firm contracts or other solid basis existed to show the power could be sold.

There are 2,206 customers for power within Applicant's district, which has a population of approximately 26,000. The project would produce between 30,600 kilowatts and 35,000 kilowatts by 1970. Only 20 percent of the power could be used inside Applicant's district for some years; the estimate is that all the power to be produced cannot be used within the district before 1992.[2] Approximately 85 percent of the district is included within the Gifford Pinchot National Forest so that only about 15 percent of the area of the district will be available for growth which might appreciably increase the consumption of electric power.

It appears that by far the greater part of the power to be generated by this project would have to be sold outside the district for many years to come. Applicant presents no studies showing probable demand outside the district. In its attempt to show that the project could be financed successfully, it presented three letters; one from a neighboring public utility district and two from private companies. Examination of these letters reveals nothing more than a polite reply on the part of the private companies to letters of inquiry which had been sent them. The letter from the Clark County Public Utility District indicates more interest, but is far from providing any reliable expectation of a market. We think this is an insecure foundation upon which to base an $11,000,000 venture.

A comparison may be drawn between our determination here and our requirements when licensing natural gas pipelines to initiate service in new areas. In the case of natural gas we have upon occasion required written contracts when it was anticipated that a substantial portion of the sales of gas would be made to a particular customer. In licensing hydroelectric projects we have not gone so far as to require firm contracts, nor do we do so here. In such a case as this, however, we do require a stronger showing than Applicant has so far been able to make.

We have authorized natural gas pipelines to extend their services in new areas notwithstanding the fact that the market to support the new services was marginal at best. In those cases, however, the pipelines were bringing a new service, a new form of energy, to areas previously lacking it. It is our policy to encourage extension of natural gas and of electric power into new areas whenever possible, both to bring their benefits to additional customers and to further the development of these areas. This policy, however, has no application in the case before us. Skamania County is amply supplied with electric power at reasonable rates. There is nothing in the record to indicate that one additional home would receive electricity by reason of the building of this project.

The sole benefit suggested is that, if the fondest hopes of Applicant are realized, power might be supplied at a price of 3.12 mills per kilowatt hour rather than at 3.37 mills per kilowatt hour, the price paid Bonneville Power Administration during 1962. The figure of 3.12 mills per kilowatt hour can be supported only if the annual cost is divided over a 50-year period by the estimated annual generation. If a 44-year period is used, as recommended by staff, the cost of power at site becomes 3.42 mills per kilowatt hour—more than BPA's selling price. If flows at the diversion structure are considered during the months of June through

---

[2] In 1962, the maximum demand was 10,900 kilowatts. A new mill, with an estimated firm need of 2,500 kilowatts, is building in the district. Studies (which did not consider the new mill) estimate a demand for 19,700 kilowatts in 1971.

November, when the amount of water available is less than the hydraulic capacity of the project, the cost of power could rise to 3.91 mills per kilowatt hour. These figures take no account of the additional cost of precautions for the protection of wildlife and fish, loss of available water through spillage necessary in connection with the fish operations, the likelihood that not all the potential power can be disposed of for some years at least, or the possibility of human miscalculation. It is the judgment of the Commission that the cost of the project would be such that there would be an increase rather than a reduction in the cost of power as compared with Bonneville's present rates."

Effect on Wildlife

The Department of Game of the State of Washington opposed issuance of the license on the ground that some of the project's waterways would be a hazard to deer and other game. This hazard could be largely eliminated by asphalt rock stripping along the sides of the waterways so that game could climb out, and the testimony indicates that alternative measures would also be effective in minimizing the hazard to game. These protective measures would add, however, to the anticipated cost of the project.

Recreational Facilities

That part of the river to be occupied by the project is not particularly suitable for fishing, and very few fishermen use it. The fishing facilities below the project would be affected to some extent by fluctuations in the river. The testimony is that even during low periods the project would allow the fish population enough water for continued existence, but would leave less water in which the fish could move than there is at present. Any loss in stream fishing as a result of the project would be more than offset by the addition of the boating and lake fishing not now available.

The Effect on the Fish Installations

The U.S. Fish and Wildlife Service fears that operations of its two fish hatcheries and its fish nutrition laboratory on the Little White Salmon River would be endangered by the construction and operation of the proposed project. The two hatcheries are considered to be among the best in the Columbia River Basin. They not only contribute to the economy of the area, but are an insurance policy on the preservation of the salmon.

The Little White Salmon National Fish Hatchery was established before the turn of the century. Egg taking operations began on the Little White Salmon in 1896. In 1955 the hatchery buildings were rebuilt and enlarged at a cost of $612,871.93. It is now the second largest producer of the 21 hatcheries established or reconstructed under the Columbia River Fishery Development Program. In 1962 it produced 12,667,000 fall chinook salmon out of the 54,760,000 produced in that year by all hatcheries under the program and released an additional 215,000 silver salmon of 1960 brood year.

The Willard National Fish Hatchery was built in 1954 at a cost of $649,755.94. In 1962 it produced 159,000 fall chinook salmon and released 2,858,000 silver salmon of the 1960 brood year, as compared with a total of 16,296,000 silver salmon released in 1962 by all hatcheries under the program.

The Western Fish Nutrition Laboratory was built in 1957. Its purpose is to determine the nutritional requirements of salmon and steelhead for the benefit of the hatcheries of the Columbia River Basin. The uncontradicted testimony is that this laboratory is an essential unit in the Columbia River

Fishery Development Program, and has already gone far in providing basic information and setting standards that are being adapted to hatchery operations.

All these installations are a part of the Columbia River Fishery Development Program to rehabilitate the salmon and steelhead of the Columbia River System. The program, although financed by Federal funds, is planned and executed in cooperation with the States of Idaho, Oregon, and Washington. From 1949 through 1962, over $22,500,000 has been made available by Congress for the construction or reconstruction of 21 hatcheries in the Columbia River Basin. Approximately 1,500 miles of tributary streams have been cleared of obstructions to permit better passage and spawning of fish. Some 500 screens have been installed in diversion ditches and canals, 22 major fishways have been built at falls that blocked fish migration, and some 150 minor falls have been improved to permit easier passage for the fish.

It has been urged that the project might adversely affect the fish installations on the Little White Salmon River in the following ways:

Temperature of the water: The river water is now colder than optimum temperature for salmon hatching and growth, although the fish installations have operated successfully. With the advent of the project, the water temperature would be slightly raised in summer because the reservoir would be warmed by the sun. We agree with the examiner that no adverse effect upon the fish installations is to be expected from these temperature changes.

Change in the chemical content of the water: Data on fish nutrition has been collected at the fish laboratory over a 5-year period. It is urged that alteration of the chemical content of the river (which would result from water flowing through the reservoir and from fluctuating volumes of water) will render this data useless. There is now substantial chemical change from season to season and from year to year, principally because the volume of flow varies constantly with differences in rainfall and as temperature changes affect the melting of the mountain snowcaps that feed the river. The varying flow causes the river and its tributaries to flow over different ground in different years and seasons, and also changes the rate of erosion and the proportion of water from different sources. Lumbering and road building also affect the chemical content of the water. While the data so far collected cannot be said to deal with a constant situation, the project would create a completely new condition. There appears no doubt that the creation of a reservoir, the diversion of the flow of the river, and the fluctuating flow would introduce chemical changes in addition to and different from those previously experienced at the fish laboratory, and so would adversely affect the hatchery program and the comparability of the statistics on fish population which are an important value of the fisheries.

Fluctuation and quantity of flow: Applicant admits the necessity of making sufficient water available to the fish installations, spilling water from the reservoir if necessary. Applicant also concedes that operation of the project would cause fluctuations in the flow of the river downstream, especially as the project is to function as a peaking operation. It would also be necessary at certain seasons of the year to provide an even flow, as salmon would be deterred from entering at the mouth of the river if it discharged a fluctuating volume of water. Although it may be necessary to spill so much water that the estimated power output may be reduced at certain times, the flow can be regulated without adversely affecting the fish if there are no accidents or breakdowns of communications between those dealing with the fish and those in charge of the project.

Silting and debris: Excessive silt kills salmon eggs. Both hatcheries have some silting problems, but they do not appear to have interfered greatly with their operations. It has been suggested that protection against debris might have to be increased at the hatcheries if debris in the river increased as a result

of the project. From the evidence, it does not appear that the change in river conditions with respect to silt and debris would be great enough to be given much weight in our considerations.

Fish disease: Expert testimony was presented that the reservoir might act as a breeding tank for micro-organisms which would introduce disease into the water flowing to the downstream fish installation. Other expert testimony was presented to the contrary. In view of the testimony of an expert witness employed by the U.S. Fish and Wildlife Service, we hesitate to say that the hazard does not exist; accordingly, we leave undisturbed the examiner's finding on this point.

Construction: Damage could result to the fish installations during construction of the project unless protective measures are taken. Blasting within 1 mile of salmon eggs at certain critical times could kill them. Until concrete has been installed long enough to be leached, it introduces toxic elements into the water. This could be taken care of by diverting the flow of water around the fish installations during the period of construction and for a short time thereafter, but the possibility of accidents remains. Both the testimony in this record and our own experience indicate that this possibility is substantial.

Accidents and unforeseen developments: Unforeseen accidents have repeatedly occurred on other projects and caused damage to fish. Such happenings as washouts, sinking of a barge, incorrect calculation of flow, and rock slides have caused deleterious effects. After careful consideration, we conclude that, while the evidence does not establish how great a hazard the project would be to the fish installations, some hazard would exist.

The evidence on the danger to the fish is not susceptible of demonstration with mathematical precision, but it clearly reflects substantial hazards.

Upon this record, the possible benefits to be conferred upon the public are both small and problematical and, in our judgment, are not likely to be realized. The hazard of detriment to the public is clearly present. While the economic feasibility of this project is problematical, if that were the only issue we might well grant a conditional license. Under the circumstances, we believe that the application should be denied at this time, not because of any single factor, but because a weighing of all considerations persuades us that, on balance, the applicant has not made a case for the project. If at some future date the need should arise for development of water power at this location or there should be other material changes of circumstances, another application may be submitted.

The Commission orders:

(A) The findings and order of the presiding examiner in the above-entitled matter, issued August 8, 1963, are hereby adopted as the findings and order of the Commission.

(B) The exceptions of Applicant to the initial decision of the presiding examiner are hereby denied.

Commissioner Ross *concurring.*

Commissioner BLACK *dissenting.*

Ross, Commissioner, *concurring:*

Once again the Commission, as in the controversy surrounding the immediate damming of the Salmon River, is called upon in its role as a trustee and guardian of the nation's resources to protect the continuing interest of the entire human species in our precious natural resources, a role which involves "our maturity and mastery, not of nature but of ourselves".[1] It would be shameful if this Commission were not alert to the possibilities of the extinction or severe diminution of the fishery resources of the Northwest. Surely, the

[1] Rachel Carson, CBS Reports, April 3, 1963.

nation cannot afford to gamble with the rights of future generations and await the virtual extinction of fish in the Columbia while idly relying on some speculative promises that all will be well. If we are to do our job, it must be done here and in each case. There may not be a next time. All too often the nation oversleeps and awakens to a world stripped of its glory. Ponder life for a moment without the clear sparkling streams teeming with fish and wildlife. Let us not forget the epic tragedies which befell the passenger pigeon, the buffalo and the whooping crane. Let us not repeat the Raid on Resources so vividly described in Stewart Udall's *The Quiet Crisis.*

There is a place in our lives both for power and the material benefits that power brings, and the fish which are increasingly important in the recreational field, and are also meaningful as a sacred and living symbol of life itself. It is the function of the Federal Power Commission to focus the camera and bring the two into proper perspective.

Here the scales weigh against the dam for the several reasons stated by the Staff, the Examiner and the majority. One of the primary answers of the power developers in the Northwest to the arguments that their high dams were destroying the anadromous fish runs has been that the state and federal fish hatcheries would serve as an adequate substitute for nature. This contention is supported by experience abroad and has been accepted in many cases in this country. Therefore, when the hatcheries themselves are threatened, it becomes incumbent to proceed cautiously, particularly since the environment necessary for successful reproduction is extremely difficult to duplicate. And as the majority notes, these two hatcheries are among the oldest and most successful in the Columbia River basin.

The evidence on the danger to the fish concededly is not of that mathematical precision which would make our decision here a simple mechanical process. But the evidence clearly silhouettes the clear and present danger this project represents to this resource at this time and thus, in my opinion, the reasonable, prudent course is to forego, at least for the present, this power project. Surely, the respected leaders of this Utility District, the very ones who have fought valiantly to promote the orderly growth of one of the most beautiful areas of the country, will not quarrel too bitterly over a decision which does not close the door, but only reserves to their children and our children the opportunity to weigh again the wisdom of our decision.

In a manuscript, "Our Commitment to Future Generations", which was completed two days before he was slain, John F. Kennedy began:

> Robert Frost, a late poet, once remarked, "What makes a nation in the beginning is a good piece of geography". Americans have been richly endowed with a land that is both beauteous and bountiful. Our greatness today rests in part on this gift of geography that is the United States but what is important for tomorrow is what the people of America do with their conservation legacy. [*Country Beautiful,* Feb.-March, 1964, p. 12.]

BLACK, Commissioner, *dissenting:*

We are here faced with the question of whether vague and unsupported fears of danger to an existing fishery laboratory and two fish hatcheries should preclude the licensing of a hydroelectric project of moderate economic efficiency. Unfortunately, and apparently in recognition of the fundamental lack of any solid evidence of danger to the fish facilities from the proposed development, the majority has injected a variety of makeweight issues relating to the

economic feasibility of the project. Because I believe the majority's expressed reasons for rejecting this project would adversely affect the continued development of the Columbia River Basin by non-federal entities, I must dissent.

The majority expresses four basic reasons for denying applicant a license. First, that all the power needs within the general area can be met even if the project is not built; second, that project power cannot all be marketed; third, that the possibility exists that the project is not economical; and fourth, that fish hatchery operation may be adversely affected. I will deal with these points in the order I have stated them.

Need for the Power

The Commission has taken a most curious and unfortunate position which will perhaps set a precedent with far reaching implications for the development of the Columbia Basin water power resources by publicly-owned entities in the Pacific Northwest. The majority tells us that the Northwest is in a surplus power position and that the Bonneville Power Administration can supply applicant's needs for the foreseeable future. I expect that this is true. But if this is a valid reason for denying a license in this case, it should also prevent the licensing of other projects within Bonneville's marketing area. This Commission has here taken a stand which necessarily treats the Federal Government as the favored—or perhaps even the exclusive—power supplier for the future in the Northwest. I don't think that Congress expected the enactment of the Bonneville Power Act to have the effect of creating a kind of federal monopoly in the Columbia Basin. The Commission is setting up the intended benefits of the preference provisions of the Bonneville Act as an obstacle to the development by PUD's municipals, and other public entities, of their own generating facilities.

Moreover, the approach which the majority has taken here would in the case of competing applications between a preference and non-preference body, actually use the preference provisions of the Bonneville Power Act to defeat the preference provisions of the Federal Power Act. As between a private and public applicant in the Bonneville marketing area, the public body of course has less "need" for its own generation, since it is a preferred customer of Bonneville. The Commission's reliance on this factor is an ominous sign for the future of public non-federal hydroelectric development in the Pacific Northwest. Logically, it does not bode well for the future development of the water resources of the area by privately-owned utilities, either. The rather complete integration of the operations of the private and public bodies which comprise the Pacific Northwest Power Pool with the Bonneville system tends to minimize the absolute "need" for power by *any* of the member utilities as long as the Pacific Northwest enjoys a surplus of power.

The majority has taken, I believe, a fundamentally erroneous approach in its insistence on "need" by the developer. Our responsibility under Section 7(a) of the Federal Power Act is to see that *the water resources of the region* are most effectively developed for the over-all public good. The majority seems to recognize this most basic concept of the law when it recites that "A license under the Federal Power Act is a privilege conferred, not for the benefit of the licensee, but for the benefit of the public," and then proceeds to ignore this solemn pronouncement. The resources of the Little White Salmon River are totally undeveloped for its hydroelectric power potential, and the Commission, by its action today, is preventing its development for the benefit of the public in large part by its preoccupation with the individual applicant's need or lack of need for the power the project would produce.

Marketability

Related to the question of applicant's need for power in its own system is the question of its ability to dispose of energy outside the district. It is conceded that applicant cannot market all the output of the project on its own system in the early years.

As the majority opinion notes, three letters from private utilities and a Public Utility District were placed in evidence which show varying degrees of interest in purchase of the project power. It is, of course, incumbent upon this Commission to satisfy itself that a proposed project can be financed, and I am inclined to agree with the majority that applicant's case with respect to sale of the project power in the early years is not compelling. We must recognize, however, that financing of a project must await issuance of a license; and without a license a proposed developer is not in a particularly favorable bargaining position. It would be entirely consistent with past practice of this Commission, both with respect to applications by natural gas pipelines seeking to serve new areas,[1] and in hydroelectric licensing cases,[2] to issue the license with a condition requiring applicant to demonstrate financibility to our satisfaction within a reasonable period of time.

Economic Feasibility

The record contains satisfactory evidence that, although the site is not a bountiful one, it is capable of economic development. Applicant's case establishes that over a 50-year period its average annual costs will be $704,000. This would result in the power costing the applicant $20 per kilowatt year of peaking capability or 3.26 mills per kwh of average annual energy in contrast to the 3.37 mills applicant paid for power it obtained from Bonneville in 1962. The majority summarily rejects applicant's case without discussion and concludes with the Examiner that the annual costs may exceed annual benefits by $118,000. This is achieved by assigning an unsupported, inflated average annual cost to the project of $715,000 and by denying the applicant any credit for the project's dependable capacity over and above that attributable to its prime energy. It disregards the unrefuted expert testimony of applicant's consultants (R. W. Beck & Associates). Applicant's evidence establishes that the annual benefits could exceed annual costs by as much as $248,000, producing a benefits-cost ratio of 1.35.

Even a most conservative analysis of this project using the value of power determined by the staff, it is only during the first 7-year period that the annual costs exceed the annual benefits, and then by a mere $142,500. However, for the remaining 43-year period the dependable capacity at market will increase substantially and produce a net benefit over cost of $168,300, for a benefits-cost ratio of 1.22. Thus, even on this basis we have a benefits-cost ratio based on the weighted dependable capacity at market for the 50-year license period of about 1.11. Staff's conclusion that the benefit-cost ratio is less than unity is based on its analysis of the project's initial seven years of operation only, contrary to the normal standard laid down in FPC Technical Memo No. 1 which prescribes the use of a 50-year period.

This Commission issued thirteen major project licenses between January 1, 1961 and December 31, 1963, to both private and public bodies, seven for projects

with benefit-cost ratios of less than 1.11.[3] It should be noted that even after oral argument of this case before the Commission we unanimously approved the issuance of a major project license in another uncontested case involving a facility having a benefit-cost ratio of only 1.14.[4] Furthermore, it should be pointed out that in submitting recommendations to the Bureau of the Budget and the Congress for the inclusion of hydroelectric and generating facilities in proposed federal construction, it is the policy of the Commission to make favorable recommendation for the inclusion of such facilities in cases in which the benefits to cost ratio of the project, on a 50-year term basis, simply exceeds unity.

UNCONSTRUCTED MAJOR PROJECTS

Project No.	Project name	Licensee	Benefits costs	Construction cost
2079	Upper American R.—Calif.	Placer Co. Water Agency	1.08	$102,205,800
2106	McCloud-Pit R.—Calif.	Pacific Gas & Elect. Co.	1.03	92,030,000
2144	Boundary—Wash.	City of Seattle	2.07	118,566,000

[1] Initial installation.
[2] Ultimate installation.

It is clear that applicant's proposal, on the record before us, is economically feasible. But the majority, in straining to support the Examiner, goes outside the record and agonizes over all sorts of eventualities and calamities which might befall the applicant. It is not uncommon, they tell us, for a hydroelectric project to cost more than is expected. There may be "possible" reductions in the power output of the project. There is "at least the possibility" that the expectations of applicant with regard to the amount of power to be generated are "over optimistic." Applicant may experience accidents, the "possibility of human miscalculation," or "other unforeseen events" in the course of construction.

Indeed, some or all of these things "might possibly" happen. They might happen in the construction of *any* project, large or small. But I have always labored under the apparent misapprehension that this Commission decided its cases on a factual record; not on conjecture and speculation that something might go wrong. No one pretends that a decision upon the licensing of a hydroelectric project can be decided with computer-like accuracy; but if timidity and unsupported fears are so profoundly to affect the exercise of our licensing jurisdiction as the majority opinion indicates in this case, then we have a lot of hand wringing to do over the so-called marginal projects we have licensed in the past several years.

Fish Interests

Finally, the Commission has decided that the "possible benefits" of the proposed project are outweighed by the hazard of damage to the operation of two fish hatcheries and a fish nutrition laboratory. Lest my position be misunderstood in light of Commissioner Ross' moving and poetic concurring statement, let me assert without equivocation that I have no quarrel with Rachel Carson,

[3] Economic Feasibility of Projects Licensed from January 1, 1961 to December 31, 1963.
[4] *Public Service Company of Colorado*, Project No. 2351, issued March 23, 1964, 31 FPC 684.

Robert Frost, etc. as to the value of the nation's fish and wildlife resources. In fact, if the majority's conclusions were supported by substantial evidence I would join with my colleagues in the denial of the project license, even though I am convinced they have erred in passing upon the financial and economic aspects of the application.

The majority is concerned with possible changes in the chemical content of the water which, it is asserted, might adversely affect the hatchery program. If the chemical content of the water upon which fish nutrition data is based were reasonably constant, or even if it fluctuated with some reasonable predictability, we might be justified in deferring to the expressed fears of the fisheries interests. But the majority recognizes (and the record supports) the fact that the chemical content of the water is constantly changing from a number of wholly unpredictable causes. A witness for the U.S. Fish and Wildlife Service testified simply that "The quality of the water may change; we do not know how." At another point he admitted that "I do not know to what extent" there will be any change in water quality. The fact is that to the extent some small chemical change may occur as a result of the construction and maintenance of the project, it very likely will be of no more significance than the great variety of changes occurring from other causes over the years.

The majority addresses itself to the question of possible fish diseases resulting from the breeding of micro-organisms in the reservoir, candidly admits that it doesn't know what will happen, and shrugs the whole thing off by saying that the Examiner's finding will remain undisturbed. The Examiner based his finding upon the testimony of an inorganic chemist for the Department of the Interior who should in the first place have been disqualified to express an expert opinion concerning the development of living organisms. He did, however, demonstrate sufficient candor to admit at several points in the record that he "wouldn't have any idea," what the effect might be. There is, on the other hand, considerable and persuasive evidence of record that the project would not, in fact, create water conditions suitable to the growth of algae, flora and fauna. But, even assuming for the sake of argument that the witnesses who testified to this effect were wrong, evidence was adduced which would establish that the growth of small organisms is, if anything, *beneficial* to fish. The members of this Commission are not expert fish biologists; but our lack of independent knowledge in this regard does not justify abdicating responsibility to the Examiner, who, so far as I know, is not highly schooled in the matter of fish diseases either. There is no substantial evidence of record to support his finding or that of the Commission that any hazard of disease will be created by construction of the proposed project.

Lastly, we are told that damage to the fish could result from construction activities, and "unforeseen accidents" such as "washouts, sinking of a barge, rock slides," etc. These dreadful things have occurred on other projects and caused damage to fish. Apparently the way to avoid such risks is simply not to license any more projects.

The majority strikes a stern and rigid pose as to the burden of proof which applicant must bear, and which, it is asserted, was not met. But the merest expression of nervousness by the fishery interests and we go all to pieces.

The refusal by the majority to explain the basis for its conclusions underscores its approach to this case upon the apparently preconceived notion that the project should not be built. It has created out of whole cloth all manner of obstacles to a favorable decision. In so doing, the facts of record, the precedents of this Commission and the intent and requirements of the law have been ignored. All to satisfy the undefined apprehensions and opposition of the fishery interests; and with the effect of inhibiting development in the Northwest

of water power resources by local public bodies who find themselves in the marketing area of the Bonneville Power Administration. Whether or not this small project is ever built is probably not of earth shaking moment; the basis upon which the Commission's decision was reached, however, is most disquieting, and I am compelled to dissent for the reasons stated.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION FOR A LICENSE FOR A HYDROELECTRIC PROJECT

(Issued August 8, 1963)

LANDE, *Presiding Examiner:* This proceeding is upon an application filed by the Public Utility District No. 1 of Skamania County, Washington (hereinafter referred to as the Applicant) for a license, pursuant to the provisions of the Federal Power Act, for the construction of a hydroelectric project to develop the water power potential of the Little White Salmon River, a tributary of the Columbia River.

A hearing was held in Portland, Oregon, from March 4 through March 13, 1963, inclusive. During the course of the hearing all parties and participants were afforded an opportunity to present evidence and to cross-examine witnesses. In addition, all persons appearing at the hearing and desiring to speak either in favor of or in opposition to the issuance of a license for the proposed project were heard.

The record for consideration herein consists of a transcript of 1529 pages, 76 physical exhibits and a number of other documents received by reference and official notices.

Seriatim briefs have been filed by all parties on the various dates set. Applicant replied to the interveners' briefs on or about July 22, 1963, as of which date the case was considered submitted for decision.

PROCEDURAL BACKGROUND

A Little White Salmon hydroelectric project was first actively considered by local residents in the 1940's. At the same time that the Skamania County PUD No. 1 and some residents of the area expressed an interest in the projects, the Washington Public Power Supply System indicated its interest and went so far as to obtain some measure of approval from the Washington State Departments of Game and Fisheries of the then proposed project, which differed from the present project. The initially proposed project studies contemplated a series of canals and tunnels down the left side of the river as distinguished from the present plan for canals and penstocks down the right bank of the river. Subsequently Applicant allegedly started an engineering study of the Little White Salmon River with a view of constructing a hydroelectric project to meet the future needs of the area served or to be served by the Applicant. Applicant obtained loans from the Housing and Home Finance Agency and also used its own funds to obtain an engineering report. The preliminary engineering report was dated July 21, 1958, and formed the principal basis for the application for a license to construct Project No. 2199.

The Commission by its Order of December 14, 1956, issued a preliminary permit to the Applicant for Project No. 2199. On September 14, 1959, the Applicant filed an application for license showing *inter alia* that the proposed project would affect lands, fish hatcheries, and nutritional laboratories of the United States.

Notice of the foregoing application was published and thereafter, based upon their petitions, the State of Washington through its Departments of Fisheries

and Game, and the Secretary of the Interior through the U.S. Fish and Wildlife Service were granted intervention by the Commission's Orders of January 4, 1960, and September 4, 1962, respectively. Several letters of protest against building of the project have been received by the Commission. Following a request for hearing by the State of Washington and the U.S. Fish and Wildlife Service, a hearing was fixed by the Commission's Order of May 11, 1962, and was held in Portland, Oregon, in March 1963.

THE ISSUES

The basic issues in this proceeding may be stated in substance as follows:

1. Is the proposed project best adopted to a comprehensive plan for improving or planning the water power development of the Northwest?
2. Has Applicant shown its own need for the project output now, or in the foreseeable future?
3. Is there a market for surplus power from the project?
4. Will the project impose hazards to existing hatchery, laboratory installations, and to the area wildlife?
5. Is the project economically feasible?

JURISDICTION

The proposed Project nestles along the boundary line of the Gifford Pinchot National Forest. The proposed transmission line of the Project crosses National Forest land. The proposed powerhouse of the Project is located on United States land close to the Little White Salmon Fish Hatchery of the U.S. Fish and Wildlife Service; and similarly situated upon such United States lands are the penstock, the access bridge across the River, the weir at the powerhouse and the initial portion of the Project transmission line.

The evidence shows, and it appears to be conceded by all of the participants in the proceeding, that the Applicant must secure from the Federal Power Commission a license for the Project because portions of the Project occupy public lands and "reservations" within the meaning of Section 3(2) of the Federal Power Act.

Jurisdiction of the Commission is properly grounded upon (a) the fact that the Project proposes the construction, operation and maintenance of dams, water conduits, powerhouses, transmission lines and other project works upon parts of "reservations" of the United States consisting both of national forest reservations and other lands owned by the United States, and (b) upon the fact that the Project contemplates construction, operation and maintenance of dams, water conduits, reservoirs, powerhouses, transmission lines and other project works for the development, transmission and utilization of power across, along, from or in streams which affect "navigable water" within the meaning of Section 3(8) of the Federal Power Act.

PROJECT'S FEATURES

Water for the proposed Project would be diverted by a structure to be located in the Little White Salmon River (elevation about 1,160 feet) approximately 5 miles above its confluence with the Columbia River. From the diversion structure water would flow through a 11,200-foot canal to Rock Creek Reservoir where about 200 acre-feet of usable pondage would be available between the normal pond elevation of 1,151 feet and the minimum level at elevation of 1,147 feet. Water would be lead from the reservoir through a 8,560-foot canal to a tunnel about 5,160 feet long which terminates at the base of a surge tank.

An underground penstock would bring the water to a single 49,200 hp. turbine in the powerhouse located on the river about a half-mile above its mouth, and just across the Little White Salmon River from the upper group of holding and rearing ponds of the Little White Salmon Fish Hatchery. The minimum tailrace pool elevation proposed is 102.5 feet as compared with the hatchery trough elevation of 102.5 feet and rearing pond elevation of 101.67 feet.

The total cost of constructing Project No. 2199 is estimated at $11,909,000. This is based on preliminary designs intended only to show major features and their function as a unit. Before actual bids on construction can be made many more design details will have to be developed on the basis of further tests and study. Commission Staff has reviewed the estimates in the light of work papers and other detailed information available and regards them as reasonable. Geological testimony of the experts, Applicant's witness Coombs and Interior's witness Anderson, is in substantial agreement in regard to its relationship to proposed structures. Interior and Washington did not seriously question the adequacy of the structures and their safety or adequacy to serve the purposes for which they are intended. It is understood that additional studies would be carried out before final designs can be prepared for Commission approval in the event a license were issued.

ADJACENT FACILITIES

Little White Salmon Fish Hatchery

The Little White Salmon Hatchery is located in a narrow canyon of the Little White Salmon River just above its confluence with the Columbia River. This hatchery was first established in 1898. In 1955 it was rebuilt and enlarged at a cost of $612,871.93 and now consists of a service building, a hatchery building with 72 troughs, several storage buildings and 52 raceway-type concrete rearing ponds. One group of rearing ponds is located about 1,700 feet below the powerhouse site and the second group is located across the river and just immediately below the site. This second group of ponds is operated in conjunction with a short fish ladder and holding pond which are used in egg-taking operations.

The principal water supply for the hatchery consists of a diversion dam a short distance upstream from which water passes through 200 feet of 48-inch steel pipe to a settling basin and rotary screening device. It then passes through 1,100 feet of 36-inch steel pipe designed to carry 55 cfs to a trough at the upper rearing ponds at 102.5 feet elevation. This water supply is supplemented by a small diversion dam and 24-inch steel pipe just immediately upstream from this group of ponds. Water is passed to the lower group of ponds by means of 1,650 feet of 24-inch pipe. This water supply is supplemented from two springs across the river and one on the same side of the river.

Willard National Fish Hatchery

The Willard National Fish Hatchery was constructed at a cost of $649,755.94 in 1951 under authorization of the Mitchell Act of May 11, 1938 (52 U.S. Stat. 345) as amended by the Act of August 8, 1946 (60 U.S. Stat. 932) and is located on the Little White Salmon River about 3,900 to 4,000 feet below the diversion structure for Project No. 2199. It consists of several buildings including a hatchery building and 108 deep troughs and 50 concrete raceway rearing ponds. The main water supply consists of an intake structure by which water is taken from the river through 1,100 feet of 36-inch steel pipe designed to carry about 50 cfs of water. The water passes through a screening device before reaching the hatchery. This water supply can be supplemented from one well which can

produce 1,000 g.p.m. and two which can produce 500 g.p.m. each. Facilities for reuse of water are also available. A spring used primarily for domestic purposes is also available for the hatchery and laboratory use.

Western Fish Nutrition Laboratory

The Western Fish Nutrition Laboratory was built by Interior in the early 1950's for the purpose of studying basic nutritional needs of salmonoids and basic process of body chemistry and metabolism of these fish for use in artificial propagation of salmonoids in the Pacific Northwest. This installation is located just immediately downstream from the Willard Fish Hatchery on the Little White Salmon River and normally receives its water supply from two of three wells located just above the hatchery.

Wildlife and Recreational Aspects

Approximately four and one-half miles of the Little White Salmon River from the Willard diversion point to its confluence with the Columbia River will be affected by the proposed Project. The valley through which the river runs is relatively steep, however there are several routes of access to the river which are utilized by fishermen. The Little White Salmon River is one of the few remaining exclusive trout streams in the State of Washington.

Witness Larson testified for the Washington Department of Game that construction and operation of the proposed Project would have "an extremely deleterious effect" on game fish in the Little White Salmon River. He further testified that the open canals would cause substantial losses of deer by drowning.

Applicant's Own Need

Skamania County is located on the north bank of the Columbia River, beginning about 20 miles east of Vancouver, Washington. The southern boundary of the county extends 40 miles along the Columbia River. The Gifford Pinchot National Forest partially covers Skamania County, and comprises 85 percent of the county's total 937,000 acres. Skamania County Public Utility District No. 1 was organized in 1938 as a municipal corporation, which is subject to audit control and supervision of the State of Washington. It operates an electrical distribution system serving users located entirely within Skamania County. The power which the Applicant distributes is presently obtained entirely from the Bonneville Power Administration (BPA). The Applicant has been actively engaged in the operation of electrical public utility properties since 1939 when it acquired the electrical distribution properties of the private companies then serving Skamania County, Washington. The initial purchase of such properties was financed by the sale of the Applicant's electrical utility bonds in the amount of $79,000. As of December 31, 1961, the Applicant had outstanding $393,114 of electric revenue bonds and had $83,769 in cash accrued for bond redemption. As of December 31, 1961, the Applicant was serving 2,206 customers in Skamania County. The normal electric load growth experienced by the Applicant suggests its energy requirements might double in about 10 years. Applicant contends that the construction of the Project in Skamania County would help the area attract new business, new industry, and other ventures which could utilize energy made available under drawback provisions in Applicant's agreements for sale. Furthermore, Applicant claims that the Project would afford the people of Skamania County and the Applicant protection not only against anticipated rate increases of the BPA, but protection against the date in the future when the BPA may be unable to meet the demands of its preference customers.

The Department of the Interior (Interior) strongly challenges the contention that Applicant has a true need for the power to be generated by the proposed Project. It submits that under the terms of the Bonneville Project Act, Applicant is what is known in the industry as "preference customer", and it has a prior right to purchase power from Bonneville—a right which is greater than that of private utilities or industries. If any future shortage of power should be anticipated the Bonneville Power Administration is required by statute to pull back from its nonpreference customers enough power to meet the requirements of the preference customers. Henderson McIntyre, Bonneville's witness, testified that even if no new resources should be developed beyond those which are now being constructed or in operation, the requirements of all of the public utility districts in the Northwest would be met through the year 1972–73. This took no account of the certainty of further development of generating resources in this region—public and private, hydro and steam. Mr. McIntyre stated that it was his estimate that the Applicant will be able to purchase all of its energy requirements from Bonneville at least through the year 1974–75. For at least the next ten years this Applicant will never once need the power which it would generate by the construction of this Project. When other projects are constructed in the region, as they certainly will be, this will serve to further put off the date by which the dam must be constructed. Mr. McIntyre thinks that Applicant cannot justify this Project in terms of its own needs or the needs of the region.

As to an increase in rates against which Applicant wishes to protect itself, Witness McIntyre stated that BPA's rates will be reviewed in the near future, and that it appears probable that there will be a ten percent overall increase in BPA's rates. Interior points out that while the increase in rate appears reasonably certain, the reasoning that the Project should be built to protect the Applicant against rate increases is not very persuasive since in the contemplated operation of the Project the Applicant still intends to purchase its base load from BPA.

It does not appear necessary to repeat here the various assumptions and the rather optimistic future energy need estimates made by Applicant's witnesses. Nor will much be said about Interior's detailed criticism thereof. Suffice it to point out that in this connection Staff Witness Bell is of the opinion that it will be about 1992 before the entire output of Project No. 2199 would be needed to supply Skamania County P.U.D. system loads.

Applicant's witnesses Price and Westfall were of the opinion that the anticipated growth of electrical loads in the Pacific Northwest justifies construction of the Project. They felt that if there is any "slippage" of energy in the near future the surplus will be reduced substantially. By contrast, Staff Counsel takes the position that the mere possibility of a deficiency of peaking capacity at some future time does not justify granting a license, unless it is also shown how the power will be integrated into the system and that contracts for the sale of power from the Project can be made on terms which will enable it to finance its construction. These matters will be discussed later.

The Cost of Energy Produced

Applicant proposes to negotiate a contract for integration of the energy to be generated by the Project with the Bonneville Power Administration. There is some doubt whether energy from the Project can be sold on terms that will assure financial success. Applicant estimates the cost of average annual energy to be generated by the Project at 3.12 mills, compared to the average cost of energy purchased by Applicant from Bonneville, its sole source during the year

1962 of 3.37 mills per kilowatt hour. Furthermore, Bonneville's witness anticipated at 10% average rate increase.

Applicant estimates the average annual cost of producing energy at the Project over a 50 year period to be $704,000. The Staff contends that the actual average annual cost for the first 44 years of the Project will be $769,000. Thus, the Applicant and the Staff are nine percent apart in their average cost estimates. Furthermore, the Staff maintains that Applicant's cost estimate per kilowatt hour is unrealistic because it uses the Lapham Gage for actual flows and as a basis of the correlated flows Applicant erroneously assumes more water for production of power than would actually be available at its intake structure. In addition, should it become necessary to release water for hatchery use either at the diversion structure or the penstock, particularly since such releases are most likely to occur during low flow periods, the resulting reduction in power production would represent a definite loss to the Project. The Staff points out that 17% less water for six months would raise the unit cost of power at market to 3.70 mills per kwh. A 37% decrease in water for 6 months would raise the cost to 3.90 mills.

Applicant contends that with pumping there would be a recapture of water "so that the measurements of flow at the Willard gaging station would be quite realistic." The economics of this plan seem to be based on a hope of purchasing cheap power from Bonneville to operate pumps to raise 15 cfs for a head of 225 to 250 feet. However, it appears that as the size of pumps is increased the capital investment increases very materially.

In short, it appears that the pumping plan economics are in doubt and considerably more information is necessary before it can be determined how much water can economically be pumped, and consequently the impact thereof on the cost of energy.

Area's Need

Applicant contends that beginning in 1967 and during an occasional season thereafter there would be a deficit of power in the area within which the proposed Project is situated. In order to demonstrate a possible power deficit in the foreseeable future, Applicant counted as "firm" power quantities which Bonneville had proposed to firm up only if the proposed Canadian Treaty had been signed. A brief comment about interruptible and firm loads is in order. Interruptible loads are loads which can by contract be curtailed by either the supplier or the purchaser. They may curtail it at their option without penalty in order to accommodate their plant operations to the market. Interruptible power is treated as secondary and nonfirm in the forecasts of the programing staff of the Bonneville Power Administration. The reason that this power is sold as interruptible and not as firm is that the persons generating electricity cannot guarantee to meet certain loads under all conditions, *i.e.*, if critical water conditions should recur. In order to firm up interruptible loads the generating agency would have to be assured of the availability of resources to meet those loads. Interior submits that without Canadian storage this cannot be done.

If the Canadian Treaty had been ratified by Parliament, dams would have been built on the headwaters of the Columbia River permitting greater storage of water and greater assurance of firm power. Such an increase in the availability of firm power would have enabled Bonneville to sell this power, now sold as interruptible, on a firm basis. It would prefer to do so because secondary power does not command as high a price as does firm power. Although the Bonneville Power Administrator has indicated the desirability of firming up this interruptible power he has not indicated that this would be done unless the water resources could be so managed as to permit a justifiable prediction

that these loads could be met under all water conditions. Similarly, a Northwest-California intertie is anticipated to import power from California to firm up the generation of power which can now be sold only as secondary and to take away surplus energy from the Northwest which can be sold in California. Interior states that it has never been contemplated, and is not now contemplating, that firm power would be exported from the Northwest whenever it was needed to meet loads in that region. It is for this reason that the factor of inter-regional exports was excluded from firm loads since these exports are by their nature exports of unsalable power, surplus to the needs of the Northwest.

Mr. McIntyre, for the Bonneville Power Administration, testified that according to Bonneville's predictions the power load requirements would be amply met throughout the ensuing ten years without the construction of the Little White Salmon Hydroelectric Project. He pointed out that the Administration would export over any intertie only noncritical power. He added that the "West Group Forecast", on which Applicant based its projections, was designed for only one purpose—to show the development of the region without new construction and that for this reason you would normally expect to find a greater deficit in the West Group Forecast than you would in the Bonneville Advance Program, based on the programed development of hydroelectric construction in the area. He also pointed out that Applicant's presentation was based on the 1962 West Group Forecast which showed higher estimates of future loads than were demonstrated in the more recent 1963 West Group Forecast, available at the time of the hearing. Basically, Mr. McIntyre's testimony demonstrated that in the next ten years there will be no substantial excess of demand over supply of electrical energy even if the Little White Salmon Hydroelectric Project were not constructed.

Staff Counsel takes the position that Applicant intends to operate the Project as a peaking resource. Load forecasts show that without Canadian Storage there will be no need for additional peaking capacity until about 1972–73. If Canadian Storage is realized there will be no need for the peaking capacity of the Project in the foreseeable future. Interior submits that since there is at the present and for some time in the future, a surplus of peaking capacity in the Pacific Northwest area the Project will not become dependable at its full peaking capability for a number of years.

Interior asserts that in the past five years, Bonneville has been unable to sell $125.5 million worth of surplus power. If the proposed Project should be licensed, and an additional surplus created, to that extent Bonneville's unsalable power surpluses will have been increased, and its financial structure placed in further jeopardy. It submits that such a result would not be consistent with the best interests of the region, and even with the long-range interests of the Applicant itself.

Effect of Project on Fish Installations

The United States Government has constructed two hatcheries and a laboratory on this river: the Willard Hatchery, the Little White Salmon Hatchery, and the Willard Fish Nutritional Laboratory, which have all been in operation for a considerable period of time. The United States Government has invested several million dollars to construct these hatcheries, and this laboratory. In addition, substantial sums of money are expended each year for the operation and maintenance of these facilities. These hatcheries form a significant portion of the total Columbia River Fishery Development Program. The Columbia River is the largest source of salmon and steelhead trout in the Pacific North-

west; and laboratories and hatchery programs play a significant part in maintaining and improving this national resource.

What would be the effect of the construction of a dam on the Little White Salmon River? Some of these effects are apparent and can be measured; some of the more significant effects are not known and cannot be measured although the testimony presented in this case indicates that problems will be presented by the construction of the proposed Project. Testimony from representatives of the Applicant, witnesses from the interveners, and from experts on both sides of the question all indicate possible injury to hatchery and laboratory operations following construction of this Project. The extent of this risk, although apparent, cannot be measured.

The Applicant would outweigh these hazards with the alleged benefits of the Project. A discussion of the effects of the Project follows.

Water Quantity

During 1962 the amount of water used at the Little White Salmon Hatchery from the river varied from 13 cfs to 49 cfs. Water rights claimed for use of water from the river are shown as approximately 73 cfs. It is anticipated that a greater amount than 49 cfs will be used during 1963. During 1962 the Willard Hatchery used from about 18 to 30 cfs of water from the Little White Salmon River. Rights to 50 cfs of water from the river are claimed. Increased production in 1963 utilized all the water which could be drawn through the main supply system from the river. Although it is designed to carry 50 cfs, certain obstructions permit only about 26 cfs to pass. This condition necessitated reuse of some water. More water would be used at the Willard Hatchery if rearing ponds presently not in use are utilized.

Both the Applicant and the intervener, U.S. Fish and Wild Life Service, assume that at times the flow in the Little White Salmon River will not be sufficient at the intake structures of either fish hatchery to meet their needs. In the event of insufficient water supply at the Little White Hatchery, the Applicant has elaborate plans for supplying water from the tailrace pool below the powerhouse, including a by-pass valve from the penstock when the turbine is shut down.

With regard to the Willard Hatchery the Applicant asserts that it is willing to release up to 35 cfs of water at the diversion structure whenever it is called for.

The Staff points out that Applicant has overlooked a very substantial inflow into the Little White Salmon River during low flow periods between the Lapham and Willard Gages.

Based on the demonstrated inflow between the Cook, Lapham and Willard Gages, and the provisions in Applicant's plans to provide water for hatchery use in the event of low flows, it is concluded that if the Project were to be constructed the Little White Salmon and Willard Hatcheries would have sufficient water as to quantity at all times for their needs.

Water Quality

Diversion of water from the river at the Project diversion structure would probably mean that water flowing past the Willard Hatchery intake will have a greater percentage of ground water in it than prior to diversion. This fact, however, gives no clear indication whether the hatchery operations will be favorably or adversely affected.

On the other hand a serious question is raised with regard to the quality of water available to the Little White Salmon Hatchery during periods of low

water when flows at the present intake have to be supplemented with water, which has passed through the Rock Creek reservoir. The reservoir will cover an area of about 40 acres with the upper end being about a quarter to a half-mile away. Applicant draws attention to the fact that the reservoir will provide excellent fishing and has offered to make annual plants of sports fish in cooperation with the Washington State Department of Game in the reservoir area over the life of the Project. Interior's Woodall foresees prolific growth of algae and flora and fauna in silt deposits and around the shores of the reservoir. He reasons further that these conditions could contribute to the culture of disease organisms and parasites.

It is found that changes in the quality of water by reason of the Project will probably not affect materially the operation of the Willard Hatchery or the Little White Salmon Hatchery as long as the river and springs provide sufficient water for its use. However, when the Little White Salmon Hatchery would have to depend on use of water which passes through the Rock Creek Reservoir, it will be faced with a hazard to its operation. Under these circumstances the quality of the water could be harmful to hatchery operation.

Water for the operations of the Western Fish Nutrition Laboratory is supplied from two wells. The effect of lowering the flow in the river in the vicinity of the wells would result in getting more ground water in proportion to the Little White Salmon River water, in the wells. This variance in proportion would result in changes in chemical quality of the water. However, evaluation of this change is a difficult matter. Witness Royce, felt he could with assurance pass on the effect of chemical changes in water on fish hatchery operation. He testified that he could not tell whether the chemical changes in well water would be significant to the operation of the laboratory. Similiarly, Witness Woodall, who is certain that a chemical change will take place, states that what the effect of these changes on the operation of the laboratory is, and must largely remain speculative because the effects are immeasurable. The problem stems from the fact that the effect of a change in quality of water cannot be measured until after the change has taken place.

The Applicant in its Brief makes the point that there is no evidence to show an impairment in the quality of the water in the wells, and that the evidence actually shows that if the proportion of river water in the wells becomes less, the quality of the water will be better. The important point, however, is not whether ground water is of better quality; the question is whether the change in the chemical composition of the water is such that past studies can no longer be correlated with future studies. The present source of water represents a standard condition in five years of experimentation. Thus, while it cannot be said that construction of the Project will affect operations at the Laboratory adversely, a chemical change in water quality can be anticipated. To this extent, studies at the Laboratory would be subject to a hazard if the Project were constructed.

Water Temperature

Applicant contends that the temperature of water for the Little White Salmon Hatchery will be improved. Witness Royce stated that a warming of the water up to ten degrees would be beneficial, and suggests that this might be accomplished through use of water which has passed through the Rock Creek Reservoir. Applicant's witness Needham suggests that hatcheries operating with water at less than 50 degrees Fahrenheit may be considered marginal in their productive ability.

As far as the subject of water temperatures go, it appears that there is no evidence that the Project will have any adverse effect. On the contrary there is some evidence that it could possibly have a slightly beneficial effect.

Construction Hazards

The construction of a powerhouse and other facilities within the close confinement of the Little White Salmon River would cause certain inconvenience in hatchery operations. However, such conditions would only be temporary if the Project were constructed. It seems that most of the dangers could be avoided by cooperation and careful scheduling of the construction activities with the hatchery operations.

It must be recognized that increased activity, such as the construction of a hydroelectric project in the vicinity of a fish hatchery, does increase the possibility of some unforseen event occurring which would be damaging to fish. However, this possibility would not be sufficient cause for denying the construction of a project. The solution would be to establish safety measures insofar as possible to guard against known hazards. Applicant claims that construction of the Project would lessen the amount of silt in the water used by the Little White Salmon Hatchery. This in turn could be considered as some compensating factor.

Water Rights

Interior contends that it now has water right certificates for the appropriation and use of 74.5 cfs of water. Of this 74.5 cfs of water to which the intervener holds water right certificates, 50 cfs of the water are and have been beneficially used for fish farming on the Little White Salmon River. The intervener will continue to use this amount of water and up to 74.5 cfs of water in the future as the expansion programs of the intervener are completed.

Interior claims that according to the law of the State of Washington it has a vested right in the 50 cfs of water which are now being beneficially used for fish farming. Revised Code of Washington, Sec. 90.03.010, *et seq.* This vested right to the appropriation and use of the 50 cfs of water is allegedly protected by section 27 of the Federal Power Act.

As to the remaining 24.5 cfs of water to which the intervener holds water right certificates pursuant to Washington law, Interior allegedly has an inchoate right[1] to the use and appropriation of this amount of water.

It is Interior's contention that the use of water for fish farming is a right or use of the "same nature" as irrigation. Water used to raise crops is water used for irrigation. Water used to grow grass to raise cattle is water used for irrigation. Water used to grow fish eggs to raise fish is water used for irrigation or at least water used for a purpose of a related or "same nature", as water used for irrigation. Interior submits that the Commission should do nothing to destroy the inchoate water rights of the intervener, no license should be granted to the Applicant if there is not enough water in the Little White Salmon River for both parties. Only after a Washington court has finally determined the inchoate water rights of the intervener in the river should the Commission issue a license if there is a reasonable doubt as to the availability of sufficient water for both the Applicant's proposed Project and the intervener's existing fish farm facilities.

It is Staff's position that it is not necessary to treat this question at length. First, in view of the substantial accretions to the Little White Salmon River

[1] The Washington Statute states: "90.03.460 *Inchoate rights not affected.* Nothing in this chapter contained shall operate to effect an impairment of any inchoate right to divert and use water while the application of the water in question to a beneficial use is being prosecuted with reasonable diligence, having due regard to the circumstances surrounding the enterprise, including the magnitude of the project for putting the water to a beneficial use and the market for the resulting water right for irrigation or power or other beneficial use, in the locality in question."

between the Lapham and Willard Gage, which allegedly have been overlooked by both Applicant and the U.S. Fish and Wildlife Service, it appears that there is considerably more water available from accretions to river flow for hatchery use than was expected. Consequently, there may be considerably less releases for hatchery use than believed necessary. Further, if the Project were constructed, the Licensee could under conditions of the license, be required to release amounts of water necessary for hatchery purposes.

Under these circumstances and also because Applicant failed to properly demonstrate the economic feasibility of the Project, the water right contentions raised by Interior do not warrant further discussion at this time.

Recreation Facilities

The Washington State Department of Game (Washington) contends that the Project will adversely affect the resident fish population of the Little White Salmon River. There will not be sufficient quantities of water in the river below the diversion point to sustain the resident fish population. There is a need for adequate deer protective devices in the canals proposed by the Applicant. Washington alleges that there will be a total loss of steelhead spawning grounds if the Project is licensed. Washington claims that Applicant failed to supply the Department of Game with timely reports about the Project. Washington submits that Applicant's offer of settlement was belated and deficient. The proposed Rock Creek Reservoir does not contain suitable spawning area for trout. Washington states in its Brief that in order to have good fishing on a lake as large as that which would be created by the Rock Creek Reservoir, at least 10,000 pounds of legal-size rainbow trout would have to be planted annually for the term of the Project. The Applicant's offer to plant annually 2,000 pounds of fish is allegedly inadequate on this score.

Washington requests that if license is granted, Licensee should be required to install and maintain at reasonable intervals asphalt footings for deer in strips on the surfaces of Canal No. 1 and Canal No. 2 or crossing ramps, where the depths and velocity of water within the canal appears to be such as to prevent escapement of deer, subject to the approval of the Department of Game. In addition, Licensee should be required to annually reimburse the Department of Game of the State of Washington for the actual cost of rearing and releasing a sufficient number of steelhead fingerlings to provide an adequate number of adult steelhead returnees to the sport fishery in the State of Washington.

Economic Feasibility

Applicant's ability to finance the proposed Project raises several problems. The record shows that on June 8, 1959 the John Nuveen Company advised the Applicant that in the opinion of the underwriters a revenue bond of approximately $9 million can be successfully marketed, provided the total energy output can be satisfactorily sold. Witness Shepeard, Applicant's Chairman said that thus far Applicant had no contracts to sell the power (Tr. 390).

Staff Counsel and Interior contend that the Project's unit cost will be so high that it will not be possible to sell the power profitably. In its Reply Brief the Applicant makes a convincing argument that pursuant to F.P.C. Technical Memorandum No. 1, it is proper to compute the Project's average annual cost over a fifty-year period rather than over forty-four years, as was done in the Staff's computation. This reduces the average annual cost from $769,000 to $715,000. There is also some validity to Applicant's contention that Staff is too conservative in computing the quantity of water that can be beneficially employed by the Applicant. However, the basic unsolved problem is Applicant's

failure to prove that it will be able to dispose economically of the Project's energy output. Applicant's Reply Brief states that by purchasing 50% of its need from Bonneville at the "A–4" rate of $14.50 per kilowatt year, Applicant's total cost of power will be slightly less than if Applicant purchased its entire power supply from Bonneville. Applicant's entire presentation in support of economic feasibility is based on a multitude of assumptions and hopes. The record does not contain specific evidence about the "A–4" rate of $14.50, nor was it discussed in relation to the $20.00 and $21.85 cost per kilowatt year appearing on sheet 3 of Exhibit No. 12, Applicant's Schedule of Projected Amortization and Annual Power Cost. The Project does not provide energy stand-by, it has a single generator and is not able to guarantee delivery to prospective customers. Consequently, the Project depends entirely on Bonneville to carry its energy to an outlet. On the other hand, there is no assurance that Bonneville will not raise the "A–4" rate, particularly since it desires to stem the source of additional surplus power. Such occurrence will automatically increase the Project's unit cost, thus making it more difficult to sell the output.

The record does not contain evidence that any of the 2,206 electricity customers in Skamania County are willing and able to assist with the financing of the Project. In fact, a delegation of residents of Skamania County came to the hearing to oppose the construction of the Project. The signed Protest placed in the record states, *inter alia*, that the initial cost and interest seems out of proportion to the benefits, which could be derived, and that there is no assurance that all the power produced can be marketed. If not, the cost to PUD customers would have to be increased (Tr. 7). The opinion of a small local group does not carry much evidentiary weight. Yet it does reveal lack of popular support of the consumer public within the public utility district. This fact in turn is not likely to help the sale of the proposed revenue bonds. It remains unproven that on the basis of the economic facts in the record the underwriters could successfully sell an $11.9 million issue of revenue bonds for the Project. It is possible that the issuance by this Commission of a certificate may be erroneously taken by some potential purchasers of bonds as assurance of the financial soundness of the Project. *Cf. Carolina Natural Gas Corp.*, 10 FPC 515. However, evidence that a project is financeable should be based on the proof that the project itself is economically feasible. Without an economically feasible project, the prospects of successful financing are remote. *Cf. Board of Mayor and Alderman*, 21 FPC 583, 584. Furthermore, the inquiry into the economic feasibility of a project is, *inter alia*, intended to consider the potential investor. *Cf. Atlantic Seaboard Corp.*, 7 FPC 926, 929; *In re Mississippi River Fuel Corp.*, 9 FPC 198, 208. The very specific condition spelled out by John Nuveen and Company implies that unless the power surplus can be readily and advantageously marketed the Project is not financeable.

In the *First Iowa Hydroelectric Cooperative* matter, 6 FPC 227 at p. 230, the Commission held that only a superficial showing of financial ability would not justify authorizing a license.

The Applicant's problem of marketing the surplus power, amounting to about 80 percent of the project output becomes apparent in light of the staff witness's testimony that even if critical water conditions are assumed, the energy capability would not be needed in the water years of 1967–68 and 1968–69, and that the full peaking capability would not be usable on the predicted load until 1973. During average water years there would be less need for power from Applicant's Project. Mr. McIntyre testified for Bonneville that in the Northwest where we have an all-hydro system it is impossible to develop resources to meet critical year power requirements, and not have surpluses in better than critical year conditions. He also stated that at the present time there is a considerable amount

of surplus peaking capacity available throughout the entire year. Although operation for peaking seems to characterize the Applicant's proposed Project it remains unproven just what kind of sales the Applicant could make.

In *City of Seattle, Washington, Project No. 2144;* and *Public Utility District No. 1 of Pend Oreille County, Washington, Project No. 2250*, 26 FPC 54 at page 137, the Commission in granting the other of two applications denied a license because, *inter alia*, the Public Utility District, had failed to adduce probative and convincing evidence that that Applicant could use or that there is at present, or apt to be within or without the Public Utility's service area, need for a substantial portion of the energy which would be produced.

Interior takes the position that there will not be a deficiency, but rather a surplus of power in the Bonneville Power Administration for many years to come; that the proposed Project would only add additional burdens and costs on the Bonneville Power Administration by forcing it to incur added costs of selling a larger surplus of power; that the power which would be generated by the proposed Project cannot be sold for less than the power produced by the Bonneville Power Administration; that Bonneville can produce and sell power to the Applicant and its consumers for less than the power which would be produced by the proposed Project; that there will be the construction of other larger and more efficient hydroelectric projects in the Columbia River Basin within the next five years which will adequately meet the growing power demands of the area. Interior concludes that the proposed Project is of a marginal nature and will not contribute to the procurement of low cost power in the Columbia River Basin area.

Factors to be considered in determining economic feasibility of a Project include dependability of the energy output and the time when the operations can be used to full capacity. Applicant's claim that there is an immediate and definite need for the full capacity of the Project is based upon estimates made in a certain "West Group Forecast". During cross-examination it was established that a more recent "West Group Forecast" substantially weakens Applicant's claim for immediate need of the output. In fact, the evidence indicates that there is good reason to conclude that full capacity of the Project will not be achieved until 1972. In other words, the evidence in this proceeding is inadequate to support a determination of economic feasibility during the immediate future. This finding would be different had Applicant produced definite proof of an intertie or definite evidence of a substantial market. A license for a hydroelectric project cannot be awarded on a trial basis. Analysis of Applicant's presentation indicates that a substantial part of the output of the Project will not be needed during the next five to seven years. As the case now stands in the foreseeable future the Project is not likely to be of much economic benefit to either Skamania County or to the surrounding areas. The evidence of record fails to bring the more distance future into focus. There is no evidence in the record showing that even a substantial portion of the surplus from the proposed Project can definitely be sold at rates that will satisfy the conditions laid down in the letter from the Underwriters, John Nuveen and Company. It must therefore, be concluded that Applicant has failed to show that its proposed Project is economically feasible.

SUMMARY

Applicant is a Public Utility District of the sparsely populated Skamania County, where 85 percent of the acreage is occupied by a National Forest. Generally speaking, Applicant desires to erect on Federal land a hydro-electric plant for about $11.9 million. Applicant made something less than a convincing showing of financial ability, predicated to some extent on hopes to sell about

80 percent of electric output through Bonneville, which is currently experiencing an electric energy surplus.

Interior is apprehensive of the Project's impact on its adjacent fish facilities costing a couple of million dollars and constituting an important part of the Columbia River Basin hatcheries and Fish Conservation Program. Washington's Department of Game is insisting on expensive remedial action to conserve local recreational aspects. Applicant's case was presented at an inopportune time. The application came too soon and the reasons favoring a license are too few. A new hydro-electric Project invariably crowds somebody. Usually, when the advantages tip the scale, the license is issued to the Applicant. In this case, nearly every defect discussed before could be alleviated if dealt with it alone. However, the cumulative effect of the remedial steps will be expensive and will tend to further increase the already precarious cost per kilowatt hour. Moreover, the aggregate of the defects places the proposed Project in a sub-marginal situation and out of phase with the general needs of the Northwest.

It is difficult to determine the complete hydro-electric requirements of the Northwest in the more distant future. Many new needs might arise. Should new industry settle in Skamania County, the population size and the need for electric energy might increase more rapidly than in former years. The Canadian Treaty might finally get ratified by Parliament, and then due to Canadian storage the peaking capacity and the surplus level in the Northwest will greatly change. After the accumulation of additional experimentation and research data, Interior's need to maintain the status quo of the water used for its hatcheries and nutritional laboratories on the Little White Salmon River might lessen. When sufficient problems are removed the financial companies might come forward and make a firm commitment to underwrite the Project, thus making more apparent Applicant's economic feasibility. However, on the basis of the showing made in this record the Applicant must be denied a license.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the record in these proceedings, it is specifically found and concluded, in addition to the findings and conclusions heretofore stated, that:

1. Applicant, Public Utility District No. 1 of Skamania County, Washington, a municipal corporation of the State of Washington, applied for license for construction of Project No. 2199 on July 27, 1959.

2. Applicant does not presently own or operate any generating facilities. Its entire requirements are purchased from the Bonneville Power Administration.

3. During calendar year 1962 the peak load for the distribution system of the Applicant, Public Utility District No. 1 of Skamania County, was 10,900 kilowatts.

4. The proposed Project, more fully described in the application, will include a Diversion-Intake Structure, Canals, Regulating Reservoir, Tunnel, Penstock, Powerhouse, Switchyard, Power Transmission Lines, and a Diversion Weir below the Powerhouse.

5. Portions of Project No. 2199 will be located upon reservations of the United States, consisting of the Gifford Pinchot National Forest and of other lands owned by the United States. Furthermore, the construction, operation, and maintenance of the proposed Project No. 2199 will affect public reservations of the United States. Consequently, under the provisions of § 23(b) of the Federal Power Act the Applicant may not construct, operate or maintain the proposed Project works until it shall have received a license under the provisions of that Act.

6. The facilities owned and operated by the United States Fish and Wildlife Service which are located within the proposed Project area or its vicinity include the Willard National Fish Hatchery, the Western Fish Nutrition Laboratory, and the Little White Salmon National Fish Hatchery.

7. The Willard National Fish Hatchery and The Little White Salmon National Fish Hatchery are directly dependent upon the Little White Salmon River for the water used in rearing ponds, while water essential for egg incubation may be taken alternatively from the River or from springs at Little White Salmon Hatchery or from a well at Willard Hatchery.

8. The Willard and Little White Salmon Hatcheries play an important role in maintaining salmon runs in the Columbia River Basin, and contribute to comprehensive development of this water resource.

9. The Western National Nutrition Laboratory makes an important contribution to artificial fish propagation through its studies of fish physiology and metabolism.

10. All of the structures involved in this project will be constructed upstream from the limit of the migratory range of any anadromous fish that may frequent the Little White Salmon River.

11. The Little White Salmon River has a small population of native trout. In addition to native trout, the State of Washington, Department of Game, plants trout in the river annually to encourage sports and recreational use of the river.

12. A portion of the stream bed, located in the lower three miles of the river between the Willard National Fish Hatchery and the Little White Salmon National Fish Hatchery will be affected to the extent that the normal flows of the river will, during approximately six months of each year, be diverted through the Project facilities to the extent of the Project capacity.

13. The Secretary of Interior appearing through the United States Fish and Wildlife Service, who has supervision over the three federal facilities located on the Little White Salmon River, has recommended that the license be denied.

14. The total estimated construction cost of the Project is $10,264,300, requiring the issuance of revenue bonds in the amount of $11,909,000 in order to finance.

15. Based on Applicant's load growth estimates it will not need the full output of the project until about 1992 or 1993.

16. Initially, the Applicant would have to dispose of about 80 percent of the Project output outside of its service area.

17. The Applicant is presently purchasing all its power needs from the Bonneville Power Administration paying 3.37 mills per kilowatt hour during the fiscal year of 1962. A ten percent average increase in power cost appears likely.

18. The Applicant will be able to continue to purchase all its power needs from the Bonneville Power Administration as a preference customer for the next ten years and beyond, even though no new resources other than those now under construction are made available to Bonneville.

19. There is reason to believe that additional new resources other than those now under construction will be made available to the Bonneville Power Administration.

20. Geological testimony shows that the significant accretion to the Little White Salmon River flow occurs below elevation 1000 feet and downstream from the Project diversion structure.

21. The Applicant has not made satisfactory adjustment for accretion to the Little White Salmon River from underground sources between the Lapham and Willard Gages in estimating the amount of water available for power production.

22. As a result of using the Lapham Gage flows instead of flows at the diversion structure the Applicant overestimated its annual energy output.

23. When the reduced amounts of water available at the Project diversion structure are taken into consideration with the annual costs which actually must be met during the first years of project operation, the cost of energy at site can reasonably be estimated to be within the range of Bonneville's charges.

24. The power which would be generated by the proposed Project cannot be sold economically for less than the power produced by the Bonneville Power Administration.

25. Project No. 2199 has not been shown to be dependable on any particular load. Applicant intends to operate the Project as a peaking resource.

26. Since there is at the present and for some time in the future, a surplus of peaking capacity in the Pacific Northwest area the Project will not become dependable at its full peaking capability for a number of years.

27. Load forecasts show that without Canadian Storage there will be no need for additional peaking capacity until about 1972.

28. If Canadian Storage is realized there will be no need for the peaking capacity of the Project in the foreseeable future.

29. In the absence of a plan of operation, a load or market, the dependable capacity of the Project is assumed to be equivalent to its prime energy capability of 15,800 kilowatt at site. Based on load estimates Project No. 2199 will not become dependable at its full capacity until the early 1970's if Canadian storage is not realized.

30. If the Project's prime energy capability is considered to be its dependable capacity, and if benefits from pumping are included, in the comparison of annual benefits with annual costs, the costs may exceed benefits by about $118,000.

31. The Benefit to Cost ratio during the period of operation before the Project's full peaking capability become dependable will be negative.

32. The Applicant has not obtained any firm commitment for any of its surplus power; it has not negotiated any contracts for sale of such power; and has not established existence of any potential market for such power.

33. The Applicant has not shown that it can satisfy any of the conditions necessary for financing specified by its own financial consultant.

34. Due to substantial accretion to flows in the Little White Salmon River, and the provisions in Applicant's plans for the Project the Little White Salmon and Willard fish hatcheries will have an adequate quantity of water for their use, if the Project were to be constructed.

35. Reduction of flows in the Little White Salmon River as a result of diversion of water for power development would probably produce a chemical change, however, this does not appear fatal to the hatchery operations.

36. The Little White Salmon Hatchery would be subject to the hazard of having fish diseases introduced into rearing ponds if water were to be supplied to it from the Rock Creek reservoir.

37. Diversion of water from the river would require costly and constant attention.

38. Lowering of the river level will result in a lowering of the static water level in the wells supplying the Western Nutrition Laboratory. However, the wells may still be pumped at the same rate.

39. Lowering of the river level will change the chemical composition of the water in the wells supplying water to the Western Nutrition Laboratory because of the resulting different proportions of river and ground water. The impact of the change in chemical composition of water in the wells at the

Western Nutrition Laboratory cannot be evaluated at this time on the basis of information available now.

40. Should the chemical change in the wells supplying water to the Western Nutrition Laboratory be such that it would change any of the results of experiments now being conducted it would impair the usefulness of studies and experiments made in the past five years.

41. Silting has been a problem in hatchery operation. Operation of a hydroelectric project on the Little White Salmon River would not aggravate this problem and there is some indication that it might alleviate it.

42. Operation of a hydroelectric project on the Little White Salmon River will not materially affect temperatures for hatchery operation.

43. Construction of a hydroelectric project as proposed would increase the hazards of congestion, and would increase the exposure to accidents which might interfere with hatchery operation, unless careful safety precautions are taken, and there is a careful scheduling of hatchery and construction activities.

44. Should there be a reduction in resident trout population in the Little White Salmon River as a result of diversion of water, stream-side fishing will be curtailed some. Stocking of the Rock Creek Reservoir with trout will tend to increase recreational activity in this area.

45. Presence of the open diversion canals would constitute some hazard to wildlife which can be reduced by installation of fences, crossings, and side stripping to enable animals falling into the canal to climb out.

46. The Applicant has shown that it is willing to cooperate in modifying its plans for project design to meet the needs of hatchery operation and wildlife in the area.

47. The necessary precautionary measures will materially increase the unit cost of the Project's power output.

48. The proposed Project poses costly problems to the comprehensive development of the resources of the Little White Salmon River and the Columbia River Basin.

49. The issuance of a license for the proposed Project will interfere with and be burdensome to the facilities of the Department of the Interior.

50. The facilities of the Department of Interior on the Little White Salmon River have made a substantial contribution to the commercial fishing and sport fishing in the Pacific Northwest, and are part of the U.S. Fish and Wildlife Service's continuing program to develop the commercial and sport fishing resources of this nation in the Pacific Northwest.

51. Applicant failed to demonstrate its ability to finance the proposed Project.

52. The proposed Project is economically too marginal in nature and not compatible with the present need to develop inexpensive power in the Columbia River Basin.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission, that:

The application for a license for proposed Project No. 2199 by the Public Utility District No. 1 of Skamania County, Washington, be and the same is hereby denied.

ALLEN C. LANDE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. G–18512

ORDER ON MOTION TO TERMINATE PROCEEDING

(Issued July 30, 1964)

This proceeding involves an increased rate filing by Southern Natural Gas Company (Southern) for a seven month locked-in period from November 1, 1959 through May 31, 1960. The effective rate of return included in the rate filing was 5.57%. This filing was an outgrowth of the limitations imposed on pipeline rate increase filings by the Court in the *Memphis* case.[1]

On July 31, 1963, Southern sent to its jurisdictional customers two jurisdictional cost of service computations for the seven month period involved. One cost of service included return at 6.5%, the amount allowed in Southern's last rate case (Opinion No. 379) including 1.5% on accumulated deferred taxes. On this basis, Southern had a revenue deficiency of $3,396,575. The other included no return on these funds. On this basis, Southern's revenue deficiency was $2,703,381. Southern also sent a statement of its actual revenues for this period which showed that Southern experienced a return of 5.62%.

A settlement conference was thereafter called by Staff at which it was agreed that Southern should file a motion to terminate this proceeding. All parties, except Staff, further agreed that Southern should be permitted to retain $2,300,000 of possible refunds relative to gas purchased under suspended rates in this period. Staff reserved its position on this issue.

Accordingly, Southern filed a motion on August 21, 1963 to terminate this proceeding on condition that its obligation to refund any portion of the increased rates is discharged and that Southern would retain the first $2,300,000 of possible refunds from gas suppliers and flow through all such refunds in excess of that amount. Staff filed an answer in which it did not dispute the propriety of Southern's rates for the period covered by the instant Docket, but contended that Southern should not be permitted to retain any supplier refunds attributable to jurisdiction sales.

We are satisfied that Southern's rate level in effect during the period covered by the Docket is just and reasonable. Southern's actual rate of return during this period was approximately 5.62%. Based on this showing, which is not disputed by any party, we will discharge Southern's obligation to make refunds of any portion of the increased rates filed in this Docket.

The broad issue of flow through by pipeline companies of supplier refunds is currently before us in a United Gas Pipe Line rate proceeding (Docket No. RP63–1). We consider it more appropriate to await our determination in that case before deciding the issue here. This course of action should not be prejudicial to Southern's jurisdictional customers since Southern has actually received only a minor amount of supplier refunds for the period in question. Thus, the issue is largely an academic one at this time.

The Commission orders:

(A) The proposed increased rates and charges filed by Southern Natural Gas Company in Docket No. G–18512 are just and reasonable and Southern is discharged from any obligation to refund any portion of such increased rates.

---

[1] *Memphis Light, Gas and Water Division et al.* v. *F.P.C.*, 250 F. 2d 402 (CADC, 1957); rev. *sub nom. United Gas Pipe Line Co., et al.* v. *Memphis Light, Gas and Water Division, et al.*, 358 U.S. 103, reh. den. 358 U.S. 942.

(B) Action on Southern's motion for an order entitling it to $2,300,000 of possible refunds from gas suppliers for the period covered by Docket No. G–18512 is deferred.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CUMBERLAND AND ALLEGHENY GAS COMPANY, DOCKET NO. CP64–183; WEIPENN GAS COMPANY, INC., DOCKET NO. CI64–915

ORDER AMENDING ORDER ISSUED JULY 13, 1964

(Issued July 31, 1964)

The order of the Commission issued July 13, 1964, *supra*, p. 100, in the above-entitled matters granted a certificate of public convenience and necessity to Weipenn Gas Company, Inc. (Weipenn) in Docket No. CI64–915 authorizing Weipenn to acquire from Cumberland and Allegheny Gas Company (Cumberland) certain off-system facilities of Cumberland and to render certain natural gas services formerly rendered by Cumberland, as more fully described in said order.

It appears that in view of the relatively minor nature of Weipenn's operations, the provisions of ordering paragraph (C) of the subject order are unnecessary.

The Commission finds:

It is in the public interest and appropriate in carrying out the provisions of the Natural Gas Act that ordering paragraph (C) be deleted from the Commission's order issued July 13, 1964, in Docket No. CP64–183, *et al.*

The Commission orders:

(A) Ordering paragraph (C) be and the same is hereby deleted from the Commission's order issued July 13, 1964, in Docket No. CP64–183, *et al.*, and ordering paragraphs (D), (E) and (F) of said order are hereby re-lettered (C), (D) and (E), respectively.

(B) In all other respects, the Commission's order issued July 13, 1964, in Docket No. CP64–183, *et al.*, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–292

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 31, 1964)

On June 5, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64–292 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of four mainline taps and the sale and delivery of natural gas from its interstate pipeline system by use of said taps to three existing

customers, Southwest Gas Corporation, Southern Union Gas Company and the City of Safford, Arizona, for resale, all as more fully set forth in the application.

The locations of the proposed facilities to be constructed are at various points along Applicant's transmission system.

The estimated total cost of Applicant's proposed facilities is $1,760 which will be financed from funds on hand, supplemented by short-term bank loans. The estimated third-year sales to the three customers above-named total 96 Mcf per peak day and 14,800 Mcf per annum, respectively.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within twelve months from the date on which this order issues.

Before Commissioners; Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

GARFIELD GAS GATHERING COMPANY, DOCKET NO. CP64-220

FINDINGS AND ORDER GRANTING MOTION FOR WAIVER OF INTERMEDIATE DECISION PROCEDURE, GRANTING MOTIONS FOR LEAVE TO WITHDRAW INTERVENTIONS, ISSUING A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND WAIVING FILING REQUIREMENTS

(Issued July 31, 1964)

On March 31, 1964, Garfield Gas Gathering Company (applicant) filed an application, as amended and supplemented, for a certificate of public convenience and necessity, pursuant to Section 7(c) of the Natural Gas Act, for authority to construct and operate certain facilities, operate certain existing facilities and sell and deliver natural gas to Mountain Fuel Supply Company (Mountain Fuel).

Garfield will purchase and gather the gas from various producers in Colorado. Applicant will deliver 9,125,000 Mcf of gas during the first year, at an average daily rate of 25,000 Mcf. The minimum quantity for subsequent years is 18,250,000 Mcf at an average daily rate of 50,000 Mcf. The contract term is for 20 years, and the sale is proposed at an initial rate of 21¢ per Mcf.

A notice of intervention and a petition for leave to intervene were filed by the Public Utilities Commission of the State of Colorado (PUC) and by Rocky Mountain Natural Gas Company, Inc. (Rocky Mountain), respectively.

By notice issued June 2, 1964, this proceeding was consolidated with ten producer applications and set for hearing. These producer applications were later severed from this proceeding by notice issued July 22, 1964.

On July 22, 1964, PUC and Rocky Mountain each filed notices of withdrawal of their notice of intervention and petition for leave to intervene.

On July 27, 1964, a hearing was held, at which time applicant moved that this proceeding be disposed of pursuant to the Commission's shortened procedure as set forth in Section 1.32 (18 CFR 1.32) of the Commission's Rules of Practice and Procedure. All parties and Staff concurred in the motion.

The evidence filed in this proceeding indicates that Mountain Fuel will have need of this additional supply of gas to maintain service to present and potential customers in its existing market area in Utah. This supply of gas is not intended to serve any new market area.

The Commission finds:

(1) These proceedings should be disposed of pursuant to Section 1.32 of the Commission's Rules of Practice and Procedure. (18 CFR 1.32)

(2) Garfield Gas Gathering Company is a "natural-gas company" within the meaning of the Natural Gas Act, subject to the jurisdiction of the Commission.

(3) The construction and operation of facilities and sale of natural gas as proposed by applicant are required by the public convenience and necessity and a certificate therefor should be issued.

The Commission orders:

(A) The request for the omission of the intermediate decision procedure is hereby granted.

(B) Permission is hereby granted to the Public Utilities Commission of Colorado to withdraw its notice of intervention.

(C) Permission is hereby granted to Rocky Mountain Natural Gas Company, Inc., to withdraw its petition for leave to intervene.

(D) A certificate of public convenience and necessity is hereby issued to Garfield Gas Gathering Company for the sale of natural gas in interstate com-

merce for resale as proposed in its application as amended and supplemented, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in said application. The certificate issued by this paragraph is not transferable and shall be effective only so long as applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission and shall be accepted in writing and under oath within thirty days after the issuance of this order.

(E) The general terms and conditions set forth in paragraphs (a), (b), (c) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificate granted in paragraph (D) hereof.

(F) The time within which the facilities hereby authorized in Paragraph (D) shall be constructed and placed in actual operation as provided in paragraph (b) of Section 157.20 of the Commission's Regulations is hereby fixed at 6 months from the date on which this order issues.

(G) In lieu of the pipline form of tariff, applicant has filed a special rate schedule in accord with Section 154.52 of the Commission's Regulations under the Natural Gas Act. The Commission hereby waives the requirements of Section 154.33 and the second sentence of Section 154.32 thereof with respect to said filing. The schedule so filed shall be effective on the date hereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64–293

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 31, 1964)

On June 5, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64–293 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a tap and metering facilities on its Gulf Coast Line in McLean County, Illinois, to enable it to sell and deliver natural gas to Allied Gas Company (Allied), for resale in the Village of Sibley and the unincorporated community of Cropsey, Illinois.

Applicant states that Allied has obtained a franchise from the Village of Sibley and a certificate from the Illinois Commerce Commission authorizing it to construct and operate the distribution systems in each of the municipalities.

The estimated cost of Applicant's proposed facilities is $17,200, the funds for financing same will be met from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Natural Gas Pipeline Company of America is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–325 (3 FPC 330).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within ninety days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP61-8

ORDER PRESCRIBING BRIEFING SCHEDULE ON THE RESERVED ISSUE OF PROPER RATE TREATMENT OF LIBERALIZED DEPRECIATION AND ACCUMULATED DEFERRED TAXES

(Issued July 31, 1964)

On June 21, 1962, a "Stipulation And Agreement To Terminate Proceedings" [1] (Stipulation) was incorporated in and made a part of the record in this proceeding. This constituted a settlement of all of the issues in this proceeding, except the issues as to the consolidated effective tax rate [2] and the proper rate treatment of liberalized depreciation and accumulated deferred taxes. The latter, Article IV, Paragraph 2, Transcript 21, pp. 2960–2962 of the aforesaid Stipulation, which is the subject of this order, was reserved for later determination as provided therein.

Article IV, Paragraph 2 of the said Stipulation provides, among other things, that the issue of proper treatment of liberalized depreciation be determined in an

[1] T. 21, pp. 2954–2970 (inclusive).

[2] This issue is not included within the scope of this order.

adjudication by the Commission in this proceeding, Docket No. RP61–8, that the Commission render final decision on this issue pursuant to Section 1.30(c) of the Commission's Rules of Practice and Procedure without the intermediate decision of the presiding examiner; that parties may request the opportunity to file briefs in accordance with a briefing schedule to be prescribed by the Commission; that thereafter parties may request oral argument as to this issue; each party, subject to the foregoing, reserves its right to apply for rehearing and to petition for judicial review of the Commission's decision with respect to such issue.

The aforesaid Stipulation making the provisions set forth above was approved by the Commission in Opinion No. 367, issued October 25, 1962.

On February 3, 1964, the Commission issued its Option No. 417, and on April 15, 1964, its Opinion No. 417–A in Docket No. G–5471, *et al.*, Alabama-Tennessee Natural Gas Company, upon the issue of proper rate treatment of liberalized depreciation and accumulated deferred taxes.

On May 11, 1964, the City of Chicago filed a motion, under Section IV, Paragraph 2 (T. 2960–2962) of the Stipulation and Agreement approved by the Commission in Opinion No. 367, issued October 25, 1962 herein, moving the Commission to issue an order permitting briefs to be filed by the parties, setting briefing dates, permitting oral argument, and thereafter to render a determination on the reserved issue in this proceeding.

On May 19, 1964, Natural filed its Answer to the motion of the City of Chicago, stating that inasmuch as the Commission intends Opinion No. 417, if ultimately sustained by the courts, to be applicable to Natural, and inasmuch as the Commission, subsequent to the issuance of Opinion No. 417, has evolved, in settlement conferences with Panhandle Eastern Pipe Line Company (Docket No. RP64–18), and certain other pipeline companies, agreements providing for prospective rate reductions, that it should be treated similarly. Natural submits as a part of its answer, a rate proposal offering to make certain rate reductions effective October 1, 1965, in accordance with the terms and conditions therein provided. It states that it will waive its right to show cause why the principles of Opinion No. 417 are not factually supportable insofar as Natural is concerned in consideration of the Commission accepting the rate proposal aforesaid. Natural, therefore, opposes the motion of the City of Chicago on the grounds that there is no need for briefs, oral argument on the reserved issue, and no need for a determination herein because Opinion No. 417 is dispositive of the reserved issue.

On May 28, 1964, the City of Chicago filed its reply to Natural's answer. Chicago objects to Natural's rate proposal and Natural's request to terminate this proceeding by placing the proposal aforesaid into effect. It further points out that the reserved issue on liberalized depreciation herein relates to the question of reflecting the use of liberalized depreciation in the cost of service in this proceeding and, since the rates became effective March 1, 1961, Natural by its rate proposal providing for prospective reductions, is repudiating its obligation to refund to its customers amounts collected from and after March 1, 1961. Chicago further states that, based upon the "normalization" method used in Natural's cost of service, pending decision on this issue, the amount of refunds here involved would be in excess of $30 million. Chicago points out that under Natural's proposal, none of these refunds would be passed on to its customers.

On June 2, 1964, the Public Service Commission of Wisconsin filed its reply to the answer of Natural, concurring in, and adopting the aforesaid reply of the City of Chicago.

In view of the conflict between the parties, as outlined above, it is appropriate that the parties, under Section IV, Paragraph 2 of the Stipulation and Agreement, be permitted to file briefs on dates prescribed by the Commission. We will give consideration to the advisability of oral argument herein after we have considered the briefs to be filed.

The Commission finds:

The parties and the Commission Staff should be granted the opportunity to present initial briefs and reply briefs on the reserved issue of liberalized depreciation under Article IV, Paragraph 2 of the Stipulation and Agreement in this proceeding, as hereinafter ordered.

The Commission orders:

(A) Any party in this proceeding, including Commission Staff, desiring to file briefs on the matters presented by the reserved issue of proper rate treatment of liberalized depreciation under Section IV, Paragraph 2 of the Stipulation and Agreement in this docket shall file an initial brief on or before September 28, 1964.

(B) Reply briefs, if any, shall be filed on or before October 27, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

POTOMAC EDISON COMPANY AND SOUTH PENN POWER COMPANY, DOCKET NO. E-7104

ORDER ACCEPTING RATE SCHEDULE FILINGS EFFECTING RATE REDUCTIONS AND TERMINATING PROCEEDING

(Issued July 31, 1964)

Potomac Edison Company (Edison) and its corporate affiliate South Penn Power Company (South Penn) on July 20, 1964, submitted for filing pursuant to Section 205 of the Federal Power Act, proposed rate schedules which would reduce Edison's present "WS" Electric Tariff rates by approximately $150,000 annually. South Penn, a purchaser from Edison under that tariff, proposes to flow through to its resale customers a pro-rata portion of the rate reduction from Edison. Attached Appendix A sets forth in detail the proffered rate schedules of both companies as designated in the files of the Commission. Briefly they are as follows:

Edison—Rate Schedule "WS–HV" for service at 34.5 kv and above to South Penn and Monongahela Power Company; Rate Schedule "WS–LV" for service at 4.16 and 12.47 kv to the towns of Thurmont and Williamsport, Maryland; Rate Schedule "WS–DV" for service at 2.4, 4.16, 7.2 and 12.47 kv for distribution to borderline retail customers of South Penn and the Potomac Light and Power Company.

South Penn—Rate Schedule "WS–HV" for service at 34.5 and above to the Borough of Chambersburg, Pennsylvania; and Rate Schedule "WS–DV" for service at 2.4, 4.16, 7.2 and 12.47 for service to the Borough of Mont Alto, Pennsylvania and borderline retail customers of Potomac Edison Company and Metropolitan Edison Company.

Edison is one of three principal operating subsidiaries of the Allegheny Power System.[1] Its operations are centered in western Maryland and adjacent portions of the states of Pennsylvania and West Virginia.

[1] West Penn Power Company (West Penn) and Monongahela Power Company (Monongahela), other subsidiaries of the Allegheny system, operate primarily in the States of Pennsylvania and West Virginia respectively.

Edison's subsidiary corporations include the Northern Virginia Power Company, Winchester, Virginia, Potomac Light and Power Company, Martinsburg, West Virginia and South Penn, Waynesboro, Pennsylvania.

Edison, West Penn and Monongahela operate under an Intercompany Agreement designated as Edison's Rate Schedule FPC No. 16. Edison, Northern Virginia Power Company and Potomac Light and Power Company (Potomac Light) operate under a separate Intercompany Agreement designated as Edison's Rate Schedule FPC No. 18.

Edison supplies all of the requirements of South Penn and the Towns of Williamsport and Thurmont, Maryland under its WS Tariff. It supplies a very minor portion of the requirements of Monongahela and of Potomac Light under the WS Tariff, the remainder of its service to these companies being made under the Intercompany Agreements referred to above.

By order of the Commission issued June 7, 1963, an investigation was instituted as to the lawfulness of Edison's "WS" Tariff. Numerous cost analyses were prepared and conferences have been held among representatives of that Company, interested State Public Service Commissions and this Commission's staff. The proffered rate schedule filings with their consequent rate reduction result from that order of investigation, those studies and conferences. As filed, the proposed rate schedules are concurred in by representatives of the Public Service Commission in Maryland, Public Utilities Commission of Pennsylvania and Public Service Commission of West Virginia, as well as the staff of this Commission. They would effect the following rate reductions:

Customers	Delivery voltage	Actual revenue at present rates	Dollar reduction	Percent reduction
EDISON				
South Penn	138 & 34.5 kv	$2,394,520	$132,500	5.5
Monongahela	34.5 kv	49,030	6,200	12.6
Town of Thurmont, Md.	(4 kv from 34.5 kv Sub.)	89,090	6,770	7.6
Town of Williamsport, Md.		55,760	4,440	8.0
South Penn	(4 kv from Distribution Sys.)	239,410	(110)	
Potomac Light		215,780	1,140	0.5
		3,043,590	151,000	5.0
SOUTH PENN				
Direct wholesale sales:				
Mont Alto, Pa.	12 kv	19,070	770	4.0
Chambersburg, Pa.	69 kv	53,810	4,390	8.2
Borderline distribution wholesale sales:				
Potomac Edison Company	7 and 12 kv	93,720	170	0.2
Metropolitan Edison Company	2.4 kv	770	20	2.6

We believe this proceeding should be disposed of through acceptance of the proffered rate schedule filings. These schedules will eliminate Edison's collection of approximately $150,000 of annual revenues which are in excess of Edison's cost of service including allowances for return and income taxes. The settlement appears to be a reasonable compromise of the contested issues.

All of the interested parties to this proceeding have indicated their willingness to accept the proffered rate settlement. Our acceptance of the proffered rate filings and termination of this proceeding is not, however, to be taken as indicative of our views as to the appropriate disposition of any of the disputed items associated with Edison's cost of service were this case to be fully tried and decided on the merits as to all contested issues.

In disposing of this case upon the basis of the proffered rate schedules and resulting revenues, we take note of the immediate rate relief which will be afforded thereby and the willingness of South Penn, Edison's corporate affiliate,

to flow through to South Penn's wholesale customers pro rata portions of the reduced rates from Edison.

We note that Edison and South Penn have requested that the rates be put into effect as promptly as practicable. To avoid needless cost of split billing, company representatives agreed that the new rates should apply to meter readings taken on and after July 31, 1964, which would include all service from July 1, 1964.

The Commission finds:

(1) Good cause has been shown that the 30-day notice period provided in Section 205(d) of the Federal Power Act be waived with respect to Edison's Rate Schedule FPC "WS–HV", "WS–LV", "WS–DV" and South Penn's Rate Schedule FPC "WS–HV", "WS–DV", and such rate schedules be allowed to take effect as of July 1, 1964.

(2) It is necessary and appropriate for the purposes of the Federal Power Act to terminate the above entitled proceeding in the manner hereinafter ordered.

The Commission orders:

(A) The 30-day notice period provided in Section 205(d) of the Federal Power Act is hereby waived with respect to the proposed rate schedules referred to in the finding above and they are hereby allowed to take effect as of July 1, 1964.

(B) The issuance of this order shall constitute full notice of the filing and publication of the rate schedules in question insofar as their effective date is concerned.

(C) Acceptance of Edison's and South Penn's rate schedules as herein provided is without prejudice to any findings or orders which have been or may hereafter be made by this Commission in any proceeding by or against the aforementioned companies. Moreover, nothing in this order shall be construed as a waiver in any other respect of the requirements of Section 205(d) of the Federal Power Act or Section 35.11 of the Commission's Regulations under the Act; nor shall this order be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract or practice affecting such service or rate provided for in the rate schedules as above designated; nor shall this order be deemed as recognizing a claim, contract or obligation affecting or relating to such service or rates.

(D) The above entitled proceeding, Docket No. E–7104, is hereby terminated.

APPENDIX

POTOMAC EDISON COMPANY

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 2, 1964)

BINDER, *Presiding Examiner:* This is a consolidated proceeding under Sections 7(c) and (e) of the Natural Gas Act (Act) in which Shell Oil Company (Shell), Humble Oil & Refining Company (Humble) and The Superior Oil Company (Superior) seek permanent certificates of public convenience and necessity authorizing sales by them of pipeline quality natural gas for resale in interstate commerce to El Paso Natural Gas Company (El Paso), a regulated pipeline company, at an initial price of 17.7 cents per Mcf at 15.025 psia.[1]

The applicants seek such certificates at the contract price, *i.e.*, without any conditions relating to price. The Staff and the interveners contend that a permanent certificate should issue only upon condition that the initial price inclusive of tax reimbursement and inclusive of any minimum guarantee of liquids shall not be in excess of 13 cents per Mcf at 15.025 psia for pipeline quality gas. Accordingly, the issue to be resolved in this case is the appropriate public convenience and necessity initial price level for the sales of natural gas to be made by applicants under Section 7 of the Act.

The gas committed to El Paso by Shell and Humble is from the East Boundary Butte Field which lies partly in Apache County, Arizona, and partly in San Juan County, Utah. One of Shell's three productive wells is a high gas ratio oil well,[2] and the other two are dry gas wells. Humble's sale involves production from only two wells at this time. One is a high gas ratio oil well, and the other is a dry gas well. The Superior gas is from a one-well field in Apache County, Arizona, which has not been given an official field designation but is a dry gas well. All of the present production is from Apache County, Arizona. The record in this proceeding shows that at this time the applicants have no production in Utah.

An initial service rate applicable to the sales proposed here was not set forth in the Commission's Statement of General Policy No. 61–1.

Each of the contracts covers a 20-year period and provides that the total initial price shall be 17.7 cents per Mcf at 15.025 psia for sweet gas as defined in the contracts for the first five years of the contract, with periodic increases of 1.0 cents per Mcf at five-year intervals following the date of initial delivery. The contracts provide for an adjustment for the extraction of carbon dioxide and hydrogen sulphide when the buyer engages in such extraction. The adjustment becomes operative only when the acid content exceeds 7 percent by volume. When it does so, a proportionate reduction is made for the removal of such excess by the use of a formula which provides as follows:

$$\frac{4\frac{1}{2}¢ \times \text{percent of actual acid gas content-reduction}}{7 \text{ percent}}$$

[1] The Commission issued a temporary certificate on September 5, 1962, to Shell authorizing it to sell natural gas from the East Boundary Butte area to El Paso subject to the condition that "the total price shall not exceed 15.0 cents per Mcf at 15.025." A similar temporary certificate was issued on November 20, 1962 to Humble. Superior has no temporary certificate.

[2] Solution oil gas ratio is defined as the number of cubic feet of gas (measured at a specific temperature and pressure) per barrel of stock tank (residual) oil. Petroleum Subsurface Engineering by Harold Vance (Educational Publishers Inc., 1950). In a number of the states of the United States there are general proration policies limiting the amount of gas which may be produced from a high gas ratio oil well on the basis of 2,000 to one, *i.e.*, 2,000 cubic feet of gas to one barrel of oil.

The contracts provide that if the gas contains more than 7 percent by volume of hydrogen sulphide and/or carbon monoxide, or more than five grains of organic sulphide (mercaptans) per 100 cubic feet, the buyer may refuse to accept delivery, but if the buyer refuses, the seller may install treating facilities and the buyer will then be obligated to take the gas. These contracts also provide that if the seller fails to exercise its option to construct the facilities, the buyer may construct the treating facilities and be entitled to a credit on the purchase price of the gas for the removal of the acid gases to the extent necessary to meet the 7 percent quality limitation. The contracts in the instant case, however, provide that if the computed contract adjustment for acid as determined under the above formula should exceed 6½ cents per Mcf, the seller shall have the option to sell the gas to third parties unless the buyer agrees to a credit for the treatment not in excess of 6½ cents per Mcf.

Shell has estimated the acid gas content of its gas at 5 percent which results in a treating charge for its gas of 3.2 cents per Mcf. Humble, on the basis of the same formula, has estimated its treating charge at 4.32 cents per Mcf. Apparently, each producer will be charged a different amount per Mcf for treating its gas dependent upon its acid content.

There is no provision in the contracts for a difference in price because two of the wells are high gas ratio oil wells, and the balance are dry gas wells. The producers urge that all gas involved in this proceeding is to be considered dry gas.

Each of the producers is required to deliver gas at a pressure sufficiently high to allow the gas to enter El Paso's pipeline. There is no evidence in this proceeding that the matter of the pressure will present any problem to the producers at any specifically determinable time in the future and none of them has any necessity for compressing the gas they are selling at this time. The gas flows from their wells at sufficiently high pressure to enter El Paso's pipeline without compression. If, as, and when, at some undetermined time in the future, the producers find it necessary to go to additional expense to meet their obligations as to pressure, they have the right to seek higher rates pursuant to the provisions of the Act and their contracts.

The gas from all the wells involved here is commingled and delivered to El Paso in Arizona where title passes to the pipeline. Shell has constructed a gathering system which is about ten miles long at a cost to it of approximately $100,000. This system will also be used by Humble.

Assuming arguendo, (a contention which the examiner does not consider to be tenable), that applicants ought to receive some additional compensation above a price which otherwise would be considered as "in line" for installing and operating the gathering facilities, the evidence, relating the probable volumes to be flowed through these facilities over any representative period to the investment in such facilities and the producers' costs of operation thereof, is wholly inadequate on which to base any judgment figure reflecting a reasonable estimate of any additional compensation per Mcf by reason of their installation and operation. It may be further observed in this connection that these facilities are of such size that they can be usefully employed if, as, and when further development of the area occurs and additional gas is gathered through these facilities. Any so-called extra or additional compensation figure per Mcf essayed in this connection would be based on pure conjecture. The employment of some nice round conjectural approximation which is not supported by evidence in the record would be inappropriate in determining the public convenience and necessity initial price. The applicants have the burden of establishing all the elements including initial price which are necessary to establish that the public convenience and necessity will be served by the granting of the applications.

As the Southern California distributors, who are interveners in the proceeding, have pointed out in their brief, the amount of annual purchased gas involved in this proceeding constitutes a relatively small volume. A total average daily volume of approximately 4,000 Mcf per day is involved according to the certificate filings made by the producers. El Paso's annual purchased gas will be affected by over $14,000 for each one cent that the price is increased or decreased from the 15.0 cents price now temporarily in effect. However, when this price is multiplied to reflect the possible effect on El Paso's other present and future purchases in Arizona and other neighboring marketing areas, the real monetary interest of the distributors and the consuming public in California could well prove to be much larger than the immediate impact of these three sales on El Paso's cost of purchased gas. The circumstances, including the possibility of substantial future production in the area, however, serve to emphasize the importance of care and prudence in determining the initial price for the gas proposed to be sold here.

The producers have modeled their contracts insofar as price is concerned upon the Commission's authorization issued in the *Aneth* case, Opinion No. 335 and accompanying order in *El Paso Natural Gas Co., et al.*, Docket No. G–13862, *et al.*, issued February 23, 1960, 23 FPC 369. In the course of this proceeding they have pointed particularly to the authorization issued in relation to the contract of *Western Natural Gas Company*, Docket No. G–13964, one of the producer applicants in such Aneth proceeding. Western, a then affiliate of El Paso, sought and obtained a certificate in the latter proceeding for the sale of dry gas of pipeline quality at the same price per Mcf as that received by the numerous unaffiliated producers all of whom were selling casinghead gas to the pipeline at the same time in the Aneth case. Based very largely upon the alleged comparability of the price situation in the present case to that of the producers in the Aneth case the applicants contend that they should receive the same price for their gas that the producers in such proceeding received. A short review of the facts and circumstances of that case would therefore be helpful in reaching an understanding of the applicants' contentions.

Sixteen of the seventeen independent producer sales certificated in Docket No. G–13862, *et al.*, were casinghead sales. As the Commission explained it in the Aneth decision "approximately 93,000 Mcf would be available from the processing by El Paso of approximately 113,000 Mcf per day of casinghead gas. A further 6,500 Mcf per day would be gas well or dry gas, El Paso producing approximately 2,000 Mcf thereof from its wells. The remaining 4,500 Mcf of gas would come from El Paso's affiliate Western Natural Gas Company." (23 FPC 369, at p. 372.) It will be observed that by far the largest percentage of this gas was casinghead gas. A reading of the Aneth opinion indicates that the Commission was largely preoccupied with the casinghead gas sales, with rather little, if any, emphasis being afforded to the sale of Western's dry gas. The latter, however, was an isolated sale of dry gas in the Boundary Butte Field, which is located not in but near the Aneth Field where the sales of casinghead gas were being made.

This casinghead gas was gathered by El Paso and then processed by the buyer at its plant at Aneth and then transported to El Paso's San Juan plant. A portion of the revenues derived from the extracted liquids in the Aneth case were retained by El Paso as reimbursement for its services in processing the gas from Aneth. In addition to the 17.7 cents per Mcf the producers received supplemental revenues from their share of the extracted liquids. However, the revenues received from the sale of the liquids was not credited against the processing or other costs of extracting such liquids. After the gas was proc-

essed at the Aneth plant the producers in the Aneth case were paid 17.7 cents per Mcf for the residue gas remaining from the extraction process. Thus, in essence, the producers of casinghead gas received 17.7 cents per Mcf for pipeline quality gas compressed to 850 psig and available for transportation at the tailgate of El Paso's Aneth plant.

The Commission's Aneth decision, 23 FPC 369 was thereafter affirmed *sub nom. Texaco Inc.* v. *F.P.C.* (5 Cir. 61), 290 F. 2d 149, and was binding on all parties to that proceeding. The price received by the producers is a historical and legal fact. It cannot be challenged, nor is there any attempt to change or challenge the price received by the producers in such case. The problem here however, is whether such price should be relied on or employed to base the public convenience and necessity initial price in the instant case.

The Staff contends that a more appropriate basis for comparison in determining the price of the dry gas proposed to be sold here is not the casinghead sales at Aneth but the dry gas sales in the San Juan Basin. The Staff has pointed out that the Aneth price level was derived by comparison with El Paso's costs in the San Juan Basin; that the Commission in Opinion No. 335 pointed up the fact that the Aneth gas was casinghead gas and required different price treatment. In other words, San Juan gas was essentially low pressure, dry, sweet gas, while the largest percentage of the gas at Aneth was casinghead gas.

The gas proposed to be sold in this particular proceeding is high-pressure sour gas, but like the San Juan gas and unlike the greater part of the gas sold in the Aneth proceeding it is essentially dry gas. Since the gas involved here and the gas involved in the San Juan sales are both dry gas, the staff is of the opinion that the sales proposed here and the San Juan sales are reasonably comparable, but that the Aneth casinghead sales are not reasonably comparable. The Western Natural gas was geographically close to Aneth. Western's application was consolidated with the other dockets involving casinghead gas and one price was set for all the gas involved in the consolidated proceeding, all of which was sold at the same time to one buyer, El Paso. The price determined for the gas sold by the producers of casinghead gas at Aneth was applied to Western's dry gas production apparently without any real consideration of the difference in the type of gas being sold by Western. As Commissioner Kline in his concurring opinion in the Aneth case pointed out, however, "the gas produced in the Aneth Field is a wholly different type than that produced in the San Juan Basin and is produced in conjunction with oil and is rich in hydrocarbons, while the San Juan Basin gas is dry. In the process of removing liquids from the Aneth gas, substantial revenues are obtained from the sale of liquids." (23 FPC at 381) It was clear that the other producers at Aneth were not producing the same kind of gas as was being produced in the Boundary Butte Field by Western Natural.[2] Moreover, if the size of the volumes involved in the sales which are the subject of camparison or attempted comparison is a factor deserving serious consideration, then it must be said that the volumes involved here are much smaller than those at Aneth and are not comparable for this reason.

---

[2] As the Ninth Circuit Court of Appeals pointed out in *United Gas Improvement Co.* v. *Federal Power Commission*, 283 F. 2d 817, at page 823:

> Existing producer prices are relevant for comparative purposes only if they pertain to gas production in the same or an analogous area and if other principal features of the contracts are fairly comparable. Thus the contracts should be comparable from the standpoint of gas reserves and future potentials. The significance of any disparities existing as to these conditions should be explained by Commission findings based upon substantial evidence. Substantial variation in the quality of gas sold should be similarly treated.

In any event, the greater part of the gas which was the subject of sale at Aneth was casinghead gas and not really comparable to the gas sales proposed to be made here nor was it actually comparable to the dry gas being sold by Western. Indeed no such comparison was attempted in the Aneth case.

The Commission offered certain other important, additional, and different reasons or "factors" in Opinion No. 335 for pricing gas in the Aneth proceeding at 17.7 cents per Mcf. The additional rationale offered by the Commission in reaching the 17.7-cent per Mcf price in the Aneth case is set forth in rather succinct form in Commission Opinion No. 335. After a somewhat generalized discussion of the meaning of the CATCO opinion,[4] the Commission in its Aneth Opinion at 23 FPC 369, page 376, *et seq.* explained the reasons for fixing the initial price at Aneth at 17.7 cents per Mcf, in material part, as follows:

> Among the factors which support an initial price of 17.7 cents per Mcf for these producers' sales to El Paso is a comparison of the price proposed for the Aneth Field gas, with the cost to El Paso of gas from the San Juan Basin in northwestern New Mexico, some 75 and more miles distant from the Aneth Field. In accordance with the request contained in our "Aneth' letter", *supra*, El Paso presented evidence purporting to show what it cost the company in 1957 for its natural gas from the San Juan Basin. According to this evidence, the average cost to El Paso in 1957 for natural gas at the outlets of its San Juan processing plants for delivery into the company's main transmission system was 22.61 cents per Mcf in 1957, compared with 22.36 cents per Mcf which it claimed would be the price of Aneth gas in 1962. The presiding examiner was of the view that this claimed cost of San Juan gas was unjustified for the reason, among others, that El Paso had improperly included as costs certain depletion allowances and well-drilling expenses permitted as Federal income tax deductions. He concluded that properly adjusted, the cost to El Paso of San Juan pipeline gas would be approximately 17 cents per Mcf. *However, this conclusion is erroneous since in Opinion No. 326, issued subsequent to the examiner's decision herein, on August 10, 1959, in the El Paso rate case in Docket No. G–4769, 22 FPC 260, the Commission held that these tax benefits were properly includible in the cost of service, but were to be considered by the Commission in fixing the rate of return on the company's well-mouth properties.* [Italics supplied.]

While, as this excerpt clearly indicated, there was some evidence as to costs offered by El Paso in the record in the certificate proceeding, such cost evidence was not as complete as that offered in El Paso's rate case, Docket No. G–4769. El Paso's evidence in the certificate case, however, purported to show "* * * the average cost to El Paso in 1957 for natural gas at the *outlets of its San Juan processing plants* for delivery into the company's main transmission system * * *.

These costs were not what it cost the independent producers at San Juan or at Aneth to produce the gas they were selling in those respective fields. Instead they involved gas costs to El Paso which may be described as being in two categories. One category of gas involved was self-produced and the second category consisted of gas purchased by El Paso from independent producers of gas at San Juan. It will be noted from the above quotation that self-produced gas was involved as well as purchased gas since the Commission refers to El Paso's

---

[4] *Atlantic Refining Co.* v. *Public Service Commission of the State of New York*, 360 U.S. 378.

depletion allowances and well-drilling expenses and that such a reference would have no meaning if all they had reference to was gas purchased from others. Moreover, as the above quotation indicates, the costs referred to by the Commission were not the costs to El Paso at the wellhead but the average cost to El Paso of gas produced in the San Juan Basin at the outlets of its San Juan processing plants. Moreover, those costs were figured in Docket No. G–4769 for a different period than they were in the certificate case. In this connection, it should be observed that the Commission after reviewing the record in the Aneth certificate proceeding elected not to consider any of the costs presented in such proceedings for the purpose of determining the price level for the gas at Aneth. Instead, as the Commission's Opinion in the certificate proceeding indicates, it turned to the evidence submitted by El Paso in Docket No. G–4769, a docket which was not consolidated with any of the dockets in the Aneth proceeding and which was confined to a determination of El Paso's rates.

The Commission in the El Paso rate case "* * * arrived at a total cost of service in the amount of $160,693,628 based upon the *test year 1955*, which compares with the presiding examiner's determination of $171,594,444."[5] (*El Paso Natural Gas Company*, Docket No. G–4769, Opinion No. 326, 22 FPC 260, at page 263.) [Italic supplied.] These total costs, of course, included costs in addition to that of acquiring San Juan and other gas.

It will also be noted that the costs to El Paso at San Juan were costs figured on the basis of what they would be "at the outlets of its San Juan processing plants for delivery," *i.e.*, they included prices paid to independent producers, plus the cost of self-produced gas which was substantial, plus additional costs to El Paso involving transportation to its processing plant, plus the cost of gathering and processing. As we have pointed out, El Paso is not only a buyer of gas but is itself a substantial producer in the San Juan Field.

In connection with the employment in the Aneth Opinion of the cost data in the record of the El Paso rate case in Docket No. G–4769 but not the cost data in the Aneth certificate dockets, the Commission in its Aneth decision went on to say:

> *There is, however, data in the record in the El Paso rate case in Docket No. G–4769 bearing on the cost to El Paso of San Juan gas to which we may reasonably look, since the same subject matter and to a considerable extent common issues are involved, and since the record in that rate case provides certain data not contained in the record in the instant certificate proceeding. Together, these data support an initial price of 17.7 cents per Mcf for the sale to El Paso.* Thus it appears on the basis of the record in G–4769 that for the *1955* test year the weighted average cost at the wellhead to El Paso for gas purchased in the San Juan Basin is 11.69 cents per Mcf. If there is added to this a one-cent escalation on January 1, 1959, the price would be 12.69 cents per Mcf. Since the gas involved in the instant case is "pipeline" gas which has been processed and gathered, to place the costs for San Juan gas involved in G–4769 on a comparable basis there should be added some 5 cents per Mcf representing processing and related costs, giving a total of approximately 17.7 cents per Mcf.
>
> * * * * * * *
>
> Some of the producers advance a number of arguments to justify the 20-cent price proposed for the Aneth gas, as contrasted with staff's field price evidence, including explanations based on differences in the terms of the

[5] The examiner referred to was the examiner who presided in Docket G–4769, not the examiner who presided in the Aneth case.

sales contracts, the richer hydrocarbon content of the Aneth gas, differences in delivery pressures, differences in the time of negotiating the contracts, distances from markets, and other circumstances. Some of these circumstances may tend to justify somewhat higher prices than those generally prevailing in the San Juan Field shown by staff's evidence; however, they fall short of meeting the standards of the Supreme Court's Catco opinion in sustaining the 20-cent price proposed.

* * * * * * *

Accordingly, considering all the facts, *including a comparison with the costs of San Juan gas, the terms and conditions of the Aneth sales contracts and the respective production, gathering and sales obligations thereunder*, the fact that this price will tend to fix a level for the price of future sales from this area, the evidence of public need for this gas, and the other circumstances bearing on the matter, we conclude that the applicants have failed to show that the public convenience and necessity require the proposed sales at a rate level higher than 17.7 cents per Mcf. Rather than deny the certificates, which is one of the alternatives open to us under the *Catco* rule of the Supreme Court, we believe it necessary to authorize the proposed sales on condition that the initial price be no higher than 17.7 cents per Mcf. [Italics supplied.]

An examination of the Aneth decision shows that in material part the Aneth price was derived by the Commission through its mistaken conclusion as to "includible" costs in the rate case, which conclusion was reiterated and applied in important part to fix the price level in the Aneth certificate case. This conclusion was to the effect that "* * * these tax benefits [*i.e.*, the savings available to producers through depletion allowances and well-drilling expenses] were properly includible in the cost of service, * * *." (23 FPC 369, 376) These incorrectly determined costs at San Juan were employed to set the price level fixed for Aneth gas and caused them to be at a higher level than they would have been if the tax benefits had not been translated into costs. Basically this occurred because the cost of obtaining all gas at San Juan was used as a measuring rod, rather than just the cost of acquiring the gas from other producers, for determining the price level at Aneth. To these inflated costs the Commission added an additional five cents per Mcf for "processing and related costs." The latter figure, of course, had no relationship to the tax benefits but is not a cost which in the examiner's judgment would be followed in this particular manner today to fix producer prices, for reasons which will be discussed hereinafter.

The fact that these tax savings were held by the Commission in El Paso's rate case in Docket No. G–4769, as they were in Aneth Opinion No. 335, to be costs recoverable by the producers was one of the principal reasons which impelled the Fifth Circuit to reverse the Commission's decision in Docket No. G–4769, *El Paso Natural Gas Co.* v. *F.P.C., et al.*, 281 F. 2d 567 (1960). In this connection, the then Commission, among other things, pointed up its conclusion in its Aneth opinion that the examiner's determination of cost data in the certificate proceeding was erroneous because he had held that: "El Paso had improperly included as costs certain depletion allowance and well-drilling expenses permitted as Federal income tax deductions." (23 FPC 369, 376) The then Commission in the El Paso rate case compounded its error with regard to the employment of these depletion allowances and well-drilling expenses when it determined in that case to apply these non-existent costs "in fixing the rate of return on the company's wellmouth properties." (23 FPC 369, 376)

There would be no reason for the Commission to emphasize its views with regard to the tax benefits available to producers in its Aneth decision, nor to

say that "among the factors which support an initial price of 17.7 cents per Mcf" was "the cost to El Paso of gas from the San Juan Basin", unless the Commission were relying upon these costs to support its conclusion regarding a 17.7-cent initial price at Aneth. Moreover, the testimony with regard to field price in the Aneth certificate proceeding is replete with testimony to the effect that the field price for the independent producers of natural gas at San Juan at the time was 11.69 cents per Mcf. This figure was not disputed in the Aneth certificate case. Had the Commission intended to rely solely on the field price of 11.69 cents and an escalation of one-cent, which was anticipated,[6] plus processing and related costs, there would have been no reason for the Commission in its Aneth opinion to expound its views on these improperly "includible costs" on which the Commission said it had relied in fixing the price at 17.7 cents per Mcf at Aneth and to state that these figures supported its initial price.

The Commission carried into its Aneth opinion the same error it committed in the El Paso raté case, Docket No. G–4769 at least insofar as El Paso's costs for self-produced gas was concerned. In addition it brought over into the Aneth decision its determination as to applicable rate of return as determined by it in El Paso's Docket No. G–4769. In connection with tax depletion and well-drilling expenses, the Court of Appeals when the rate case reached it for determination held that:

> * * * there is no statutory authority for the Commission to treat actual savings in taxes to which natural gas companies are entitled any differently than any other cost of service. (281 F. 2d 567, 573.)

In connection with the costs at Aneth and the tax savings element related to that matter the examiner in his initial decision (23 FPC 383 at p. 404, *et seq.*)

> * * * pointed out that El Paso's cost of service study includes as a cost Federal income taxes in the amount of $7,988,218 when in fact El Paso pays no Federal income tax at all and the figure represents savings available through depletion allowances and well-drilling expense.

At page 405 of the same initial decision the presiding examiner pointed out that:

> The elimination of this item of Federal income taxes from El Paso's cost-of-service presentation would reduce the average cost of gas from San Juan as projected by El Paso by 3.3 cents per Mcf.

Despite the language of the Aneth opinion stating that the Commission had relied upon cost figures in Docket No. G–4769 to support its 17.7-cent initial price and despite the fact that the Fifth Circuit subsequently held that the cost of service figures in such docket were incorrect it appears that some of the parties to this proceeding have taken the position that all that the Commission did in the Aneth case was to take the 11.69 cents per Mcf fair field price at San Juan which at the time of the certificate proceedings was considered to be representative for purposes of comparison with the price to be set at Aneth and add to such figure an escalation of one cent per Mcf. This was a rise in price which had not taken place at the period under consideration but which was anticipated. To the figure of 12.69 cents the Commission added an additional 5 cents for processing and related costs and in this manner the Commission reached a price of 17.7 cents per Mcf at Aneth.

---

[6] Escalation clauses authorize a producer to seek the amount of the escalation. Under the Act the normal practice in such a situation where a producer desires to take advantage of an escalation clause is to file for an increase in rates. The obligation of the producer in such a proceeding is to establish that he is entitled to such increase. In the Aneth case the Commission simply anticipated the amount of the escalation and awarded such amount in its Aneth price without requiring the establishment of the elements necessary in a Section 4(e) proceeding to obtain an increase in the rates.

The argument, in substance, is that despite the Commission's statement in the Aneth opinion that it was relying on cost figures in Docket No. G–4769 including the depletion allowances and well-drilling expenses, the Commission did not in fact rely on these figures but instead reached a determination of initial price on the basis of adding together the fair field price, an anticipated escalation, and El Paso's processing costs at its San Juan plant.

Assuming, arguendo, that this was the Commission's approach or the approach of the Court of Appeals, it would be inconsistent with present day pricing practices resulting from the Commission's experience in matters of this character since the Aneth decision was issued. It is no longer the Commission's practice to add a cost based differential to a field price to arrive at the appropriate "in line" price.

While the decision of the Court of Appeals in the Aneth proceeding is certainly binding on the parties thereto, it is the examiner's opinion that the rule of *res judicata* has no rigid application to proceedings of the character being considered here for reasons which will be discussed hereinafter. The Aneth decision is not binding insofar as future cases are concerned, and it is not binding here because the facts involved in that proceeding make this matter distinguishable from the Aneth case.

Since the Commission in Docket No. G–4769 was using a different set of figures including a different test period to reach rates than the figures which were employed in the *Aneth* certificate proceeding to reach the initial price, the figure for tax savings which was arrived at in the rate case was $7,704,477 rather than the figure of $7,988,288 which El Paso employed in the certificate case.[7] However, the dollar amounts in these two figures are not too far apart and would not change materially the conclusion that the elimination of the "phantom taxes" from El Paso's cost of presentation would reduce the average cost of gas to El Paso by approximately 3.3 cents per Mcf, *i.e.*, the effect of this one item would lower the figure of 17.7 cents arrived at in Aneth by using El Paso's figures in its rate case to 14.4 cents per Mcf. Apparently by the use of these "phantom taxes" El Paso sought to obtain higher rates than it would otherwise receive in Docket No. G–4769. The use of these "phantom taxes" in the certificate case, however, served to assist its affiliate Western Natural to obtain higher prices at Aneth. The effect of El Paso's approach was also to assist the other producers who were selling gas to obtain higher prices for the gas being sold at Aneth.

In this connection, it may be noted that the Court of Appeals for the District

[7] In the El Paso rate case, Docket No. G–4769, there were over 50 exhibits received in evidence bearing upon the company's cost of service and rate base. There were only very few exhibits relating to cost of service received in the Aneth certificate case. Moreover, a different period was involved. In the rate case the Commission "arrived at a total cost of service in the amount of $160,693,628 based on the test year 1955 * * *." The costs presented in the Aneth case related to the year 1957. In this connection, it is observed that the difference in the test period appears to have had little effect insofar as the 5 cents for processing and related costs were concerned. However, it is not possible at this juncture to determine the materiality of the impact on overall costs of service by reason of the different test period employed in the rate case as compared to the representative period used in the certificate case. Accordingly, the examiner is not taking any position as to the exact effect per Mcf of the employment of the phantom taxes in El Paso's rate case and the Commission's support of its employment in the certificate case. The purpose of calling these matters to the attention of the Commission is to point out the facts with regard to the determination of the 17.7-cent price at Aneth.

of Columbia Circuit in *Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 679 (1963), at footnote 11, pointed out that:

> In using the area pricing approach, it must be remembered that the purchaser of natural gas, usually the pipe line company, is a regulated utility. To it, the price of gas is of no great concern, because whatever price it pays can be recovered from the consumer through an increase in rates. Thus a contract between a producer and a pipe line company is not necessarily an arms length transaction. Under the circumstances, if the consumer is to be protected at all, the Commission must do it. And the escalations in the price of gas since Phillips have not been a source of satisfaction to the state agencies charged with consumer protection.

The examiner is fully aware that after the Fifth Circuit Court reversed the Commission's order in Docket No. G–4769,[8] the same Circuit in *Texaco Inc.* v. *F.P.C.*, 290 F. 2d 149 affirmed the Commission's order in the Aneth case which fixed the initial price at 17.7 cents per Mcf. In the Texaco certificate case the court pointed out that the Commission had authority to condition a certificate at a price below the contract figure which at Aneth was 20 cents per Mcf. As to the level of 17.7 cents per Mcf which was authorized in the Aneth proceeding, the court in its Texaco opinion said:

> In its petition for review in number 18543, the State of California, playing its traditional role of stressing the interest of the consuming public, asserts that the 17.7-cent initial price, itself, is not supported by substantial evidence in the record. It contends that the Commission should have denied the certificate out of hand or at most it should have conditioned it upon requiring an initial price of 12.69 cents.
>
> As we have already indicated, and as all parties recognize, a section 7 proceeding is not to be equated with a proceeding under section 4 or section 5 to determine a just and reasonable rate. The power and duty of the Commission to give "most careful scrutiny and reasonable reaction to initial price proposals of producers" may be discharged by it without the elaborate and detailed proofs required in a section 4 or section 5 proceeding. We find that the record before the Commission meets the requirements of a section 7 determination that an initial price of 20 cents would not be compatible with public convenience and necessity and that an initial price of 17.7 cents would be.
>
> Finding no error in the order here under attack, we conclude that it should be affirmed in all respects.

While there is no doubt as to the correctness of the general principles employed by the court, insofar as they were expressed, the fact is that the price level at Aneth appears to have been arrived at in material part by employing the figures obtained in a formal Section 4 proceeding which the same court said had been incorrectly decided. Accordingly, the initial price at Aneth appears not to have been reached upon the general principles expounded by the circuit court in its opinion or upon any "hold the line", or other concept now considered acceptable by the Commission and the courts.

The Commission's and the Court's conclusions at Aneth were based upon theories which would not be applied today without serious consideration of the specifics of the individual situation under review and without a reasonable showing that the initial price was "in line".[9]

---

[8] *El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567.

[9] In this connection, see for example, the Commission's Statement of General Policy issued September 28, 1960, 24 FPC 818, in which it set forth Area Price Levels for Natural Gas by Independent Producers including those in the San Juan Basin, New Mexico. The price for initial service in the San Juan Basin was placed at 13.0 cents at 15.025 psia.

The Aneth case was decided by the Commission on the heels of the Catco decision. It was decided at a time when the full ramifications of the Catco decision were not fully understood, or at least appreciated by the then members of the Commission [10], nor indeed in some cases by the courts.[11]

At the time that the Commission and subsequently the court decided the Aneth case, regulatory principles with respect to the certification of producer sales under Section 7 of the Act were still in their early post-Catco stage.

It should be kept in mind in this connection that an outstanding element of the regulatory process is the development of criteria for judgment. The approach of the Commission to initial price regulation under Section 7 had not as yet been fully developed when the Commission reached its determination in the Aneth case, nor when the Fifth Circuit Court decided that matter. In truth, it is still in the course of development, although there has been substantial improvement in the Commission's processes since Aneth.

Conceptually the regulatory process cannot, or at least should not be imprisoned within the framework of a single comparatively early decision like Aneth. To follow this approach, as though the Aneth decision were *res judicata* of all subsequent sales even in areas not far distant from the Aneth Field and even to the point of sales of gas of a different type, would bar the Commission from any future empirical analysis and thus prevent subsequent development of the Commission's processes for the purpose of improving standards which greater experience shows would better protect the public interest.

While the doctrine of *res judicata* may have reasonable application in various types of administrative and judicial proceedings it has no rigid or unvarying application to a proceeding bearing upon a determination by the Federal Power Commission of the present or future public convenience and necessity. A leading case dealing with this general subject is *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 236 F. 2d 289 (1956). At page 291 of this opinion Judge Maris speaking for a unanimous court commented as follows:

> The principal contentions of Panhandle are based upon the premise that, as it asserts, the Commission had in 1947 authorized the partial abandonment of its service to Michigan Consolidated and had determined Panhandle's obligations to that company in proceedings which involved the issuance of a certificate of public convenience and necessity to Michigan-Wisconsin Pipe Line Company,[5] an affiliate of Michigan-Consolidated in the American Natural Gas Company System. It strenuously argues that the action of the Commission in those proceedings must be given effect in this proceeding upon principles of res judicata. The contentions of Panhandle in this regard we find to be wholly without merit.
>
> In the first place the doctrine of *res judicata* can have no application to a proceeding, such as this, which involves a determination of the present or future public convenience and necessity with respect to the continuance or abandonment of natural gas service. For, as Judge Learned Hand said in a somewhat analogous situation in *United States Feldspar Corporation* v. *United States*, D.C.N.Y. 1930, 38 F. 2d 91, 95, "No estoppel is relevant upon that inquiry, no inconsistency important, except as it helps to ascertain the

---

[10] See, for example, *Texas Gas Transmission Corporation*, 22 FPC 378; *The California Company, et al.*, 22 FPC 252; *The Superior Oil Company*, 22 FPC 369; *Sunray Mid-Continent Oil Company*, 22 FPC 361; *Sun Oil Company*, 22 FPC 357; all post-Catco determinations, and all of which were reversed by various Courts of Appeals in 287 F. 2d 146 (CADC), cert. denied 365 U.S. 880, 882; 283 F. 2d 817 (CCA 9); 290 F. 2d 147 (CCA 5); 287 F. 2d 159 (CCA 10) and 290 F. 2d 133 (CCA 5).

[11] *E.g.*, *United Gas Improvement Co.* v. *F.P.C.*, 269 F. 2d 865 (3rd Cir. 1959), reversed *Public Service Commission* v. *F.P.C.*, 361 U.S. 195 (1959).

very truth; the inquiry is not to be assimilated to the ordinary suit *inter partes*, where no more is at stake than the settlement of a private dispute." In a situation such as this the Commission is exercising delegated legislative power to make a rule to guide the conduct of the parties in the future. It is not exercising quasi-judicial power to determine past or present rights or liabilities, as was done in the case of In re *Federal Water & Gas Corp.*, 3 Cir., 1951, 188 F. 2d 100, certiorari denied *Chenery Corp.* v. *Securities & Exchange Comm.*, 341 U.S. 953, 71 S. Ct. 1018, 95 L. Ed. 1375, in which this court did apply the doctrine of *res judicata*. That case, upon which Panhandle relies, has no relevance here.

(Footnote omitted.)

While reasonable consideration of gas prices in nearby areas, where the quality of the gas and other relevant circumstances are analogous, for purposes of making comparisons for "hold the line" objectives should be afforded every producer it does not follow that inadequately developed principles employed in an earlier determination should be followed blindly and unanalytically in all subsequent cases. Nor does it follow that additional Commission experience should not be used to improve its administrative processes.

In the Aneth case, for example, the Commission determined the costs at El Paso's processing plant at San Juan and used these processing costs to set the price of gas at Aneth, *i.e.*, five cents per Mcf. The processing costs at San Juan have no rational relationship to the costs of processing at the Aneth plant.[13] Among other things, the two different plants have entirely different amounts invested in them and process different types of gas. The fact is that the costs of processing gas at San Juan had no necessary relationship to the costs of processing gas at Aneth and the equating of these costs to arrive at a price for San Juan had no logical basis whatever. It would not be done today because it would be recognized that one set of costs had no necessary or logical relationship to the other. There are, of course, many other reasons for not following this practice or applying costs reached in this way to the gas being sold here.

In addition, it may be observed that in the Aneth opinion a comparison was between a *price* proposed for Aneth gas with the *cost* to El Paso of gas from the San Juan Basin (23 FPC 369, 376). In this connection, it should be observed that "cost" and "price" are different matters. Cost and price may or may not be the same in a particular or specific instance but as concepts they are not usually equivalents. When they are equivalents, it is usually attributable to coincidence. The employment of this kind of comparison is highly questionable from the standpoint of logic, and it would be unwise to employ or adhere to this kind of comparison in the future.

The Commission traditionally formulates policy, at least insofar as price conditions in contested certificate cases are concerned, upon a case-by-case basis. When the Commission does so, it is, or should be, apparent that it is not the Commission's intention to put itself into a doctrinaire or ideological straitjacket so that it may not take advantage of the experience, knowledge, and expertise which it has acquired since it made an earlier decision. The Commission's policy must be developed gradually, moving from problem to problem, and observing the public and private effects of prior decisions. Without the benefit of such a developing process past decisions of the Commission would tend to

---

[13] The Commission in its brief filed with the Court of Appeals called the Court's attention to the fact that the Commission obtained the cost of gathering and processing at San Juan and divided this figure by the volumes going through the plant and arrived at 5 cents per Mcf. (See Comm. Brief, p. 31.) This was an absurd way to ascertain processing costs at Aneth.

become so embedded and so rigid that they would defeat any effort looking towards improvement in its administrative processes.

The views and concepts represented in Opinion No. 335 differ from more recent Commission pricing policy or thinking in a number of material respects. To begin with in Aneth the Commission added a cost-based differential to a field price and it supported its decision as to price level by reliance on erroneously determined costs from another and unconsolidated docket.

The Commission in subsequent cases, particularly in the remanded CATCO proceeding,[13] in the *Socony Mobil Oil Company, Inc.*, Docket No. G–13780, 27 FPC 347 (1962); in *Skelly Oil Company*, Docket No. G–18638, *et al.*, Opinion No. 362, 28 FPC 401 (1962); and in *Texaco Seaboard, Inc., et al.*, CI61–118, Opinion No. 383 issued March 27, 1963, 29 FPC 593, concluded that it would be impracticable, inappropriate and unnecessary to fix initial prices on a cost basis and particularly that it would not consider "fragmentary cost" evidence or unit cost data based upon companywide operations in fixing initial prices under Section 7 of the Act.

In connection with the views expressed by the Commission in its *Aneth* Opinion, the Staff made the following comment in its brief:

> Aside from the fact that the Opinion No. 335, 17.7¢ prices are tainted because of the erroneous treatment of one of the "factors which support[ed]" the price, these 17.7¢ prices should not be used for the further reason that the other supporting factor, field prices adjusted with costs, is no longer considered to be a proper price determinant. The Commission[8] and the courts,[9] in all of the later cases have viewed this type of determination as improper. Thus, both factors, which the Commission considered as support for the prices in Opinion No. 335, the basis for all of the 17.7¢ sales in the record, today are considered to be erroneous and should not be perpetuated in this proceeding. (Footnotes omitted.)

The examiner agrees with the staff that the views expressed in Opinion No. 335 should not be considered as a precedent for establishing a 17.7-cent price for the sales involved here.

As we have pointed out, the sales of natural gas involved in this proceeding are much more like the sales of gas involved in the San Juan Basin than they are like the Aneth sales. The Aneth sales, in general, involved casinghead gas while those in this case are sales involving dry gas.

There is one lone sale of dry gas by Western in the Boundary Butte Field, which is near the East Boundary Butte Field where Shell and Humble are making sales in this proceeding. It was this single sale of dry gas in which the Commission in the Aneth case authorized a price of 17.7 cents per Mcf.

Lengthy testimony by a staff expert bearing generally upon comparable and "in line" prices appears in this record. The staff's expert witness was of the opinion that a lone dry gas sale, such as Western's, would be a wholly insufficient and inadequate basis on which to formulate a line in this proceeding for a price determination which would reasonably meet Section 7 standards.

The staff's documentary evidence was set out generally in the form of its usual price exhibit and was accompanied by an oral exposition of the exhibit and the staff expert's general position regarding pricing.

The staff witness presented a tabulation of field price data which was based upon existing negotiated producer prices of recent volumes and under which sub-

---

[13] See *Continental Oil Co.*, 27 FPC 96 (1962); see also *Skelly Oil Company*, Opinion No. 362, issued August 30, 1962, Opinion No. 362–A issued December 18, 1962, 28 FPC 1065. See also *California Oil Co., Western Division* v. *F.P.C.*, 315 F. 2d 652 (CA10, No. 7148, March 1963).

stantial volumes of gas moved in interstate commerce from the same general geographic production area to a common point of collection for delivery to a common market.

Since the contracts under consideration involved here relate to gas produced beyond the boundaries of one of the pricing areas established under the Commission's policy statement, the price line was referenced by the witness to a substantial number of permanently certificated contracts applicable to nearby areas having gas of either a comparable or possibly comparable character. The staff's exhibit and testimony were referenced to authorized sales in the Aneth area of San Juan County, Utah, the Boundary Butte Field in southern Utah, and the San Juan Basin of New Mexico as possibly comparable sales. The reasons why the Aneth Opinion No. 335, in the examiner's opinion, should not be considered as forming any precedent for establishing prices in this proceeding have been discussed hereinabove.

In addition to these reasons it further appears that the quality of the gas, which is the subject of these proceedings, is inferior to the quality of the major part of the gas sales involved in Opinion No. 335 since the average Btu content at Aneth is higher than the average Btu content at East Boundary Butte Field by approximately 20 percent. In addition, the impurities at the East Boundary Butte Field are greater than those which obtain at Aneth or San Juan. In this connection, it may be observed that the applicants here have a ceiling on processing costs to remove impurities for which they may be charged by the pipeline, whereas Western's contract has no such limitation on the costs to remove impurities. (See pages 483, 484, *supra*.)

The staff exhibit and evidence show that San Juan sales with two exceptions are all wellhead sales and are all made at an initial price of not more than 12 cents. The San Juan area price is a price applicable to pipeline quality gas as that term is generally understood in the San Juan area. In this connection, the California distributors have pointed out:

> The Application of that in-line price [i.e. the San Juan area price of 12 cents per Mcf] to the instant sales should be consistent with the Commission's purpose to stabilize prices at levels which buyers have been paying for pipeline quality gas in an established producing area and in adjacent or analogous areas where a new field is undergoing production and development. Thus, where gas is customarily purchased from the producer at the tailgate of a processing plant, subsequent to gathering and processing, the price for pipeline quality gas reflects that practice and, under the in-line price theory, no allowance may be made for processing and gathering upon the certification of a new sale from that area or an adjacent area.[14]

The examiner agrees with the California distributors' statement.

The staff witness pointed out that the sales in the San Juan Basin were numerous, that the gas was of the same type as the gas being offered by the applicants in this proceeding, *i.e.* dry gas, and that the sales in the San Juan Basin upon which he was relying were recent and involved substantial volumes. Specifically, the witness referred to substantial volumes of gas moving in interstate commerce from the San Juan Basin in very recent dates including San Juan contracts dated 1960, 1961, and 1962, as well as the type and quality of the gas, the facilities to be provided, and the services to be rendered. This gas was generally sold at 12 cents per Mcf or less.

The staff witness, however, suggested by his testimony that a price of 13 cents rather than a price of 12 cents per Mcf would meet "in-line" standards as

[14] See joint initial brief of the California distributors, p. 21.

recently enumerated by the Commission. One of the reasons for this conclusion appears to be that in the case of East Boundary Butte gas, *i.e.*, the gas being sold here, the producers are not contractually entitled to receive any additional payment for liquids whereas the producer-sellers in the San Juan Basin gas are entitled to a payment of not less than 1 cent per Mcf. In this situation the staff witness apparently equated this case to those which involved "unusual" services. Assuming, arguendo, that such was the situation in this proceeding, a 13-cents per Mcf initial price would appear adequate to satisfy such a claim.[15] In *Panhandle Eastern Pipe Line Company*, Opinion No. 350, issued January 15, 1962, 27 FPC 35, the Commission pointed out that:

> Apart from some specific service or forbearance in connection with a sale of gas, or some circumstance with respect to the conditions of its sale which affects its character as pipeline quality gas, the value of the gas to the purchaser is not a consideration in the certification of initial prices under our area pricing policy. (Footnote omitted.)

This Commission position is relevant to the producers' claim that the gas involved there has some special economic value because it could be employed as "swing gas" by El Paso which claims to have a greater need for dry gas than casinghead gas.

Based upon all the facts adduced in this record, the briefs which have been submitted, and the considerable volume of oral argument contained in the transcript, the examiner has concluded that a permanent certificate should issue to each of the applicants in these proceedings only upon condition that the initial price inclusive of tax reimbursement and inclusive of any minimum guarantee of liquids shall not be in excess of 13 cents per Mcf at 15.025 psia for pipeline quality gas.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the presiding examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated that:

(1) Each of the applicants named in the caption of this decision is a "natural, gas company" within the meaning of the Natural Gas Act as an independent producer of natural gas, as that term is defined in Section 154.91(a) of the Commission's Regulations, engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption and such sales together with the construction and operation of any facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(2) Each of the applicants named in the caption is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(3) The sale of natural gas as proposed by each of the applicants herein together with the construction and operation of any facilities subject to the juris-

---

[15] The Court of Appeals in *The Atlantic Refining Company* v. *F.P.C.*, 316 F. 2d 676, 679, pointed out that even in a case like the Atlantic case where there was a difficult question as to which of the two prices should be used as the initial price, the nature of the Act requires the choice of the lower prices. "In arriving at initial rates under Section 7, the Commission, of course, does not foreclose a company from obtaining an increase under Section 4. * * * Since there is no mechanism for refund of overcharges under Section 7, if the Commission is to err in setting an initial rate, it should err on the low side because the company, under Section 4, can immediately increase the rate, subject to disallowance by the Commission after a full rate proceeding, the public being protected with reference to refunds in the interim."

diction of the Commission necessary therefor are required by the public convenience and necessity and a certificate authorizing the same should issue to each of them upon the terms and conditions of the order herein, which terms and conditions are required by the public convenience and necessity.

(4) The public convenience and necessity requires that the initial price charged by the independent producers named in the caption for the sales proposed in their certificate applications in this proceeding be not greater than 13 cents per Mcf at 15.025 psia, inclusive of tax reimbursement and inclusive of any minimum guarantee for liquids, and that the take-or-pay requirement in their contracts be revised in accordance with the final order of the Commission to be issued in Docket R–199 commenced by Notice of Proposed Rulemaking dated May 22, 1961, provided, however, that the applicants shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) A certificate of public convenience and necessity is hereby issued to each of the applicants referred to in finding (1) for the sale of natural gas in interstate commerce for resale as proposed in their applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, upon the terms and conditions of this order.

(B) The certificate to be issued to each of such producer applicants is hereby conditioned to prohibit any total initial price, including all reimbursements and charges, greater than the 13 cents per Mcf at 15.025 psia, inclusive of tax reimbursement and inclusive of any minimum guarantee of liquids, from the date of issuance of this order until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(C) The certificate of such producer applicants shall be conditioned so that the take-or-pay for requirement in each contract is subject to the provisions of the Commission's final order in Docket No. R–199 as of the effective date of that order, provided, however, that the producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities.

(D) The certificates issued herein are conditioned upon their acceptance in writing by the respective producer applicants within 30 days of the issuance of this order.

(E) The certificates issued herein are not transferable and shall be effective only so long as each of said applicants continues the acts and operations herein authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commissions Regulations under said Act requiring the filing of rate schedules for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose nor prejudice any further proceeding or objection relating to the operation of any price or related provisions in the gas contracts here involved.

SAMUEL BINDER,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

AREA RATE PROCEEDING, ET AL., DOCKET NO. AR61-2, ET AL.

ORDER ON PROTEST TO PARTICIPATION OF KENNETH L. SMITH AS A WITNESS AND MOTION TO STRIKE EVIDENCE

(Issued August 3, 1964)

On July 7, 1964, a group of respondents [1] filed a formal protest to the participation of Kenneth L. Smith as a witness in these proceedings and moved to strike his testimony and exhibit. The protest lies under our Rules of Practice and Procedure, 18 CFR 1.10(c). Mr. Smith's participation is sponsored by the "Municipal Distributors" [2] which filed an answer on July 16, 1964. Mr. Smith was formerly Assistant Chief of this Commission's Bureau of Natural Gas. Respondents contend, that our rule governing the appearances of former employees, 18 C.F.R. 1.4(c), applies to and should exclude Mr. Smith's participation in these proceedings. We are cited to no reported decisions under that rule as now in effect.

Rule 1.4(c) provides in pertinent part:

> *Appearances of former employees.* No person having served as a * * * officer, expert, * * * accountant * * *, or other employee of the Federal Power Commission may * * * act as * * * expert witness * * * in connection with any proceeding or matter before the Commission which such person has handled, investigated, advised or participated in the consideration thereof while in the service of the Commission unless he be expressly authorized by the Commission on a verified showing that such participation would not be contrary to the public interest and would not be unethical or prejudicial to the interests of the Commission.

There is no question that Mr. Smith did serve as an officer, expert, accountant and employee of the Commission and that he now would appear as an expert witness in a proceeding. There is a controversy as to whether Mr. Smith has "handled, investigated, advised or participated in the consideration" of the "proceeding or matter" in which he would now participate. There is a further controversy as to whether Mr. Smith's appearance "would not be contrary to the public interest and would not be * * * prejudicial to the interests of the Commission." There is no suggestion that Mr. Smith's appearance might be "unethical".

This matter was first raised by counsel for the Municipal Distributors who filed a request on November 5, 1963, supported by Mr. Smith's accompanying affidavit, that the Commission either authorize Mr. Smith's participation or advise that Rule 1.4(c) did not apply. Counsel did not serve the other parties to this proceeding, which is not required under our rules since the request does not go to the merits of the case. On November 27, 1963, we granted the requested

---

[1] Amerada Petroleum Corporation, The Atlantic Refining Company, Cabot Corporation, E. Cockrell, Jr., Cities Service Oil Company, Continental Oil Company, Gulf Oil Corporation, Humble Oil & Refining Company, Kerr-McGee Oil Industries, Inc., Pan American Petroleum Corporation, Phillips Petroleum Company, The Pure Oil Company, Shell Oil Company, Sinclair Oil & Gas Company, Socony Mobil Oil Company, Inc., The Superior Oil Company and Texaco Inc.

[2] Memphis Light, Gas and Water Division; City of Dyersburg, Tennessee; Gibson County Utility District; City of Humboldt, Board of Public Utilities; Jackson Utility Division of the City of Jackson, Tennessee; City of Brownsville, Tennessee; Town of Covington, Tennessee; Tipton County Utilities Company, Inc.; Crockett Public Utility District; and Bells Public Utility District; and American Public Gas Association.

authorization subject to subsequent consideration of any formal protest; we noted that counsel's letter and Mr. Smith's affidavit indicated that Mr. Smith's prior participation in the proceeding "was at an early stage and was of a limited nature." We did not serve our authorization on the parties but deposited it together with the incoming correspondence in the public files. See 18 CFR 1.36(c)(11). Mr. Smith's prepared testimony, which discloses his former employment, was presented by the Municipal Distributors on December 10, 1963.

Rule 1.4(c) was intended to protect the public from conflicts of interest, not to give rise to a new head of adversary litigation. The stated purpose of the rule in its present form "is to permit the appearance before the Commission of its former officers and employees in all cases where no question of conflict of interest would result from such participation". *Order No. 184*, 15 FPC 792, 793; 21 Fed. Reg. 1047. Certainly the rule does not give private persons the right to have an opponent's testimony stricken on the mere assertion, unsupported by fact, that a conflict of interest exists.

Our authorization of November 27, 1963, was granted subject to any formal protest because we wanted to reserve the right to consider such additional facts as a protestant might bring to light. The present protest does not reveal any new facts. The instant proceeding was instituted by order issued May 10, 1961, and the only staff actions concerning the proceeding involved prehearing conferences commencing in Baton Rouge, La. on June 26, 1961, with respect to general problems involved in the proceeding as then contemplated, and on November 28, 1961, with respect to a cost questionnaire which was required by Commission order of May 25, 1962. The resignation of Mr. Smith became effective on January 12, 1962, and the case-in-chief of the Commission staff was not introduced in evidence until December 10, 1963. Furthermore, the initial evidence adduced by the Commission staff in the first area proceeding, Docket No. AR61–1, was not introduced in evidence until November 15, 1962, ten months after Mr. Smith left the employ of the Commission. We have once more considered all of the facts available to us and conclude that Mr. Smith's appearance as an expert witness in this proceeding would not be contrary to the public interest and would not be prejudicial to the interests of the Commission.

Mr. Smith is expressly authorized to act as an expert witness in this proceeding.

The protest is rejected and the motion to strike is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP64–240

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued August 3, 1964)

On April 14, 1964, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP64–240 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon two compressor stations known as Applicant's Trees Station and Rogers Station, respectively, all as more fully set forth in the application on file with the Commission.

Applicant for reasons of obsolescence proposes to abandon (1) the Trees Station consisting of seven gas engines, single tandem, double acting, horizontal type, manufactured in 1913, and moved to the present location in 1926 and

1928 (four engines rated at 450 Hp and three engines rated at 500 Hp, a total of 3,300 Hp) and (2) the Rogers Station consisting of three gas engines, twin tandem, double acting, horizontal type, installed in 1911, each rated at 1,300 Hp. The engines have not been operated for several years.

The net salvage value of the facilities to be abandoned has been computed on the basis of $5 per horsepower, or a total of $36,000.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP64–263

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued August 3, 1964)

On April 29, 1964, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP64–263 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon its Terry Compressor Station located in Texas, consisting of six (6) Cooper-Bessemer gas engines, type 80, twin, single acting, horizontal, each rated 170 Hp, all as more fully set forth in the application on file with the Commission.

The facilities described above proposed to be abandoned by the Applicant have not been operated for several years due to their obsolescence and the fact that new sources of gas supply provide volumes of gas for the markets formerly

served by the Terry Station. No service will be discontinued as a result of the abandonment of the obsolete facilities. The net salvage value of all the facilities to be abandoned has been computed on the basis of $5 per horsepower, or a total of $5,100.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

KENNEBEC RIVER PULP & PAPER COMPANY, INC., PROJECT NO. 2364

ORDER ISSUING LICENSE (MAJOR)

(Issued August 3, 1964)

Application was filed on May 10, 1963 by Kennebec River Pulp & Paper Company, Inc. (Applicant) of New York, New York, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2364, known as the Abenaki Development, located on the Kennebec River, in Somerset County, Maine, in the towns of Anson and Madison.

According to the application, project regulatory dams were built in 1907, followed in 1922 by the construction of a ground wood mill and necessary dam and canal required for the operation of the mill. These facilities have remained unchanged to date. In 1961, Applicant purchased the Abenaki mill and power plant and land necessary for operation of the mill. Applicant has installed an Allis Chalmer generator on the number 5 water wheel and a power line and appurtenances thereto to make it possible to transmit surplus electric power to the upper mill.

The Abenaki Development has a total installed capacity of 4,866 horsepower connected to generators having a total rated capacity of 3,650 kilowatts and 9,100 horsepower connected to wood grinders. The energy generated by the project is used wholly in Applicant's pulp and paper mills.

Abenaki is a low head (42-foot) run-of-river plant. The hydraulic capacity of the plant, when operating at nameplate rating is about 3,800 c.f.s. River flows greater than 3,800 c.f.s. can be expected approximately 53 percent of the time as indicated by Applicant's flow duration curve filed as part of the application. The estimated equivalent annual average generation is 78,613,000 kwhr, indicating a plant factor of about 86 percent.

The New England-New York Interagency Committee, Gold Book, recommends a high dam across the Kennebec River about one and one-half miles below the town of Madison to develop the head between the Weston Project No. 2325[1] reservoir and the Anson Project No. 2365 tail water.[2] The higher head project would have an installed capacity of 24,000 kw. The reservoir created by the dam would have a gross capacity of about 4,500 acre feet and would inundate the Abenaki project. An alternative project also recommended by NENYIAC, is a low dam at the same location with an installed capacity of 8,800 kw which would not inundate the Abenaki project. The report indicates, however, that if the Abenaki project is modernized for continued operation for pulp and paper production, the low Madison dam may be the most desirable development. Provision is hereinafter made in the interest of a more comprehensive plan of development of the Kennebec River in the reach involved herein.

In its order issued May 21, 1954,[3] the Commission found that the Kennebec River from its mouth at least up to Moosehead Lake[4] constitutes navigable waters of the United States within the meaning of Section 3(8) of the Federal Power Act. The basis for this finding was that the Kennebec River has been used extensively for the transportation of substantial quantities of sawlogs for a long period of time, beginning in the early 1800's and has been navigated by canoes, bateaux and steamboats.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the plans of the project structures affecting navigation were satisfactory, and that such plans have been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife resources.

The Department of Health, Education and Welfare, in reporting on the application, advised that neither the water supply nor water quality control are significantly affected by the project, and the granting of a license for the project is not expected to create or intensify vector problems.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have a termination date of 1993. Since there was no substantial project construction after 1935, we will make the effective date of the license May 1, 1954, the first day of the month in which we determined the Kennebec River to be a navigable water, as set forth above.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of New York, is authorized to do business in the State of Maine, and has submitted sat-

[1] Application for license for which has been filed by Central Maine Power Company and Skowhegan Water Power Company.
[2] Applicant's application for license for which is pending.
[3] Central Maine Power Company, Docket No. E-6456 (13 FPC 1076).
[4] Moosehead Lake is the source of Kennebec River.

isfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received.

(3) The issuance of a license for the project as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 14,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) The 3,400-foot transmission line described in paragraph (B) below, and included in the application for license, is part of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Kennebec River Pulp & Paper Company, Inc. (Licensee) of New York, New York, under Section 4(e) of the Federal Power Act (Act) for a period effective as of May 1, 1954, and terminating December 31, 1993, for the continued operation and maintenance of the Abenaki Development (Project No. 2364), located on the Kennebec River, a navigable water of the United States, in Somerset County, Maine, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2364 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: Sheet 1 (FPC No. 2364-1) General Map of Project Area.

(ii) A concrete gravity overflow dam approximately 780 feet long its height varying from several feet to approximately 25 feet with the crest at an elevation of 219.65 feet (U.S.C. & G.S.) and topped by 3-foot flashboards; a 25-foot log sluice in the center of the dam; a headgate section about 200 feet long channeling water into a forebay approximately 830 feet long and 160 feet wide; water from forebay is channeled into a grinder room through 7 tubes developing a gross head of 42 feet; the grinder room is equipped with two 2550 hp and two 2000 hp turbines directly connected to wood grinders and 3 turbines connected to generators having a combined capacity of 3,650 kw; a 3,400-foot transmission line; and

appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 (FPC No. 2364–2) entitled "Detail Map Showing the Project Dam", and

Sheet 2 (FPC No. 2364–3) entitled, "Section Views of Dam".

Exhibit M: consisting of one typewritten page entitled, "Equipment" filed in the Commission May 10, 1963.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (30 FPC 1658), which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof, except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 29. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 14,000 horsepower.

Article 30. Whenever the Licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States for the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 31. The right, power, and authority is reserved to the United States to construct or to the Commission to issue a license authorizing the construction, operation and maintenance of a hydroelectric project which will more completely utilize the water resources of the reach of the Kennebec River in which the project is located.

Article 32. The acceptance of this license by the Licensee shall constitute its stipulation, consent and agreement made upon its own behalf and upon the behalf of its successors and assigns for the benefit of the United States, or the person or persons hereinafter constructing, operating and maintaining such more complete hydroelectric project or his or their successors and assigns, that said Licensee, its successors or assigns, shall surrender its license at such time as the project becomes inoperative by reason of inundation by such more complete hydroelectric project; Provided, that Licensee shall be paid the net investment in Project No. 2364 upon surrender of its license; and Provided further, that Licensee shall not be entitled to any compensation for severance damages sustained by reason of inundation or destruction of the project or project works of Project No. 2364.

Article 33. The Licensee shall, within one year from the date of issuance of this license, file with the Commission a detail map, Exhibit K.

Article 34. The Licensee shall, within one year from the date of issuance of this license, file with the Commission for approval a recreational use plan for the project which shall include not only recreational improvements which may be provided by others, but the recreational improvements the Licensee plans to provide.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NORTHERN ILLINOIS GAS COMPANY, DOCKET NO. CP64-243

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued August 3, 1964)

On April 17, 1964, Northern Illinois Gas Company (Applicant) filed in Docket No. CP64-243, an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Northern Natural Gas Company (Northern Natural) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant, and to sell natural gas to Applicant for ultimate distribution and sale, by Applicant's subsidiary, Allied Gas Company (Allied), to the public in and near the City of East Dubuque, Illinois, all as more fully set forth in the application on file with the Commission.

Applicant seeks to have Northern Natural construct approximately 1.5 miles of 3-inch gas main, together with regulating and metering facilities at a total estimated cost of $42,000.[1] The odorizing and regulating facilities will be constructed by Applicant at a cost of $7,750. Applicant's subsidiary, Allied, is to construct and operate a gas distribution system in and near the City of East Dubuque, Illinois, at a total estimated cost of $308,200.

Applicant estimates that during the first three years of operation the annual and peak day gas requirements of the distribution system to be constructed and operated by Allied will be: 59,000 Mcf and 519 Mcf, 75,000 Mcf and 671 Mcf, and 91,000 Mcf and 828 Mcf, respectively. No increase in contract demand is required as these volumes will be delivered from Applicant's existing 92,250 Mcf contract demand from Northern.

On October 1, 1963, the City of East Dubuque, Illinois, granted Allied a franchise to construct and operate a gas distribution system in and near the City of East Dubuque. Subsequently on March 10, 1964, the Illinois Commerce Commission granted Allied a certificate of public convenience and necessity authorizing it to construct and operate a distribution system and to transact the business of furnishing gas service to the public in and near the City of East Dubuque, Illinois.

Northern Natural indicates by answer filed May 15, 1964, it has no objection to providing the requested service if the Commission finds such service is required by the present and future public convenience and necessity.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 23, 1964 (29 F.R. 7957). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

---

[1] Applicant has agreed to reimburse Northern Natural for the actual cost of facilities to be constructed by Northern Natural.

(2) Applicant, Northern Illinois Gas Company, an Illinois corporation having its principal place of business in Aurora, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act, and has received the necessary local franchises to render the service proposed.

(3) It is necessary and desirable in the public interest to direct Northern Natural Gas Company to establish physical connection of its transportation facilities with facilities proposed to be constructed by Applicant and to sell and deliver natural gas to Applicant up to 828 Mcf per day for ultimate distribution and sale by Applicant's subsidiary, Allied Gas Company in and near the City of East Dubuque, Illinois, under Northern Natural's appropriate rate schedule.

(4) The requirement that Northern Natural serve Applicant, as hereinafter ordered, will not (a) place an undue burden upon Northern Natural, (b) require Northern Natural to enlarge its transportation facilities or (c) impair Northern Natural's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Northern Natural for distribution in the City of East Dubuque, Illinois, within one year from the date of the issuance of this order.

The Commission orders:

(A) Northern Natural Gas Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell and deliver up to 828 Mcf per day to Applicant for resale as hereinbefore described. Such service shall be rendered pursuant to Northern Natural's presently filed appropriate rate schedule.

(B) Northern Natural shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service from Northern Natural as directed herein within one year from the date of issuance of this order.

(D) Northern shall file pursuant to Part 154 of the Commission's Regulations an acceptable superseding service agreement reflecting the additional delivery point to Applicant.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP64-214

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 3, 1964)

On March 26, 1964, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP64-214 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities necessary for the activation and operation of a proposed additional underground storage area, referred to as the Lucas extension of the Weaver Storage Field, Ashland County, Ohio, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 30.1 miles of 4½-inch to 20-inch storage lines and to install and operate two 3,400 horsepower compressor units at the existing Lucas Compressor Station. Further, Applicant

proposes to convert 48 existing producing wells to storage use and to drill an additional 152 wells over a three year period beginning in 1964.

The proposed storage addition will be located adjacent to Applicant's existing Weaver 3–A and 3–D Storage Fields. The proposed field will be joined with the Weaver 3–A and 3–D Fields to operate as a single combined unit having access to both existing Lucas and Weaver Compressor Stations.

The proposed field will have an ultimate storage capacity of 30,000,000 Mcf of gas and be capable of a 100,000 Mcf maximum daily withdrawal potential.

The estimated total cost of the proposed project is $6,969,512. Financing for the project will be secured through the parent company, The Columbia Gas System, Inc.

Applicant states that the proposed additional storage project is necessary to provide increased capacity to serve the growing requirements of existing markets and to assure adequate market service for the winter 1965–66 and thereafter.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed construction and operation of the subject facilities and the proposed storage operations by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(6) It is appropriate and in the public interest that Applicant should be required to submit semi-annual reports as hereinafter ordered.

(7) Maximum storage pressure of 1,150 psig for the proposed additional field should not be exceeded without further authorization by the Commission.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Ohio Fuel Gas Company, to construct and operate the proposed facilities necessary to activate and operate a proposed

additional underground storage area, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Comission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 24 months from the date on which this order issues.

(D) The certificate issued by paragraph (A) above is hereby conditioned as follows:

(1) Applicant shall submit semi-annual reports, coinciding with the termination of injection and withdrawal cycles, containing the following information:

(a) Total volumes of natural gas injected and withdrawn during each month of the cycle and the volume in storage at the end of the cycle;

(b) The maximum daily withdrawal rates experienced during the cycle and working pressure on maximum days, and

(c) Shut-in wellhead pressure of each observation and active storage well.

(2) The above-described semi-annual reports shall be filed until Applicant's shut-in wellhead pressure of 1,150 psig is reached and thereafter until two additional injection and withdrawal cycles have been completed.

(3) Maximum storage pressure of 1,150 psig for the proposed additional field shall not be exceeded without further authorization by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

PUGET SOUND POWER & LIGHT COMPANY, PROJECT NO. 1292

ORDER APPROVING SURRENDER OF LICENSE (TRANSMISSION LINE)

(Issued August 3, 1964)

Application was filed on November 16, 1960 by Puget Sound Power & Light Company, under Section 6 of the Federal Power Act (Act), for surrender of its license for transmission line Project No. 1292, affecting lands of the United States within the Snoqualmie and Wenatchee National Forests.

By its order issued November 4, 1960, the Commission, among other things, denied a joint application by Puget Sound Power & Light Company (Massachusetts) and Puget Sound Power & Light Company (Washington) to transfer the license for Project No. 1292 for the reason that the lines under the license for that project were not primary lines within Section 3(11) of the Act. The subject application was filed pursuant to a request therefor in Commission letter of November 4, 1960.

By letter dated April 10, 1963, the Forest Service submitted a copy of a Special Use Permit for the lines, issued December 26, 1962, for the continued occupancy of National Forest lands by the lines.

Annual charges under the license have been paid through December 31, 1960. The license instrument was returned with the application for surrender.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) Acceptance of surrender of the license for transmission line Project No. 1292 is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the license for transmission line Project No. 1292 is hereby accepted, effective as of December 31, 1962, subject to the payment of annual charges through said date in the amount of $20.00.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

ST. MICHAELS UTILITIES COMMISSION, AND COMMISSIONERS OF ST. MICHAELS, MARYLAND v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E–7114; STOCKTON LIGHT AND POWER COMPANY (OF MARYLAND), AND STOCKTON LIGHT AND POWER COMPANY (OF VIRGINIA) v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E–7117; DELAWARE POWER AND LIGHT COMPANY, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF VIRGINIA, DOCKET NO. E–7137

ORDER ACCEPTING RATE SCHEDULES FOR FILING, GRANTING MOTION FOR SEVERANCE AND DISMISSAL OF ILLEGAL OVERCHARGE ISSUE OF COMPLAINT OF STOCKTON LIGHT AND POWER COMPANY, AND AMENDING ORDER INSTITUTING INVESTIGATION AND PROVIDING FOR HEARING

(Issued August 3, 1964)

On June 1, 1964, Delaware Power & Light Company (Delaware) and its wholly-owned subsidiary, The Eastern Shore Public Service Company of Maryland (Maryland Eastern Shore) submitted for filing with the Commission four rate schedule supplements which would effect rate reductions for two Delaware customers and two Maryland Eastern Shore customers. The Companies request a retroactive effective date of May 1, 1963 for all four filings and plan to refund to the four customers all amounts collected on and after May 1, 1963, in excess of the Companies' Standard Resale Service Schedules determined to be applicable to St. Michaels, Maryland, in Commission Opinion No. 427, issued May 13, 1964, 31 FPC 1161, in Docket No. E–7114, *St. Michaels Utilities Commission, et al.* v. *The Eastern Shore Public Service Company of Maryland*, and voluntarily offered to three other customers which have wholesale contracts similar to St. Michael's contract with Maryland Eastern Shore. The proposed refunds, with interest thereon at six percent per annum, total approximately $106,500 for the four customers. One filing, for service to St. Michaels, is made in compliance with the Commission order in Opinion No. 427. The other three filings are made, according to the Companies, as a result of Opinion No. 427. The four rate schedule supplements, as ordered below, will be added to the general investigation of the companies' wholesale rates, ordered and set for hearing by Commission order issued November 18, 1963, 30 FPC 1305.

On June 1, 1964, Maryland Eastern Shore submitted for filing with the Commission, pursuant to Commission Opinion No. 427 and order issued May 13,

1964, in Docket No. E–7114, its Resale Service Schedule No. 1, for service to St. Michaels, Maryland, complainant in that proceeding. That submittal, in the form of a supplemental rate schedule, embodies the rates and charges reflected in Maryland Eastern Shore's Resale Service Schedule No. 1, previously filed with the Commission as a part of Maryland Eastern Shore's FPC Electric Tariff, Original Volume No. 1. The proffered schedule has been designated as Supplement No. 3 to Maryland Eastern Shore's Rate Schedule FPC No. 7.[1] The Company requests an effective date for the filing of May 1, 1963, in accordance with Opinion No. 427.

On June 26, 1964, Maryland Eastern Shore filed with the Commission a report showing the details of its calculations resulting in the refund to St. Michaels, in accordance with Paragraph (C) of Opinion No. 427. Pursuant to Paragraph (F) of that order, the illegal overcharge phase of the proceeding in Docket No. E–7114 shall be deemed terminated upon acceptance by the Commission of the foregoing rate schedule supplement as well as a release from St. Michaels to Maryland Eastern Shore for claimed overcharges.

On November 18, 1963, the Commission issued an Order in Docket No. E–7137[2] instituting investigation and ordering a hearing as to the lawfulness of all wholesale rates and charges of Delaware Power and its wholly owned subsidiaries, Maryland Eastern Shore and The Eastern Shore Public Service Company of Virginia. Maryland Eastern Shore's Rate Schedule FPC No. 7 and its FPC Electric Tariff are included in that investigation order. That docket was consolidated for hearing purposes with Docket No. E–7117 and the remaining issues in Docket No. E–7114.

On June 1, 1964, Maryland Eastern Shore submitted for filing with the Commission as a rate schedule supplement, pursuant to Section 205 of the Federal Power Act, its Resale Service Schedule No. 1 (with the requirement of that schedule for execution of a service agreement pursuant to the Company's FPC Electric Tariff, Original Volume No. 1 deleted), for service to Stockton Light and Power Company (Stockton). Maryland Eastern Shore requests an effective date of May 1, 1963, and states that it proposes to refund to Stockton all amounts collected in excess of the rates and charges reflected in the Resale Service Schedule No. 1 rate on and after May 1, 1963, with interest thereon at six percent per annum to June 1, 1964, a total amount of approximately $8,671. The filing will result in a reduction in rates to Stockton.

On July 25, 1963, Stockton filed with the Commission a complaint against Maryland Eastern Shore, Docket No. E–7117, alleging, inter alia, that Stockton's contract with Maryland Eastern Shore, Rate Schedule FPC No. 4, entitled Stockton to the rate benefits of Resale Service Schedule No. 1 from May 1, 1963, without the execution of a new service agreement. That issue was set for hearing by the Commission's order issued November 18, 1963.

In submitting the Stockton filing, Maryland Eastern Shore states that it is doing so as a result of the Commission's decision in Opinion No. 427 interpreting its rate schedules involving St. Michaels and Maryland Eastern Shore. Stock-

[1] On June 15, 1964, St. Michaels protested that the rate schedule filing was not in compliance with Opinion No. 427. A subsequent exchange of correspondence between counsel for St. Michaels and Maryland Eastern Shore shows that Maryland Eastern Shore is filing the rates and charges reflected in Resale Service Schedule No. 1, intended the deletion from the proffered documents of the following portions of Resale Service Schedule No. 1 which appear as a part of the Company's FPC Electric Tariff, Original Volume No. 1: "Availability," "Character of Service," "Service Agreement" and "Billing."

[2] Amended February 7, 1964, 31 FPC 395.

ton's contractual arrangements reflect considerations similar to those set forth in St. Michaels' contract with Maryland Eastern Shore. On June 2, 1964, Maryland Eastern Shore filed with the Commission a Motion for Severance and Dismissal of Illegal Overcharge Allegation of Complaint of Stockton Light and Power Company, stating that for the purpose of terminating further controversy on the illegal overcharge issue, it is willing to satisfy Stockton's claim on this issue. As an attachment thereto, Maryland Eastern Shore filed a Consent by Stockton agreeing to the severance and termination of the illegal overcharge phase of Docket No. E–7117 upon the terms stated in the Motion, including the refund and filing of the reduced rate with the Commission.

Maryland Eastern Shore's supplemental rate schedule for service to Stockton has been designated Supplement No. 2 to its Rate Schedule FPC No. 4. FPC No. 4 is also included in Docket No. E–7137.

On June 1, 1964, Delaware Power submitted for filing with the Commission, pursuant to Section 205 of the Federal Power Act, its Resale Service Schedule No. 1, (with the requirement of that schedule for execution of a service agreement pursuant to the Company's FPC Electric Tariff, Original Volume No. 1 deleted), for service to the City of Dover, Delaware and the Town of Middletown, Delaware. These filings result in a reduction in rates to both customers. Delaware Power's Resale Service Schedule No. 1 is on file with the Commission as a part of Delaware Power's Electric Tariff, Original Volume No. 1. Delaware Power requests an effective date of May 1, 1963, for both filings, and states that it proposes to refund to Dover and Middletown all amounts collected in excess of the Resale Service Schedule No. 1 rate on and after May 1, 1963, with interest thereon at six percent per annum to June 1, 1964, a combined total of approximately $79,860 for the two customers.

Delaware Power states in making these filings that it is doing so as a result of Commission Opinion No. 427 in Docket No. E–7114. That proceeding as noted, involves a subsidiary of Delaware Power.

The rate schedule submittal for service to Dover has been designated Delaware Power & Light Company's Supplement No. 3 to its Rate Schedule FPC No. 28. The rate schedule submittal for service to Middletown has been designated Delaware Power & Light Company's Supplement No. 4 to its Rate Schedule FPC No. 12. Delaware Power's Rate Schedules FPC Nos. 28 and 12 are both included in Docket No. E–7137.

The Commission finds:

(1) It is necessary and appropriate for purposes of the Federal Power Act and good cause has been shown that the 30-day notice period provided in Section 205(d) of the Federal Power Act be waived with respect to The Eastern Shore Public Service Company of Maryland Supplement No. 3 to Rate Schedule FPC No. 7; The Eastern Shore Public Service Company of Maryland Supplement No. 2 to Rate Schedule FPC No. 4; Delaware Power & Light Company Supplement No. 3 to Rate Schedule FPC No. 28; and Delaware Power & Light Company Supplement No. 4 to Rate Schedule FPC No. 12, and such rate schedules be allowed to take effect as of May 1, 1963.

(2) It is appropriate for purposes of the Federal Power Act that Maryland Eastern Shore's Motion for severance and dismissal of illegal overcharge issue of the Complaint of Stockton Light and Power Company be granted.

(3) It is necessary and appropriate for purposes of the Federal Power Act that Paragraph (A) of the Commission's Order issued November 18, 1963 in Docket Nos. E–7114, E–7117, E–7137, as amended, be further amended to include the rate schedules listed in finding (1) above.

The Commission orders:

(A) The 30-day notice period provided in Section 205(d) of the Federal Power Act is hereby waived with respect to the proffered rate schedules referred to in finding (1) above and they are hereby allowed to take effect as of May 1, 1963.

(B) The issuance of this order shall constitute full notice of the filing and publication of the rate schedules in question insofar as their effective date is concerned.

(C) The Motion filed June 2, 1964, by Maryland Eastern Shore requesting severance and dismissal of the illegal overcharge issue of the complaint of Stockton Light and Power Company is hereby granted.

(D) Paragraph (A) of the Commission's Order issued November 18, 1963, in Docket Nos. E–7114, E–7117 and E–7137 is hereby amended to include the rate schedules listed in Finding (1) above.

(E) Nothing contained in this order shall be construed as a waiver in any other respect of the requirements of Section 205(d) of the Federal Power Act or Section 35.13 of the Commission's Regulations under the Act, nor shall it be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract, or practice affecting such service or rate provided for in the rate schedules as above designated, nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate.

(F) This order is without prejudice to any findings or orders which have been or may hereafter be made by this Commission in any proceeding now pending, or hereafter instituted, by or against the aforementioned companies.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64–245

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued August 3, 1964)

Transcontinental Gas Pipe Line Corporation (Applicant) filed an application in Docket No. CP64–245 on April 20, 1964, and a supplement thereto on May 25, 1964, pursuant to Section 7(b) of the Natural Gas Act, for permission and approval to abandon 13.67 miles of its 4-inch purchase lateral pipeline in Calcasieu Parish, Louisiana (Vinton Lateral) and 3.76 miles of 4-inch purchase lateral in Acadia Parish, Louisiana, (South Bayou Mallet Lateral) all as more fully described in the application and supplement thereto.

The facilities proposed to be abandoned were originally utilized in taking into Applicant's system natural gas purchased from independent producers in the fields in which the respective facilities are located. Deliveries of natural gas by means of the South Bayou Mallet facilities have now ceased due to exhaustion of gas supplies; and the portion of the Vinton Lateral to be abandoned is no longer needed due to the subsequent construction of parallel 12-inch and 20-inch laterals required for the transportation of larger volumes of gas purchased elsewhere.

Applicant intends to effect a sale in place of the lines proposed to be abandoned. The present net book values of the portions of the Vinton Lateral and

the South Bayou Mallet Lateral proposed to be abandoned are $112,011.39 and $34,444.21, respectively.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application, supplement and exhibits, submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued May 29, 1948, in Docket No. 704 (7 FPC 24).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, as supplemented, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application as supplemented, in this proceeding, are hereby granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-269

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued August 3, 1964)

On April 30, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-269 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon, by sale to United Gas Corporation certain natural gas facilities located in Bogalusa, Louisiana and places in Mississippi described as follows:

1. D'Iberville, Mississippi:

1.6 miles of 2-inch D'Iberville line between Milepost 1.3 and Milepost 2.9, located in Sections 3 and 10, Township 7 South, Range 9 West, Jackson County, Mississippi, and Section 9 and Surveys 21 and 22, Township 7 South, Range 9 West, Harrison County, Mississippi.

2. Bogalusa, Louisiana:

(a) 0.2 mile of 8-inch line, being a portion of the 8-inch tie-over Bogalusa Junction line between Milepost 2.6 and Milepost 2.8, located in Section 38, Township 3 South, Range 13 East, Washington Parish, Louisiana;

(b) 0.7 mile of 8-inch line, being a portion of the 8-inch tie-over Bogalusa Junction line between engineering stations 50+98 and 87+17, located in Sections 26 and 27, Township 3 South, Range 13 East, Washington Parish, Louisiana; and

(c) 0.04 mile of 8-inch, 2.3 miles of 10-inch and 0.15 mile of 12-inch line downstream from the present town border station, located in Sections 44, 12, 13, 45, 46, 39 and 38, Township 3 South, Range 13 East, Washington Parish, Louisiana.

3. Bay St. Louis, Mississippi:

6.9 miles of 4-inch old Bay St. Louis line between Milepost 0.0 and Milepost 0.9 and between Milepost 3.2 and Milepost 9.2, located in Sections 21, 33, 32 and 31, Township 7 South, Range 11 West; Sections 33 and 36, Township 7 South, Range 12 West, and Sections 1, 2, 3 and 4, Township 8 South, Range 12 West, Harrison County, Mississippi.

4. Philadelphia, Mississippi:

0.5 mile of 6-inch line, located upstream from present town border station, located in Section 36, Township 11 North, Range 11 East, Neshoba County, Mississippi.

Applicant proposes to sell to United Gas Corporation, which is its parent company, and one of its customers the 12.3 miles of pipelines on the basis of cost of the line depreciated as of June 30, 1964, amounting to $39,271.

United Gas Corporation will continue to operate the facilities as a part of its distribution systems so that no abandonment of service will result. Due to the increase of population along the route of the subject facilities they are now being used as distribution facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by United Gas Pipe Line Company of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) The Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

B. TIMAEUS (DECEASED), PROJECT NO. 1929

REFERENCE TO ATTORNEY GENERAL FOR SUIT TO REVOKE LICENSE

(Issued August 4, 1964)

On August 20, 1957 the Commission issued a new minor-part license to B. Timaeus, of Pistol River, Oregon, for Project No. 1929 for a period of 10 years, effective as of December 3, 1956.

The project is located on Little Boulder Creek, in Jackson County, Oregon, and affects lands of the United States. The only part of the project presently occupying lands of the United States consists of 85 feet of tailrace on approximately 0.04 acre. The tailrace is of natural drainage, no actual channel having been constructed by the licensee.

Article 11 of the license fixes annual charges in the amount of $5.00 for the costs of administration of Part I of the Federal Power Act, and in the amount of $5.00 for the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands.

Our statement of annual charges for the calendar years 1958 and 1959 was mailed to Taylor and Miller,[1] legal representatives of the deceased licensee, on December 31, 1959. Annual charges, in the amount of $10.00, are owing for each of the calendar years 1958 through 1963. Section 11.31(e) of the Commission's Regulations provides for the imposition of a penalty, in case of delinquency in payment, of 5 percent of the total amount so delinquent, assessed and added to the total charges which shall apply for the first month or part of month so delinquent with an additional penalty of 3 percent for each full month thereafter until the charges and penalties are satisfied in accordance with law.

The Commission finds:

The above-mentioned failure to pay the annual charges owing under the license for Project No. 1929 constitutes a violation of the terms of the license and the Regulations of the Commission under the Federal Power Act.

The Commission orders:

The afore-mentioned violation of the terms of the license for Project No. 1929 and of the Regulations of the Commission under the Federal Power Act is hereby referred to the Attorney General for the institution of proceedings under Section 26 of the Federal Power Act for revocation of the license for Project No. 1929, for collection of annual charges and penalties thereon, and for restoration of the lands of the United States involved to a condition satisfactory to the Department of the Interior.

CITIES SERVICE GAS COMPANY, DOCKET NO. RP64-17

ORDER DENYING MOTION FOR OMISSION OF THE INTERMEDIATE DECISION

(Issued August 5, 1964)*

On July 22, 1964, the Presiding Examiner in the above-entitled proceeding transmitted to the Commission a motion to omit the intermediate decision procedure which was made by Cities Service Gas Company at the conclusion of the hearing in this matter. Cities Service urges that an intermediate decision is unnecessary since there is no controversy among the parties with respect to the facts here involved. Cities Service recognizes, however, that decision of this case will require the drawing of inferences from, and the application of legal doctrines to, the stipulated facts.

Commission staff counsel and counsel for the Secretary of the Army oppose the instant motion, stating that the Commission should have the benefit of an expression of the Examiner's views. Counsel for Army states that since this is a novel case, the intermediate decision may be particularly desirable. The only other party hereto, the Corporation Commission of the State of Kansas, was not present at the time the motion was made and has taken no position thereon.

The Commission finds:

It has not been demonstrated, under the circumstances of this proceeding, that the public interest would be served by omission of the intermediate decision procedure.

The Commission orders:

Cities Service Gas Company's motion to omit the intermediate decision procedure in the above-captioned proceeding is hereby denied.

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

OPINION NO. 431-A

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. RP61-3; COASTAL TRANSMISSION CORPORATION, DOCKET NO. RP61-4

OPINION AND ORDER DENYING REHEARING

(Issued August 5, 1964)*

Syllabus

1. Commission *rejects* contention that with respect to "no-profit-to-affiliates" rule it promulgated new criteria and to company's detriment applied same to facts occurring at time former criteria governed. P. 519.
2. Even assuming opinion expressed new rule, application thereof to past transactions does not invalidate such rule. P. 520.
3. Once the representatives of the several firms had become members of the promotional group further relationships were not at arm's-length. P. 520.
4. Affiliation having once been established, promoters profits do not represent cost at all. P. 520.

---

*Opinion No. 431-B, issued October 2, 1964, denied rehearing with respect to opening record, 32 FPC 908. Reversed, *Florida Gas Transmission Co.* v. *F.P.C.*, 362 F. 2d 331 (CA5-1966). Petition for rehearing pending.

5. If entire profit of affiliated contractor is disallowed, Commission cannot allow as a cost a portion of that profit which was paid in Federal income taxes. P. 520.
6. Points not raised in exceptions are automatically waived under Section 1.31 (c) of Rules. P. 521.
7. Affidavits of former members as to the interpretation they intended to be placed on language of Commission opinions is not a customary basis for interpreting such decisions and, in circumstances here, is not proper.– – Commission cannot inquire into mental processes of a Commissioner nor ascertain what he considered. P. 521.
8. Where, during period in question, no taxes were payable on consolidated return nor any liability incurred for taxes, pipeline, under *Cities Service*, could not accrue any liability for taxes. P. 522.
9. Argument that because of elimination of construction profits from cost, Company's tax depreciation will be greater than depreciation allowed on books for cost of service purposes [with resultant windfall to jurisdictional customers] is not an issue before Commission now– – it will have to be determined in a proceeding affecting pipeline's rates. P. 522.
10. Commission *denies* applications for rehearing and petition to reopen proceedings.

Commissioners O'Connor and Woodward *dissenting*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

SWIDLER, *Chairman:*

Florida Gas Transmission Company and the Florida Public Utilities Commission on July 7, 1964 filed applications for rehearing of our Opinion No. 431 and accompanying order issued June 8, 1964, 31 FPC 1402. There we found that $7,936,545 representing profits of four affiliated engineering and construction firms, along with the related amount of $250,565 of interest during construction, should be eliminated from Florida Gas plant accounts. We also found that accruals for income tax purposes on the books of the predecessor Coastal Transmission Corporation were improper because there was no tax liability for the corresponding period on the basis of the consolidated tax return. In general the issues are treated in our original opinion, and no purpose will be served in repeating our discussion except for the comments below.

Florida Gas contends that we have promulgated new and different criteria and to the detriment of the company have applied them to facts that had occurred at a time when the former criteria governed. In our opinion we have not adopted a new rule but have applied an old rule to new circumstances. For instance, Florida argues that "the no-profits-to-affiliates" rule has always required a finding of "control" and that such control must exist at the time of the execution of the contracts which created the costs. Without defining the limits reached by the earlier cases, in the present case based on the circumstances discussed in our original opinion we found (31 FPC 1402 at 1406, 1407) that the construction and engineering group though never in a position of legal control in the sense that they had majority stock control, from the beginning occupied a dominating position which as a practical matter precluded any independent action to give the principal construction and engineering assignments to anyone else so long as the inside group's bids were not grossly out of line. The circumstances shown in the record and discussed in our opinion traced the continuing effect of this control up to the period when the contracts were actually executed.

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

Assuming that in so holding, our opinion expressed a new rule for determining whether to exclude the profits of affiliates this does not invalidate it. In numerous cases unnecessary to cite here courts, while reluctant to proceed retroactively, have applied new rules of law to past transactions. As said in *S.E.C.* v. *Chenery Corp.*, 332 U.S. 194, 203, cited by Florida Gas, "Every case of first impression has a retroactive effect, whether the new principle is announced by a court or by an administrative agency." The court added: "But such retroactivity must be balanced against the mischief of producing a result which is contrary to a statutory design or to legal and equitable principles. If that mischief is greater than the ill effect of the retroactive application of a new standard, it is not the type of retroactivity which is condemned by law."

In the present case the "mischief" is permitting the plant accounts of the company to be distorted by this kind of cost, so that there will be little choice in a rate case but to require the consumers of the gas to pay a return on insiders' profits for the expected life of the property. Furthermore, as stated in our original opinion, the language of the Commission's Opinion No. 301 (16 FPC at p. 142), regardless of differences of opinion as to its meaning, at least should have raised a question in the minds of the promoters of Florida Gas or its predecessors as to the treatment that might be accorded the profits item.

Florida Gas argues that there was no basis on which to find that the engineering and construction firms formed an "affiliated group." We did not find, nor did we need to find, that they agreed with each other or that they were formally affiliated with each other. The four firms were affiliated with Houston Texas or its predecessor, and the records make clear that they combined their talents and financial resources to promote the pipeline project not only as investors but also as persons having special interests in the profits to be made from the pipeline's construction. While Florida Gas points out that the original organizer, Mr. J. O. Mack, negotiated separately with representatives of the several firms, these negotiations were at arm's-length, if at all, only to the extent Mack may have had some original control as to which persons he would select from those approaching him with an interest in construction and engineering profits from a successful pipeline. Once the representatives of the several firms had become members of the promotional group further relationships were not at arm's-length. The Houston Texas board could as a practical matter not repudiate the oral agreements and, as related in the original opinion, the influence of these early relationships carried forward to the execution of the formal contracts four years later.

Both the Florida Commission and Florida Gas argue that we were in error in citing language in the *St. Croix* case, 3 FPC 13, 21, to the effect that it is impossible to determine what is reasonable cost where an affiliation exists. They point out that evidence was presented in this case that would have enabled us to determine the reasonableness of the pipeline costs. We cited the *St. Croix* case to show the infirmities which exist in any attempt to determine costs where the relationship between the parties is one of affiliation. Actually such evidence is irrelevant and was properly stricken by the examiner. Once the affiliation is established, the profits of the promoters of the project do not represent cost at all, and for this we cited *Louisville Hydro-Electric Company*, 1 FPC 130, 133.

Florida Gas also argues that the $7,936,545 in profits which we deleted from its plant accounts should have been reduced by the amount of the Federal income taxes on these profits. Obviously if we disallow the entire profit of the affiliated contractor we cannot allow as a cost a portion of that profit which was paid in Federal income taxes. If Florida Gas' plant accounts should not include profits between affiliates it would indeed be an anomaly to include taxes

that have been incurred only because of such profits. Furthermore, we note that Florida Gas did not raise this point in its exceptions, and under Section 1.31 (c) of our Rules has thus waived it.

Florida Gas finally contends, as does the Florida Commission, that we have misinterpreted the language of Opinion No. 301, particularly the statement by the Commission that: "While as we have already stated, the cost of the proposed facilities appears to be reasonable, in view of this fact, this cost will be carefully scrutinized in any future proceeding dealing with accounting or rates of Houston Gas."

Florida Gas says it made a complete disclosure of the facts and would interpret the Commission's language to mean that the estimated cost of the facilities, including the profits, appears reasonable but in view of the relationships outlined the Commission is going to scrutinize the costs carefully after they are incurred to make sure that the actual costs are, in fact, reasonable. In support of its position Florida Gas has appended copies of affidavits from three former members of the Commission who participated in the issuance of Opinion No. 301, and has asked that the record be reopened to receive these affidavits.

The Florida Commission contends that the language is clear and unambiguous and that it is sheer sophistry for this Commission to seek an interpretation that converts the quoted language into a warning that "scrutiny" would be synonymous with "non-acceptance" of amounts in excess of the costs of the engineering and construction firms.

The affidavits submitted by Florida Gas, in general, state that it was not the intention of the Commission when Opinion No. 301 was issued on December 28, 1956, to apply the no-profits-to-affiliates rule or to warn the applicant that it might be applied later. The affidavits of Chairman Kuykendall and Commissioner Kline state that there was no intention that the rule be applied later; otherwise the opinion would have so stated. Commissioner Connole states his view that the Opinion No. 301 treatment "accorded to these estimated costs, including the estimated profits, as disclosed, would be disposed of if a future proceeding dealing with such matters should ever be before the Commission, but no decision was reached nor warning intended nor recommendation made that such profits should be eliminated from the capital plant accounts—." Chairman Kuykendall was in the majority; Commissioners Connole and Kline dissented, although on rehearing Commissioner Kline joined the majority and Commissioner Connole concurred. The remaining two members of the majority, Commissioners Digby and Stueck, are now deceased.

Affidavits of former members as to the interpretation they intended to be placed on language of Commission opinions is not a customary basis for interpreting Commission decisions and, at least in the circumstances here, we do not think it is proper. As Florida Gas concedes, we cannot inquire into the mental processes of a Commissioner nor ascertain what he considered. *United States* v. *Morgan*, 313 U.S. 409, 422; *Chicago, B & Q Ry. Co.* v. *Babcock*, 204 U.S. 585, 593. There are a number of cases (see 97 CJS 514) including *Covey* v. *American Distilling Company*, 132 F. 2d 453 (CA7) cited by Florida Gas, that accept evidence from a Judge in a prior proceeding as to the matters litigated. Frequently these cases involve the application of the doctrine of *res judicata* to a court judgment where the identity of the issues is a matter of some importance. However, none of the cases called to our attention involves admission of evidence as to what a judge or a Commissioner meant by a full opinion setting forth his determinations and the reasons for them. In somewhat different circumstances the Supreme Court has said that judgment "ought never to be overthrown or limited by the oral testimony of judge or juror of what he had in mind at the time of the decision." *Fayerweather* v. *Ritch*, 195 U.S. 276, 307.

We have before us an opinion which does not in terms even discuss the applicability of the no-profits-to-affiliates rule, pro or con. As Commissioner Connole's affidavit indicates, it expressly leaves open for further consideration the entire question. The majority on Opinion 301 found the estimated total costs (including the profits) reasonable for purposes of granting a certificates to the proposed pipeline. For other purposes they left these costs for later scrutiny. See *Coastal Transmission Corp.*, Docket No. G–18338, *et al.*, 26 FPC 677, at 685. Assuming arguendo that one Commission could bind its successors on a matter of this sort, they did not limit this scrutiny, and they did not say how this scrutiny was to be conducted. The problem of the method and scope of the scrutiny was deferred. The intervenor who had raised the issue in the certificate proceeding could not have contested the failure of the Commission to apply the rule since it had not decided against him. We, of course, express no opinion as to what individual members of the Commission may have thought or intended. The affidavits are an attempt to add something to the opinion that was not there before and cannot be retroactively added to it.

Thus the argument of the Florida Commission that the language of Opinion No. 301 is unambiguous and that the cost of the facilities cannot mean only cost less profits is besides the point, for the language does not define the scrutiny to be applied. Likewise the argument of the Florida Commission that we should have found that Florida Gas had made full disclosure does not affect the result. There is no issue here on this point, and, irrespective of full disclosure, the costs of the pipeline were subject to scrutiny under Opinion No. 301. Our response to the Florida Commission also applies to the dissenting statement of Commissioner Woodward.

Commissioner O'Connor's dissent points to possible losses to investors. Where such losses are the result of insider's profits, the investors may have legal remedies through the courts, whereas the consumers must depend upon the action of the regulatory bodies having rate and accounting jurisdiction.

On the question of Coastal's taxes Florida Gas continues to argue that Coastal could have accrued taxes on its books although no taxes were payable on the consolidated return on the theory, apparently, that taxes will be payable in later years. It cites our Uniform System of Accounts Section 7 "Current and Accrued Liabilities" as permitting the accrual of taxes as accrued liabilities even though payable more than one year from date. This section, however, assumes that whenever payable the item constitutes a liability. Here, during the period in question, no taxes were payable on the consolidated return, nor was there any liability incurred for taxes. Therefore Coastal, in accordance with the *Cities Service* case,[1] could not accrue any liability for taxes.

Florida Gas further argues that because of the elimination of the construction profits from cost the company's tax depreciation will be greater than the depreciation allowed on its books for cost of service purposes with a resultant windfall to jurisdictional and nonjurisdictional customers. This is an issue not before us here and will have to be determined in a proceeding affecting Florida Gas' rates. The nonjurisdictional rates appear to be subject to the jurisdiction of the Florida Commission.

The Commission finds:

(1) The assignments of error and grounds for rehearing set forth in the applications for rehearing of Florida Gas Transmission Company and the Florida Public Utilities Commission present no new facts or principles of law which were not considered by the Commission when it issued its Opinion No. 424 and order or which, having now been considered, warrant any change in or modification of said Opinion and Order.

[1] *Cities Service Gas Co.*, 30 FPC 158, July 15, 1963.

(2) The petition by Florida Gas to reopen the record to receive the affidavits should be denied.

The Commission orders:

(A) The applications for rehearing filed by Florida Gas and the Florida Commission are hereby denied.

(B) The petition to reopen filed by Florida Gas is hereby denied.

Commissioners O'Connor and Woodward* *dissenting.*

O'CONNOR, Commissioner, *dissenting:*

In my dissenting statement to Opinion No. 431, I strenuously contended that a Commission which neither timely nor definitively disposed of a significant, appropriately raised issue, violated not only the specific terms of the Natural Gas Act, but also a moral obligation to the industry and the investing public.

Three affidavits have recently been filed by the still-living members of the 1956 Commission. All three, which I consider as though introduced in evidence before the Presiding Examiner, verify that the no-profits rule was raised and considered during the certification deliberations. All three indicate that the Commission was cognizant of the possible consequences of its invocation. Two of them recognize the obligation of specificity, which then-Commissioner Kline characterizes as a ". . . duty as a member of the Commission to protect the interests of all groups, and not to approve a certificate if such action might lead to entrapment of future investors." [1]

Because of these affidavits, I appreciate more clearly the prominence the no-profits issue attained during the Houston Texas certification proceedings. Consequently, I am even more convinced that the then-Commission was derelict in its failure to clearly dispose of that issue, and that this Commission is estopped to dispose of it now. The recent 5th Circuit reversal in *Hill* v. *F.P.C.*,[2] which admonished the Commission for declining "to undergo the judicial travail of weighing [a record] on which complete information was furnished," reinforces my convictions.[3]

A point made by Florida Gas indicates the financial severity flowing from the majority's decision. Eliminating costs from a utility's Plant Account reduces not only its gross return, but, for purposes of accounting under the Uniform System of Accounts, its annual credit to Reserve for Depreciation. In calculating its net income for tax purposes, however, the plant account elimination will not be made, although the elimination will be indicated by a reduced return. This results in an actual tax liability, assuming the current corporate tax rate of 50%, that is lower by 50% of the difference between the two depreciation figures.[4] Under the "actual taxes" figure, the lower—actually paid—tax charge will be included in the company's cost of service.

---

* This matter was decided prior to the death of Commissioner Woodward.

[1] Affidavit of Arthur Kline, filed in Application for Rehearing of Opinion No. 431, filed by the Florida Gas Company.

[2] 335 F. 2d 355 (July 23, 1964).

[3] The Commission will be squarely faced with this travail in the *Natural Gas Pipeline Company of America* proceedings, Docket No. CP62-243, where the Staff, contrary to its position in G-9262, is requesting a ruling on the affiliation question contemporaneous with certification.

[4] Thus, where prior to elimination the gross income was $100 and the sole expense a depreciation figure of $50, the books, for both Federal income tax purposes and Uniform System of Accounts purposes, would indicate a tax liability of $25. Assuming elimination from plant decreased gross income to $90, the depreciation charge for tax purposes would remain at $50, but would decrease for purposes of accounting under the Uniform System of Accounts. Assuming a decrease to $40, the tax liability for accounting purposes would remain at $25, (50% of $90—$40), but the actual tax liability would be but $20 (50% of $90—$50).

Thus, the net effect of the majority's decision is to preclude from recovery, through the allowance for depreciation, over $8,000,000 in plant costs; to give solely to the ratepayers the $4,000,000 benefits of a legitimate tax deduction; and to deny a return to investors of over $7,375,000.[5] The impact, obviously, falls upon the investor but for whom this concededly valuable project could never have been financed. The unfortunate investor, lulled into a regrettably false sense of security by regulatory inaction, now finds himself entrapped through no fault of his own.

This outcome is onerous when one considers that the excluded costs were not fictitious or watered, but were eminently reasonable. It is particularly onerous when one considers that their exclusion results from applying a rule, born out of the early abuses of the electric power industry, which was neither designed for, nor necessitated by, the historical development of the natural gas industry.

Three other points have appeared in both the majority's basic opinion and their order denying rehearing which require comment.

The first involves the majority's desperate attempt to attribute some meaning to the troublesome language in Opinion No. 301. In so doing, they engage in a bit of contorted interpretation. The language, to them, says that the engineering and construction profits are includable for testing the economic feasibility of Houston Texas, but that they are potentially excludable in any subsequent rate-making or accounting proceeding. Assuming this was the language's *raison d'etre*, one legitimately wonders how a meaningful feasibility determination can be made when the rate base—upon which dollars of return are dependent—remains subject to sizable diminution. Particularly is this true when the basis for diminution is readily visible at the time of certification.

The second point lies in the majority's embarrassing inability to decide who is affiliated to what. Are the engineering and construction companies collectively affiliated to Houston Texas, or severally affiliated? Only through collective association does their conclusion of affiliation have even remote validity, for no individual company was sufficiently influential to direct the policies of Houston Texas by itself. The obvious problem with a theory of collective affiliation, however, is the absence of an agreement, either explicit or implicit, to act as a collective entity, or of any evidence that they even so considered themselves. Consequently, the majority hinges their decision on an individually-affiliated theory, even though—by twenty-eight year old standards—this requires finding that *each* company had the power to direct the policies of Houston Texas. The majority tries to obscure their difficulties with this position by referring to the individual companies as a "group". This is a nifty nametag, but as a smokescreen, it shields little.

The third point lies in their repeated insistence that the Mack interests, up until 1958, the date the final contracts were executed, continued to be completely dependent upon the construction and engineering companies. I doubt this to be true. Prior to 1956, these companies conferred a great benefit upon J. O. Mack: they stayed with him when others, feeling the project would never be certificated and thus the large expenses attributable to preliminary studies never recovered, refused to commit themselves. Prior to certification, the withdrawal of any one of the companies may well have quashed the entire project. In 1956, however, Houston Texas received its certificate of public convenience and necessity. From this date forward, a different picture was presented. Had any of the companies then decided to withdraw, the Mack interests would have had little difficulty in

[5] This figure is the 30 year return at 6¼% assuming a depreciation rate of 3½% on a declining rate base.

finding others: outside financing had been negotiated, federal sanction had been acquired, and thus recoupment of expenses—plus a reasonable profit—was the likely result for any company offered the role. The control, which may have existed either collectively or severally in the original companies in the pre-certificate days, doubtlessly did not carry over to the post-certificate days. Any assertion to the contrary does not recognize the practicalities of the industry.

For reasons expressed in my original statement to Opinion 431, and supplemented here, I dissent to this opinion and order denying rehearing. Although I remain convinced that the reasonableness of the questioned costs has been proven, in order to perfect the record, I would remand this issue for further consideration.

WOODWARD, Commissioner, *dissenting:*

When Opinion 431 issued,[1] I dissented on the issue pertaining to consolidated taxes.[2] The Petitions for Rehearing of that Opinion and Order[3] have compelled further analysis and, for reasons hereinafter stated, I must now respectfully dissent to the Opinion and Order Denying Rehearing.

The elimination of profits is barred by res judicata and estoppel, as well as by equity. While the limits of these doctrines in the field of administrative law is the subject of controversy, Davis sees an increasing tendency to apply them in order to do equity.[4]

The issue in the original cost case involved a determination of the proper amounts to be recorded by Houston Texas in its plant account as the actual legitimate original cost of its facilities which were constructed in 1958 and 1959, pursuant to the authorization of this Commission issued in December, 1956, in its Opinion and Order No. 301.[5]

In that Opinion, the Commission unequivocally stated that while "the cost of the proposed facilities appears to be reasonable—this cost will be carefully scrutinized in any future proceeding dealing with accounting or rates . . . ." The words used are plain and unambiguous; they have commonly and universally accepted meanings. The costs involved included allowances for *profits and fees*[6] and they were subject to full disclosure to the Commission in the initial certificate proceeding. This fact is uncontroverted in the record.

The Commission raised no objection to the cost evidence nor did it find any disqualifying inadequacy as to the correctness of the plant accounts submitted by the applicant. Significantly, however, our predecessors did find it necessary to impose several conditions in the certificate *relating to other matters.*

In short, "cost" cannot now be held to mean only cost less profits any more than "scrutiny" of those costs can be held to be synonomous with exculsion of reasonable profits. The word "cost" referred to the pipeline's cost since the Commission never discussed the contractor's cost.

The profits in issue arose solely from construction and engineering services rather than stock ownership and allowance of the total costs, admittedly, would result in no higher costs to be recovered from consumers than would be recovered

[6] Emphasis supplied throughout this statement unless otherwise indicated.

had other independent contractors constructed the pipeline. On its face, such a result is not derogatory of the public interest and this fact cannot be ignored or deemed irrelevant; it is the core of the responsibility which Congress has committed to the custody of this Commission.

Here, there was no write-up of rate base through inter-affiliate sales; there was no artificial inflation of rate base through a write-up of assets in a pooling-of-interest transaction. Nothing evil or secretive transpired. Houston Texas contracted for its work with well-established concerns experienced in the business, not on a cost-plus-a-fee basis which would guarantee the contractors a profit, but on the basis of a fixed price per unit of work, placing all risk of loss on the contractor. The evidence tendered to substantiate these facts is complete and convincing and it proves that there has been no inflation of the rate base. Absent a showing of misrepresentation, concealment or fraud, the Commission has no reason to seek now to employ a concept entirely different from that provided in Opinion 301. There has been no such showing.

There is another, perhaps decisive issue in this proceeding—the disallowance of amounts of construction costs now recorded in the plant accounts of Houston Texas would constitute a modification of the original certificate since that certificate, in effect, permitted payment of "reasonable" costs.

Under the facts and circumstances before us, we do not possess authority to achieve such a result any more than did the Interstate Commerce Commission in *United States* v. *Seatrain Lines*, 329 U.S. 424. There the Court held that the Commission, under the Interstate Commerce Act, could not limit a certificate once it had been issued. Similarily, there is no provision in the Natural Gas Act for modification or revocation of a certificate, partial or otherwise.

The entire amount of engineering and construction costs, including profits, should be allowed if they were reasonable and compared favorably with similar construction costs to other companies. Failure to admit evidence to this effect precludes a proper determination by the Commission of the original cost issue in this proceeding. The matter should be remanded to the Examiner with instructions to admit evidence as to reasonableness of cost, and to submit further findings and conclusions to the Commission for consideration.

Rehearing should be granted and Opinion and order No. 431 should be reversed and set aside.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

HIGHLAND OIL COMPANY, DOCKET NOS. G–19866 AND RI60–283

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued August 5, 1964)

On May 15, 1964, Highland Oil Company (Highland) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Highland. The offer relates to a sale made under Highland's FPC Gas Rate Schedule No. 1 in Duval County, Texas (Texas R. R. Com. District #4). The proposed increased rates of 15.0952¢ and 17.24347¢ per Mcf were suspended by order of the Commission for the statutory period, and were made effective by Highland on April 1, and October 6, 1960, respectively.

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

Under the terms of the offer, Highland proposes to eliminate the favored-nation, price redetermination and their periodic escalation provisions from its rate schedule and to establish a 15¢ per Mcf rate for the subject sale. Highland's annual revenues will be decreased about $5,200 from the presently effective rates. No protests or objections have been filed to the offer.

Highland, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate.[1] The estimated total dollars to be refunded approximates $18,800, exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's *Statement of General Policy No. 61–1*, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Highland's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Highland's rate and rate schedule.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Highland on May 15, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Highland on May 15, 1964, is hereby approved in accordance with the provisions of this order.

(B) Highland shall file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 1, eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Highland shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate, making account for proper charges, with simple interest at 7 percent, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal, and interest, and the bases for determination, together with a copy of a release from TGT with respect to such refunds.

(D) Upon notification by the Secretary of the Commission that Highland has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement, subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated insofar as they relate to Highland's FPC Gas Rate Schedule No. 1, and severed from the con-

[1] Highland's FPC Gas Rate Schedule No. 1 is subject to a dehydration charge by TGT, for which allowance must be made in computing the refund.

solidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Highland's offer of settlement, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Highland, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 1136

ORDER AMENDING LICENSE (TRANSMISSION LINE)

(Issued August 5, 1964)

Application was filed on January 30, 1964, and supplemented on April 24, 1964, by Pacific Power & Light Company, Licensee for transmission line Project No. 1136, for amendment of its license for the project affecting lands of the United States within the Fremont National Forest and lands formerly within the Klamath Indian Reservation.

The application was filed in response to the Commission's letter dated June 6, 1963 requesting the Licensee to apply for amendment of Article 10 of the license (the annual charge article) to reflect the fact that Federal trusteeship over the property of the Klamath Indians was terminated on August 13, 1961 by Proclamation issued by the Secretary of the Interior on August 10, 1961 (68 Stat. 718; 25 U.S.C. 564(g)). The termination of trusteeship removed the basis for the imposition of annual charges for the occupancy by the project transmission line on the former Indian lands.

Annual charges under the license for the occupancy by the transmission line of Indian lands totaling $166.32 ($55.44 per annum) for the calendar years 1961 through 1963 have been paid by the Licensee, and are being held on special deposit. This sum will be refunded to the Licensee.

The Commission finds:

It will not be inconsistent with the public interest to amend subparagraph (ii) of Article 10 of the license to adjust the annual charges specified therein.

The Commission orders:

(A) Subparagraph (ii) of Article 10 of the license for Project No. 1136 is hereby amended to read as follows:

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $16.20.

(B) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

---

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

DAIRYLAND POWER COOPERATIVE, MINNKOTA POWER COOPERATIVE, INC., SOUTH CENTRAL RURAL ELECTRIC COOPERATIVE, INC., DOCKET NO. E-7113

ORDER DEFERRING FURTHER PROCEEDINGS

(Issued August 6, 1964)

This proceeding was instituted by the Commission on July 22, 1963, 30 FPC 365, to determine whether it had jurisdiction under the Federal Power Act over electric companies organized in the cooperative form and financed by loans from the Rural Electrification Administration, which owned or operated facilities for the interstate transmission or sale at wholesale of electric power. The hearings have been completed and all briefs are in, but the examiner has not yet issued his initial decision.

On July 31, 1964, the Senate Appropriations Committee issued its report on the Independent Offices Appropriations, 1965. The committee refers (p. 8) to the fact that hearings have recently been held on a bill to clarify Congressional intent with respect to the matters in issue in this proceeding, and indicates that while the bill is now pending before the Senate Commerce Committee for consideration, it may not be possible to complete action thereon this calendar year. Stating the Appropriations Committee's belief that "the assertion of additional Federal regulatory authority over REA cooperatives by the FPC should await the decision of the Congress on pending legislation", the Committee expresses its intent that the Commission defer action in the present proceeding until the Congress can give additional attention to the jurisdictional question involved.

In the light of the foregoing, the Commission has concluded that its proceedings in the instant case should be deferred to permit further Congressional consideration of the matter. Accordingly, the examiner is directed to defer issuing his initial decision herein until January 1, 1966.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

JACK W. GRIGSBY (OPERATOR), ET AL., DOCKET NOS. RI61-96 AND RI62-536

ORDER CONDITIONALLY ACCEPTING OFFERS OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND TERMINATING PROCEEDINGS

(Issued August 6, 1964)

On June 18 and 22, 1964, Jack W. Grigsby (Operator), *et al.* (Grigsby) filed offers of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offers involve proposed increased rates for sales of natural gas made to United Gas Pipe Line Company (United) by Grigsby and relate to sales made under Supplement No. 5 to Grigsby's FPC Gas Rate Schedule No. 6, Supplement No. 3 to its Rate Schedule

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

No. 7 and Supplement No. 3 to its Rate Schedule No. 8. The sales under Rate Schedule Nos. 6 and 7 are made in the State of Mississippi, and the sale under Rate Schedule No. 8 is made in South Louisiana. Each of the proposed increased rates were suspended by order of the Commission for the statutory period, were made effective by Grigsby by appropriate motion, and have been charged and collected subject to refund.

Under the terms of the offers, Grigsby proposes to withdraw its increased rate filings for the sales made by it to United in Mississippi and thereby reduce the rates to 20¢ per Mcf, and to reduce the rate for the sale in South Louisiana to 19.25¢ per Mcf. This sale is in the Crescent Farms Field and is surrounded by the same circumstances we considered in *Cities Service Company, et al.*, Docket No. G–8921, *et al.*, 28 FPC 1108, for a sale in the same field to the same purchaser, and we there approved the same settlement rate sought here. Accordingly, we shall approve Grigsby's proposed settlement rate for its sale.

Under the terms of the offers, Grigsby proposes to refund all of the monies charged and collected, subject to refund, above the settlement rates. However, it proposes that it should be relieved of its obligation to pay appropriate interest on the amounts to be refunded under the sales made by it to United in Mississippi. Grigsby has offered no sound basis for granting its request which is inconsistent with our approach in previous settlement cases. Consequently, we must deny Grigsby's proposal to be relieved of its interest obligation under its FPC Gas Rate Schedule Nos. 6 and 7.

However, for the past two years the Commission has approved numerous producer rate settlements involving the jurisdictional sales of natural gas. These settlements have been of great value to all segments of the natural gas industry and to consumers generally by assisting in the establishment of stability in gas prices to the consumer and revenues to the industry. There have been three essential elements in each of the settlements: (1) settlement rates consistent with rates established by our *Statement of General Policy No. 61–1*, as amended, (2) a moratorium on increased rate filings above the applicable ceiling; and, (3) appropriate refunds. The refund period was determined through use of a cost of service study of the company involved, with refunds required for all periods after the unit costs so determined equalled unit revenues.

These settlements have involved large producers having diversified operations where cost of service studies could be used for the limited purpose of determining refund periods but have not been applicable to the sales of small producers where cost of service studies would not be meaningful.

We have explored various methods of applying the settlement technique to the sales of small producers so that they and the consumers might obtain the benefit of such settlements. We have calculated the average percentage of amounts collected subject to refund above the settlement rates which the large producers have been required to refund under approved settlements and we propose to require the same average percentage of refunds by small producers without reference to individual cost studies. Accordingly, we shall be prepared to approve small producer settlements meeting the criteria as to level of rates and moratorium provisions where the producer agrees to make the following percentage of refunds above settlement rates:[1]

Years	Refunds
1963 and thereafter	100%
1961 and 1962	70%
1957 through 1960	25%

[1] The procedure outlined here has no applicability to settlement proposals under the Second and Seventh Amendments to the *Statement of General Policy No. 61–1.*

Therefore, we shall conditionally approve Grigsby's settlement proposal to require refunds with interest in accordance with the foregoing.

In affording the small producers the same opportunity to settle and terminate all of their pending rate proceedings which we have accorded the larger producers, we believe it to be in the public interest to require that the small producers agree to a 36 month moratorium on proposed rate increases above the applicable ceiling for each of their filed rate schedules as is generally agreed to by large producers in their company-wide settlements. Therefore, we shall condition our approval of Grigsby's proposal to require it to agree to a filing moratorium on each of its filed rate schedules of 36 months from June 1, 1964. Provided, however, Grigsby may reserve the right to file during such period to reflect any possible tax reimbursement increases or changes in the applicable area ceilings if contractually authorized so to do.

For all of the reasons set forth in our order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G–9287, et al., 32 FPC 49, we shall require Grigsby to retain the amounts of refund ordered herein until further order directing the nature of their disposition and also to submit within 45 days of this order to the Commission and to United a detailed report setting out the amount of refund related to each rate schedule, the volume of gas sold thereunder and the period covered. We shall also by separate action direct the pipeline purchaser within ten days from the receipt of such report, to submit a report of its own setting forth whether it intends to pass on all or part of such refund amounts to its customers and the names of such customers and amounts of refund each would receive, or, if it claims the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by Grigsby (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from United (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

We find that approval of the proposal settlements, as conditioned herein would serve the public interest.

However, we desire to make it clear that acceptance of Grigsby's offers of settlement shall not be construed as approval of any future increased rates that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Grigsby's rates and rate schedules.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offers of settlement filed with the Commission by Grigsby on June 18 and 22, 1964, and as herein conditioned in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offers of settlement filed with the Commission by Grigsby on June 18 and 22, 1964, are hereby approved in accordance with the provisions of this order.

(B) Grigsby shall file, within 30 days from the date of issuance of this order, a notice of change in rate to its FPC Gas Rate Schedule No. 8 providing for the 19.25¢ per Mcf rate specified in its offer of settlement. The notice of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) The notices of change in rate filed by Grigsby to its FPC Gas Rate Schedule Nos. 6 and 7, which were designated as Supplement Nos. 5 and 3 respectively, shall upon Grigsby's acceptance and compliance with the terms and provisions of this order be deemed withdrawn without further order of the Commission.

(D) Grigsby shall compute the difference between the rates collected subject to refund and the related settlement rates for the periods such rates were collected subject to refund, to the date of this order, together with interest as specified in each docket to the date of this order, in accordance with the percentages hereinabove set forth. Grigsby shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on United setting out the amount of refunds related to each rate schedule (showing separately the principal and applicable interest), the bases used for such determination and the periods covered.

(E) Grigsby shall retain the amounts shown in the report required under paragraph (D) above, subject to further order of the Commission directing the disposition of those amounts.

(F) If Grigsby elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6% per annum on all funds thus available from September 15, 1964, to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(G) If Grigsby elects to deposit the retained refunds in a special escrow account, Grigsby shall tender for filing on or before September 15, 1964, an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon United. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Grisby and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Grigsby, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

(H) Grigsby shall, file with the Commission within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order, including specifically its agreement to a filing moratorium on each of its filed rate schedules of 36 months from June 1, 1964.

(I) Any party to the proceedings having objections to the terms of this Order shall within 30 days from the date of issuance of this Order set forth such objections in writing to the Commission (Original and one copy), and by serving copies on the other parties.

(J) If as a result of any objections filed pursuant to paragraph (I) hereof, the Commission by subsequent order changes Grigsby's duties and obligations hereunder, Grigsby's acceptance of this settlement order shall not be binding on it without its express agreement.

(K) Within 90 days from the date of this order, Grigsby shall make such filings under its rate schedules as are required to make effective the terms of the settlement proposals.

(L) Upon full compliance by Grigsby with all the terms and provisions of this order, the Section 4(e) proceedings in Docket Nos. RI61–96 and RI62–536, shall terminate.

(M) Upon termination of the Section 4(e) proceeding in Docket No. RI62–536 in accordance with paragraph (L) above, said proceeding shall be severed from the consolidated proceedings in Docket No. AR61–2.

(N) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Grigsby, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against Grigsby or any other companies, person or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MOUNTAIN FUEL SUPPLY COMPANY, DOCKET NO. CP64–207

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 6, 1964)

On March 19, 1964, as supplemented on April 3, 1964, Mountain Fuel Supply Company (Applicant) filed in Docket No. CP64–207 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and

necessity authorizing the construction and operation of 6.3 miles of 24-inch pipeline between Wanship and Coalville, Utah, replacing the existing 16-inch pipeline in this location; 9.0 miles of 16-inch pipeline between Henefer and Morgan, Utah, replacing and relocating 11.5 miles of 14-inch pipeline between these towns, and 4.3 miles of 16-inch pipeline between Echo Reservoir and Coalville, Utah, replacing the existing 14-inch pipeline between these points, all as more fully set forth in the application, as supplemented.

The proposed project will advance Applicant's continuing program of reconditioning and upgrading its transmission system to permit Applicant to operate these pipelines at higher pressures with increased reliability. Also a part of the existing 14-inch pipeline in Weber Canyon must be relocated to make way for the further construction of Interstate Highway No. 80 along the bottom of Weber Canyon.

Applicant estimates the cost of the proposed construction to be $922,000, with the cost of removal and salvage value of lines replaced estimated at $84,216 and $72,308, respectively, or a net cost of $933,908. Applicant will finance the proposed facilities from funds on hand and short-term loans.

On May 27, 1964, Dennis L. Sargent and Tonya A. Sargent filed a Protest to the subject application, alleging that if the line were relocated service to them would be discontinued. The Sargents received service from the 14-inch line between Henefer and Morgan proposed to be replaced and relocated. Such sale is subject to the jurisdiction of the Public Service Commission of Utah. Under different circumstances in view of the protest, we may set the matter for formal hearing. However, on July 24, 1964, Applicant further supplemented its application by filing a copy of an order of the Public Service Commission of Utah, issued July 22, 1964, conditionally authorizing the abandonment of service. The abandonment was permitted subject to the completion of construction of the relocated pipeline and Mountain Fuel converting all of the gas-burning appliances of such customers to liquefied petroleum gases and the installation of the necessary lines and tankage to operate the liquefied petroleum system, or, at the option of such customers, a cash payment representing the actual cost thereof. The Utah Commission also found that Applicant's present 14-inch line is situated along the bottom of Weber Canyon where there is also located a major highway designated as a part of the interstate highway system. Further, the Utah Commission found that Applicant's line must be relocated to accommodate the new interstate highway and that the highway system will occupy a substantial part of the property now occupied by certain direct retail customers; hence, such customers' future existence in that location is rendered uncertain.

After consideration of allegations set forth in the protest and in the light of the action of the Utah Commission, we find it unnecessary to order a formal hearing herein.

After due notice, no petition to intervene, notice of intervention or other protest to the granting of the application has been filed.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mountain Fuel Supply Company, a Utah corporation having its principal place of business in Salt Lake City, Utah, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 15, 1940, in Docket No. G–154 (2 FPC 288).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction, replacement relocation and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction, replacement, relocation and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Mountain Fuel Supply Company, to construct, replace, relocate and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MOUNTAIN FUEL SUPPLY COMPANY, DOCKET NO. CP64-221

DECLARATION OF EXEMPTION

(Issued August 6, 1964)

Mountain Fuel Supply Company (Applicant) filed an application on March 31, 1964, for exemption of its Orem-Uintah Basin Pipeline facilities from the provisions of the Natural Gas Act, pursuant to Section 1(c) thereof.

Upon the basis of the application filed, the exhibits appended thereto, and the files of the Commission, it appears that:

(1) Applicant is a Utah Corporation operating as a public utility in the States of Utah and Wyoming where it is engaged in the distribution of natural gas subject to the jurisdiction of the public service commissions of these states. Part of the gas so distributed is produced in Utah, Wyoming and Colorado and is transported in interstate commerce pursuant to certificate authorization from the Federal Power Commission.

(2) Applicant's Utah markets are further served by its intrastate Orem-Uintah Basin Pipeline running from fields in east central Utah to the Provo-Orem area near Utah Lake.

(3) Applicant proposes to purchase gas from Garfield Gas Gathering Company, (Garfield) under the terms of an agreement which provides that Garfield will deliver such gas to Applicant at a point in the Uintah Basin inside the State of Utah where the same will be delivered into Applicant's intrastate Orem-Uintah Basin Pipeline. Applicant's intrastate and interstate facilities are not interconnected.

(4) All natural gas received by Applicant for transportation through said Orem-Uintah Basin Pipeline is to be consumed ultimately within the State of Utah, and all of the subject facilities are located within said state; and

(5) The Utah Public Service Commission has certified to the Federal Power Commission that it has and is exercising regulatory jurisdiction over the rates, service and facilities of Applicant.

Wherefore, The Commission declares, by reason of the foregoing:

Mountain Fuel Supply Company, with respect to the operation of its Orem-Uintah Basin Pipeline is exempt from the provisions of the Natural Gas Act, and the orders, rules and regulations of this Commission issued thereunder.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

WISCONSIN MICHIGAN POWER COMPANY, DOCKET NO. E-7174

ORDER ACCEPTING RATE SCHEDULES FOR FILING, PROVIDING FOR HEARING AND SUSPENSION OF PROPOSED RATE SCHEDULE CHANGE

(Issued August 6, 1964)

Wisconsin Michigan Power Company (Wisconsin-Michigan), Milwaukee, Wisconsin, on June 26, 1964, tendered for filing, pursuant to Section 205 of the Federal Power Act, proposed changes in its filed rate schedules which, as amended by substitute filings made on July 24, 1964, purports to increase, as of August 3, 1964, its present rates and charges for wholesale electric service to ten electric utility and municipal customers: Wisconsin Public Service Corporation, Upper Peninsula Power Company, City of Crystal Falls, Michigan, and the Cities of Kaukauna, Shawano, Clintonville, New London, Oconto Falls, Florence, Wisconsin and Oconto Electric Cooperative, Oconto Falls, Wisconsin. The proffered rate schedule supplements have been tentatively designated in the files of the Commission as Wisconsin-Michigan's Supplement No. 4 to Rate Schedule FPC No. 12, Supplement No. 4 to Rate Schedule FPC No. 25, Supplement No. 4 to Rate Schedule FPC No. 36, Supplement No. 3 to Rate Schedule FPC No. 43, Supplement No. 3 to Rate Schedule FPC No. 33, Supplement No. 7 to Rate Schedule FPC No. 24, Supplement No. 2 to Rate Schedule FPC No. 41, Supplement No. 4 to Rate Schedule FPC No. 39, Supplement No. 2 to Rate Schedule FPC No. 38, and Supplement No. 6 to Rate Schedule FPC No. 32.[1]

Over-all, the proffered rates and charges would increase Wisconsin-Michigan's present rates to the aforementioned electric utilities and municipalities by approximately $209,000 per annum for all customers based upon 1964 deliveries of

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

[1] Applicable to the electric utilities and municipalities in the order as previously listed.

power and energy. For the twelve-month period ending May 31, 1964, Wisconsin-Michigan's revenues from those customers totaled $2,005,270. Applying the proffered supplemental rate schedules to those deliveries, Wisconsin-Michigan's operating revenues for service to those customers would be increased to $2,214,339.

As a result of the subject rate filings proffered initially on June 26, 1964, objections were filed by certain of the Wisconsin municipal customs of Wisconsin-Michigan and by the Oconto Electric Cooperative. Subsequent to the modification of those filings by the filings of July 24, 1964 (the latter had the result of reducing the proposed rates to the smaller customers), those cities withdrew their objections but reserved their right to press them in the event the Commission should object to the modified filings or suspend the rates as to Oconto Electric Cooperative or other purchasers. The cooperative by its letter of counsel dated July 13, 1964, objects generally to the filing of the new rates insofar as they would apply to it.

We are setting for hearing and suspending the rate increase as it applies to Oconto Electric Cooperative (Supplement No. 6 to Wisconsin-Michigan's Rate Schedule FPC No. 32) for a period of one day from August 3, 1964, the date upon which the rate previously was proposed to be made effective, until August 4, 1964.[2] We accept the rate increase as it applies to the other named wholesale customers of Wisconsin-Michigan. The hearing and one day suspension will permit an adjudication of the question presented as to whether or not the cooperative can justify a lower rate for itself than for Wisconsin-Michigan's other wholesale customers while at the same time avoiding any undue discrimination in the event that we should subsequently determine that no such differential is appropriate.

On June 9, 1964, we adopted Opinion No. 432 and accompanying order, Docket No. E-7026, 31 FPC 1445, in which we rejected, as discriminatory, prior rate increases of Wisconsin-Michigan to the investor owned and municipal electric systems as listed above when no increase was proposed for the cooperative. We made clear that on the record in that case the company had not justified a higher rate for the municipalities than for its cooperative customers. We specifically stated, however, that "We recognize that the cooperative did not participate in this proceeding and we, therefore, make no findings in this case which would in any way prejudice Oconto's rights (*supra*, pp. 1451—1452)." We also made clear (*id.* at 1452) that since Oconto was not before us we could not prescribe the exact level of rates for all of Wisconsin-Michigan's customers or determine what if any differential in the rates to the cooperatives may be justified.

The increased rates and charges proposed by Wisconsin-Michigan for all of its customers follow, in general, the rate form and rate level reflected in the schedule of rates and charges set forth in Opinion No. 432, Appendix B. Slight changes in the form of the demand block rates reduce Wisconsin-Michigan's charges to smaller wholesale purchasers by approximately $6,800 annually from the over-all maximum cost of service of Wisconsin-Michigan reflected in Opinion No. 432. Small purchases are made by Florence and Oconto Falls, Wisconsin, Crystal Falls, Michigan, Upper Peninsula Power Company, and

[2] By telegram dated July 31, 1964, we advised Wisconsin-Michigan as follows:

Please be advised that the Commission has suspended for a period of one day from August 3, 1964 to August 4, 1964, the rate schedules which you filed on June 26, 1964, insofar as they proposed to increase the rates to Oconto Electric Cooperative above those previously in effect because such rates and charges may be unjust, unreasonable, or otherwise unlawful. Otherwise, the filed rates may go into effect as of August 3, 1964. The Commission's order will follow by mail.

Suring division of Wisconsin Public Service Corporation. Purchasers of larger amounts of power and energy from Wisconsin-Michigan include Clintonville, Kaukauna, New London, Shawano, Wisconsin and Oconto Electric Cooperative.

We have examined the rates as filed and believe that no reason exists for suspending them so far as they apply to the several municipal and investor owner systems involved. These rates are all at levels which are either at or below those which were expressly indicated as appropriate in Opinion No. 432. We believe, however, that despite the fact that Wisconsin-Michigan in filing its new rates has chosen not to attempt to make or justify any differential between the cooperative and its other wholesale customers, Oconto should be given the opportunity to make a factual showing in support of its position.

A principal contention of Oconto appears to be that there are "socio-economic factors" which would justify a different wholesale classification for a cooperative than for the other wholesale customers of Wisconsin-Michigan. As the cooperative indicates, this is an issue which is presented in several pending cases in which comprehensive records as to this matter have already been made or are in the process of being made. Under these circumstances, we believe that the interest of all parties can best be served by deferring hearing in this proceeding until the Commission has formulated its basic policy upon this issue in the other pending proceedings. At such time we will, we believe, be able to evaluate the similar claims of the cooperative here, as well as such other arguments it may then wish to present, on a more expedited basis.

The Commission further finds:

In view of the foregoing, it is necessary and appropriate for the purposes of the Federal Power Act that the Commission, pursuant to the authority of that Act, particularly Sections 205, 206, 308, and 309 thereof,

(1) accept the following proposed rate schedules of Wisconsin-Michigan for filing to become effective as filed rate schedules August 3, 1964:

Supplement No. 4 to Rate Schedule FPC No. 12, Supplement No. 4 to Rate Schedule FPC No. 25, Supplement No. 4 to Rate Schedule FPC No. 36, Supplement No. 3 to Rate Schedule FPC No. 43, Supplement No. 3 to Rate Schedule FPC No. 33, Supplement No. 7 to Rate Schedule FPC No. 24, Supplement No. 2 to Rate Schedule FPC No. 41, Supplement No. 4 to Rate Schedule FPC No. 39, Supplement No. 2 to Rate Schedule FPC No. 38;

(2) enter upon a hearing concerning the lawfulness of Wisconsin-Michigan's filed rate schedule for service to Oconto Electric Cooperative as proposed to be supplemented in the manner provided in proposed Supplement No. 6 to its Rate Schedule FPC No. 32; and that the operation or effectiveness of such proposed supplemental rate schedule under the Federal Power Act be suspended and the use thereof deferred, all as hereinafter provided.

The Commission orders:

(A) Wisconsin-Michigan's rate schedules as referred to in finding (1) above, are accepted for filing to become effective August 3, 1964.

(B) A public hearing be held concerning the lawfulness of Wisconsin-Michigan's Rate Schedule FPC No. 32, as supplemented and proposed to be supplemented in the manner provided in its proffered Supplement No. 6 thereto, at a time and place to be specified by notice of the Secretary.

(C) Pending such hearing and decision thereon, the operation under the Federal Power Act of the proffered rate schedule supplement referred to in paragraph (B) above, is suspended and the use thereof deferred until August 4, 1964. On that date, the proffered rate schedule supplement shall take effect

in the manner prescribed by the Federal Power Act, subject to further order of the Commission.

(D) During the period of suspension Wisconsin-Michigan's currently effective Rate Schedule FPC No. 32, and Supplement Nos. 3 and 5 on file with the Commission shall remain and continue in effect.

(E) Unless otherwise ordered by the Commission, Wisconsin-Michigan shall not change the terms or provisions of its proffered supplemental rate schedule referred to in paragraph (B) above or those of its rate schedule and supplements thereto on file with the Commission and referred to in paragraph (D) above, until this proceeding has been disposed of, or until the period of suspension has expired.

(F) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426 in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37) on or before August 30, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-99

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 7, 1964)

On April 21, 1964, El Paso Natural Gas Company (Applicant) filed an application to amend the Commission's order issued February 18, 1964, 31 FPC 422, in Docket No. CP64-99 by authorizing Applicant to participate in the cost, as to its undivided one-third interest herein, of drilling two additional observation wells into Zone No. 1 of the Jackson Prairie Storage Unit, Lewis County, Washington, all as more fully set forth in the application to amend.

The order of February 18, 1964, authorized Applicant to construct and operate certain facilities; to sell and deliver natural gas and, with respect to Applicant's interest therein, to share in the cost of the facilities to be constructed and operated by The Washington Water Power Company (Water Power), all solely for the purpose of testing the Jackson Prairie Storage Unit.

The application indicates that the subject additional wells are intended to evaluate any possibility of gas migration. The observation wells utilized so far have indicated a restriction of flow.

The two additional wells will be drilled by Water Power, as operator of the storage unit, at an estimated cost of $27,000 each, for a total expenditure of $54,000.

By letter, dated May 21, 1964, Applicant was issued a temporary certificate.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 3, 1964 (29 F.R. 8442). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's

---

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

order issued February 18, 1964, in Docket No. CP64-99 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 18, 1964, in Docket No. CP64-99 be and the same is hereby amended by authorizing Applicant to participate in the cost, as to its undivided one-third interest therein, of drilling two additional observation wells into Zone No. 1 of the Jackson Prairie Storage Unit, Lewis County, Washington, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP64-249

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 7, 1964)

Florida Gas Transmission Company (Applicant) filed an application on April 22, 1964, and a supplement thereto on May 13, 1964, in Docket No. CP64-249, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation of natural gas on a direct preferred interruptible basis to the City of Fort Pierce, Florida, (City) for use by the City in its existing Henry D. King Municipal Generating Station, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct and operate approximately 8.1 miles of 6-inch pipeline extending from its existing main pipeline in St. Lucie County, Florida, to the City's generating station. The natural gas will be used by the City in its plant for the generation of electricity for distribution to its residential, commercial and industrial customers in and near Fort Pierce, Florida. The maximum peak day and annual requirements of the City's generating station are estimated to be 6,250 Mcf and 1,642,000 Mcf, respectively.

The estimated cost of the facilities necessary to the sale and delivery of the proposed volumes to the City of Fort Pierce is $200,000, which will be defrayed from Applicant's current funds.

Since the requested service will require an additional delivery point the Applicant should file a superseding service agreement reflecting the additional delivery point for service to the City of Fort Pierce.

The natural gas requirements of the generating plant will be subject to curtailment when necessary to meet the Applicant's firm service requirements. An appropriate condition to provide for such curtailment will be attached to the certificate issued in this proceeding.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 3, 1963, in Docket No. CP63–277 (30 FPC 27).

(2) The proposed construction and operation of facilities and transportation of natural gas, as hereinbefore described and as more fully described in the application and exhibits, as supplemented, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate be granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm resale service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation of natural gas as more fully described in the application and supplement thereto in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) The certificate issued in paragraph (A) above is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm resale service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

HUMBLE OIL & REFINING COMPANY, DOCKET NOS. G-9287 AND G-9288, ET AL.[1]

ORDER UPON MOTION FOR REHEARING OR RECONSIDERATION

(Issued August 7, 1964)

On July 8, 1964, 32 FPC 49, we issued an order in these proceedings conditionally approving a rate settlement proposal filed by Humble Oil & Refining Company (Humble) on May 25, 1964. Subsequently, on July 24, 1964, Humble filed its motion for rehearing or reconsideration of certain conditions and provisions of that order.[2] We have given due reconsideration to those conditions and provisions of our order of July 8, 1964, in the light of Humble's motion.

Humble states that our order of July 8, 1964, placing several conditions on the acceptance of the settlement, constitutes a rejection of the negotiated settlement and, in fact, is the offer of a different settlement. We, of course, could have rejected the settlement for the reasons set forth in our conditional approval but, consistent with our practice in other settlements,[3] we preferred to indicate the basis of an acceptable settlement which accords with the principles evolved in such other producer settlements. Recognizing that changes had been made in the proposal submitted by Humble, we provided for acceptance or rejection by Humble of the altered settlement and for the filing of objections by other parties.

Humble takes exception to our conditioning its proposal so that the refund period under all of its rate schedules included in the proposal be for the same period of time. Humble had proposed that the refund period under its FPC Gas Rate Schedule Nos. 39 and 126 be for a shorter period of time than for all other rate schedules involved in the settlement. Humble states that during the settlement conferences it was proposed to settle these sales at Sandy Hook (Rate Schedule No. 39) and Gwinville (Rate Schedule No. 126) at 17¢ per Mcf for past deliveries and the area price (or last firm rate, where applicable) for the future.

Humble again, as in its proposal, cites the fact that it has made substantial development and has added acreage in the Gwinville field. However, as we pointed out in the July 8 order, the additions and the development were entirely within the original "contract acreage", and for the reasons set forth in that order distinguishes Humble's proposal from others where we have granted "exceptions" to the applicable area ceiling.

The differing refund dates approved by us in *Socony Mobil Oil Company, Inc.*, Docket No. G-12193, *et al.* (Order issued May 5, 1964) 31 FPC 1101, which was cited by Humble concerned two separate corporations. Refunds were required for the so-called "Republic" rate schedules from April 1, 1960, to December 31, 1961, during which sales were made by Republic Natural Gas Company. However, after Republic merged with Socony, and all sales were made by Socony under its own rate schedules, the refund date applied to all rate schedules. We do not believe the *Socony* situation to be at all analogous with Humble's proposal.

The settlement cited by Humble in *Cities Service Production Company, et al.*, Docket No. G-9510, *et al.*, 28 FPC 1114, and the "exception" there granted was

---

[1] The additional dockets involved herein are set forth in Appendices A, B and C attached to the order of July 8, 1964, issued herein.

[2] Filings supporting Humble's motion have been made by Alabama Gas Corporation, Southern Natural Gas Company and Consolidated Natural Gas System Companies.

[3] *E.g.:* Hunt Oil Company, Docket No. G-9065, *et al.*, 30 FPC 220.

based on the dedication of the deeper horizons at the time of settlement and not on the elimination of favored-nation clauses as Humble avers. The base contract had contained a depth-limitation clause.

In the settlement in *Gulf Oil Corporation, et al.*, Docket No. G–9520, 29 FPC 837, cited by Humble, the sale made at Gwinville by Gulf to a different purchaser than Humble's was considered as an "exception" because it involved a contemporary package renegotiation of four old contracts coupled with negotiation of three new contracts all in separate fields adding considerable reserves under the old and the new contracts, and is not comparable to Humble's situation at Gwinville.

As a final support for its proposal for a different refund date for its Gwinville and Sandy Hook sales, Humble avers that "the parties looked to the overall economic effect as a guide." It then cites percentages of amounts of monies refunded in other general rate settlements, and amounts of proposed increased rates disallowed. We do not believe that amounts refunded by other large producers is determinative of the refunds to be made by Humble. The parties have used cost of service studies to determine when refunds should begin and that date having been determined should be applicable in the same manner to all of Humble's rate schedules.

For all of the above reasons, and those set forth in our order of July 8, 1964, we affirm our conditional approval of the settlement proposal to require Humble to make refunds under its Rate Schedule Nos. 39 and 126 in the same manner, and for the same period of time, as we required for its other rate schedules where collection was made subject to refund.

Next, Humble takes exception to the conditions imposed upon five rate schedules, pending certification, in Texas Railroad Commission District Nos. 3 and 4 (Rate Schedule Nos. 325, 341, 342, 349 and 350) by which we required Humble to make future adjustment to conform with the ultimate in-line price determination, and required refunds from the date of the order of July 8, 1964, if any of the rates were reduced. Humble states that such rates are presently involved in either the *H. L. Hawkins, et al.* proceedings, Docket No. G–18077, *et al.*, or the *Turnbull & Zoch Drilling Co. (Operator), et al.*, proceedings, Docket No. G–17960, *et al.* It further states that in each instance the rate presently being charged is the "guideline" rate, and in view of the pendency of the aforenamed proceedings the issues regarding its rates should be left for final determination in those proceedings. Further, Humble states it desires to continue to participate in each of the proceedings. In view of the foregoing, we shall amend our order of July 8, 1964, by deleting therefrom ordering Paragraph (D), and striking Docket Nos. CI63–1057 (Rate Schedule No. 325), CI64–297 (Rate Schedule No. 349), CI64–298 (Rate Schedule No. 341), CI64–299 (Rate Schedule No. 350), and CI64–677 (Rate Schedule No. 342) from Page 2 of Appendix C to the order.

Humble's next point regards the severance of its proceedings from the consolidated proceedings in *Sunray DX Oil Company, et al.*, Docket No. G–4281, *et al.*, as provided by ordering Paragraph (O) of the order of July 8, 1964. Humble states that such severance was in accordance with the settlement proposal as filed, but it notes that the hearings in those proceedings have been concluded, and that it has filed an initial brief therein. Accordingly, it requests that it be permitted to continue to participate in those proceedings as an intervenor. We find that although the time for filing petitions to intervene has terminated, the unusual conditions herein cause us to find that good cause exists, and it is in the public interest to permit the continued participation of Humble in such proceedings as an intervenor.

Humble states that ordering Paragraph (E) of the order of July 6, 1964, relating to refunds does not clearly state that its refund obligation would be

limited to the difference between the rate collected subject to refund and the related settlement rate or rate not subject to refund, whichever rate was higher. It was our intention to require refunds down to the last firm rate where the settlement rate was lower and we shall amend the order to so provide. Consequently, we shall amend the first sentence of ordering Paragraph (E) of the order of July 8, 1964, to read:

> (E) Humble shall compute the difference between the rates collected subject to refund and the related settlement rate or rate not subject to refund, whichever rate was the greater, for the period from May 1, 1961, to the date of this order, together with interest as specified in each docket to May 31, 1964.

* * * * * * *

Humble requests that in view of its motion, the time limitations set forth in the order of July 8, 1964, be extended for the number of days ensuing between that date and the date of issuance of this order. Such a request is reasonable, and accordingly we shall grant an extension of the time limitations of our order by 30 days.

The Commission finds:

(1) The participation of Humble Oil & Refining Company in the consolidated proceedings *Sunray DX Oil Company, et al.*, Docket No. G–4281, *et al.*, may be in the public interest.

(2) Except as it is granted hereby, the motion for rehearing or reconsideration filed by Humble on July 24, 1964, should be denied.

The Commission orders:

(A) Humble Oil & Refining Company be, and it is hereby permitted to become an intervener in the consolidated proceedings in *Sunray DX Oil Company, et al.*, Docket No. G–4281, *et al.*, subject to the rules and regulations of the Commission: Provided, however that the participation of such intervener shall be limited to matters affecting asserted rights and interests affecting it as set forth in its motion for rehearing or reconsideration filed on July 24, 1964; and provided, further, that the admission of such intervener shall not be construed as recognition by the Commission that it might be aggrieved because of any order or orders of the Commission entered in such consolidated proceeding.

(B) The order of July 8, 1964, issued herein, be and it is hereby amended to delete ordering Paragraph (D) therefrom, and striking Docket Nos. CI63–1057 (Rate Schedule No. 325), CI64–297 (Rate Schedule No. 349), CI64–298 (Rate Schedule No. 341), CI64–299 (Rate Schedule No. 350), and CI64–677 (Rate Schedule No. 342) from Page 2 of Appendix C to such order.

(C) The first sentence of ordering paragraph (E) of the order of July 8, 1964, issued herein, be and it is hereby amended to read:

> (E) Humble shall compute the difference between the rate collected subject to refund and the related settlement rate or rate not subject to refund, whichever rate was the greater, for the period from May 1, 1961, to the date of this order, together with interest as specified in each docket to May 31, 1964. * * *

(D) The time limitations set forth in ordering Paragraphs (E), (F), (G), (H), (I), (J) and (M) of the order issued herein on July 8, 1964, are each extended an additional 30 days in addition to each of the time limitations set forth therein.

(E) Except as modified hereinabove, the motion for rehearing or reconsideration filed in these proceedings present no issues of fact or law which were

not fully considered by the Commission, or which upon now being considered require any change or modification of the order issued herein on July 8, 1964, and the motion is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

INTERSTATE POWER COMPANY, DOCKET NO. CP64-143

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 7, 1964)

On December 23, 1963, as amended on February 10, 1964, Interstate Power Company (Applicant) filed in Docket No. CP64-143 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a pipeline between the Rock River near Prophetstown, Illinois, and the Mississippi River near Albany, Illinois, all as more fully described in the application, as amended.

The proposed facilities consist of approximately 13.2 miles of 12-inch pipeline with required valves and miscellaneous connecting material and will be operated in parallel with existing facilities for increased line capacity to provide for normal future system load growth and potential new customers.

The total estimated cost of the proposed facilities is $472,710, which cost will be financed by company funds or short-term bank borrowing.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as amended, has been filed.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendment and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Interstate Power Company, a Delaware corporation having its principal place of business in Dubuque, Iowa, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 3, 1951, in Docket No. G-1547 (10 FPC 873).

(2) The facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Interstate Power Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as amended, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

INTERSTATE POWER COMPANY, DOCKET NO. CP64-176

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 7, 1964)

On February 6, 1964, Interstate Power Company (Applicant) filed in Docket No. CP64-176 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in order to render natural gas service in the Village of Erie, Illinois, all as more fully set forth in the application.

Applicant proposes to construct and operate 5.3 miles of 2-inch pipeline in order to supply natural gas to Applicant's proposed gas distribution system in Erie. A tap is to be located in Whiteside County at the crossing of Applicant's existing 9-inch main transmission line under Highway 2.

Applicant states that it will serve Erie from gas volumes available under contract with Natural Gas Pipeline Company of America. The estimated third year peak day and annual natural gas requirements of Erie are 410 Mcf and 42,998 Mcf, respectively.

The total estimated cost of the proposed facilities (including distribution facilities) is $131,180, which cost will be financed from company funds or short-term borrowing

It appears that Applicant has obtained appropriate authorizations from Erie and the Illinois Commerce Commission.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Interstate Power Company, a Delaware corporation having its principal place of business in Dubuque, Iowa, is a "natural-gas company"

within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 3, 1951, in Docket No. G–1547 (10 FPC 873).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Interstate Power Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NOS. RP61–21, RP63–2, CP63–13; MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP63–12

ORDER APPROVING PROPOSED STIPULATION OF AGREEMENT AND TERMINATING PROCEEDINGS

(Issued August 7, 1964)

On March 16, 1964, Mississippi River Fuel Corporation (Fuel), and its subsidiary, Mississippi River Transmission Corporation (Transmission), jointly filed a stipulation and agreement dated March 12, 1964, proposing settlement of the captioned proceedings, seeking Commission approval thereof and termination of the proceedings in these dockets. The stipulation, which resulted from conferences among Fuel, Transmission and their resale customers, was agreed to by all those resale customers and by the Missouri Public Service Commission. Thereafter, representatives of Fuel and Transmission conferred with members

of the staff of this Commission. As a result of these conferences, the aforementioned stipulation and agreement was revised as of May 6, 1964.

On May 27, 1964, Fuel and Transmission filed a motion for approval of the revised stipulation, termination of the rate proceedings, and issuance of a certificate of public convenience and necessity in Docket No. CP63–12, as purported to be amended in accordance with the revised stipulation. The Commission, by order issued June 9, 1964, 31 FPC 1512 in these proceedings, deferred action on that motion and prescribed further procedures in these matters. The Commission's order noted that in view of the position of certain parties on the applications in Docket Nos. CP63–12 and CP63–13, any action on the motion to the extent that it requested approval of the proposed settlement agreement was premature and would have to await Commission disposition of the issues in these certificate dockets on a formal record that would ultimately come before the Commission.

Pursuant to the procedure outlined in the order issued June 9, 1964, Transmission on June 15, 1964 filed an amendment to its application in Docket No. CP63–12 and Fuel as of the same date, filed a notice of withdrawal of its application in Docket No. CP63–13.

At the hearing held on July 6, 1964, in the certificate proceeding, a stipulation was introduced into evidence resolving the differences between the parties in those proceedings.

By separate order issued this day in Docket Nos. CP63–12 and CP63–13, we have issued a certificate of public convenience and necessity to Transmission, in accordance with the application as amended in Docket No. CP63–12. We now have before us the stipulation and agreement as revised May 6, 1964 in proposed settlement of the rate proceedings in Docket Nos. RP61–21 and RP63–2.

The stipulation and agreement as revised May 6, 1964, provides in major part as follows:

1. Fuel will refund to its jurisdictional customers, the following principal sums:

i. $1,400,000 applicable to the period from June 15, 1961 through December 31, 1962 (this represents the period during which the proposed increase in Docket No. RP61–21 was in effect, subject to refund);

ii. $1,277,500, applicable to the period from January 1, 1963 through April 30, 1964;

iii. $79,750 per month (or a pro-rata portion thereof for a partial month) for each month after April 30, 1964, until the date upon which the revised tariff of Transmission, as the successor company, is made effective.

In addition to the above principal amounts, Fuel will pay to each customer the related amount of interest at the rate of 7 percent per annum, computed as provided in Article 2 of the revised stipulation. Up until the effective date of Transmission's revised tariff, referred to above, Fuel will continue to collect its rates presently effective in Docket No. RP63–2, subject to further refunds described below.

2. Fuel will refund to its customers, in accordance with the provisions of Article 3 of the stipulation, all amounts it may receive from suppliers applicable to gas purchases from June 15, 1961 to the effective date of Transmission's revised tariff. However, no further refunds are required to be made by Fuel of amounts received from United Gas Pipe Line Company or other suppliers prior to March 12, 1964, the date of signing of the agreement by the parties, inasmuch as the jurisdictional customers' portion of such refunds is included in the principal refunds referred to above.

3. Transmission's rates, which became effective April 1, 1964, shall continue in effect until the effective date of Transmission's revised tariff, provided, how-

ever, that as set forth in Article 4 of the stipulation, Transmission will refund to its jurisdictional customers any amounts received from its suppliers applicable to gas purchases from such suppliers prior to the effective date of Transmission's revised tariff.

4. Transmission will file a revised tariff, subject to the approval of the Commission, in the form set out in Exhibit 13 in Docket No. CP63–12, as modified by the pro-forma sheets attached to the revised stipulation. In addition to the rate schedules providing for interruptible and stand-by service, such revised tariff will provide for contract demand service under Rate Schedule CD–1, containing basic monthly rates of $1.89 per Mcf of contract demand and 23.20¢ per Mcf of natural gas delivered under that rate schedule. If, on the proposed effective date of such revised tariff, the rates and charges of Trunkline Gas Company, one of Transmission's suppliers, are higher or lower than Trunkline's rates which became effective April 1, 1964, Transmission will adjust the rates and charges contained in the pro-forma tariff sheets attached to the stipulation, in accordance with the method set out in Article 6 thereof, to reflect such change in Trunkline's rate. Further, the revised tariff will not include the 72 percent annual and 40 percent daily minimum take-or-pay provisions contained in Fuel's presently effective tariff.

5. Transmission agrees to pass through to its jurisdictional customers, pursuant to the method set out in Article 7 of the stipulation, any refunds it receives from suppliers whose rates are being collected, subject to refund, after the effective date of Transmission's revised tariff. The refunds thus to be passed through will be those applicable to gas purchased during the period from and after the effective date of Transmission's revised tariff and so long as the rates contained in that tariff, or as modified, to give effect to suppliers' rate reductions (as described below) remain in effect.

6. Transmission agrees to reduce its jurisdictional rates in the manner set out in Article 8 of the stipulation, to give effect to any reduction in the prospective rates of any of its suppliers which is made effective by any final or non-applicable order of the Commission, during the period from and after the effective date of Transmission's revised tariff and so long as the rates contained in that tariff, or the rates reduced pursuant to Article 8, remain in effect.

7. Transmission agrees that it will not file for an increase in the rates and charges of its Rate Schedule CD–1, which will be contained in its revised tariff, to become effective prior to July 1, 1966, except under the contingencies set forth in Article 9 of the stipulation.

The stipulation also provides that it shall become effective when the Commission issues an order approving such stipulation and agreement and terminating the above dockets; when the Commission issues a certificate of public convenience and necessity to Transmission in Docket No. CP63–12; and when the Commission issues an order making the revised tariff to be filed by Transmission, effective without suspension.

The stipulation further sets out that it was entered into by the parties as a negotiated settlement, without prejudice to such parties in any other proceeding and without acceptance or agreement to any methods or principles underlying the provisions of the agreement. The agreement requests that the Commission waive the requirements of its General Rules and Regulations, particularly Part 154 thereof, to the extent necessary to effectuate all the provisions of that agreement.

The Commission is of the view that the proposed settlement is in the public interest and that the results thereof are within the range that could reasonably be expected if the proceedings were all to go through the decision making

process. On the basis of all the foregoing, we believe the proposed settlement should be approved as hereinafter provided:

The Commission finds:

(1) The proposed settlement of these rate proceedings, upon the basis set forth in the revised stipulation and agreement identified above and incorporated herein, is appropriate and in the public interest in carrying out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter provided and ordered.

(2) Good cause exists for the Commission to waive its applicable Rules and Regulations under the Natural Gas Act, in order that the revised tariff sheets to be filed, pursuant to Article 6 of the stipulation, may become effective as hereinafter provided.

The Commission orders:

(A) The settlement of these proceedings upon the basis of the revised stipulation and agreement filed May 27, 1964, which is made a part hereof by reference thereto and as modified by the stipulation introduced into evidence in Docket Nos. CP63–12 and CP63–13, is hereby approved and made effective as proposed therein.

(B) Fuel, within the time and in the manner set forth in the aforesaid stipulation and agreement, shall refund to its jurisdictional customers the principal amounts and applicable interest herein-above set forth.

(C) Fuel and Transmission shall comply with each of the provisions of the revised stipulation and agreement.

(D) Within 20 days of making any refunds required pursuant to the provisions of the revised stipulation and agreement, Fuel and Transmission shall report to the Commission, showing separately the amounts of principal and interest so paid, together with a computation showing the manner in which such refunds was determined, and shall serve a copy of this report upon each customer and upon interested state commissions.

(E) Within 60 days from the date of issuance of this order, Transmission shall file a revised tariff acceptable to the Commission, in the form and containing the provisions set out in Exhibit 13 in Docket No. CP63–12, as modified by the pro-forma sheets attached to the revised stipulation and agreement, to be effective from and after the date of filing subject only to such changes as provided for under the terms of the revised stipulation and agreement.

(F) Upon compliance with the terms and conditions of this order, the proceedings in Docket Nos. RP61–21 and RP63–2 are terminated, subject to the terms of the revised stipulation and agreement as to future pass-through of refunds and rate reductions.

(G) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, Fuel, Transmission, the Commission staff, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against Fuel or Transmission or any other person or parties affected by this order.

Commissioner Black *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP63–12; MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. CP63–13

ORDER GRANTING MOTIONS FOR LEAVE TO AMEND AND WITHDRAW AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 7, 1964)

On July 16, 1962, Mississippi River Transmission Corporation (Transmission) filed an application, as supplemented, in Docket No. CP63–12 for a certificate of public convenience and necessity, pursuant to Section 7(c) of the Natural Gas Act, for authority to acquire and operate the pipeline facilities of Mississippi River Fuel Corporation (Fuel) and the interest of Fuel in Storage Corporation, a wholly owned subsidiary of Fuel.

In addition to its pipeline facilities, Fuel presently owns gas production in the Sligo and Hico-Knowles Fields of North Louisiana, which is taken into its pipeline system as part of its overall gas supply. Contingent upon acquisition of its pipeline facilities by Transmission, Fuel proposed to sell the gas from these fields to Transmission as set forth in its application filed July 16, 1962, in Docket No. CP63–13.

Notice of both applications was issued November 16, 1962. (29 F.R. 11476.)

A hearing was scheduled to be held March 25, 1963, on a consolidated record, but was continued March 12, 1963, until further notice at the request of the applicants.

Petitions to intervene in both proceedings were filed by Oklahoma Illinois Gas Pipeline Company (Oklahoma Illinois), Owens-Illinois Glass Company (Owens-Illinois), Laclede Gas Company (Laclede), Granite City Steel Company, *et al.* (Granite City Group), St. Charles Gas Corporation (St. Charles), and Illinois Power Company (Illinois Power).

Pursuant to a notice issued February 7, 1964, a hearing was convened on a consolidated record March 2, 1964, and was recessed to March 24, 1964. Subsequent notices of continuance of these proceedings were issued at the request of the applicants.

On June 15, 1964, Transmission filed an amendment to its application in Docket No. CP63–12 which, among other things, excluded Fuel's interest in Storage Corporation from the proposed acquisition and included a transfer by Fuel to Transmission of the on-system gas producing properties in the Sligo and Hico-Knowles Fields.

On the same date, Fuel filed a notice of withdrawal of its application in Docket No. CP63–13.

Pursuant to a notice issued by the Presiding Examiner, a prehearing conference was held and concluded June 18, 1964.

On July 6, 1964, formal hearing was resumed. Counsel for Transmission thereupon presented a stipulation signed by Transmission, Fuel, Oklahoma Illinois, Owens-Illinois, and the Granite City Group. This stipulation, in addition to specifying that nothing in the language of the stipulation entered into between Fuel and Transmission and their customers dated March 12, 1964, as revised May 6, 1964, could be used to prejudice Oklahoma Illinois, Owens-Illinois and Granite City in the determination of Docket No. CP62–243, *et al.*, would in effect, preclude the signatories thereto from referring or adverting to any changes of fact which may be effected by reason of the acquisition by Transmission of the properties of Fuel or making any argument with respect thereto

in connection with the ultimate determination of the proceedings upon competitive applications to render additional service to the St. Louis area filed by, among others, Oklahoma Illinois in the comparative hearing heretofore held in *Natural Gas Pipeline Company, et al.*, Docket No. CP62–243, *et al.*

The stipulation (page 6) further provides, however, that "*Upon acceptance* and acknowledgement *by* the parties and *the Commission of the within stipulation*, due and timely execution of the functions of the Commission imperatively and unavoidably require that the intermediate decision procedure be dispensed with . . . ." (Emphasis supplied). It appears from the foregoing quoted portion of the stipulation that the signatories thereto may have intended by such stipulation to preclude the Commission from considering, in connection with the disposition of the competitive applications involved in the Docket No. CP62–243, *et al.* proceedings, not only the language in the earlier stipulation between Transmission, Fuel and their customers (which of course cannot bind the Commission in deciding Docket No. CP62–243, *et al.*) but also any changes of fact which may be effected by the approval of the merger sought in these proceedings.

We stated in our opinion in *Arkansas Louisiana Gas Company, et al.*, Docket No. G–17567, *et al.*, 27 FPC 697, 702, "Such a merger [referring to Transmission and Fuel] appears to be in the public interest because service and rates should not be affected by such an artificial corporate division," and we believe that the present merger proposal, as modified to incorporate within the resulting pipeline, Fuel's Sligo and Hico-Knowles production properties, will achieve this objective. However, we cannot bind ourselves to ignore the effects of the merger or of any resolution of the pending rate cases involving Fuel (Docket Nos. RP61–21 and RP63–2) in connection with the considerations of other applications particularly competitive applications upon which a comparative hearing has been held. We observe that there are parties to the proceedings upon the competitive applications who are not parties to this merger proceeding and who are not signatories to the stipulation under consideration, whose rights could in any event not be affected by the stipulation. Of course, no language agreed to by any of the parties either in the stipulation entered into between Transmission and Fuel and their customers, or in the subsequent stipulation between Transmission, Fuel and Oklahoma Illinois, Owens-Illinois and Granite City can properly preclude us from considering any matters of which we can appropriately take notice at the time the Docket No. CP62–243, *et al.*, proceedings are before us.

In its application, Transmission asserts that a combination of the Transmission and Fuel pipeline operations will provide a single uniform rate to all resale customers presently served by the two companies, and points out that the acquisition should result in simplification of Commission regulation as well as increasing the flexibility and efficiency of operation of the corporate structure of the resulting merged company. With Sligo and Hico-Knowles going to the merged company we agreed that the public interest would be served by a merger: in eliminating the possibility which previously existed of discrimination in rates or services between customers of the two commonly controlled but separately operated pipelines in favor of non-jurisdictional customers and against the customers this Commission is obligated to protect; in reducing the costs and expenses of operation; and in simplifying the Commission's task of assuring non-discriminatory service at the lowest justified rates.

The Commission finds:

(1) Transmission and Fuel are "natural-gas companies" within the meaning of the Natural Gas Act, subject to the jurisdiction of the Commission.

(2) Sufficient cause has been shown for permitting Transmission to amend its application in Docket No. CP63–12.

(3) Sufficient cause has been shown for permitting Fuel to withdraw its application in Docket No. CP63–13.

(4) The present and future convenience and necessity permit the acquisition and operation of the pipeline facilities and gas production of Fuel by Transmission as proposed by the application as amended in Docket No. CP63–12.

(5) A request having been made for omission of the intermediate decision procedure and all requirements of the provisions of Section 1.30(c)(1) [18 CFR 1.30(c)(1)] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission forthwith to render its final decision in these proceedings.

The Commission orders:

(A) The motion of Mississippi River Transmission Corporation for leave to amend its application in Docket No. CP63–12 is hereby granted.

(B) The motion of Mississippi River Fule Corporation for leave to withdraw its application in Docket No. CP63–13 is hereby granted.

(C) A certificate of public convenience and necessity is hereby issued authorizing Mississippi River Transmission Corporation to acquire and operate the pipeline facilities and interests in gas production of Mississippi River Fuel Corporation in the Sligo and Hico-Knowles fields, all as more fully set forth in the application, as amended, in Docket No. CP63–12.

Commissioner Black *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 2290

ORDER ISSUING LICENSE (MAJOR)

(Issued August 7, 1964)*

Application was filed on January 6, 1961 by Southern California Edison Company (Applicant) of Los Angeles, California, for a license under the Federal Power Act (Act) for its constructed Kern River No. 3 hydroelectric project, designated as Project No. 2290, located on Kern River, Salmon Creek and Corral Creek in Kern and Tulare Counties, California, in the vicinity of Bakersfield, Bodfish, Isabella, Kernville and Weldon, and affecting lands of the United States within the Sequoia National Forest.

Kern River No. 3 project was constructed between the years 1901 and 1921. By January, 1910, about 800 feet of tunnel work had been completed. During the period 1914–1918, work was retarded due to World War I conditions. The powerhouse was completed and the two generating units were placed in operation in 1921. Two diversion structures, in addition to the main dam on Kern River, one on Salmon Creek and the other on Corral Creek, were completed in 1921 and 1924, respectively. The diversion structure on Salmon Creek was replaced by a new dam completed in 1923 and the diversion structure on Corral Creek was replaced by a new dam completed in January, 1934. The energy generated by the project is included in Applicant's system and is used for public utility purposes.

*Rehearing denied, 32 FPC 910.

Applicant requests a "fair value" license under the provisions of Section 23(a) of the Act for a period of 50 years. According to the application, the project was constructed pursuant to a Final Power Permit granted by the Secretary of Agriculture on September 20, 1913 for a period of 50 years under the Act of February 15, 1901 (31 Stat. 790). Applicant has operated the project under this permit which authorized the occupancy and use for the development, transmission, and distribution of power of certain National Forest lands of the United States for a maximum period of 50 years from September 20, 1913. In addition, transmission lines extending from the Kern River No. 3 power plant to Vestal and to Applicants' licensed Borel Project No. 382, were authorized under Commission license as transmission line Project No. 174.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, offered no objection to the granting of the application for license.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, conditions in the interests of fish and wildlife conservation.

The Department of Agriculture, in reporting on the application, by letters dated March 21, 1962, and September 27, 1963, recommended for inclusion in any license for the project, conditions in the interests of the Department.

(A) In its letter of March 21, 1962 the Department of Agriculture advised that the California Department of Fish and Game, the United States Bureau of Sport Fisheries and Wildlife, the U.S. Forest Service and Applicant had entered into an agreement setting up a cooperative study. By letter dated September 27, 1963, the Department of Agriculture advised that the study has been completed and that as a result an agreement was entered into on August 9, 1963 among the Applicant, the California Department of Fish and Game, the United States Forest Service, and the United States Bureau of Sport Fisheries and Wildlife, setting forth certain conditions to be recommended for inclusion in any license that might be issued to the Applicant for the continued operation of its Kern River No. 3 project.

The State of California Department of Fish and Game, which was permitted to intervene in this proceeding pursuant to petition filed March 17, 1961, advised that the petition may be deemed dismissed if the license for the project includes conditions substantially in accord with the terms of the abovesaid Agreement dated August 9, 1963. Conditions substantially in accord with the conditions set forth in the Agreement are hereinafter included in this order.

(B) Kern County, California filed a petition to intervene on March 16, 1961 and an order granting an intervention was issued April 3, 1961. By letter dated November 15, 1963 Kern County advised that its intervention in this proceeding may be considered withdrawn upon the same conditions as specified by the State of California Department of Fish and Game.

Numerous informal protests have been received regarding the need for the release of flows from the project reservoirs for the protection of fish. We believe such protection is assured by the special conditions hereinafter included.

It is clear that Applicant is not here seeking a fair value license in lieu of a permit; instead it is seeking a fair value license to succeed the permit. Applicant waited until its 1913 permit was about to expire[1] and then applied for a fair value license for a term of 50 years. The result, were we to grant the application, would be that Applicant would have had authority to operate the project for a period of between 47 and 50 years pursuant to the permit and for

[1] Because of objections by intervenors mentioned above the Commission could not have acted on the 1961 application before the permit expired.

a further period of between 47 and 50 years pursuant to a fair value license issued by this agency.[2]

We believe that any such result would obviously not be in keeping with the statutory scheme. The provisions of Section 23 of the Act (now Section 23(a)) authorizing the holders of outstanding government permits to convert their permits to fair value licenses (rather than the net investment licenses) were inserted into the Act as an inducement for bringing outstanding permits under the more comprehensive licensing provisions of the Federal Power Act, which *inter alia*, authorized the imposition of additional conditions aiding in bringing about the comprehensive development of the Nation's water resources. It clearly was not intended to permit a person who had engaged for almost fifty years in the operation of a project under a federal permit to receive a new long term license under conditions markedly superior to those which would apply either to a licensee of a new project or a licensee of an old project seeking a renewal thereof at the end of the original license term.

At any time after enactment of the Federal Power Act in 1920 applicant could have applied for a fair value license in lieu of its permit. Under established Commission policies if it had sought such a license during the earlier periods of its permit the Commission would have issued a fair value license either for the remainder of the permit term or as was the case in some early situations for a full 50-year period.

In any event the Commission has never issued a fair value license when the permit had a remaining term of less than 20 years; on the contrary on at least four previous occasions it has refused to issue such licenses to Applicant when it sought them at various periods of up to 7½ years prior to the expiration of a 50-year permit.[3] It is true that in the recent *Montana Power Company* v. *F.P.C.* case 330 F. 2d 781 (CA9 No. 18451, decided April 14, 1964) the Ninth Circuit reversed a determination of the Commission insofar as it had failed to give the Montana Power Company (a Montana corporation) a fair value license in substitution for the permit previously held by the Montana Power Company (a New Jersey corporation), when as the result of a Commission-approved merger, the New Jersey company no longer was in a position to retain its permit rights. In our opinion that decision, insofar as it suggests that the Commission may lack discretion to refuse a fair value license to a permittee filing near the end of the permit term, must be confined to its very special facts. In any event, since the Court expressly upheld the Commission's action in limiting the duration of the license which it issued to the unexpired term of the permit, the case does not stand as a precedent for issuance of a long term fair value license near the end of a permit's term, or after it has expired.

We come, finally, to the question of the term of the new license. We have concluded that an appropriate normal term in issuing a new license at the expiration of a federal permit would be twenty-five years. This will give the licensee a sufficient degree of certainty to permit integration of the project into its overall plans while at the same time bringing the project before the Commission for reconsideration within a reasonable period. The fifty-year maximum written into the statute was geared to the approximate period which might be necessary to insure that the applicant could finance construction and has no bearing upon

[2] The variations in the periods mentioned above would depend upon the date as of which the Commission action in granting the fair value license was made effective.

[3] *Southern California Edison Company, Ltd.*, Project No. 1933, 5 FPC 695 (August 9, 1946); *Southern California Edison Company, Ltd.*, Project No. 1934, 5 FPC 698 (August 9, 1946); *Southern California Edison Company*, Project No. 2175, 21 FPC 419 (March 27, 1959); *Southern California Edison Company*, Project No. 2198, 21 FPC 698 (May 20, 1959).

the question of how long a period should be allowed for new licenses for projects at the end of their original term. We believe, however, that generally the term for a new license to a holder of an expired permit should not be less than the term of licenses for constructed projects which have operated without authorization. In the case of projects which are filed under the Androscoggin decision, Opinion 357 (27 FPC 830), the Commission has fixed a termination date of December 31, 1993 for such licenses in those cases in which applications are timely filed regardless of when the project was originally constructed. Accordingly, licenses for projects formerly operated under federal permits should generally be issued for a period of 25 years or to extend to December 31, 1993 whichever is longer, except in cases where for good cause a different term is justified. In the circumstances, we are herein fixing the effective date of the license for Project No. 2290 as of September 20, 1963 (termination date of the Final Power Permit) and extending to December 31, 1993.

In view of our finding (8) herein, we are hereinafter requiring Applicant to file for amendment of its license for transmission line Project No. 174 to exclude therefrom the double circuit 66 kv transmission line extending from Project No. 2290 to the Vestal substation and the 66 kv transmission line extending from that project to Applicant's Borel Project No. 382, and appurtenant facilities.

The Commission finds:

(1) The project affects lands of the United States within the Sequoia National Forest.

(2) Applicant is a corporation organized under the laws of the State of California and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given as required by the Act. No conflicting application is before the Commission.

(4) The issuance of a license for the project as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(5) The issuance of a license for the project as hereinafter provided will not interfere or be inconsistent with the purposes for which the Sequoia National Forest was created or acquired.

(6) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes.

(7) The installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 43,000 horsepower, and the amount of annual charges, based on such capacity to be paid under the license for the project, for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) The following described transmission facilities, which are included in the application for license, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project: the double circuit 66 kv transmission line extending from the subject project to the Vestal substation and the 66 kv transmission line extending from the subject project to Applicant's Borel Project No. 382.

(9) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Southern California Edison Company (Licensee) of Los Angeles, California, under Section 4(e) of the Federal Power Act (Act) for a period effective as of September 20, 1963, and terminating December 31, 1993 for the continued operation and maintenance of Project No. 2290 upon the Kern River, Corral Creek and Salmon Creek, and affecting lands of the United States within the Sequoia National Forest, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2290 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J	FPC No.	Title
Sheet 1	2290-1	General Map of Kern River No. 3 Project Powerhouse to Intake Area.
Sheet 2	2290-2	General Map of Kern River No. 3 Project, Kern River No. 3—Vestal Transmission Line.
Sheet 3	2290-3	General Map of Kern River No. 3 Project—Kern River No. 3—Borel Transmission Line.

(ii) All project works consisting principally of:

An overflow concrete gravity dam across Kern River, 26 feet high and 270 feet long, with a fish ladder; a main conduit extending 68,515 feet to a forebay above the powerhouse and consisting of a concrete sand box 449 feet long, 3,862 feet of covered and 1,705 feet of open concrete flume, 60,171 feet of concrete lined tunnel, a 45-foot long concrete spillway section at the siphon inlet, a 1,143 foot steel pipe siphon and 1,140 feet of reinforced concrete pipe; two steel penstocks each 2,511 feet long from the forebay to the powerhouse; a small concrete dam on Salmon Creek, 60 feet long and 5 feet high, a steel pipe 228 feet long from Salmon Creek Dam to the main conduit; a small concrete dam on Corral Creek, 36 feet long and 6 feet high, a steel pipe 904 feet long from Corral Creek Dam to the main conduit; a powerhouse on the Kern River containing two Pelton reaction turbines of 25,000 horsepower each, connected to generators of 16,000 kilowatts each; a 66 kv double circuit transmission line about 44.5 miles long from the powerhouse to the Vestal Substation; a 66 kv single circuit transmission line about 17.25 miles long from the powerhouse to the Borel Powerhouse; a telephone line between the powerhouse and intake works with superimposed alarm and telemark circuits; a multicircuit control and power line between the powerhouse and forebay; access roads; operators village; and appurtenant electrical and mechanical equipment; this location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited

and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L	FPC No.	Title: General Design Drawings Kern River No. 3 Project
Sheet No. 1	2290-30	Dam and Fish Ladder.
Sheet No. 2	2290-31	Plan and Sections of Intake.
Sheet No. 3	2290-32	Sections and Elevations of Intake.
Sheet No. 4	2290-33	Sand Box and Adjacent Flumes.
Sheet No. 5	2290-34	Salmon and Corral Creek Diversions.
Sheet No. 6	2290-35	Corral Creek Flume.
Sheet No. 7	2290-36	Brush Creek Siphon.
Sheet No. 8	2290-37	Brush Creek Siphon Spillway.
Sheet No. 9	2290-38	Forebay Plan, Elevations and Sections.
Sheet No. 10	2290-39	Penstocks—Plan and Profile.

Sheet No. 13	2290-42	Powerhouse—Sectional Elevation—Longitudinal.
Sheet No. 14	2290-43	Powerhouse—Sectional Elevation—Lateral.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–1 (Revised April 1, 1964) entitled "Terms and Conditions of License for Constructed Major Project Affecting Lands of the United States" (32 FPC 71), which terms and conditions, designated as Articles 1 through 33, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 34. The Licensee shall conduct the normal operations of its outlet works and power plants so as to avoid the sudden release of large flows into the channels normally carrying regulated flows and, except in the event of emergencies, shall insofar as possible, avoid changes in stream stages which would endanger human life, health, or property, or be detrimental to fish life or habitat.

Article 35. The Licensee shall release or spill at the Fairview Diversion Dam sufficient water to maintain flows in the Kern River at the times and in not less than the amounts shown in the following schedules as measured at the "Kern River near Kernville" gauging station:

Period of release	Dry year c.f.s.	Normal year c.f.s.	Period of release	Dry year c.f.s.	Normal year c.f.s.
January	25	40	July 16-31	75	90
February	25	40	August	75	90
March	60	70	September	65	70
April	80	100	October	25	50
May	90	100	November	25	40
June	90	100	December	25	40
July 1-15	85	100			

For purposes of applying the above schedules, a "Dry Year" is defined as a year in which the April 1 through July 31 total runoff at Fairview Diversion

Dam, as predicted by the California State Department of Water Resources in its April 1 forecast, is estimated to be 186,000 acre-feet or less. A "Normal Year" is defined as a year in which the April 1 through July 31 total runoff is so estimated to be over 186,000 acre-feet. The appropriate schedule of flows shall take effect on May 1 following the April 1 forecast and extend through April 30 of the following year.

It is further provided that should the natural flow of the Kern River at the Fairview Diversion Dam at any time be less than the applicable schedule for that time then only the natural flow need be released, subject to such reductions as may be necessary to meet the obligation to supply the water needs of the Kern River Fish Hatchery as set forth in Article 36.

Article 36. The Licensee shall deliver to the California Department of Fish and Game at the tailrace of the Kern River No. 3 powerhouse, not less than 20 c.f.s. from the Kern River No. 3 conduit for the operation of the California Department of Fish and Game's Kern River Fish Hatchery. The Licensee will exercise reasonable diligence to furnish a continuous supply consistent with proper operation of the project. The licensee will not be liable for interruption or shortage of supply, nor any loss or damage occasioned thereby, if such interruption or shortage results from any cause not within its control. The Licensee shall, except in emergencies, give the California Department of Fish and Game at least three (3) days prior notice of the time and estimated duration of any interruption or shortage of supply required for the purpose of making repairs or improvements to the project.

Article 37. The Licensee shall maintain, by releases at the point of diversion through calibrated orifices, or other means, flows immediately below the Licensee's points of diversion on Salmon Creek and Corral Creek at the time and in not less than the amounts shown in the following schedules:

	Flow in cubic feet per second
Salmon Creek:	
February 1–June 30	4
July 1–January 31	1
Corral Creek:	
February 1–June 30	1
July 1–January 31	0.5

It is further provided that should the natural flow of either stream at the point of diversion be less than the applicable schedule for that time, then only the natural flow of such stream need be released past the point of diversion. Nothing herein shall be construed as requiring the Licensee to install or maintain other facilities for the measurement of such releases.

Article 38. The Licensee shall assist the California Department of Fish and Game, the U.S. Forest Service, Department of Agriculture, and the U.S. Bureau of Sport Fisheries, Department of the Interior; and shall pay the cost, not to exceed $5,000, of such studies as may be necessary to determine the adequacy of the existing screen or the need for other or different fish protective devices at the Kern River No. 3 intake works.

If from such studies it is determined that:

(1) a fish screen or other fish protective devices are necessary to prevent fish from passing into the conduit, and

(2) the passage of fish into the conduit would materially impair the fish resource in or using the waters of the Kern River, and

(3) the cost of installation and maintenance of a fish screen or other fish protective devices is justifiable in relation to the fish resource imperiled, the Licensee shall be advised of such determinations and shall be furnished with

design criteria designating the type, size, mesh and location of the screen or other devices and the time within which installation shall be made. Such screen or other devices shall be so designed, installed and operated in a manner which will not unnecessarily impede the flow of water into the conduit or prevent the Licensee from diverting water at such times and in such amounts as the Licensee is legally entitled.

If the Licensee disagrees with any of such determinations, it may request that the matter or matters in dispute be submitted to the Federal Power Commission and the California Department of Fish and Game, U.S. Forest Service, Department of Agriculture, U.S. Bureau of Sport Fisheries, Department of the Interior and Licensee shall be given notice and the opportunity to be heard before the Federal Power Commission.

The California Department of Fish and Game; U.S. Forest Service, Department of Agriculture, and U.S. Bureau of Sport Fisheries, Department of the Interior shall inspect any fish screen or other fish protective devices so installed and, if installed in accordance with the order or agreement, acceptance and approval of the installation shall be provided in writing to the Licensee and to the Federal Power Commission by the California Department of Fish and Game; U.S. Forest Service, Department of Agriculture; U.S. Bureau of Sport Fisheries, Department of the Interior.

The Licensee shall, at its expense, install, operate, maintain, and replace in the event of loss or destruction, any fish screen or other fish protective devices required under this Article.

Article 39. The Licensee shall assist the California Department of Fish and Game, the U.S. Forest Service, Department of Agriculture, and the U.S. Bureau of Sport Fisheries, Department of the Interior, and shall pay the cost, not to exceed $3,000, of such studies as may be necessary to determine the adequacy and efficiency of the fishway at the Fairview Diversion Dam.

If from such studies it is determined that:

(1) the existing fishway is so inadequate or inefficient as to materially impair the fish resource in or using the waters of the Kern River, and

(2) the cost of modification or replacement and maintenance of the existing fishway is justifiable in relation to the fish resource imperiled, the Licensee shall be advised of such determinations and shall be furnished with design criteria designating the type, size and location of the fishway required and the time within which installation shall be made.

If the Licensee disagrees with any of such determinations it may request that the matter or matters in dispute be submitted to the Federal Power Commission and the California Department of Fish and Game, U.S. Forest Service, Department of Agriculture, U.S. Bureau of Sport Fisheries, Department of the Interior and Licensee shall be given notice and the opportunity to be heard before the Federal Power Commission.

The California Department of Fish and Game, U.S. Forest Service, Department of Agriculture, and U.S. Bureau of Sport Fisheries, Department of the Interior shall inspect any fishway so installed and, if installed in accordance with the order or agreement, acceptance and approval of the installation shall be provided in writing to the Licensee and to the Federal Power Commission by the California Department of Fish and Game, U.S. Forest Service, Department of Agriculture; U.S. Bureau of Sport Fisheries, Department of the Interior.

The Licensee shall, at its expense, install, operate, maintain, and replace in the event of loss or destruction, any fishway required under this Article.

The Licensee shall maintain such flows through the fishway as the California Department of Fish and Game, U.S. Forest Service, Department of Agriculture,

U.S. Bureau of Sport Fisheries, Department of the Interior, and Licensee shall determine from time to time to be necessary. Such flows shall be considered a part of the flows required under Article 35.

Article 40. The Licensee shall, prior to any operation of its desilting works for the removal of accumulated silt, fines or other debris entrapped by Fairview Diversion Dam or appurtenant facilities, advise, consult and cooperate with the U.S. Forest Service, Department of Agriculture, and the California Department of Fish and Game and perform such operation in a manner which will be consistent with the preservation of the fish, wildlife and recreation resources of the Kern River and with the proper operation of the project.

Article 41. This Article and Articles 35, 36, 37, and 40 shall be subject to review upon the written request to the Federal Power Commission made by any one of the following: California Department of Fish and Game, U.S. Forest Service, Department of Agriculture, U.S. Bureau of Sport Fisheries, Department of the Interior, or Licensee, ten years or more after the date of issuance of license. This Article and Articles 35, 36, 37, and 40 may be revised by agreement of the California Department of Fish and Game, U.S. Forest Service, Department of Agriculture, U.S. Bureau of Sport Fisheries, Department of the Interior, and Licensee with the approval of the Federal Power Commission. In the event that agreement on any revisions so requested has not been reached by the California Department of Fish and Game, U.S. Forest Service, Department of Agriculture, U.S. Bureau of Sport Fisheries, Department of the Interior, and Licensee within six (6) months from the date of such request, the California Department of Fish and Game; U.S. Forest Service, Department of Agriculture; U.S. Bureau of Sport Fisheries, Department of the Interior; and Licensee shall be given notice and opportunity for hearing before the Federal Power Commission.

Article 42. The Licensee shall provide reports to the Commission annually of any studies made or of changes in project design or operation under Articles 38 and 39.

Article 43. The Licensee shall within one year from the date of issuance of this license submit revised Exhibit K drawings to define the project boundary and area in accordance with the rules and regulations of the Commission.

Article 44. The Licensee shall pay to the United States the following annual charges, effective as of September 20, 1963:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with its regulations, in effect from time to time. The authorized installed capacity for such purposes is 43,000 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands exclusive of those used for transmission line right-of-way an amount to be hereafter determined by the Commission.

(iii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands for transmission line right-of-way purposes only, an amount to be hereafter determined by the Commission.

Article 45. The Licensee shall, within one year from the date of issuance of this license, file with the Commission a recreational use plan for the project which shall include not only recreational improvements which may be provided by others, but the recreational improvements the Licensee plans to provide.

(D) The Licensee shall, within six months of the date of issuance of this license, file with the Commission an application for amendment of minor-part license for Project No. 174 to exclude therefrom the transmission lines from Kern River No. 3 to Vestal and Kern River No. 3 to Borel Project No. 382.

(E) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED STATES DEPARTMENT OF THE INTERIOR SOUTHWESTERN POWER ADMINISTRATION, DOCKET NO. E-7172

ORDER TEMPORARILY EXTENDING CONFIRMATION AND APPROVAL OF RATES AND CHARGES

(Issued August 7, 1964)

The Secretary of the Interior, acting on behalf of the Southwestern Power Administration (SWPA) and pursuant to the Flood Control Act of 1944 (58 Stat. 887) on June 30, 1964, filed a request for the extension of the Commission's confirmation and approval, soon to expire, of rate schedules and contractual rates and charges applicable to the integrated system of SWPA as follows:

Rate schedules	Expiration date of Commission approval	Requested extension date
IC and EF	Aug. 9, 1964	July 1, 1969
P-1	Aug. 9, 1964	Mar. 1, 1965
P-2	July 1, 1967	July 1, 1969
Contractual rates and charges contained in the following contracts with SWPA:		
Texas Power and Light Company (Contract Ispa-177)	Sept. 11, 1964	July 1, 1969
Southwestern Electric Power Co. (Contract 14-02-001-782)	Nov. 18, 1964	July 1, 1969
Oklahoma Gas and Electric Co. and Public Service Co. of Oklahoma (Contract Ispa-356).	Aug. 9, 1964	July 1, 1969

In addition, the Secretary requested confirmation and approval for a five-year period expiring July 1, 1969, of the proposed new rate schedule F-2 to supersede existing rate schedule F-1, expiring August 9, 1964.

In support of the request for a five-year approval of the above rate schedules and contractual rates and charges SWPA filed an Average Rate and Repayment Study dated February 1964, which will require analysis by the staff and review by the Commission.

The Secretary requests that in the event action is not taken by the Commission before the expiration dates of the above rate schedules and contractual rates and charges that temporary extension of confirmation and approval be granted for the existing rates until Commission's final action is taken.

The Commission finds:

It is appropriate for the purposes of the Flood Control Act of 1944 that pending review and final action by the Commission of the filing made by the Secretary to temporarily extend the confirmation and approval of the existing rate schedules and the contractual rates and charges referred to above to December 31, 1964, or to such earlier date as the Commission's final action is taken.

The Commission orders:

The confirmation and approval of Rate Schedules F–1, P–1, IC and EE, and the Contractual Rates and Charges set forth in contracts between SWPA and Texas Power and Light Company (Contract Ispa 177), Southwestern Electric Power Company (Contract 14–02–001–782), and Oklahoma Gas and Electric Company and Public Service Company of Oklahoma (Contract Ispa 356) are hereby temporarily extended to December 31, 1964, or to such earlier date as the Commission's final action is taken.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BROOKS PIPE LINE CO, DOCKET NO. CP64–121; BROOKS GAS CORPORATION, DOCKET NOS. CI62–247 AND CI63–708

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE SCHEDULE FOR FILING

(Issued August 10, 1964)

On November 29, 1963, Brooks Pipe Line Co. (Brooks Pipe) filed in Docket No. CP64–121 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition from Brooks Gas Corporation (Brooks Gas) and the operation of 18 miles of 6-inch pipeline extending from a point in the Velrex Field, Schleicher County, Texas, to the Mertzon gasoline plant in Irion County, Texas, and to transport and deliver natural gas for the account of Brooks Gas, all as more fully set forth in the application.

Brooks Pipe proposes to finance the acquisition of the subject pipeline at a cost of $200,000, less accrued depreciation, by the issuance of common stock which will be exchanged with Brooks Gas in payment for said line.

Brooks Gas will pay Brooks Pipe two cents per Mcf for gas transported through said line. Brooks Gas, after processing at the Mertzon plant, will sell and deliver the gas at the tailgate of said plant to Northern Natural Gas Company (Northern Gas).
